UNITED STATES CONSULATES.

Frequent application is made to the Bureau for the address of United States Consuls in the South and Central American Republics. Those desiring to correspond with any Consul can do so by addressing "The United States Consulate" at the point named. Letters thus addressed must be delivered to the proper person. It must be understood, however, that it is not the duty of Consuls to devote their time to private business, and that all such letters may properly be treated as personal, and any labor involved may be subject to charge therefor.

The following is a list of United States Consulates in the different Republics:

ARGENTINE REPUBLIC—

Buenos Ayres.
Cordoba.
Rosario.

BOLIVIA—

La Paz.

BRAZIL—

Bahia.
Para.
Pernambuco.
Rio de Janeiro.
Santos.

CHILE—

Antofagasta.
Arica.
Coquimbo.
Iquique.
Valparaiso.

COLOMBIA—

Barranquilla.
Bogotá.
Cartagena.
Colón (Aspinwall).
Medellin.
Panama.

COSTA RICA—

San José.

DOMINICAN REPUBLIC—

Puerto Plata.
Samana.
Santo Domingo.

ECUADOR—

Guayaquil.

GUATEMALA—

Guatemala.

HAITI—

Cape Haitien.
Port au Prince.

HONDURAS—

Tegucigalpa.
Utilla.

MEXICO—

Acapulco.
Chihuahua.
Ciudad Juarez.
Ciudad Porfirio Diaz.
Durango.
Ensenada.
La Paz.
Matamoros.
Mazatlan.
Mexico.
Monterey.
Nogales.
Nuevo Laredo.
Progreso.
Saltillo.
Tampico.
Tuxpan.
Vera Cruz.

NICARAGUA—

Managua.
San Juan del Norte.

PARAGUAY—

Asunción.

PERU—

Callao.

SALVADOR—

San Salvador.

URUGUAY—

Colonia.
Montevideo.
Paysandu.

VENEZUELA—

La Guayra.
Maracaibo.
Puerto Cabello.

WEIGHTS AND MEASURES.

The following table gives the chief weights and measures in commercial use in Mexico and the Republics of Central and South America, and their equivalents in the United States.

Denomination.	Where used.	United States equivalents.
Are	Metric	0.02471 acre.
Arobe	Paraguay	25 pounds.
Arroba (dry)	Argentine Republic	25.3171 pounds.
Do	Brazil	32.38 pounds.
Do	Cuba	25.3664 pounds.
Do	Venezuela	25.4024 pounds.
Arroba (liquid)	Cuba and Venezuela	4.263 gallons.
Barril	Argentine Republic and Mexico	20.0787 gallons.
Carga	Mexico and Salvador	300 pounds.
Centaro	Central America	4.2631 gallons.
Cuadra	Argentine Republic	4.2 acres.
Do	Paraguay	78.9 yards.
Do	Paraguay (square)	8.077 square feet.
Do	Uruguay	2 acres (nearly).
Cubic meter	Metric	35.3 cubic feet.
Fanega (dry)	Central America	1.5745 bushels.
Do	Chile	2.575 bushels.
Do	Cuba	1.599 bushels.
Do	Mexico	1.54728 bushels.
Do	Uruguay (double)	7.776 bushels.
Do	Uruguay (single)	3.888 bushels.
Do	Venezuela	1.599 bushels.
Frasco	Argentine Republic	2.5096 quarts.
Do	Mexico	2.5 quarts.
Gram	Metric	15.432 grains.
Hectare	do	2.471 acres.
Hectoliter (dry)	do	2.838 bushels.
Hectoliter (liquid)	do	26.417 gallons.
Kilogram (kilo)	do	2.2046 pounds.
Kilometer	do	0.621376 mile.
League (land)	Paraguay	4,633 acres.
Libra	Argentine Republic	1.0127 pounds.
Do	Central America	1.043 pounds.
Do	Chile	1.014 pounds.
Do	Cuba	1.0161 pounds.
Do	Mexico	1.01465 pounds.
Do	Peru	1.0143 pounds.
Do	Uruguay	1.0143 pounds.
Do	Venezuela	1.0161 pounds.
Liter	Metric	1.0567 quarts.
Livre	Guiana	1.0791 pounds.
Manzana	Costa Rica	1.5-6 acres.
Marc	Bolivia	0.507 pound.
Meter	Metric	39.37 inches.
Pie	Argentine Republic	0.9478 foot.
Quintal	do	101.42 pounds.
Do	Brazil	130.06 pounds.
Do	Chile, Mexico, and Peru	101.61 pounds.
Do	Paraguay	100 pounds.
Do. (metric)	Metric	220.46 pounds.
Suerte	Uruguay	2,700 cuadras (<i>see Cuadra</i>).
Vara	Argentine Republic	34.1208 inches.
Do	Central America	33.874 inches.
Do	Chile and Peru	33.367 inches.
Do	Cuba	33.384 inches.
Do	Mexico	33 inches.
Do	Paraguay	34 inches.
Do	Venezuela	33.384 inches.

METRIC WEIGHTS AND MEASURES.

METRIC WEIGHTS.

Milligram ($1/1000$ gram) equals 0.0154 grain.
Centigram ($1/100$ gram) equals 0.1543 grain.
Decigram ($1/10$ gram) equals 1.5432 grains.
Gram equals 15.432 grains.
Decagram (10 grams) equals 0.3527 ounce.
Hectogram (100 grams) equals 3.5274 ounces.
Kilogram (1,000 grams) equals 2.2046 pounds.
Myriagram (10,000 grams) equals 22.046 pounds.
Quintal (100,000 grams) equals 220.46 pounds.
Millier or tonneau—ton (1,000,000 grams) equals 2,204.6 pounds.

METRIC DRY MEASURE.

Milliliter ($1/1000$ liter) equals 0.061 cubic inch.
Centiliter ($1/100$ liter) equals 0.6102 cubic inch.
Deciliter ($1/10$ liter) equals 6.1022 cubic inches.
Liter equals 0.908 quart.
Decaliter (10 liters) equals 9.08 quarts.
Hectoliter (100 liters) equals 2.838 bushels.
Kiloliter (1,000 liters) equals 1.308 cubic yards.

METRIC LIQUID MEASURE.

Milliliter ($1/1000$ liter) equals 0.27 fluid dram.
Centiliter ($1/100$ liter) equals 0.338 fluid ounce.
Deciliter ($1/10$ liter) equals 0.845 gill.
Liter equals 1.0567 quarts.
Decaliter (10 liters) equals 2.6417 gallons.
Hectoliter (100 liters) equals 26.417 gallons.
Kiloliter (1,000 liters) equals 264.17 gallons.

METRIC MEASURES OF LENGTH.

Millimeter ($1/1000$ meter) equals 0.0394 inch.
Centimeter ($1/100$ meter) equals 0.3937 inch.
Decimeter ($1/10$ meter) equals 3.937 inches.
Meter equals 39.37 inches.
Decameter (10 meters) equals 393.7 inches.
Hectometer (100 meters) equals 328 feet 1 inch.
Kilometer (1,000 meters) equals 0.62137 mile (3,280 feet 10 inches).
Myriameter (10,000 meters) equals 6.2137 miles.

METRIC SURFACE MEASURE.

Centare (1 square meter) equals 1,550 square inches.
Are (100 square meters) equals 119.6 square yards.
Hectare (10,000 square meters) equals 2.471 acres.

The metric system has been adopted by the following-named American countries: Argentine Republic, Bolivia, Brazil, Chile, Colombia, Costa Rica, Ecuador, Honduras, Mexico, United States of America, and Venezuela.

PUBLICATIONS.

The International Bureau of the American Republics was established as the representative of the International Union entered into in 1890 by the independent States of this continent, for the publication in four languages of their tariff laws and all laws and provisions which might be enacted by them relating to trade and navigation, for the collection and publication of useful statistics and information, and for the promotion by these and other proper means of greater and closer commercial relations between the countries of the Union. In pursuance of this purpose, the Bureau has published for distribution a number of Handbooks, Reports, Codes of Commercial Nomenclature, a Commercial Directory of the American Republics, including the European dependencies in Central and South America and the West Indies, and a Monthly Bulletin, which is now in its ninth year and is the official organ of the Bureau. Many of these publications, especially the Handbooks, have naturally through the course of time become obsolete, and it is therefore necessary to bring them down to date. New editions have been published of the Handbooks of Guatemala, Venezuela, Mexico, and Brazil, but the work of revising the others has not as yet been completed. In the meantime, it has been deemed prudent to withdraw from circulation all those which need revision.

Below is given a list of the publications of the Bureau available for distribution.

Payment is required to be made in cash, money orders, or by bank drafts on banks in New York City or Washington, D. C., payable to the order of the INTERNATIONAL BUREAU OF THE AMERICAN REPUBLICS. Individual checks on banks outside of New York or Washington, or postage stamps, can not be accepted.

BIBLIOGRAPHY OF BRAZIL.

PREPARED BY

P. LEE PHILLIPS, F. R. G. S.,

Chief of Division of Maps and Charts, Library of Congress.

The most complete list of Books, Magazine Articles, and Maps relating to Brazil that has ever been published, embracing everything of value upon history, biography, government, laws, religion, education, inducements and advantages offered immigrants, topography, coast line, soil, mineral wealth, flora, fauna, climate, natural advantages, transportation facilities, and all other subjects of whatever nature concerning the country.

Of special interest to librarians and specially useful in libraries.

The work is published under the auspices of the International Bureau of the American Republics, and it will be sent to any who may desire it on receipt of one dollar.

ADDRESS THE

INTERNATIONAL BUREAU OF THE AMERICAN REPUBLICS,

WASHINGTON, D. C.

BIBLIOGRAFÍA DEL BRASIL.

PREPARADA POR

P. LEE PHILLIPS, F. R. G. S.

Jefe de la Sección de Mapas y Cartas, Biblioteca del Congreso.

La lista más completa de Libros, Artículos de Revistas y Mapas referentes al Brasil que se ha publicado, y que comprende todo lo de valor relativo á historia, biografía, gobierno, leyes, religión, educación, alicientes y ventajas ofrecidas á inmigrantes, topografía, la costa, suelo, riqueza mineral, flora, fauna, clima, ventajas naturales, facilidades de transporte y á todas las otras materias concernientes á la naturaleza del país.

De especial interés á los bibliotecarios y particularmente útil en las bibliotecas.

Este trabajo está publicado bajo los auspicios de la Oficina Internacional de las Repúblicas Americanas y será remitido, mediante el recibo de un dollar, á las personas que lo soliciten.

 122-124 Fifth Ave., New York, U. S. A.

BRAZIL.

The new Handbook of Brazil, compiled by the Bureau of the American Republics, is now ready for distribution. It is essentially a geographical sketch of Brazil with special reference to its economic conditions and prospects of future development, and contains, besides the latest available official data in regard to the natural resources of the country, its industries and manufactures, commerce, financial organization, means of communication, etc., a brief history of the country, its ethnology and archæology, laws, religion, educational system, and miscellaneous data. In its treatment the book is similar to the other handbooks recently published by the Bureau. It contains 233 pages of matter and will be sold for 50 cents per copy.

Al escribirnos enviemos referencias. Al recibo de \$2.50, oro, mandaremos un sombrero de muestra. Este es el precio neto por mayor para los importadores.

HENRY S. NORTHROP,

FABRICANTE DE

TECHOS DE ACERO ESTAMPADO

40 CHERRY STREET,

NEW YORK, U. S. A.

Desea Agentes Especiales en todos los Puertos de Mar de la América Latina. Enviense referencias con las solicitudes. Catálogos en Español y Muestras gratis.

EL ZON-O-FONO MEJORADO.

CONSTRUIDO BAJO PATENTES PROPIAS:

Todos los demás, con Registros de Disco, son infracciones expuestas á persecución.

El Zon-o-fono es una máquina parlante con volumen de voz suficiente para llenar cualquier iglesia ó teatro. Su voz es alta, clara, distinta y armoniosa. El aparato es ligero, de poco volumen, de buena construcción y durable; se mueve con un mecanismo de reloj y no se descompone. Es la máquina parlante más á propósito para uso doméstico y para exhibiciones. Los registros se hacen en discos de caucho endurecido, tienen 7 pulgadas de diámetro, son indestructibles, y no les afectan los cambios de clima ni los de temperatura; se pueden usar indefinidamente sin que sufran deterioro. No se gastan ni se rompen como los de cera. El precio del aparato completo como lo representa el grabado, pero sin los discos, es \$25.00. Zon-o-fono para niños, \$6.00. Los registros cuestan 50 centavos cada uno. Pídanse catálogos y listas de precios de vistas de movimiento, aparatos para las mismas, registros, sellos fechadores con horas, aparatos para rayos X, bicicletas, novedades eléctricas, quinetoscopios para sala, abanicos eléctricos con batería, aparato para fría agua sin hielo.

F. M. PRESCOTT,

Único Agente para la Exportación.

El Catálogo ilustrado en español ó en cualquier otro idioma se manda gratis á quienes le pidan. Se solicitan agentes para la venta en todos los países. Pídanse las condiciones.

MORRIS BUILDING,

Nueva York, E. U. A.

Oficina en Europa:

Ritterstrasse, 71, Berlín, Alemania.

INCUBADORAS

Hemos fabricado Incubadoras y Criadoras en los Estados Unidos por 15 años. Nuestras Incubadoras son notables por la uniformidad de la temperatura; y por lo que se refiere á la regulación y del calor, la ventilación y la humedad, están muy por encima de cuantas se fabrican en este país. También nuestra Heladera "Instant." Hielas los sorbetes inmediatamente con menos gasto que cualquier otra Heladera. Deseamos Agentes para nuestras Máquinas á quienes se concederán Territorios Especiales. Escribáse en solicitud de condiciones.

No. 1.

INTEROCEANIC CANAL.

A CONVENTION BETWEEN THE UNITED STATES AND GREAT BRITAIN TO FACILITATE THE CONSTRUCTION OF A SHIP CANAL TO CONNECT THE ATLANTIC AND PACIFIC OCEANS, SIGNED AT WASHINGTON, NOVEMBER 18, 1901.

The United States of America and His Majesty EDWARD THE SEVENTH, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, and Emperor of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the Convention of the 19th April, 1850, commonly called the Clayton-Bulwer Treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the "general principle" of neutralization established in Article VIII of that Convention, have for that purpose appointed as their Plenipotentiaries:

The President of the United States, JOHN HAY, Secretary of State of the United States of America;

And His Majesty EDWARD THE SEVENTH, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, and Emperor of India, the Right Honourable LORD PAUNCEFOTE, G. C. B., G. C. M. G., His Majesty's Ambassador Extraordinary and Plenipotentiary to the United States;

Who, having communicated to each other their full powers, which

were found to be in due and proper form, have agreed upon the following articles:

ARTICLE I.

The high contracting parties agree that the present Treaty shall supersede the aforementioned Convention of the 19th of April, 1850.

ARTICLE II.

It is agreed that the canal may be constructed under the auspices of the Government of the United States, either directly at its own cost, or by gift or loan of money to individuals or corporations, or through subscription to or purchase of stock or shares, and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

ARTICLE III.

The United States adopts, as the basis of the neutralization of such ship canal, the following rules, substantially as embodied in the Convention of Constantinople, signed the 28th October, 1888, for the free navigation of the Suez Canal, that is to say:

1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal, except so far as may be strictly necessary; and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.

Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

5. The provisions of this article shall apply to waters adjacent to the canal, within 3 marine miles of either end. Vessels of war of a

belligerent shall not remain in such waters longer than twenty-four hours at any one time, except in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within twenty-four hours from the departure of a vessel of war of the other belligerent.

6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof, for the purposes of this treaty, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents, and from acts calculated to impair their usefulness as part of the canal.

ARTICLE IV.

It is agreed that no change of territorial sovereignty or of international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty.

ARTICLE V.

The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by His Britannic Majesty; and the ratifications shall be exchanged at Washington or at London at the earliest possible time within six months from the date hereof.

In faith whereof the respective Plenipotentiaries have signed this treaty and hereunto affixed their seals.

Done in duplicate at Washington, the 18th day of November, in the year of Our Lord one thousand nine hundred and one.

PAUNCEFOTE. [SEAL.]

ARGENTINE REPUBLIC.

ECONOMIC DEVELOPMENT.

The following data relative to the development of the public wealth of the Argentine Republic was furnished by Señor DON MARTÍN GARCÍA MÉROU, formerly Secretary of Agriculture and now Minister to the United States, in an interview published by a recent French commercial journal.

The Argentine States promise to develop rapidly. They attract many immigrants, the climate is salubrious and the configuration of the land is such as to render communication easy.

The products of the Republic are varied, as it contains three zones—torrid, temperate, and frigid.

About 4,835,620 hectares of the Republic's territory are devoted to the cultivation of wheat, rye, alfalfa, corn, barley, tobacco, sugar cane, and vineyards. In 1899 statistics showed that the following areas in hectares were devoted to agriculture: Wheat, 2,049,683; rye, 1,244,182; alfalfa, 713,091; barley, 54,574; sugar cane, 55,469; tobacco, 15,796; vineyards, 33,469. The remainder (669,356 hectares) was devoted in general to the cultivation of corn, fruit trees, and vegetables of all kinds.

The vast natural prairies of the Provinces of Buenos-Ayres, Santa Fé, Córdoba, Entre Rios, Corrientes, and the Territory of Central Pampa are devoted to the raising of all kinds of domestic animals. In 1899 there were 22,000,000 cattle, 5,000,000 horses and mules, and 85,000,000 sheep. The Argentine Republic raises more sheep than Australia, and exports 240,000 tons of wool annually. Wild cattle are scarcely to be found in any part of the Republic. The stock is improved each year by the introduction of famous European breeds, such as Durhams, shorthorns, Herefords, Polled Anguses, Jerseys, etc. In 1899, 2,187 head of choice cattle were imported free of duty.

The exports of agricultural products during the year named were valued at 115,546,906 *pesos*, distributed as follows: Live stock, 9,027,996; animal products, 102,409,004; prepared animal products, 3,542,077; other derived products, 567,829.

The total exports for the above-mentioned year reached a little more than 184,000,000 *pesos*; as the imports amounted in round numbers to 116,000,000 *pesos*, the balance of trade is thus shown to be nearly 70,000,000 *pesos* in favor of the Argentine Republic.

In 1899 the 20 railroad lines in operation had attained a total length of 16,564 kilometers. In a few years, with the completion of the projected lines, they will have a length of 27,207 kilometers. Of these lines 16 are English and 4 belong to the Argentine Government.

The use of street cars is becoming general in the cities, the city and suburban railway lines having a length of more than 1,000 kilometers. The capital which has been invested in these lines amounts to more than 200,000,000 *francs* (\$38,600,000), and is almost entirely English. A few small electric lines in Buenos Ayres are German.

The telegraph lines have a length of 15,074 kilometers and represent an invested capital of 25,890,000 *francs* (nearly \$5,000,000).

Immense forests are found in the Provinces of Salta, Santiago del Estero, and Corrientes, as well as on the national lands of Chaco, Formosa, and Misiones. These forests produce various kinds of woods, which are mostly hard varieties, and all can be used for building and cabinet making. During the years 1895–1899 about 8,000 tons of wood

were exported, while the production greatly increased during the year 1900. The exploitation of these wooded regions is facilitated by a system of rivers which all flow into the Rio Parana, which, with the Rio Uruguay, forms the Rio de la Plata.

Oil wells have been discovered in the Province of Mendoza, and coal mines have been found in different parts of the country.

ANALYSIS OF COMMERCE WITH THE UNITED STATES IN 1900.

The Department of Foreign Affairs at Buenos Ayres has recently published some interesting data, compiled from the records on file in the office of the Consul-General of the Argentine Republic in New York, respecting the movement of foreign commerce between ports of the United States and those of the Argentine Republic during the year 1900. According to these statistics 72 steamships and 177 sailing vessels, with a capacity of 108,245 and 144,743 tons, respectively, cleared from American ports during the period mentioned. Eighty-three of these vessels sailed from New York, 28 from Boston, 11 from Portland, 43 from Pensacola, 6 from Philadelphia, 30 from Mobile, 7 from Apalachicola, 5 from Norfolk, 10 from Savannah, 1 from Baltimore, and 25 from Pascagoula, Miss. The following table shows the movement of vessels clearing from United States ports destined to Argentine ports during the last eight years:

Years.	Number of ships.	Capacity.	Years.	Number of ships.	Capacity.
		<i>Tons.</i>			<i>Tons.</i>
1893.....	188	150,524	1897.....	190	184,155
1894.....	191	176,956	1898.....	244	237,672
1895.....	179	181,082	1899.....	258	280,881
1896.....	235	213,078	1900.....	249	252,988

In 1900, 75 vessels proceeding from Argentine ports entered ports of the United States, 12 of which were steamships and 63 sailing vessels, having a total capacity of 10,727 and 47,245 tons, respectively. Of these 45 entered at New York, 19 at Boston, and 11 at Philadelphia, the aggregate carrying capacity being 37,232, 12,186, and 8,554 tons, respectively. The annexed statistics show the number and capacity of vessels entering United States ports from Argentine ports during eight years:

Years.	Number of vessels.	Capacity.	Years.	Number of vessels.	Capacity.
		<i>Tons.</i>			<i>Tons.</i>
1893.....	72	53,002	1897.....	65	88,280
1894.....	77	74,220	1898.....	70	59,572
1895.....	108	95,483	1899.....	64	58,879
1896.....	68	51,986	1900.....	75	57,972

The total number of vessels engaged in the maritime commerce of the two countries, together with their tonnage, during the eight years under consideration, were:

Years.	Number of vessels.	Capacity.	Years.	Number of vessels.	Capacity.
		<i>Tons.</i>			<i>Tons.</i>
1893.....	311	212, 048	1897.....	275	272, 435
1894.....	268	251, 276	1898.....	314	297, 244
1895.....	287	276, 565	1899.....	322	330, 769
1896.....	303	268, 064	1900.....	324	310, 960

Analyzing the statistics of 1900, for example, it is seen that while 249 vessels, of a capacity of 252,988 tons, left the United States ports bound for the Argentine Republic, only 75 vessels, of a capacity of 57,972 tons, entered harbors of the United States proceeding from Argentine ports. In other words, in the maritime commerce of the two countries during the period mentioned the United States dispatched 174 more vessels to the Argentine Republic than was received from that country, the carrying capacity of which exceeded the tonnage of the vessels proceeding from Argentine ports employed in the same trade by 195,016 tons.

The exportations made from the United States to the Argentine Republic during the year 1900 consisted of railway supplies, agricultural implements, hardware, machinery, and sundry merchandise, the invoiced values of which were as follows:

From—	To—	Amount.	From—	To—	Amount.
New York.....	Buenos Ayres.....	\$11, 768, 010	Pascagoula.....	Rosario.....	\$46, 111
Do.....	Rosario.....	1, 300, 128	Do.....	Bahia Blanca.....	8, 190
Do.....	Bahia Blanca.....	67, 914	Do.....	Puerto Belgrano..	35, 173
Do.....	Campana.....	600	Do.....	La Plata.....	22, 908
Do.....	La Plata.....	4, 083	Pensacola.....	Buenos Ayres.....	258, 608
Apalachicola.....	Buenos Ayres.....	35, 434	Do.....	Rosario.....	42, 994
Baltimore.....	Do.....	8, 921	Do.....	Bahia Blanca.....	17, 295
Boston.....	Do.....	407, 367	Do.....	Campana.....	9, 932
Do.....	Rosario.....	69, 850	Portland.....	Buenos Ayres.....	63, 078
Mobile.....	Buenos Ayres.....	191, 032	Do.....	Rosario.....	18, 391
Do.....	Rosario.....	45, 040	Do.....	Bahia Blanca.....	31, 540
Do.....	Bahia Blanca.....	6, 800	Philadelphia.....	Buenos Ayres.....	98, 715
Norfolk.....	Buenos Ayres.....	36, 228	Savannah.....	Do.....	122, 042
Do.....	Rosario.....	5, 335			
Pascagoula.....	Buenos Ayres.....	131, 114	Total exports.....		14, 852, 823

The following shows the values of the exportations from the United States to the Argentine Republic during the five years: 1896, \$8,361,195; 1897, \$5,942,912; 1898, \$8,066,573; 1899, \$12,378,866; 1900, \$14,852,813.

The annexed table shows the exports from the Argentine Republic to the United States in the year 1900:

To—	Articles.	Quantity.	Value.
New York	Wool, first grade	pounds.. 816, 269	\$139, 936
	Wool, third grade	do. 660, 225	55, 743
	Hides	number. 808, 306	2, 852, 546
	Goatskins	bales.. 1, 687	650, 803
	Other skins	pounds.. 217, 114	38, 483
	Sundry articles	21, 959
	Bones	tons. 1, 998	33, 634
	Ostrich feathers	cases.. 131	36, 062
	Hair	bales.. 430	248, 357
	Furs	48, 528
	Meats	4, 351
	Oils	350
	Chemicals	212, 151
	Dyewoods	168, 833
	Intestines	barrels.. 879	88, 898
	Horns	176
	Sundry woods	115
Boston	Wool, first grade	pounds.. 9, 695, 886	1, 902, 577
	Wool, third grade	do. 8, 459, 470	700, 335
	Hides	number. 227, 777	970, 666
Philadelphia	Goatskins	bales.. 284	99, 589
	Bones	tons.. 9, 935	167, 403
Total			8, 441, 495

The exports from the Argentine Republic to the United States during seven years were valued as follows: 1894, \$4,170,986; 1895, \$11,206,865; 1896, \$7,072,825; 1897, \$14,759,730; 1898, \$5,723,969; 1899, \$6,164,961; 1900, \$8,441,495.

INFLUENCE OF INDIA ON THE MARKET FOR ARGENTINE WHEAT.

The "Buenos Aires Handels-Zeitung" recently published an article regarding the influence of the Indian wheat crop upon the market for Argentine wheat, as in both countries the crop ripens at the same time, or during the "dead season" in other lands.

The first part of this article is a translation of one which appeared in the MONTHLY BULLETIN for November, 1900 (p. 988). Other statistics and deductions are interesting. It is stated that in the last six agricultural years, which in India are counted from the 1st of April to the 31st of March of the following year, the wheat export of British-India amounted to:

Year.	Export tons.	Year.	Export tons.
1894-95	348, 300	1897-98	121, 500
1895-96	504, 900	1898-99	982, 800
1896-97	99, 900	1899-1900	488, 700

"A glance at these dates shows the great difference there is in the exportation. The contrast between the minimum of 99,900 tons in 1896-97 and the maximum of 982,800 tons in 1898-99 is very great.

“But there is an essential difference between the Argentine Republic and India as wheat-growing countries. With the Argentine Republic’s scant population, the general amount of wheat exported per head is from 500 to 700 kilograms (1,102 to 1,543 pounds), whereas in India, with its dense population of, in round numbers, 300,000,000, only 25 kilograms (55 pounds) per head is exported even in the most favorable years. This small quota shows sufficiently that India will never be an important wheat-exporting country.

“It so happens that in India, notwithstanding its immense production of wheat, all is needed for home consumption, and, were this the only food of the people, there would not even be enough in the country to satisfy their wants. India’s exportation of wheat amounts to little more than from 2 to 4 per cent in the years of famine, and even in favorable years has never exceeded 14 per cent.

“It is different in the Argentine Republic, which only finds use for the smaller quantity of its crop in its own country. In normal years the surplus for exportation amounts to about 70 per cent of the total production. As a general producing country the Argentine Republic only stands eighth on the list, after the United States, Russia, France, India, Austria-Hungary, Italy, and Germany, all of whose productions exceed hers, but in wheat production the Argentine Republic is only surpassed by the United States.”

THE PORTS OF BAHIA BLANCA, COLASTINÉ, AND SAN CLEMENTE.

The “Buenos Aires Handels-Zeitung,” in a recent issue, stated that a commission, consisting of LUIS KUNKLER, CARLOS DELAVIGNE, and RENÉ COULON, for making the plans for the building of a commercial port in Bahia Blanca, by a French company, is now in the latter town.

The depth of water at the new port is to be maintained at 32 feet, so that even the largest ocean steamers will be able to put into that harbor.

The size of the port works will be such as will accommodate a traffic estimated at 1,000,000 tons yearly. Three years is the time allowed for the completion of all improvements. The total cost is estimated at \$6,000,000 gold.

The French Railroad Company of the Province of Santa Fé, says the “Bulletin Commercial,” of Brussels, has applied to the Argentine Republic for the authorization to extend, at its own expense, the maritime installations which it owns in the port of Colastiné on the Parana.

According to the law relating to this concession, the company intends principally to build 800 meters of wharf and to erect grain elevators and to put in cranes, as well as all other machinery necessary for loading and unloading merchandise. As is usual, in the case of

works of this kind, the material and machinery necessary will be admitted free of duty.

According to the "Monthly Bulletin of the French Chamber of Commerce" at Buenos Ayres, the Government of the Argentine Republic has approved the basis of a contract presented by the Inspector-General of Navigation and Ports for the construction and working of a commercial port in the Bay of San Clemente, in the South Atlantic. Señores JORGE GUERRERO and MARTINEZ ITUNO are named as the concessionaires for the construction work of the port which is situated between Cape San Antonio and the mouth of the River San Clemente.

EXPORTS OF ANIMALS AND ANIMAL PRODUCTS.

During the first nine months of 1901 the number of live cattle exported from the Argentine Republic amounted to 108,241, as compared with 124,894 during the same period of 1900. The live sheep exported numbered 22,643, against 194,505 in 1900. The exports of dressed beef (frozen) weighed 31,646 tons, against 15,309 tons during nine months of 1900, while the exports of dressed sheep (frozen wethers) weighed 45,828 tons in the aggregate, against 43,648 tons of such exports in nine months of 1900. The exports of jerked beef in the periods under comparison were 14,828 tons in 1901 and 9,274 tons in 1900. The wool exports increased from 82,828 tons to 177,717 tons in the same time. The exports of butter increased from 1,445,569 to 1,626,572 pounds, and of cheese from 1,333 to 2,968 pounds.

THE FORESTS OF TUCUMÁN.

A memorial was recently presented by the Director of the Immigration and Labor Department of Tucumán to the Minister of Agriculture of the Republic relative to the advantages to be derived from the development of the timber industries of that Province. It is stated that within the boundaries of Tucumán there are some 8,000 square kilometers of forest land, the greater part of which has remained untouched until the present time. Valuable woods abound which are specially adapted for the construction of cabinet work, carriages, etc., while there are numerous quebracho and other trees, including the *anoso* and *nounday*. Many of these trees are of large growth, attaining in some cases a height of 20 meters.

MINERAL NOTES.

A report from Jujuy states that at La Union copper mines over 10,000 tons of ore have been mined, and that a new vein of ore 4 meters thick has been discovered. These mines are 40 leagues distant from Jujuy, and on the line of the proposed Bolivian Railway. The

"Montevideo Times" reports the discovery of gold in the sands of the coast of the Argentine Republic near Cape Virginis. A petition has been presented to the Government asking leave to prospect for gold on 100,000 square meters in that vicinity. A similar petition has been presented for prospecting on a section of the coast between Cape Virginis and Canadon Lucacho, while leave has been requested to explore certain regions in Tierra del Fuego where the presence of minerals is suspected.

STEAMSHIP SERVICE TO SOUTHERN PORTS.

The British Consul at Buenos Ayres has informed his Government of the establishment of a steamship service by the Hamburg South American Company, under the name of the "National Southern Line," from Buenos Ayres to the southern part of the Republic, including Punta Arenas. There is to be a sailing once every twenty days dating from October 15, 1901, and two steamers of 4,000 tons each are to be employed in the service. It is also reported that up to May, 1902, the Argentine Government offers free passage on the national transports to individuals and families who have purchased land in the regions indicated; also the transportation of a limited number of farm animals, carts, tools, furniture, and building material with each family.

THE BUENOS AYRES AND VALPARAISO TRANSANDINE RAILWAY.

In London, on December 12, 1901, at the annual meeting of the stockholders of the Buenos Ayres and Valparaiso Transandine Railway Company, it was stated that the line was still in course of construction; also, that, while technically it connected with the Chilean railways, there could not be any great amount of traffic until through communication was effected. As this railway is essentially a mountain road, there are not many villages or centers of traffic from which to draw present support. It is believed, however, that considerable sums will be realized from the transportation of minerals.

This railway is the end of a long series of lines starting from Buenos Ayres—the Buenos Ayres and Pacific Railway, the Argentine Great Western Railway, and then the Buenos Ayres and Transandine Railway proper. The latter road was begun at Mendoza and will traverse 110 miles of Argentine territory before reaching the Chilean frontier. Of the 110 miles, 89 are open to traffic, 11 are nearly ready, while the roadbed of the remaining 10 miles is nearing completion. On the Chilean side the total length of the road will be 43 or 44 miles, of which 17 have been completed. It is believed that the establishment of railway communication between the Argentine and Chilean Republics will, in the future, prove to be a fraternal as well as a commercial tie.

BOLIVIA.

BUDGET FOR 1901-2.

The "Buenos Ayres Standard" gives the following figures as representing the Bolivian budget for 1901-2, as presented to Congress in August, 1901:

INCOME.		Bolivianos.
Customs dues on imports	4, 287, 000	
Customs dues on exports	2, 091, 390	
Interdepartmental dues	55, 310	
Excise of spirits	629, 500	
Excise on cacao and tobacco	299, 927	
Poll tax on Indian village proprietors	185, 628	
Land tax, tithes, and first fruits	745, 184	
Potosi mint-gross revenue	110, 000	
Nickel money (coined in Europe)	200, 000	
Consular fees for manifests of goods	150, 000	
Post-offices and telegraph (gross)	168, 000	
Tolls on bridges and roads	52, 300	
Licenses to India rubber producers	100, 000	
Licenses to miners	70, 540	
Stamps for documents, etc	229, 548	
Taxes on companies' profits	160, 000	
University fees	40, 545	
Succession dues	15, 100	
Police fines	16, 017	
Registered trade-marks	200	
Subventions to Departments (States)	334, 678	
Subvention from La Paz to railway	70, 000	
Extras and unspecified	107, 842	
Total	10, 117, 700	

EXPENDITURES.		
For President, Vice-President, Prefects, etc., and office expenses	188, 964	
Ministers', employees', and office expenses	116, 310	
Accountancy	206, 745	
Payments, capital and interest, to creditors	929, 658	
Allowances to Senators and Deputies	136, 198	
Salaries and allowances to Ministers and Consuls	530, 541	
Railways, roads, bridges, waterworks, etc	1, 375, 937	
National and Departmental war budget	2, 748, 943	
Justice, prisons, and maintenance of prisoners	704, 536	
Education, school buildings, etc	546, 485	
Departmental police	336, 254	
Hospitals and public charities	160, 003	
Public worship, church buildings and repairs	280, 108	
Public buildings, printing, etc	175, 766	
Post-offices and telegraph	439, 124	

	Bolivianos.
Potosi mint	88, 270
Custom-house expenditure	324, 172
Immigration, statistical, and mining bureaus	65, 060
Inspection of banks	7, 000
Indemnifications and extraordinary expenses	121, 000
Pensions, etc	99, 520
Special assignments	128, 351
Subventions to Departments	280, 198
Total	9, 989, 153

ARBITRATION PROTOCOL WITH PERU.

At La Paz, on November 26, 1901, a protocol was signed submitting to arbitration pending questions between the two Republics of Bolivia and Peru. The parties signatory to this document were the Bolivian Minister of Foreign Affairs and the Minister of the Republic of Peru, residing in La Paz.

COMMERCE OF THE FISCAL YEAR 1901.

The Consul-General of Bolivia at New York has furnished the MONTHLY BULLETIN with some interesting data concerning the foreign commerce of the Republic of Bolivia during the year which ended June 30, 1901, compiled from a report which the Secretary of the Treasury submitted to the National Congress at its last regular session. This report shows that the total imports into Bolivian territory during the year referred to, not including goods which entered the Republic through the Territory of Acre, amounted to 13,500,000 *bolivianos*, while the exports, including those of the Territory of Acre, during the same period aggregated 35,000,000 *bolivianos*, or an excess of exports over imports of 22,000,000 *bolivianos*. The total value of the exports and imports during said year was 49,000,000 *bolivianos*.

The principal articles imported were as follows, valuations being expressed in *bolivianos*:

Cotton goods, 1,700,000; food stuffs, 1,500,000; woolen goods, 1,300,000; small wares and hardware, 800,000; wines and liquors, 600,000; ready-made clothing, 500,000.

The principal countries from which imports were received, in the order of their importance, with the amounts received in each, expressed in *bolivianos*, were:

Germany, 3,300,000; England, 2,300,000; Peru, 2,000,000; Argentine Republic (mainly cattle), 1,000,000; United States, 900,000; and France, 800,000.

The greater part of the importations from Peru and Chile are free of duty. The imports of Chilean products during the year were valued at 700,000 *bolivianos*. It is estimated that these commercial

franchises in favor of Peru and Chile reduce the customs receipts of Bolivia by at least half a million *bolivianos* annually, and at the same time almost completely shut out the competition of other countries in the foreign commerce of the Republic with regard to all those imported products which can easily and naturally be supplied by the two favored nations.

Bolivia exported during the year 1900 the following articles:

	Bolivianos.		Bolivianos.
Silver	13,000,000	Tin.....	8,000,000
Rubber.....	10,000,000	Copper	1,000,000

The receipts of the custom-houses of the Republic in 1900, not including those of the Territory of Acre, aggregated 4,038,486 *bolivianos*, or 748,485 *bolivianos* in excess of the budget. The receipts of the different custom-houses during the year 1900 were as follows:

	Bolivianos.		Bolivianos.
Antofagasta	2,221,580.94	Tarija	123,123.87
Arica	418,190.44	Puerto Suarez.....	143,859.54
La Paz.....	885,825.54	Villa Bella.....	111,973.85
Oruro	34,623.87		
Uyuni	87,076.51	Total	4,038,486.14
Tupiza.....	12,231.58		

The export tax on metals and minerals in 1900 yielded revenue as follows:

	Bolivianos.
Silver	421,540.10
Tin and bismuth.....	298,508.05
Copper	54,220.00
Total	774,268.15

The mining industry of Bolivia has always constituted one of the principal elements of wealth of the Republic. This industry is at present in a flourishing condition, and there is every reason to believe that it will continue to grow and prosper. The mining of copper, tin, and other ores increased considerably in 1900, as is shown by the large exportation of these products, the revenue derived by the Government from the same, and the number of mining concessions awarded. During the fiscal year 1899-1900 the mining concessions granted numbered 669, and covered an area of 15,295 hectares, while in the fiscal year 1900-1901 these permits numbered 1,172 and covered 31,315 hectares, or an increase of 503 permits and 16,020 hectares. Up to the year 1900, 119 concessions, embracing 596,480 hectares of land, were issued by the Bolivian Government, covering the mining of emeralds, coal, petroleum, peat, borax, calcite, sulphur, different salts, etc. In 1900, 56 concessions were granted for the exploitation of the above substances, covering an area of 471,744 hectares, all of which shows the immense natural resources of the country, and the important part these products are playing in the development of the Republic, affording at the same time a new source of governmental revenue.

During the last eighteen months Bolivia has made concessions to the following persons: JULIO M. TRIGO, for the manufacture of palm liquor; ANTONIO CAMPONOVO, for polishing marble; ANGEL LOMBARD, for the transformation of hydraulic force of the Desaguadero River into electrical energy; GREGORIO SPALDING & Co., for improvements in rotary disk plows; and CESAR CABALLERO, for treatment of bismuth ores, oxides, and sulphides by chlorination, using in the process successive solutions of water, sulphuric acid, and salt. Negotiations are now being carried on for the establishment of a new system for treating gold, copper, and tin ores by the lixiviation process; for the manufacture of quinine by a new method; for the utilization of the fumes of furnaces as heat for the smelting of ores, and for the establishment of hat, cotton goods, and brick manufactories.

From July, 1899, to July, 1900, the Government granted rubber concessions covering 7,264 estradas in the Department of La Paz, 9,590 in Santa Cruz, and 500 in Cochabamba.

Bolivia exported the following products through the port of Antofagasta, Chile, in the year 1900:

Articles.	Weight.	Articles.	Weight.

OPPORTUNITIES FOR THE ESTABLISHMENT OF ELECTRIC PLANTS.

"El Estado," the official organ of the Bolivian Government, in its issue of November 23, 1901, contains an interesting article concerning the opportunities for the establishment of electric plants in several of the principal cities of the Republic. The article in substance is as follows:

The cities of Sucre, La Paz, Cochabamba, and Potosi afford positive advantages for the establishment of electric-light plants operated by hydraulic motors. The first of these cities can utilize the currents of the Cachimayo River, which is but a short distance from the town;

the city of La Paz can use the Coqueyapu River, which flows through its center; the city of Cochabamba can utilize the waters of the Rocha River, and especially those of the Colomi River which, at a distance of 30 kilometers from the city has a fall of more than 100 meters; and the city of Potosi can use the waters of the neighboring lakes. The rights of the companies which may establish this class of industries are duly protected by law.

In 1888 an electric-light plant was established in La Paz, and the power house was located in the upper part of the city in order to utilize the currents of the river. The contract now in force between the municipal council and this company contains the following clauses:

The company agrees to light the city, using for this purpose 425 incandescent lamps of 16 candlepower each, and 8 arc lamps of 3,000 candlepower each. On moonlight nights the company furnishes no light to the city, and on other nights only until 1 o'clock in the morning. The municipal council pays an annual subsidy to the company of 26,000 *bolivianos*, payable monthly in advance. The duration of the present contract is eight years, five of which have already expired.

Should any company desire to utilize these natural elements for establishing tramways or any other industry, it should bear in mind that the decree of May 8, 1858, guarantees to the importers of machinery for any methods of manufacture or industry unknown before in the Republic an exclusive privilege for ten years. This term may be extended by legislative enactment.

The municipal governments pay subventions only for public service, leaving the companies free to contract with private individuals in such terms as they may deem most convenient.

The population of the aforesaid cities is as follows: Sucre, 20,907; La Paz, 46,000; Cochabamba, 21,896, and Potosí, 20,000.

In addition to the points already mentioned where water could be utilized as power, any responsible company with sufficient capital would have the right to select any other place for the establishment of its plant, with the privilege of extending its operations to other parts of the country, and a concession would be granted to such company permitting it to use the national waters, provided that, after generating power from the same, the waste waters be returned to the streams from which they were originally taken. Should the company desire to use private streams, it would have to contract with the owners thereof.

In case a joint stock company should be organized for the purposes mentioned, it would have to pay to the State 2 per cent per annum of its net profits. At the expiration of the concession, the Government could grant to other companies desiring to engage in the same line of business concessions equal to the original, and, all things being equal, no preference will be given to any particular company.

It should be borne in mind that the subvention of 26,000 *bolivianos* which the municipal government of La Paz pays to the electric-light company, could not, perhaps, be paid by other municipalities whose revenues are smaller.

Any interested person desiring further information and particulars regarding the subject may apply to Señor GUILLERMO SANJINÉS, chief clerk of the Department of the Interior, La Paz, Bolivia.

STATISTICS OF INDEBTEDNESS.

The "Chilean Times" of October 23, 1901, gives the following figures relative to the indebtedness of the Republic of Bolivia, the total sum equalling only about one-third of the amount of the foreign commerce of the country in 1900, which, as stated in the MONTHLY BULLETIN for November, 1901, represented 49,001,804.45 *bolivianos*.

Foreign debt: Huanchaca Company, 2,207,032.65 *bolivianos*; Corocoro de Bolivia, 2,818,000 *bolivianos*; Minera de Oruro, 287,956.50 *bolivianos*; bonds of loan raised in Chile, 1,238,841.60 *bolivianos*; total, 6,551,830.75 *bolivianos*. Up to 1899 the total of the amortized foreign debt aggregated 5,732,016.86 *bolivianos*.

The international debt amounts to 7,306,021.41 *bolivianos*, making, with the foreign debt, a total of 13,857,852.16 *bolivianos*.

TREATIES WITH THE UNITED STATES.

A dispatch dated La Paz, December 9, 1901, states that on the date named the National Congress of Bolivia approved two treaties with the United States. The first is an extradition treaty, while the second provides for the use of postal money orders between Bolivia and the United States.

DISCOVERY OF BORAX DEPOSITS.

Recent telegrams from Bolivia state that valuable deposits of borax have been discovered in that country. These deposits are located along the Mauri River on the boundary line with Peru.

NEW TRAMWAY.

The "Buenos Aires Handels-Zeitung" states that a tramway is being built in Cochabamba, which is to unite that city with Quillo-Collo. It is to be finished in one year. Besides that, another line, running to the provinces of Del Valle and Arami, is projected.

BRAZIL.

TRADE-MARK CONVENTION WITH THE ARGENTINE REPUBLIC.

On the 30th of October a convention for the protection of trade-marks was signed at Rio de Janeiro by Dr. MANOEL GOROSTIAGA, Argentine Minister to Brazil, and Dr. OLYNTHO DE MAGALHÃES, Minister of Foreign Relations of the Brazilian Republic.

By the terms of this agreement manufacturers and merchants in Brazil and the Argentine Republic who have registered trade-marks in their respective countries, in accordance with the regulations prescribed by law, may likewise register the same in the other country, provided they conform to the laws and regulations of the country in which the registration is effected.

The ratifications of the convention will be exchanged as soon as possible at Rio de Janeiro. The convention ceases to be in force six months from the date on which either of the high contracting parties shall notify the other of the desire to terminate the same.

FOREIGN COMMERCE DURING THE FIRST THREE MONTHS OF 1901.

According to the "Boletim do Servico de Estatistica Commercial," the total exports of Brazil for the first three months of the last year amounted to 255,495,868 *milreis*, while the imports for this period were valued at 71,682,900 *milreis*, showing a total volume of trade during the period under consideration of 277,178,768 *milreis*.

The classification of imports and exports for the first quarter of 1901 was as follows, the values being compared with those reported for the same period in 1900:

	1901.	1900.
EXPORTS.		
	<i>Milreis.</i>	<i>Milreis.</i>
Animals and animal products	6,803,336	1,559,286
Minerals and mineral products	3,846,634	5,537,752
Vegetable products	194,607,525	110,539,269
Specie	238,373	235,495
Total	205,495,868	117,871,802
IMPORTS.		
Raw material	13,127,398	
Articles for use as materials in the manufactures and mechanic arts	5,936,983	
Articles ready for consumption	22,547,563	
Miscellaneous articles	28,572,384	
Specie	1,498,572	
Total	71,682,900	

The following table gives the imports, by countries, during the first quarter of 1901:

EUROPE.		AMERICA.	
	Milreis.		Milreis.
Great Britain.....	18,062,442	Argentine Republic.....	10,295,773
Portugal.....	6,281,493	United States.....	6,743,313
Germany.....	5,785,699	Uruguay.....	5,842,503
France.....	5,602,981	Peru.....	341,887
British Possessions.....	3,155,566	Cuba.....	15,472
Italy.....	3,029,997	Paraguay.....	6,332
Belgium.....	1,715,444	Chile.....	2,859
Austria-Hungary.....	1,120,299	Imports whose origin is un-	
Norway and Sweden.....	653,165	known.....	59,713
Spain.....	465,467		
Switzerland.....	424,604	Total imports of mer-	
Holland.....	393,748	chandise.....	70,184,328
Denmark.....	150,310		
Russia.....	25,037		
Turkey.....	8,552		
Greece.....	1,672		

The total exports of coffee for the first three months of the present year amounted to 2,449,324 bags of 60 pounds each, compared with 1,871,014 bags for the same period of 1900.

THE CEMENT TRADE.

According to information sent by the Belgian Legation at Rio de Janeiro to the "Bulletin Commercial," of Brussels, on the trade of Brazil, and especially of Rio de Janeiro and the States of Minas Geraes, Espirito Santo, and Bahia, the annual imports of cement to Brazil are estimated at about 26,000,000 kilograms.

The national cement industry is very little developed, the only factory of any importance being that of Radovalho, in the State of São Paulo.

The consumption of cement is considerable in Brazil, where its employment is general, as it is used for sidewalks, inside courtyards, steps, corridors, etc. The sale of this product is generally made in 90 days' time with 2 per cent discount.

Important improvements in drainage, electric lighting, electric traction, the building of wharfs, etc., are soon to be commenced in the principal cities of the country, including, among others, Rio de Janeiro, São Paulo, Bahia, Pernambuco, Belém, Pará, and Manãos, and the demand for cement will therefore undoubtedly increase.

During the year 1900 the imports of cement at Rio de Janeiro were as follows, in barrels: From Belgium, 122,387; Germany, 17,144; England, 3,924; France, 818; other countries, 424.

According to information recently published by the "Diario Oficial," the total Brazilian imports of cement during the first six

months of 1901 were 12,743,096 kilograms, and during the month of June alone 3,064,697 kilograms.

The import duties are fixed as follows by the customs tariff of 1897, which is still in force:

Roman or Portland cement, or others, rough or powdered, 20 *reis* per kilogram; the tare is 10 per cent in barrels or cases; in bags, net gross weight. Square cement tiles, plain or colored, called mosaics, with or without incrustations of marble, per square meter, 3,200 *reis*, tare the same as for cement.

There are no importing houses of cement in the State of Minas Geraes. The cement is introduced through the importers at Rio de Janeiro. No one brand enjoys absolute preference. The dealers buy from those who offer the greatest advantages in respect to price and credit. There are no statistics on the quantities and qualities imported by this State. The figures showing the imports at Bello Horizonte (capital of the State) for seven and one-half months, or from March 1 to October 14, 1901, give a total of 1,300 barrels. Up to the latter date cement was sold at retail at from 20 to 21.50 *milreis* per barrel. The brand most in demand (because it is cheapest) is the "Black Eagle."

It is difficult, through lack of statistics, to determine the quality of cement entering the State of São Paulo. An idea of the importance of the consumption can be gained from the fact that not only the city of São Paulo, but also most of the cities of this State are now constructing sewers for which large quantities of cement are employed. Sidewalks, courtyards, steps, and corridors are all made of cement. The sources of supply are Belgium, Germany (Germania brand), England (Portland brand), and France (Boulogne). Quick-setting cements of first quality are almost always demanded.

Several attempts have been made to produce cement in the State of São Paulo. The Radovalho factory makes a very excellent cement, but in small quantities. There are not enough quarries for this industry to develop to any great extent.

In the State of Bahia the use of cement is general for building and canalization, but the importation of cement has diminished on account of the financial conditions. In 1900 the imports were as follows, in barrels: From Hamburg, 8,155; Antwerp, 3,925; London, 2,200; Liverpool, 250. Up to January 15, 1901, the port of Hamburg alone sent 2,549 barrels of cement.

Cement of medium quality is preferred, of a resisting force at a tension of 25 kilograms after seven days and 40 kilograms after twenty-eight days per square centimeter.

The consumption of cement in the State of Espirito Santo is relatively very small. The annual importation of the entire State is estimated at from 3,500 to 4,000 barrels. However, with the improvement of

the economic and financial situation the revival in public and private works will give rise to a large increase in consumption. The German brands predominate. It is the same with cement as with the greater part of the German articles consumed in Victoria. The preference is imposed on account of facilities of maritime transportation, certain lines from Hamburg stopping at this port. The freight question is the most important, for, if sent by steamer, transportation costs almost twice the original price of the merchandise. As a proof of this it is stated that even from the United States cement is received every time a sailing vessel coming from New York stops at Victoria.

TOTAL NATIONAL DEBT.

A correspondent of the "South American Journal," under date of October 22, 1901, states that the report of the Minister of Finance of Brazil, recently published, gives figures which show the amount and classification of the national debt. From this the MONTHLY BULLETIN obtains the appended figures, which it reduces to United States valuations.

The foreign debt (funded) on January 1, 1901, was classified as under:

Four and one-half per cent of 1883, £3,267,300; 4½ per cent of 1888, £4,823,300; 4 per cent of 1889, £18,388,200; 5 per cent of 1895, £7,331,600; Western of Minas Railway bonds, £3,388,100; fundings, 5 per cent, £7,198,476; total, £44,396,976; increase for the year, £2,369,595. (This total, reduced to United States currency values, is about \$216,057,884.) To provide for the service of the foreign debt, which was renewed on July 1, 1901, the sum of £2,034,257 (\$9,899,712) was remitted to the Government agents in London.

The figures regarding the internal funded floating debt are brought up to March 31, 1901, the classifications being as follows:

Payable in gold: Six per cent of 1868, 6,710,000 *milreis*; 4½ per cent of 1879, usually included in foreign debt, 20,549,000 *milreis*; total, 27,259,000 *milreis*; decrease for year, 517,500 *milreis*. (Valuing the *milreis* at 54.6 cents United States gold, this represents a total of \$14,883,414.)

Payable in paper: Five per cent perpetual annuities, 483,400,100 *milreis*; 4 per cent perpetual annuities, 119,600 *milreis*; 6 per cent loan of 1897, 60,000,000 *milreis*; sundry inscribed debts previous to 1827, etc., 306,937 *milreis*; total, 543,826,637 *milreis*. (At a valuation of 15 cents United States gold per *milreis*, this represents a total of about \$81,573,996.)

The floating debt is classified as follows: Treasury bills, 17,500 *milreis*; savings banks deposits, 117,840,856 *milreis*; "*Mots de piété*," 143,633 *milreis*; total 165,577,335 *milreis*; decrease for the year,

13,832,341 *milreis*. (This total debt, at 15 cents gold per *milreis*, represents a valuation of \$24,836,603.)

Paper money in circulation, 689,000,000 *milreis* (\$103,350,000); decrease for the year, 36,706,000 *milreis*.

The total amount of the funded currency debt, floating debt, and paper money in circulation are added together to show that the total currency debt is 1,398,403,972 *milreis* (paper), or, stated in United States currency, at 15 cents per paper *milreis*, \$209,760,595.

Adding to the above the foreign funded debt and the internal gold funded debt, the total debt of the Republic, expressed in gold of the United States, is found to be \$440,701,893.

CONDITION OF THE COFFEE MARKET.

In the course of a report to the Department of State at Washington, the Consul-General of the United States at Rio de Janeiro says that the coffee trade of Brazil is undergoing a very healthy change. Forced by small profits, dealers and planters are combining against the unnecessary expenses with which the trade has heretofore been encumbered, hardly noticeable when profits were enormous, but very onerous since the conditions of the market have become precarious through over-production. Heretofore the planters have shipped their coffee to the "commissarios," on whom they were more or less dependent financially, and who supplied the wholesale dealers, the latter in turn selling to the exporters. The tendency at present is toward the abolition of the middlemen, and the principal exporters have commenced to deal with planters directly, thus effecting a saving of expense, time, and friction, while the producer and consumer are also benefited.

United States firms, which have heretofore been obliged to deal with privileged warehouses, have recently acquired abundant storage facilities with water front and dock privileges, whereby the hauling and docking expenses have been considerably diminished. Reports cabled by reliable houses, on November 12, 1901, both to the United States and Europe, state that the growing coffee crop (to be marketed after July 1, 1902) has been badly damaged by drought. They estimate the probable yield of the present crop at 7,500,000 bags—2,500,000 for Rio, 4,000,000 for Santos, and about 1,000,000 for the various other ports—this being about half the quantity of last year's harvest. A more recent report states that the crop will be 10,000,000 bags at the lowest estimate.

The Consul-General states that more detailed figures would be obtained when the Association of Factors (composed of the principal "commissarios" and wholesale dealers of Brazil) meet and compare notes, which they were to have done about December 1, 1901. Coffee prices have recently taken a sharp turn upward, and speculators have profited extensively by the situation thus created. As, on account of

the overproduction of recent years, a large surplus of coffee is stored in the principal markets of the world, it is doubtful whether a considerable advance in medium grades of coffee can be maintained.

ARBITRATION TREATY WITH GREAT BRITAIN.

On November 6, 1901, a treaty for the arbitration of the boundary dispute between Brazil and British Guiana was signed in London by the Brazilian Minister, Dr. JOAQUIM NABUCO, and Lord LANDSDOWNE. The ratifications of the treaty will shortly be exchanged at Rio de Janeiro.

REPORTS OF GOLD MINING COMPANIES.

The report of the St. John d'El Rey Mining Company for the six months ending August 31, 1901, was made public at a meeting of the directors of the company in London on December 5, 1901. The quantity of mineral taken from the mine (Morro Velho) during the six months was 80,487 tons, against 77,872 tons mined in the same period of 1900. Owing to the diminished yield of pure gold per ton, the profit for the half year was only £41,693, or a reduction of £28,000 from the profits of the same period in 1900. The mineral averaged 33s. 5d. pure gold per ton in the six months of 1901 covered by the report against an average of 42s. 6d. a ton in the corresponding period of the previous year.

The tenth ordinary meeting of the shareholders in the Ouro Preto Gold Mines, of Brazil, Limited, was held in London in December. The auditor's report showed that the operations of the company had yielded a profit of £5,107 4s. 5d., which is an amount considerably less than the earnings of the previous twelve months. The decrease was due to the rise in exchange. The quantity of ore crushed was 64,082 tons, as compared with 65,644 tons during the previous year. The value of the gold produced in 1901 was £87,037 10s., as compared with £88,247 2s. 7d. in 1900.

THE TOBACCO INDUSTRY OF BAHIA.

The British Consul at Bahia states that the tobacco trade is undoubtedly the most important industry in Bahia. The quantity of the last crop exceeded that of the preceding year, but the quality was not equal to that formerly produced. The bulk of the shipments went to Germany (two-thirds to Bremen and the remainder to Hamburg) and all the "mangote" (a coarse twist of oily tobacco) was sent to Bavaria, where it is manufactured into snuff.

Leaf tobacco is sorted in Brazil into from six to twelve classes, according to quality, previous to being exported. The trade is practi-

cally controlled by fourteen firms, eight of which are German, and the others Brazilian or Portuguese. The German firms are the most important, and work with their Bremen houses on a system of joint profits and loss. Germany supplies not only the necessary capital, but also the workmen, who arrive in Brazil as junior clerks, after serving an apprenticeship at home, where they acquire a knowledge of the tobacco traffic, the requirements of buyers, and also a rudimentary knowledge of the Portuguese language. Later these men travel into the interior of Brazil to purchase crops, and thus make the personal acquaintance of the planters. In the course of time they either open business establishments of their own or become interested partners in the firms which originally sent them out.

The crops are often purchased when barely out of the ground and are paid for at once, so that the transaction commences with a great element of risk, which is increased by the fluctuating valuations of the *milreis*. Large sums are made in the tobacco trade, but the losses are proportionate to the gains, and in 1900 were heavy owing to the poor quality of the product and the greater quantity available for export, and also to the steady rise in exchange.

THE CORK INDUSTRY.

A recent issue of the "Revista Agricola" calls attention to the great wealth of suberous plants in Brazil. Some of these trees, such as the *Conarus Suberosa*, yields an abundance of cork. Although the cork bark stripped from these plants is not in large sheets, such as are obtained from the cork trees of the Old World, it serves perfectly for the manufacture of cork bricks and linoleum. Attention is called to the fact that but little capital is needed for the exploitation of this industry, as it is only necessary to remove the bark from the tree previously to its industrial use.

RECEIPTS OF SUGAR AND COTTON AT PERNAMBUCO.

The receipts of sugar and cotton at Pernambuco during the ten years beginning with 1891-92 and ending with 1900-1901 were as follows, according to the State statistics, the figures representing bags in the case of sugar and bales in that of cotton:

Year.	Sugar.	Cotton.	Year.	Sugar.	Cotton.
1891-92.....	1,835,355	167,990	1896-97.....	1,488,106	169,867
1892-93.....	1,776,259	312,112	1897-98.....	1,758,421	240,572
1893-94.....	2,387,933	312,258	1898-99.....	1,461,980	135,579
1894-95.....	2,777,415	193,667	1899-1900.....	1,712,826	289,826
1895-96.....	2,062,568	172,427	1900-1901.....	1,974,013	158,925

FOREIGN POPULATION IN RIO DE JANEIRO.

According to statistics prepared by the German Consul-General at Rio de Janeiro, there are at the present time 2,705,000 foreigners in Brazil, distributed, according to nationality, as follows:

Italians, 1,300,000; Portuguese, 800,000; Germans, 300,000; Spanish, 100,000; Poles, 80,000; French, 10,000; English, 5,000; North Americans, 500; other nationalities, 110,000.

SOURCE OF THE JAVARY.

Dr. CRULS, Director of the Observatory at Rio de Janeiro, and Chief of the Brazilian Commission appointed to verify, in concert with a Bolivian Commission, the position of the source of the Javary River, the left branch of the Amazon, has returned to Manãos with his assistants, after having successfully completed his mission. The Commission discovered the existence, in south latitude $7^{\circ} 1' 22''$, of a branch of the Javary hitherto unknown.

COTTON CROP OF SÃO PAULO.

The Department of Agriculture of the State of São Paulo announces that the last cotton crop of the district of Tatuhy amounted in the aggregate to 120,000 *arrobas*. The next crop, now in the field, is expected to exceed that amount, and is estimated, from present indications, at from 150,000 to 180,000 *arrobas*. The Brazilian *arroba* is 32.38 pounds, so that 3,885,600 pounds represents the last crop of the district, while the present growing crop is approximately 4,857,000 pounds.

MINING NOTES.

The "Diario do Maranhão" states that Dr. WILLIAM VAN LINDE, a mining expert representing an American syndicate, is prospecting for gold in the northern part of the States of Maranhão and Pará. Dr. VAN LINDE declares that gold is found in abundance in these States, the mining property of Montes Aureos being especially valuable.

The "Minas Geraes" states that the Morro da Mina Company recently acquired the mining property of the firm of Francisco Arthur & Co., which was organized for the exploitation of manganese and other minerals in the State of Minas Geraes. The new company has a capital of 1,000 *contos*, and is already working an immense deposit of manganese situated on the plantation of Olaria, at Queluz. It is also stated that two English mining engineers are at present examining different auriferous mines of the same State in behalf of a powerful London syndicate.

MISCELLANEOUS NOTES.

The value of the paper *milreis*, nominally worth 54.6 cents (gold), but which in recent years has depreciated to 12 cents, has by a recent contraction of the circulating medium been advanced to a valuation of 23 cents. This enormous appreciation in value has been effected within the short space of a few months.

A company with a capital of 1,800,000 *frances* has been incorporated in Paris for the purpose of purchasing the sugar factories and plantations of Lorena, in the State of São Paulo, which are now under the management of M. DUMOULIN.

The Agricultural Congress which was recently held in Rio de Janeiro adjourned on October 14, 1901, and it is reported that 95 resolutions on various subjects relating to the agricultural interests of the country were adopted.

A concession for the construction of a railway from Guxapé, in the district of Passos, to the left bank of the Rio Grande has been ratified by the Government of the State of Minas Geraes. The concession is for a term of fifty years.

The São Paulo State Government has been empowered by the Legislature to expend 60,687 *milreis* in the construction of a tramway between Piracicaba and the agricultural college of Luiz de Queiroz.

Recent advices from Porto Alegre state that work has been begun on the section of the Porto Alegre and Uruguayana Railway which extends from Cacequy to Quhanduhy.

Large numbers of Japanese colonists, comprising at least 800 families, are shortly to be established on the San Monica plantations near Mendes.

Telephone communication has been established between Aracaju, capital of the State of Sergipe, and the cities of Alagoas and Pilar.

CHILE.**THE PULCAYO SILVER MINE.**

In a "Boletín" of the National Mining Society of Chile, Mr. C. G. AVALOS describes the Pulcayo silver mine, which, in 1900, is said to have furnished about 5 per cent of the world's supply of silver. This is the mine which gave rise to the famous Huanchaca Company, the latter being properly the name of the amalgamation works near the mine. The company now controlling the mines dates its existence from the year 1873, since which time it has produced an aggregate of 3,660 tons of the precious metal. The extension of the underground

workings of the mine is determined by a level 2,350 meters (2,542 yards) in length and 750 meters (2,461 feet) in vertical depth. Of recent years considerable difficulty has been occasioned by the enormous quantity of water encountered in the deeper workings. Further sources of difficulty in developing the resources of the mines are the high temperature of the water and the amount of carbonic acid held in solution by it.

SUCCESS OF THE NITRATE TRUST.

The "Engineering and Mining Journal," of New York, notes that one combination (trust) which seems to have had satisfactory results so far is that of the producers of nitrate of soda in Chile. The associated companies agreed at the outset on a reduction of 10 per cent in the annual output, which had been in excess of the demand; also upon an increase of about 25 per cent in price. This they have been able to maintain, as consumption appears to be increasing both in Europe and the United States. An accompanying circumstance which has favored the plans of the combination is the decline in ocean freight rates from the west coast of South America to American and European ports, being at present from 25 to 30 per cent lower than those of a year ago. The companies have thus far succeeded in placing contracts for 1902 at satisfactory prices, while stockholders are being favored with unaccustomed dividends. Efforts will be continued by the combination to extend the use of nitrate.

EXPEDITION TO LAND'S END.

The "Prensa," of Buenos Ayres, recently published a very interesting account of the expedition sent to Cape Horn by Chile with the object of selecting a site for a light-house, which it is proposed to construct upon Land's End, the southernmost point of South America. Contrary to the experience of all previous expeditions, the surveying ship reports most delightful weather in the vicinity of the Cape, with calm, bright days. A fine bay was discovered in the vicinity of the Cape, which is described as being one of the best of natural harbors. This discovery and the proposed placing of a light-house in the locality named is of great importance to navigators.

LAUNCHING OF THE FIRST IRON SHIP.

The launch of the first iron steamer constructed in Chile took place on November 24, 1901, at Valparaiso. The ceremonies incident to the launching were participated in by the President, the Federal authorities, and a large assemblage of citizens. The entire ship, from keel to truck, was of domestic construction.

EXTINCTION OF THE CHINCHILLA.

The Belgian mission at Santiago, Chile, reports that the attention of the authorities has for some time been called to the impending destruction of the chinchilla in the northern Provinces of Chile. However, no measures have as yet been taken for the preservation of this valuable fur-bearing animal, which has almost entirely disappeared from the neighboring Republic of Bolivia, in spite of the laws enacted for its preservation.

During the last three years, according to figures taken from the Chilean customs reports, the number of animals killed has risen enormously. For instance, in 1898 341,436 pelts were exported; in 1899, 435,906, and in 1900, 695,316. If to this total the domestic consumption (as well as the large number of pelts sent through the postal-parcels service) is added, the figures are appalling. The value of the 695,316 pelts exported in 1900 must have reached a sum approximating 2,000,000 *pesos*.

This state of affairs has aroused the "Chilean Scientific Society," which has recently urged the great necessity of regulating chinchilla hunting, if the complete disappearance of this rodent is to be prevented. The society has sent to all the communes of the northern Provinces a draft regulation, taking as a basis section 3 of article 26 of the municipal law, which contains especially the following propositions:

1. The absolute prevention of chinchilla hunting for four or six years in all the communes where the extinction of this animal is imminent.

2. The authorization of chinchilla hunting only from April 1 to September 30 of each year in the communes where the animals still exist in large numbers.

3. The forbidding of the use of dogs, fire, firearms, lances, harpoons, and guillotine traps in chinchilla hunting, the forbidding of the destruction of the burrows, and, finally, to allow only the use of such traps as will capture the animals alive.

4. The forbidding of the sale of skins measuring less than 26 centimeters from the neck to the root of the tail.

5. The punishment of violators of the stipulations of the preceding articles, by a fine of 40 *pesos* for each offense, according to article 27 of Chapter I on municipal laws.

If these measures are enacted, as seems probable, the price of chinchilla fur will greatly increase. The heaviest exports of chinchilla are sent to France, the United States, England, and Germany, principally through the port of Coquimbo.

MISCELLANEOUS NOTES.

The Chilean Legation in London informed the Government at Valparaíso that a commission of English engineers appointed by the British Government to study, from personal examination, the Chilean-Argentine boundary question, were proceeding to Chile. The Chilean Boundary Commissioners were instructed by the Government to make all necessary preparation for the reception of the engineers.

As an outcome of the Latin-Medico Congress, held in Santiago in January, 1901, an Anti-Tuberculosis League was founded in that city in September. A large number of persons die annually in Chile from tuberculous diseases, and measures are being taken to combat an increase. The League at Santiago was the first society formed for the purpose.

The "Chilean Times," in its issue for September 11, 1901, stated that the Government had accepted the offer of NICOLAS VICUÑA and FÉLIX A. LAMAS to settle 1,000 families of foreign immigrants in the Territory of Magellan. The time to which the contract is limited is eight years.

The Chilean Minister to Berlin has informed his Government that machinery for the manufacture of 8 tons of sulphuric acid daily is being constructed in that city for the Sociedad Chilena de Fundiciones. It is to be shipped to Guayaquil.

During the year 1901 the purchases of coal for the State railways have amounted to 180,000 tons, of which 105,000 tons represent domestic and 75,000 tons foreign coal.

In the estimates of the Ministry of Industry there is an item providing for the establishment of a mining school at Antofagasta, for which an appropriation of \$12,000 is required.

The German Consul in Chile reports that the number of Germans living in that Republic is 6,132, of whom about one-half are in the District Concepción, 1,200 in Valparaíso, and 1,000 in Santiago.

COLOMBIA.**BLAST FURNACES IN THE REPUBLIC.**

A correspondent of the "Bulletin of the American Iron and Steel Association" recently contributed to that journal information respecting three blast furnaces which have been built in Colombia. One is called the Ferreria de Samaca, in the Department of Boyacá. It is stated that the constructing company built the furnace with the idea of using coke as fuel and imported a good deal of machinery, but as

the operators were not experienced in iron working, their first difficulties discouraged further efforts, and now the furnace is not running. It is stated that there is good coal and ore in the vicinity.

Another company is called the Ferreria de Pacho, and the works are situated 12 leagues from Bogotá, the property being owned by Mr. ANIBAL CURREA. The furnace built at this point was destined for charcoal fuel, and a rolling mill and foundry were built in connection with it. The writer states that ores are very good in the neighborhood, but that work is suspended at present.

The third plant is the only one which is now making iron in Colombia. The company is the Ferreria de la Pradera, owned by PABLO and JULIO BARRIGA. It is situated 8 leagues distant from Bogotá, 4 leagues from the Sabana Railroad, and 3 leagues from the Northern Railroad (Ferrocarril del Norte). This plant is said to consist of a coke blast furnace capable of producing from 30 to 40 tons of iron per day, several puddling furnaces, steam hammers, and trains of rolls for turning out rails, plates, and light shapes. A machine shop is also connected with the works, and it is the intention of the company, later on, to engage in the manufacture of steel, as the ores are considered to be adapted to the production of that metal. Large deposits of iron, limestone, manganese, clay, etc., are said to exist at from 4 to 5 kilometers from the works.

HAITI.

THE COFFEE INDUSTRY.

The Belgian Consul-General for the Antilles recently made a report to his Government respecting the coffee industry of the Republic, of which the following is a partial translation:

The coffee plantations in Haiti at the present time cover an area of 50,000 hectares (125,500 acres). The plant was introduced into the country about 1715, and its cultivation soon made considerable progress. There are few regions known to agriculturists which combine to a greater degree the essential conditions for the culture of coffee, which are fertility of soil, warmth, moisture, and general conditions. The hills, rising to a height of from 1,300 to 1,600 feet, are said to be particularly adapted to the growing of the plant.

The following statement shows the number of pounds of coffee exported from the Republic during the years named:

1894-95	75,371,865	1897-98	67,437,593
1895-96	47,643,451	1898-99	61,622,184
1896-97	73,057,397	1899-1900	72,122,781

There is an export duty of \$3.86½ per hundredweight levied on all coffee sent out of the Republic.

MEXICO.

FOREIGN COMMERCE IN JULY, AUGUST, AND SEPTEMBER, 1901.

The Bureau of Statistics of the Mexican Government has just published some interesting data showing the importations and exportations of the Republic during the first three months of the fiscal year 1901-2, as compared with the commerce during the same period in 1900-1901. The following tables show the value of the imports and exports referred to during the periods mentioned :

Imports.	1901-2.	1900-1901.	1901-2, gain (+) or loss (-).
	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>
Animal products	941, 203. 79	1, 141, 899. 28	- 200, 695. 49

Total	34, 168, 694. 39	38, 392, 327. 25	- 4, 223, 632. 86

THE COTTON-GOODS TRADE.

A report on the trade of Mexico, recently published in the "British Trade Journal," relates principally to the cotton-goods trade of the Republic, and states that less than fifty years ago the greater part of the trade of Mexico in this commodity was carried on through British houses. British trade was also in a fairly flourishing condition, so far as Mexico was concerned, as late as 1872-3, but from the date of the opening of the Mexican Central and Mexican National railways, United States manufacturers have yearly increased their interests in the cotton trade of the country. Speaking of conditions generally, the report says that British trade is at present confined to a few agencies (there being no important commercial establishments) which undertake the execution of orders by means of samples and catalogues.

With particular reference to the trade in cotton goods, it is said that imports of this class of merchandise show a very great falling off both in quantity and value. In 1900 the quantity of square yards imported was 42,599,263, as against 49,029,863 in 1899, while the values for the two years were £728,867 and £741,556, respectively. The decrease

appears to have been principally in cotton prints under 30 threads, as in the year under consideration the number of square yards imported only reached a total of 15,374,634, as against 21,459,474 in 1899 and 17,203,118 in 1898. It is in this particular section that the United Kingdom has the greatest competition, not only from the produce of native manufactories but also from the United States. The production of cotton goods in the piece in 1900 was 11,802,986 pieces, as against 10,782,349 pieces in 1899, and represents an increase of nearly 9½ per cent over the production of the preceding year. In the returns published for December 31, 1900, the number of cotton mills paying taxes to the Government is given at 149, of which 15 were not working, while on the same date in 1899 the number was 137, 10 of which were closed for repairs or improvements. This increase in the number of mills and the consequent output has had its effect upon the importing market and has produced a stagnation in the operations connected with this industry.

The stocks on hand, whether imported or of domestic manufacture, are greater than the demand, and the result is that several factories have had to work shorter hours or else close entirely. This state of affairs will of necessity continue until the surplus has been consumed, and foreign importations will decline in proportion to the increase of the native output. The system now adopted by many of the factories is to have the piece folded in the same manner as the foreign, and by putting on a label in English it is very difficult for a person not an expert to distinguish between them, especially as the patterns employed are very similar. The retail prices range from 8 cents to about 15 cents per meter. In addition to the piece goods the factories of the Republic produced, in 1900, 4,256,529 pounds of cotton yarn, used almost entirely in the manufacture of cotton "rebozos," or shawls, used by the women of all classes and varying in price, according to the quality, from \$1.25 to \$50 each.

BELGIAN COMMERCE WITH THE REPUBLIC.

The Belgian legation at Mexico City reports that the exports of Belgian products to Mexico during the year 1900 amounted to the total sum of 902,370 *pesos*.

Belgium occupies the sixth place in the statistical table and comes immediately after Spain, which sent to Mexico during this same period merchandise representing a value of 2,887,145 *pesos*. Mexican exports to Belgium reached a value, during the same year, of 3,285,778 *pesos*.

This report says that the total imports of Mexico during 1900 were as follows, in *pesos*: United States, 33,880,180; Great Britain, 10,766,074; Germany, 7,249,506; France, 6,955,967; Spain, 2,887,145; Belgium, 902,370; Italy, 575,528; Austria-Hungary, 448,977; other countries, 1,746,960.

The principal products which Belgium still exports with success to Mexico are the following:

Articles.	Quantity.		Value.
	<i>Kilos.</i>		<i>Pesos.</i>
Stearine	465, 240		80, 927
Rails.....	3, 165, 247		161, 843
Cross-ties	2, 497, 150		101, 675
Cements	5, 169, 531		50, 904
Window glass and other glassware.....	847, 920		44, 929

The legation states that the competition of American industrial products with similar Belgian products is becoming more marked every day. In consequence of the establishment and development of United States colonies and United States interests in Mexico, the building methods in use in that country are spreading all over the country, to the detriment of the foreign models. They are adopted even by the natives of Mexico, and very often, when orders are given to the Belgian factories, efforts are made to restrict them to models similar to United States plans. For this reason several contracts about to be concluded have been awarded to other foreign establishments, as the Belgian builders refuse to alter their styles.

UNITED STATES COMPETITION.

It is stated, also, that United States competition in metals, machinery, etc., is daily becoming stronger in Mexico, and European manufactories are finding great difficulty in obtaining orders in the north of the Republic on account of the proximity of the United States. It is only in the southern part of Mexico that Belgian manufacturers stand any chances for their goods to be taken.

This report says that the greater part of the American engineers and capitalists are establishing themselves in the northern part of Mexico, and they are rapidly monopolizing its industry and commerce.

Only the lack of communication and capital has prevented the full development of Sonora, for the rare and more important metals, including gold, silver, copper, iron, antimony, and mercury, are to be found in this State in abundance. The district of Cananea, for example, produces more copper than all the rest of the country.

The cultivation of oranges, a comparatively new industry, is developing rapidly in the same State. This year (1901) the yield in the district of Hermosillo alone will include 400 carloads destined to the United States. This figure only relates to the early oranges, which are shipped before the oranges of northern California are gathered. The other districts will furnish in addition about 200 carloads for the United States markets. Orange plantations are increasing every year,

and little by little the Mexicans are adopting United States methods of cultivation and care in shipping the fruit.

The cultivation of sugar cane continues to develop in Mexico, especially in the States of Veracruz, Tamaulipas, and Jalisco. The importation of machinery for the sugar factories is also increasing. At the end of October it had already reached a value of 1,200,000 *pesos*, and it is expected that the result of the entire year will exceed this amount by nearly 100,000 Mexican *pesos*.

RAILWAY WAREHOUSES AT PROGRESO.

The Merida and Valladolid Railway, with its extension from Merida to the port of Progreso, according to the "Mexican Herald," has obtained a concession from the Federal Government to establish warehouses at Progreso, where foreign merchandise may be exchanged and stored until the customs duties are paid. The capital is fixed at \$1,000,000, with power to increase the same if desired. The railway company has deposited \$100,000 in bonds of the 3 per cent interior debt in the Federal treasury. The company enjoys exemption from taxes and the emoluments of certain franchises during the term of twenty-five years. The concession is for forty years.

POSTAL ARRANGEMENTS.

The Mexican Government has notified the Post-Office Department at Washington that it desires that the customs duties chargeable on articles sent by mail from the United States for delivery to addresses in the City of Mexico shall hereafter be assessed at Nuevo Laredo, Mexico. Instructions to forward all such mail to Nuevo Laredo have accordingly been issued by the Post-Office Department of the United States to all railway post-offices authorized to exchange mails with post-offices in Mexico.

FREIGHT TRANSPORTATION ON MINING RAILWAYS.

The Chihuahua Mining Company, according to the "Chihuahua Enterprise," secured a concession from the Mexican Government about December 1, 1901, authorizing the transportation of freight other than the products of its mines over its railway line. This road has been in operation over ten years, but, until the time of the granting of the concession in reference, had not been able to collect tariff rates of any character, thus preventing the possibility of assisting other mining companies in the San Domingo district. The concession granted, however, limits transportation to the carriage of freight and prohibits passenger travel.

SALE OF MINING PROPERTIES.

The "Mexican Herald" of December 1, 1901, reported the purchase by a United States syndicate of valuable metallurgical and mining properties, known as the San José and San Francisco mines, at Zimipán, in the State of Hidalgo. Señor JOSÉ ROSEVEAR is said to have received therefor the sum of \$600,000. Modern machinery is to be installed in the mines, which will permit their exploitation on an extensive scale, while smelters will be erected in the near vicinity.

GEMS AND PRECIOUS STONES.

The only precious stone that is mined systematically in Mexico is the opal; the *tecali*, or Mexican onyx, forming the only ornamental stone whose exploitation is carried on. Rosolite or pink garnet is found to some extent in one locality in the State of Morelos, and pyropes, or Bohemian garnets, are gathered by Comanche Indians in the State of Chihuahua. Topaz occurs at some points, and beautiful amethysts are to be found at Guanajuato.

Semiprecious stones of Mexico include the *chalchihuitl* of the Aztecs, once supposed to be turquoise but now properly identified with jade, also a species of amethyst and obsidian, or volcanic glass, both of which were used to a great extent by the ancient inhabitants of the country.

The demand for Mexican onyx, according to "Mexico Moderno," is increasing in the United States, preference being given to the products of Oaxaca, Tehuantepec, and Tehuacan mines, in the order named.

COAL MINES AT ESPERANZA.

The "Mexican Herald" reports that the coal mines at Esperanza, in the State of Coahuila, are producing 1,200 tons of coal and 250 tons of coke daily. The quality of the fuel is said to be such that the demand is greater than the present operating facilities will supply; consequently the company in charge is extending its system of works to the point of producing 5,000 tons of coal and from 800 to 1,000 tons of coke each day. These mines are the property of the Conquista Coal Company, with offices in New York, while the general superintendent's office is at Esperanza.

The same company owns coal mines at Conquista, 4 kilometers distant, where a considerable quantity of coal is produced. The mines are connected with Baroteran Station, 143 kilometers from Ciudad Porfirio Díaz, on the International Railroad, by the Conquista Coal Railway, which is 14 kilometers in length. The town of Esperanza was created by the opening of the mines in its vicinity, and now has a population of 6,000 souls and is furnished with broad streets and open parks.

MINING DEVELOPMENT.

The production of the Mexican silver mines, says the "Bulletin Commercial," of Brussels, in the course of an article on Mexico, will probably be larger this year than it has ever been. While the mining industry is no longer profitable in the Central States, formerly so famous for their wealth, it has developed extraordinarily in the northern part of the Republic, especially in the State of Chihuahua. The mining camp of Parral, which is situated here, is, it is said, destined to become the most important one on the entire American continent.

The exportation of mineral products, consisting almost exclusively of gold and silver metal and ores, reached a value of 91,000,000 silver *pesos* during the first eleven months of the fiscal year 1900-1901 (July 1, 1900, to May 31, 1901), while the total value of the products exported from Mexico during this same period reached 137,000,000 silver *pesos*. Mining products figure for more than 65 per cent of the total exports.

The value of the imports during the same period rose to 59,000,000 gold *pesos*, or, at the average rate of exchange, 120,000,000 silver *pesos*.

Many of these mines belong to foreign companies, so that the value of the silver ore and ingots exported does not entirely remain in Mexico, but goes beyond the frontiers, where it is distributed under form of dividends to the French, English, and especially to the American stockholders.

A correspondent in the City of Mexico of the "Chicago Record-Herald," in speaking of the production of silver in the Republic of Mexico, says: "During the year 1900, of the total silver production of the world—\$112,205,742 United States currency—the United States produced \$35,576,900, while Mexico's output of the white metal in the same currency value was \$34,269,494. It is also stated that during the fiscal year which ended June 30, 1901, Mexico's coinage of silver amounted to \$18,290,640, while the export of silver was valued at \$56,814,552, a total production of \$75,105,392 in Mexican currency, or approximately \$37,000,000 in United States currency."

Mr. NAUGLE, the American general manager of the Sonora railroad, expresses himself as follows on the mining future of this part of the country:

"Sonora is the richest of the Mexican States in metals which are in greatest demand. Its soil abounds in sulphur, gold, silver, copper, iron, coal, antimony, mercury, and graphite. The district of Calanea alone furnishes more copper than all the rest of the country, and this region will surely some day become the principal center of the world for supplying the manufacturers of all nations. This mining zone is developing with inconceivable rapidity. In less than three years a desolate and uninhabited territory has been converted into a working city of 8,000 inhabitants.

AGRICULTURAL PRODUCTS OF CÓRDOBA.

The agricultural production of the canton of Córdoba since the beginning of the year is estimated at 50,000 kilograms of rice, 1,200,000 kilograms of tobacco, 40,000 kilograms of allspice, and 2,000,000 kilograms of coffee. This enormous production greatly exceeds that of last year. The corn crop was very abundant, although corn occupies second place among the products of this region. It exceeded 225,000 hectoliters.

The exports of fruit to the United States and South America are daily increasing.

The fruit growers have concluded contracts with the Mexican Railroad Company, according to which the railroad company agrees to furnish without delay the cars they need, and to immediately send the fruit to the ports of shipment. The principal fruits exported from Córdoba are pineapples, which are in great demand in the United States, bananas, mameyes, cherimoyas, apples, and pawpaws.

CONTRACT FOR A SUBMARINE CABLE.

The Safety Insulated and Cable Company, of New York, is manufacturing, under contract with the Mexican Government, a submarine cable to be laid between Vera Cruz, Frontera, and Campeche. The cable is to be rubber insulated and 472 nautical miles in length. There must be sufficient to reach a depth of 49 feet in the port of Campeche and 65 feet in the ports of Frontera and Vera Cruz. This cable is to consist of 9 copper wires, protected by 16 galvanized-iron wires for deep water and 18 additional steel wires for the coast. The cable is to be ready for service April 2, 1902. The contract price is \$600,000, gold, of which \$283,000 is to be paid upon the laying of the cable, and the remainder within two and four months thereafter.

POSSIBILITIES OF TAMAULIPAS.

Until the building of the Gulf Railroad from Monterey to Tampico the State of Tamaulipas was one of the most sparsely settled and least-known sections of the Republic of Mexico, says the "Monterey Times." With the completion of the line, and the improvements made by the Government at Tampico, the rapid development of the State was assured, and though there have been some difficult years on the Gulf Railroad, work has been steadily pursued in spite of adverse conditions, with results that have more than justified the expenditure of time and labor. It has been demonstrated that the rich valleys of southern Tamaulipas, with their abundant water supply, are adapted to serve as granaries for the northern portion of the Republic, and also

as the source from whence early fruits and vegetables may be procured for markets in the United States. It is anticipated that within the course of ten years the great mining, commercial, and manufacturing centers of northern Texas will look to Tamaulipas for their supplies of sugar, rice, vegetables, and fruits.

RESOURCES OF LOWER CALIFORNIA.

“La Soberiana Popular,” published in La Paz, the capital of the Lower District of Baja California (Territory of Lower California), in the course of a recent article regarding that portion of the Mexican Republic, stated that the country is primarily a land of minerals, being traversed by a continuation of the Sierra Nevada Mountains. The mines of Boleo and Progreso are well known, but other mining centers of importance are Calmalli, Rosarito, and the famous Santa Clara mine. The fisheries for oyster pearls and tortoise shells, in the Bay of La Paz (a part of the Gulf of California), and the salt mines of the island of Carmen are noted. The soil of the Territory is fertile and suffers less from drought than from the neglect of the cultivators. The cultivation of grapes and the manufacture of wines and brandies form the chief occupations of the inhabitants, the exportation of these products constituting the leading sources of income for the peninsula.

MISCELLANEOUS NOTES.

The “Nouveau Monde” announces that Señor SEBASTIAN DE MIER recently presented his letters of credence as Envoy Extraordinary and Minister Plenipotentiary near the French Government at Paris. The usual felicitations were exchanged.

On October 15, 1901, HENRY W. HOWE, of the City of Mexico, was granted a patent (684,573) by the United States Government for a “bag fastener.”

The “Diario Oficial” of October 11, 1901, contains particulars of a contract entered into between the Mexican Government and the firm of S. PEARSON & SONS, Limited, for the sanitation of the city of Vera Cruz. The cost of the work is estimated at \$4,000,000, silver.

Under the name of “La Rescatadera” a company has been formed in Brussels, Belgium, with the declared object of working mines in Mexico. The capital stock of the company is 1,000,000 *francs*.

NICARAGUA.

MINING AND AGRICULTURAL CONDITIONS AT RAMA.

Mr. J. P. MORGAN, in a communication to the MONTHLY BULLETIN, dated Rama, December 23, 1901, states that, in his opinion, the people of other countries do not have a proper conception of Nicaragua and the resources of the country. In his extensive travels through Central and South America he states that he has found few countries that excel that Republic in natural advantages, its climate being very salubrious, yellow fever is unknown on the Atlantic coast, the soil is exceedingly fertile, while the inhabitants are intelligent and prosperous.

The mining and agricultural industries are extensive and profitable. In the department of Zelaya there are numbers of rubber plantations, on one of which it is claimed there are 500,000 growing plants. Banana plantations are to be found in all parts of the Department, and some rich (gold) mines are in the vicinity of Rama. A mine known as "El Mico," situated at a distance traversable in six or seven hours of ordinary travel from Rama, is employing a 20-stamp mill and a large number of workmen. The ledge from which the ore is taken is 22 feet in thickness, and there are 11 claims of 200 varas (a vara is about 33.874 inches) in length, with others of nearly as great an area. Other mining companies are the "San Francisco," the "Star," and the "Prospect," all of which are soon to be equipped with stamp mills. In order to arrive at the mining center the traveler takes boat at Rama, and after a journey of about six hours' duration lands at El Mico. A walk of from twenty to thirty minutes through banana and plantain plantations, which belong to the El Mico Company, brings him to the mills and the surrounding village of workmen's dwellings. Many of the buildings, including one 80 feet long, are constructed of pine lumber imported from New Orleans. Others, including the assay office, are built of native woods.

Messrs. C. A. ABBOTT and E. FULKS, who have charge of the plant, report that they have found the native labor very satisfactory. Nearly all the invested capital on the Atlantic coast is American, and the English language is spoken quite generally both at Rama and Bluefields. The mine owners and merchants find the laws of the country as administered by the Government well adapted to business needs. The only complaint made concerning economic conditions is that the importation of luxuries is prohibited, which, in some cases, is found to work hardship to the upper classes.

A new line of fruit steamers was recently established by the Bluefields Steamship Company, and Rama is one of its trading ports. Rama also has a triweekly mail service as well as cable communication with the outside world.

PARAGUAY.

RECENTLY APPOINTED CONSULAR OFFICERS.

The Minister for Foreign Affairs at Asunción, under date of October 23, 1901, has advised the Consul-General of Paraguay at Washington, that CHR. G. BAHL has been appointed Consul at Savannah, Ga., and ELLIOTT G. RICKARBY, Vice-Consul at Mobile, Ala. Also at the dates named other consular officers were appointed as follows:

Date.	Place.	Officer.	Title.
1901.			
Oct. 28	Havana, Cuba	Alfredo P Carrillo.....	Consul-General.
	Santiago, Cuba	Tomistocles A. Ravelo.....	Consul.
Dec. 11	Savannah, Ga	Chr. G. Bahl	Do.
	Mobile, Ala.....	Elliott G. Riekarby	Vice-Consul.
1902.			
Jan. 9	Trenton, N. J	Richard C. Oliphant.....	Do.
	Newark, N. J	James A. Coe	Do.
	Wilmington, Del.....	Theodore A. Leisen.....	Do.
	Baltimore, Md.....	William H. Love	Do.
	Cincinnati, O	Edward H. Hargrave	Do.
	Chicago, Ill.....	Daniel I. Hunt.....	Consul.
	Detroit, Mich.....	John Walker	Vice-Consul.
	Kansas City, Mo	Wm. C. Winsborough	Do.
	St. Louis, Mo.....	C. M. Pryne	Do.

PERU.

THE CEMENT TRADE.

With the exception of a few unimportant kilns there are no cement manufactories in Peru.

The introduction of German cement, dating many years back, has given to that country's product an advantage hard to overcome, while certain contractors and builders attribute to German cement a fame which competent judges declare is at least exaggerated. The only real advantages to be found in the importation of German cement at present is in the methods of transportation and the system of selling by consignment.

In 1897 the Peruvian imports of cement amounted to 1,348 tons, of which 1,212 came from Germany, 88 from England, and 48 from Chile. The following year the imports reached 2,348 tons, Germany occupying first place with 75 per cent, Chile coming second with 14 per cent, the remaining 11 per cent being furnished by England and Belgium. During 1899, the last year in which such statistics are available, the transactions continued to increase and reached 3,662 tons. The exporting countries during this period were: Germany, 2,895 tons; Belgium, 423 tons; England, 172 tons; the United States, 165 tons; Chile, 5 tons; and Italy, 2 tons.

Judging from the building, paving, and flagging under way at Lima,

there is reason to believe that the figures for 1900 and 1901 will be greater than those for the preceding years.

The export agents at Hamburg know how to profit by the departures of the sailing vessels destined for Chile and Peru, by remitting large consignments to the shipowners, which are sent either as ballast, or at very reduced freight rates, on account of the lack of other heavy or suitable merchandise to be shipped by sailing vessels to these countries. This allows the German producer to sell at a greatly decreased price and yet realize a remunerative profit. Consequently, if foreign cement manufacturers wish to create an important and permanent outlet in Peru, they must fix the prices of their products so that they can compete advantageously with that of Germany.

PROPOSED WATERWORKS AT APLAO.

Señor JULIO A. ARCE, civil engineer of Arequipa, Peru, has been engaged by the department council to study the matter of waterworks for the town of Aplao. The water is to be brought from a spring distant about 3 kilometers from the town. Another proposed plant is the sinking of deep wells and the establishment of a pumping station.

UNITED STATES PATENT FOR PERUVIAN CITIZEN.

On December 31, 1901, VINCENTE P. y SACIO, of Yauli, Peru, was granted a patent (No. 690,190) in the United States for an "apparatus for treating gold ores."

UNITED STATES.

TRADE WITH LATIN AMERICA.

STATEMENT OF IMPORTS AND EXPORTS.

The following is the latest statement, from figures compiled by the Bureau of Statistics, United States Treasury Department, showing the value of the trade between the United States and Latin-American countries. The report is for the month of November, 1901, with a comparative statement for the corresponding month of the previous year; also for the eleven months ending November, 1901, compared with the corresponding period of the calendar year 1900. It should be explained that the figures from the various custom-houses showing imports and exports for any one month are not received at the Treasury Department until about the 20th of the following month, and some time is necessarily consumed in compilation and printing, so that the returns for the month of November, for example, are not published in full until some time in January.

FOREIGN COMMERCE IN NOVEMBER, 1901.

The statement issued by the Treasury Department of the United States shows that the foreign commerce of the United States for the month of November, 1901, amounted to \$208,703,319, as compared with \$202,056,364, the total for November, 1900. The value of the imports in November, 1901, was \$72,498,873, an increase, when compared with November, 1900, of \$7,144,833. The exports for November, 1901, were valued at \$136,204,446, showing a decrease of \$497,878, as compared with the value of the exports of November, 1900. Of the imports in November, 1901, those admitted free of duty represented 45.44 per cent of the total, as compared with 41.83 per cent in the same month of the previous year. The great increase in imports was mainly due to the receipt of articles which enter into processes of manufacture in the United States. The amount of duty collected from customs in November, 1901, was \$19,526,377, against \$18,550,297 for the same month of 1900.

For the eleven months ending with November the imports were valued at \$800,426,231, against \$760,452,507 in 1900, or an increase of

nearly \$40,000,000. The amount of customs duties collected for that period in 1901 was \$224,833,333, as compared with \$219,264,909 for the eleven months of 1900.

The exports for November, 1901, show an increase in the value of the agricultural, mining, fishery, and miscellaneous products, as well as in the foreign products reexported, but a decrease in the manufactured products sent abroad, as compared with the same month in 1900. For the eleven months ending with November the exports in 1901 were valued at \$1,328,186,131, against exports worth \$1,332,056,242 in the same period of 1900. This decrease of \$3,870,111 is more apparent than real, owing to the fact that in the statement for 1900 the value of the exports to Porto Rico and Hawaii was included, while for 1901 these items were omitted.

The imports of gold in November, 1901, and for the eleven months ending therewith were valued at \$5,269,611 and \$49,808,291, respectively, as compared with \$12,641,988 and \$49,808,291 for the same periods of 1900. The exports of gold during the month in reference were worth \$15,905,612 and for the eleven months \$52,598,928.

The imports of silver were valued at \$2,796,532 in November, 1901, and \$28,358,192 for the eleven months ending with November. During the periods named the exports of silver were \$41,689,208 and \$50,914,826, respectively.

The imports and exports were classified as follows for the month of November, 1901, as compared with the same month in 1900:

Classification.	1901.	1900.

RECEIPTS AND EXPENDITURES IN 1901.

Hon. LYMAN J. GAGE, Secretary of the Treasury of the United States, reports that the revenues of the Government for the fiscal year ended June 30, 1901, as obtained from all sources, were as follows:

Internal revenue	\$307, 180, 663. 77
Customs	238, 585, 455. 99
Profits on coinage, bullion deposits, etc	12, 731, 256. 94
Revenues of the District of Columbia	3, 986, 176. 19
Fees—consular, letters patent, and land	3, 414, 933. 49
Sales of public lands	2, 965, 119. 65
Navy pension, navy hospital, clothing, and deposit funds	1, 778, 454. 91
Tax on national banks	1, 681, 473. 05
Sales of Indian lands	1, 493, 321. 24
Payment of interest by Pacific railways	1, 316, 516. 62
Miscellaneous	841, 216. 03
Customs fees, fines, penalties, etc	711, 791. 43
Sales of ordnance material	703, 054. 42
Immigrant fund	585, 082. 70
Trust funds, Department of State	537, 621. 58
Soldiers' Home, permanent fund	492, 623. 66
Sales of Government property	450, 698. 49
Deposits for surveying public lands	247, 258. 90
Sales of lands and buildings	236, 897. 53
Tax on seal skins, and rent of seal islands	232, 655. 75
Prize money to captors, Spanish War	217, 490. 60
Prize money to navy pension fund, Spanish War	217, 477. 76
Proceeds of Arkansas bonds redeemed	85, 000. 00
Depredations on public lands	75, 977. 70
License fees, Territory of Alaska	84, 087. 90
Part payment Central Pacific Railroad indebtedness	4, 576, 247. 10
Sale of claim of United States against Sioux City and Pacific Railroad Company	2, 122, 841. 24
Dividend received for account of Kansas Pacific Railway	133, 942. 89
Postal service	111, 631, 193. 39
Total receipts	699, 316, 530. 92

The expenditures for the same period were:

For the civil establishment, including foreign intercourse, public buildings, collecting the revenues, District of Columbia, and other miscellaneous expenses	\$117, 327, 240. 89
Military establishment, including rivers and harbors, forts, arsenals, seacoast defenses, and expenses of the war with Spain and in the Philippines	144, 615, 697. 20
Naval establishment, including construction of new vessels, machinery, armament, equipment, improvement at navy-yards, and expenses of the war with Spain and in the Philippines	60, 506, 978. 47
Indian Service	10, 896, 073. 35
Pensions	139, 323, 621. 99
Interest on the public debt	32, 342, 979. 04
Deficiency in postal revenues	4, 954, 762. 21
Postal service	111, 631, 193. 39
Total expenditures	621, 598, 546. 54

Showing a surplus of \$77,717,984.38.

ESTIMATED RECEIPTS IN 1902 AND 1903.

According to the report of the Secretary of the Treasury of the United States, the revenues of the Government for the current fiscal year are thus estimated upon the basis of existing laws:

FISCAL YEAR 1902.

From customs.....	\$250,000,000
From internal revenue.....	282,000,000
From miscellaneous sources.....	40,000,000
From postal service.....	116,633,042
Total estimated revenues.....	688,633,042

The expenditures for the same period are estimated as follows:

For the civil establishment.....	\$110,000,000
For the military establishment.....	115,000,000
For the naval establishment.....	70,000,000
For the Indian Service.....	11,000,000
For pensions.....	137,000,000
For interest on the public debt.....	29,000,000
For postal service.....	116,633,042
Total estimated expenditures.....	588,633,042

Or a surplus of \$100,000,000.

FISCAL YEAR 1903.

It is estimated upon the same basis that the revenues of the Government for the fiscal year 1903 will be:

From customs.....	\$250,000,000
From internal revenue.....	290,000,000
From miscellaneous sources.....	40,000,000
From postal service.....	132,020,630
Total estimated revenues.....	712,020,630

THE SALT INDUSTRY.

The Census Bureau has issued a report respecting the salt industry of the United States, in which it is stated that in 1900 there were 159 establishments, with a capital of \$27,123,364, engaged in the manufacture of this commodity. The value of the product for the year was \$7,966,897, involving an expenditure of \$6,507,169. The production of salt in the United States has increased continuously since 1850. In the last half century the capital has increased from \$2,640,885 to \$27,123,364, while the value of the product increased from \$2,222,245 to the present figure.

THE TURPENTINE INDUSTRY.

A preliminary report on the turpentine and rosin industry of the United States was issued by the Census Bureau on November 11, 1901. This shows the extent of the industry in the census year 1900 as compared with 1890. According to this report the total value of the two products, which are derived from the same source, was, for the year 1900, \$20,344,888, as compared with a total valuation of \$8,077,379 in 1890. The number of producing establishments was 1,502 in 1900 and 670 in 1890. The capital at the latest period under comparison aggregated \$11,832,845, against a grand total in 1890 of \$4,063,379. The number of employees was 41,864 in 1900 and 15,266 in 1890. The wages in 1900 amounted to \$8,390,632, while in 1890 the aggregate sum paid was only \$2,936,547 on the wage account.

VALUABLE FORESTS IN THE PHILIPPINES.

A correspondent of the "New York Tribune," writing from Manila, under date of September 1, 1901, regarding the wealth of the Philippine forests, says that the islands abound in a great variety of trees, yielding valuable gums, and rubber and gutta-percha are abundant in Mindanao and Tawi-Tawi. From the insignificant and comparatively unknown port of Cotabato, in Mindanao, alone, there was shipped last year to Singapore no less than \$200,000 worth of gutta-percha. The forestry bureau estimates that at least 17 dyewoods are produced within the limits of the archipelago, while other trees yield valuable essential oils or drugs. In short, the wealth of the islands, in woods, awaiting intelligent development may, without exaggeration, be pronounced to be enormous. There seems to be woods everywhere here for every imaginable use and purpose.

COAL IN ALASKA.

Capt. CHARLES A. F. BROUARDS returned to the State of Washington in November, 1901, after spending five years in exploring and prospecting in different parts of Alaska. He reports having visited all sections, from Kotzebue Sound to the shores of the Arctic Ocean, and that he has compiled a chart of the coast from Kotzebue Sound to Point Hope. According to his statement the northern shores of the Sound to the Arctic, a distance of 300 miles, is one immense bed of bituminous coal, and the supply is sufficient for the world's consumption for a number of years. This coal, however, is of little value for use in steamers and in railway locomotives, though it can be utilized for household purposes.

TIN IN CALIFORNIA.

At a recent meeting in Los Angeles Mr. G. M. TABER read, before the geological section of the Southern California Academy of Sciences, a paper on tin deposits. The State of California is unique in that it contains nearly all the metals known to the scientific world. Some of these are in their earlier stages of exploitation and development. Mr. TABER said:

“Among the various mineral products of California tin has not as yet been considered a native product. In only one instance has an attempt been made to develop the metal in this State. After expending several hundred thousand dollars, the plant in reference was purchased by an English syndicate and then closed up. Yet it is noticeable that the United States can furnish enough tin to supply the home demand and that California could stand at the head of the list of producers. The industry is comparatively new and few prospectors know tin when they see it. Since then the Santa Ana Tin Mining Company has located 7,040 acres of tin-bearing land in Orange County and several other claims have been found in Riverside and Los Angeles counties. Without doubt other bodies will be discovered and the tin industry will add largely to the mineral products of the State. It is also a fact that assays made from California ore show it to be three or four times richer in tin than the ore successfully worked in many, if not all, of the old mines in Europe.”

THE ELECTRIC-LIGHTING INDUSTRY.

In a recent number of the “Electrical Review” figures were given regarding the electric-lighting industry of the United States, the capital invested and the stations in use being given for each State and Territory. The grand aggregates show that there are 2,842 such stations, with a combined capital representing \$668,830,312 on September 1, 1901.

IMMIGRATION IN 1901.

While the immigration to the United States appears to be on the increase, its character seems also to have improved. The total steerage arrivals during the fiscal year 1901 numbered 487,918, an increase of 39,346, or about 9 per cent, as compared with the fiscal year 1900. Of the increase, 2,020 came through Canadian ports. The addition of 74,950 alien cabin passengers to the figures given above makes a total of 562,868 immigrants for the year. The tide of immigration is swelling. Of the steerage immigrants, over two-thirds were males, and more than three-fourths were between the ages of 14 and 45. Somewhat less than one-fourth of the number, or 117,587 in all, were unable to read or write. Those who were able to bring into the country more

than \$30 apiece numbered 56,312, but 294,860 brought lesser sums. The ratio of increase of Italian immigration for the year was 36 per cent, more than three times the ratio of increase from all Europe. The numerical increases from the other European countries aggregated scarcely one-fourth of that from Italy. The point is brought out by the Commissioner of Immigration, in the report from which the above figures are taken, that though there were more arrivals in the fiscal year 1901 than in the preceding twelve months, the number rejected was considerably less.

STATISTICS OF SILVER PRODUCTION.

The report issued by the Director of the Mint of the United States shows that the silver output of the world for the year 1900 was the largest recorded in history, amounting to 178,769,769 fine ounces, and exceeding that of 1899 by 1,572,513 ounces. Another no less interesting fact is that the world's coinage for 1900 was, as reported, \$177,011,902, an increase over the preceding year of \$10,664,980. Another fact stated in this report is that the world coined less gold in 1900 than in 1899, the figures for 1900 being \$354,936,497, and those for 1899 \$466,110,614.

POPULATION BY SEX AND COLOR.

Of the total population of the United States in 1900, which, including those persons in the military and naval service and in Hawaii, was 76,303,387, the males number 39,059,242, or 51.13 per cent, and the females 37,244,145, or 48.81 per cent, showing a slightly larger proportion of females than in 1890, when the percentages were 51.23 and 48.76, respectively. The total increase of population in the decade was 13,233,631, or 21 per cent, made up of 6,744,179 males and 6,489,452 females, representing an increase of 20.9 per cent in males and 21.1 per cent in females.

The actual excess of males in the whole country is 1,815,097; in all but 11 of the 52 States and Territories the males outnumber the females. These 11 States are practically along the Atlantic seaboard. The State of California contains the greatest excess of males, 156,009, Minnesota, with 113,586, being second; Texas, with 109,000, third, and Pennsylvania, with 106,967, fourth. The North and South Atlantic divisions, including the States of Maine and Florida, have but 4,769 more males than females, and if Pennsylvania is excluded from this list there would be a preponderance of females of 102,198. The excess of females in the Southern States is largely made up of negroes, of which race there are in the whole country 54,347 more females than males.

A comparison of the relative increase of whites and negroes during the decade shows a slight falling off in the latter, the increase for the whites being 21.4 per cent, against 18.1 per cent for the negroes. This relative decrease holds good in the Southern States as well as elsewhere, showing that the whites in that section have increased in greater proportion than those of negro descent.

The foreign-born element has increased only 12.4 per cent and the native-born population 22.5 per cent since 1890. As to color and race, the population in 1900 comprises 66,990,802 white persons and 9,312,585 colored persons, the latter comprising 8,840,789 persons of negro descent. The colored element, as a whole (negroes, Indians, Chinese, etc.), shows an increase of 17.8 per cent since 1890.

CONSUMPTION OF SUGAR.

The total consumption of sugar in the United States in 1900 was 2,219,847 tons, and, based on the yearly average increase of 6.34 per cent during the last nineteen years, the consumption for 1901 should amount to 2,360,585 tons. Of this quantity 1,000,000 in round numbers will come from domestic sources, Louisiana being able to produce 350,000, United States beet-sugar factories, 150,000, Hawaii, 350,000, and Porto Rico, 150,000 tons, all of which is free of duty, and leaving 1,360,585 tons to come from other sources, on which duty is paid.

PORTO RICAN SUGAR AND COFFEE CROPS.

Governor HUNT, of Porto Rico, states that business is steadily increasing on that island, and that the crop of sugar will be about 100,000 tons. New plantations are being started, and, while at present large areas suitable for sugar cultivation are available, the extent will be greatly increased when the title to certain public lands shall have been settled by Congress.

Regarding the outlook for Porto Rican coffee, the same authority estimates that the planters may reasonably expect to realize somewhat more than a half crop, the plants having recovered to some extent since the hurricane of 1899. The quality of the berry is said to be excellent.

RAILWAY CONCESSIONS IN PORTO RICO.

Authority for the construction of two railway lines in Porto Rico was granted by President ROOSEVELT on November 26, 1901. The concessions provided for a north-and-south line from San Juan to Port America, which is a few miles from the old Spanish fort of Guayama, and for an east-and-west line from Aquadella to Enseñada Honda.

LATIN-AMERICAN CONSULAR OFFICERS.

Recently the following Latin-American consular officers have been recognized officially by the United States Government:

GEORGE DE URIOSTE, Consul of the Argentine Republic at San Francisco, California.

NAPOLEON BONAPARTE KELLY, Vice-Consul of Brazil at Philadelphia.

ANDREW GRAY, Commercial Agent of Brazil at Pascagoula, Mississippi.

SANTOS ELIAS SANTOS, Consul of Ecuador at San Francisco, California.

JOAQUIN DIAZ PRIETO, Consul of Mexico at Cincinnati, Ohio.

AGUSTIN PIÑA, Consul of Mexico at Phoenix, Arizona.

CHR. G. BAHL, Consul of Paraguay at Savannah, Georgia.

ELLIOTT G. RICKARBY, Vice-Consul of Paraguay at Mobile, Alabama.

SIMON BARCELO, Consul-General of Venezuela at San Juan, Porto Rico.

URUGUAY.**CULTIVATION OF TOBACCO.**

The climatic conditions of Uruguay, as well as the properties of its soil, are admirably adapted to the cultivation of tobacco, and if it could be made more remunerative—the prices which the planters obtain from their crops illy compensating them for the expense and assiduous care which the plant necessitates—might become a serious competitor of the Brazilian and Paraguayan tobaccos, which are imported each year in large quantities.

There are numerous tobacco plantations in the Departments of Artigas, Tacuarembó, Rivera, Cerro, Largo, Minas, Maldonado, Canelones, Colonia, San José and Florida. The most important plantations are found in the Departments of Tacuarembó, Artigas, Rivera, Cerro, and Largo, bordering on the Brazilian State of Rio Grande do Sul, and their actual production is estimated at more than 1,000,000 kilograms.

The analysis of some samples of this tobacco, published in the "Bulletin of the Asociacion Rural de l'Uruguay," shows that their properties are in nowise inferior to those of the tobaccos consumed in other countries. They are well prepared, are of very good external appearance, and their leaves are for the most part free from worm holes and have a good odor. Everything shows that the cultivation has been intelligently followed and that great care had been used in preparation.

REPORT OF THE NORTHWESTERN OF URUGUAY RAILROAD.

The report of the Northwestern of Uruguay Railway Company, limited, for the eighteen months ending with June 30, 1901, just published, states that the gross receipts of the road were £50,829 (\$247,359) and the working expenses £47,276 (\$230,069), leaving a balance of £3,553 (\$17,290). To this must be added interest on 4 per cent internal-revenue bonds amounting to £16,085 (\$78,278), and Government guarantees amounting to £21,067 (\$102,522), making a total of £40,705 (\$198,090). Interest on debenture stock for eighteen months absorbed £36,832 (\$179,243) leaving £2,873 (\$18,838) to the net revenue account.

REPORT OF THE MIDLAND URUGUAY RAILROAD.

The report of the Midland Uruguay Railway for the year which ended June 30, 1901, states that the receipts of the line amounted to £42,584 (\$207,235), compared with £38,103 (\$185,428) for the previous year. The expenditures in 1900-1901 amounted to £42,864 (\$208,598) as against an aggregate of £46,722 (\$227,373) in 1899-1900. The result of the working of the road was a deficit in 1900-1901 of £280 (\$1,363) as compared with a shortage in 1899-1900 of £8,619 (\$41,945). Adding the Government guarantee, minus taxes, to the balance brought forward, the total receipts were found to be £61,637 (\$299,956). After deducting the deficit and the balance of debt, there remained £13,912 (\$68,703), of which £12,000 (\$58,398) was added to the reserve account. The directors report that the traffic receipts of this railway were greater than in any previous year. The increase was not due to any exceptional circumstances, and would seem to indicate a gradual development of business conditions.

THE ZANJA HONDA COLONY.

The Uruguay Development Company has passed into the hands of a receiver, and the Northwestern of Uruguay Railway Company, believing that it would be injudicious and contrary to the best interests of the road to allow the colonists located thereon to become scattered, has purchased the assets of the Development Company. These include the land, buildings, dwellings, schools, granary, and mill-agricultural implements, etc. The price paid was £7,000 (\$34,065.50). The colony affected by the change is located at Zanja Honda.

VENEZUELA.

SURTAX ON DRUGS AND PATENT MEDICINES.

On December 6, 1901, President CASTRO issued a decree with regard to the surtax on drugs and medicines, of which the following is a translation:

"The Provisional Presidente of the United States of Venezuela, in exercise of the powers delegated to him by the resolution of the National Constituent Assembly, approved on the 28th day of March of the present year, decrees:

"ARTICLE 1. All drugs, medicines, and chemical patent products, imported through the custom-houses of the Republic, shall pay duty per kilogram, gross weight, according to schedule 6 of the tariff.

"ART. 2. Fifty per cent of the product of this duty shall be added to the revenue for public instruction.

"ART. 3. All drugs, medicines, and chemical products which leave the port of exportation from the 10th instant, inclusive, are included in this decree.

"ART. 4. The Ministers of Finance and Public Instruction are hereby empowered to execute this decree, and the former shall provide rules and regulations for the fulfillment thereof."

EXPORT DUTY ON CATTLE.

On November 26, 1901, President CASTRO issued the following decree respecting the exportation of cattle:

"The Provisional President of the United States of Venezuela, in exercise of the powers vested in him by an act of the National Constituent Assembly, dated March 28 of the current year, decrees:

"ARTICLE 1. A temporary tax of eight *bolivars* shall be levied on every head of cattle exported, except milch cows.

"ART. 2. A tax of twenty *bolivars* shall be paid for every milch cow exported, and the interested parties shall, before each shipment, solicit a special permit from the Minister of Finance.

"ART. 3. This decree shall be in force from the date of its publication in the 'Official Gazette,' and it shall be the duty of the Minister of Finance to provide the proper regulations for the fulfillment thereof.

"ART. 4. Let a report thereof be presented to the National Congress at its next session."

PRODUCTION OF BALATA.

"El Guayanés," of Upata, Venezuela, states that during the twelve months ending with October, 1901, over 1,840,000 kilograms (4,048,000

pounds) of balata were shipped from San Felix and Guri, Territory of Yuruary, to Ciudad Bolívar. This district is situated south of the Orinoco River and east of its tributary, the Caroni, besides being partially drained by two other rivers, the Yuruary and the Imataca.

This balata paid a tax to the State of Bolívar equal to about 4 cents gold per kilogram and 2 cents gold per kilogram to the National Government. Such taxes have since then been increased about 100 per cent per kilogram. In addition, \$772 was collected in other taxes, fees, etc.

The total public revenue collected from balata is said to have been \$11,425.60. The export value of balata, as stated by the journal quoted, was equivalent on an average to 38 cents gold per pound, bringing the total value for twelve months up to \$1,538,200.

DEPOSITS OF COAL.

The "Mining Journal," of London, quotes Mr. E. CORTESE, a noted European mining expert, as saying that coal occurs widely distributed throughout Venezuela. "It is invariably of Oligocene age. The principal centers are to the south of Carupano, the Rio Casani, Naricual, Capiricual, Querequal, and Araguaita. At Naricual the coal contains 1.25 per cent of moisture, 38.43 per cent of volatile constituents, and 2.83 per cent of ash. The yield of coke is 58.49 per cent and the calorific power 9,052.8 calories."

LATIN AMERICA IN 1901—A REVIEW.

Many events of momentous importance, especially from a political point of view, have transpired in a number of the Latin-American countries belonging to the International Union of American Republics during the year 1901.

It is hoped and believed that eventually the several American countries will be drawn more closely together by the highways of the sea, that some of those highways will be shortened by the construction of an Isthmian canal, and that, at a period not very distant, the railway systems of the North and South will be connected at the Isthmus of Panama, so that the political and commercial capitals of seventeen out of the nineteen Republics belonging to the International Union will be closely united by land routes; thus present journeys of weeks and months will be condensed into trips of but comparatively few days. In this connection the renewed activity displayed by the various countries concerned, at the close of the year 1901, in the furtherance of all plans looking toward a trans-Isthmian waterway is a

matter of deep interest to all America, both as affecting internal and foreign relations. The convention signed at Washington on November 18, 1901, between the United States and Great Britain to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, and the agreements made with the Governments of Nicaragua and Costa Rica in the development of the same idea, mark the removal of the most important hindrances to the successful inauguration of the work.

An event of supreme interest to each of the Republics and to the International Union, marking the year 1901, was the convening of the Second International Conference of American States in the City of Mexico. In response to an invitation extended by the Republic of Mexico, this Conference was inaugurated on Tuesday, October 22, 1901. The formalities attendant upon the opening exercises were characterized by appropriate ceremonies and by cordial and courteous greetings on the part of Mexico. The Conference was still in session at the close of the year.

The Pan-American Exposition, held in the city of Buffalo from May to November, inclusive, had for its main purpose the establishment of a more extended sentiment of the community of interests existing among the nations of the Western Hemisphere, and in this respect amply accomplished its design. This fraternal feeling was evidenced by active participation on the part of all the American countries, and found expression in the common grief over the sad event which overwhelmed the land in the closing months of the Exposition. The shock occasioned by the assassination of President MCKINLEY during his visit to the Exposition was a contributing cause to the financial non-success of the enterprise. But at no time have the nations of America been so closely united as when they mourned in concert around the grave of the President of the United States.

In considering the trade relations of Latin-American countries with the United States, the countries range themselves with reference to facilities of communication in the following order: Mexico, the West Indies, Central America, the east coast of South America and the west coast of South America. Laying all other considerations aside, it can be said, regarding the commercial relations of the United States with Mexico, between which countries there is close intercommunication by land and sea, that highly satisfactory conditions prevailed in 1901. It is also worthy of note that the relations with Central America are expanding, while those of the island Republics and colonies show improvement.

The increase in Latin-American trade for the fiscal year 1901 was very noticeable. It is perhaps not fully appreciated in the United States that the markets of Europe are practically as near the Atlantic

coast of South America as are those of the United States, nor that the easternmost point of South America extends 2,600 miles farther east than New York, thus bringing the sailing distances of the ports of southern Europe actually nearer, and the principal commercial cities of England and Germany almost as near as the principal port of the United States. Pernambuco, Brazil, is 3,700 nautical miles from New York—Plymouth, England, being only 200 miles farther away from Pernambuco—while Rio de Janeiro is 4,700 miles and Buenos Ayres, Argentine Republic, is more than 1,000 miles farther removed from New York City.

Considering that the geographical conditions are almost equalized for them, it is not surprising that the European countries have thus far retained a firm grasp on the trade of South America, especially since they have been strenuously endeavoring to monopolize that trade for more than half a century, while the efforts of the United States in that direction, except in a desultory manner, have covered a period of scarcely more than a decade. This has placed many artificial obstacles in the way of commercial progress between North and South America. These include the customary usage in South America of goods manufactured in Europe, the large investments of European capital in that part of the world, including carefully developed banking facilities, and well-managed transportation lines. Concerted and industrious effort on the part of United States exporters is, however, gradually overcoming many of these obstacles. It must be said, nevertheless, that in actual practice, many vessels bringing rubber, coffee, wool, and hides from eastern South American ports to the United States load at ports of the latter country with grain, provisions, and general merchandise for Europe, where, after discharging their cargoes, they reload with goods of European make for South American markets. With regard to trade relations with the Pacific coast of South America there was a very apparent increase in the fiscal year 1901 so far as the United States was concerned, due mainly to the establishment of new steamship lines. Eighty-seven per cent of the total of South American imports is taken by countries bordering on the two great oceans, such imports including articles which could be readily furnished by the United States if proper facilities for shipping were at hand.

During the fiscal year ended June 30, 1901, the countries belonging to the International Union of American Republics exported to the United States products to the value of \$148,653,213, which represented a gain over the previous twelve months of \$17,907,956, the aggregate value of the exports in the fiscal year 1900 having been \$130,745, 257. Including the islands and colonies of America having a preponderance of inhabitants descended from the Latin races, or all of America excepting British North America and Porto Rico, the

exports to the United States were valued at \$212,599,851 in the fiscal year 1901, as compared with \$180,591,514 during the previous twelve months.

The imports by the Latin-American Republics from the United States were valued at \$90,632,555 in the fiscal year 1901, as compared with \$81,562,003 in the previous fiscal year, representing an increased import valuation of \$9,070,552 in one year. At the same time the imports by Cuba and the several American colonies were worth \$42,919,118 against \$43,000,442 in 1900, showing a decrease for the year of \$81,324. From the United States, all of Latin America imported merchandise to the value of \$133,551,673 in the fiscal year 1901, as compared with \$124,562,445 in 1900. From these figures it can be seen that in the fiscal year 1901 the balance of trade in favor of the Latin-American Republics was \$58,020,658 in 1901, and \$49,183,254 in 1900, while the balance in favor of the whole of Latin America was \$79,047,908 in 1901, and \$56,029,069 in 1900. The figures giving exports to and imports from the United States, by countries, for the fiscal years under comparison are to be found under the respective headings.

Argentine Republic.—During the fiscal year ending June 30, 1901, the Argentine Republic exported to the United States products to the value of \$8,065,318, as compared with exports worth \$8,114,304 in the previous twelve months. The imports received by the Argentine Republic from the United States during the twelve months which ended June 30, 1901, were valued at \$11,537,668 as compared with \$11,558,237 in 1900.

The published statistics of the foreign commerce of the Republic for the first six months of 1901 show an increase of \$92,082 gold in the value of imports as compared with the same period of the preceding year, and an increase of \$3,677,613 gold in the value of exports; the imports for the first half of 1901 being worth \$56,619,775 and the exports \$97,776,764. The greatest increase was shown in regard to imports from the United States, or from \$5,653,894 in the first half of 1900 to \$6,854,849 for the like period of 1901. The export list shows, however, that the reception of Argentine goods by the United States for the two periods under comparison underwent practically no change, while both France and Great Britain increased their purchases in the Argentine Republic by nearly \$4,000,000. Maize, linseed, and flour showed remarkable gains in the quantities sent abroad, the percentage of increase for the latter article being more than 200. Wool and hides also rose in export valuation from \$36,039,167 for the first six months of 1900 to \$44,837,400 during the same period of 1901. The figures for the estimated wool clip for the year 1901 show an increase of about 10 per cent and the quality is reported good.

The latest official statistics of the trade of the Republic from Argen-

tine sources are for the first nine months of the calendar year 1901, and indicate the following commercial transactions with the countries named, as compared with the corresponding period of 1900:

	Imports.		Exports.	
	1901.	1900.	1901.	1900.
United States	\$11,219,131	\$9,321,475	\$6,237,756	\$4,733,185
Great Britain	28,573,325	30,141,521	21,968,686	16,432,653
Germany	13,047,773	12,556,877	17,428,260	16,511,128
France	7,802,476	8,724,739	20,879,885	14,550,856
Belgium	6,806,876	6,985,157	11,572,853	16,169,445
Italy	11,883,720	11,699,364	3,365,815	3,213,665
Brazil	3,231,330	2,882,373	6,754,273	4,045,250
Spain	2,953,902	2,854,622	1,476,368	1,722,684

In the latter part of 1900 the first direct shipment of Argentine flour to the city of Pará was made, since which time Brazil has been an important factor in the flour trade of the Republic. A noteworthy fact in regard to the shipments of wheat from the Argentine Republic since 1892 is indicated by the remarkable changes in the destination of such exports as compared with the year 1900. In the former year Great Britain imported practically no Argentine wheat, while in the latter, the Republic figured for 48 per cent. Of the 1,929,676 tons of wheat shipped from the Republic in 1900, 92,620 tons were sent to British ports, and of the 713,248 tons of maize, 326,310 tons went to Great Britain. A new and important item of trade between the two countries referred to is furnished in the shipments of butter from the "Union Argentina" to London early in 1901, the first lot consisting of 3,325 cases. Typographical supplies for the Argentine, which had previously been obtained from Great Britain, were ordered from the United States in January, 1901, the value of \$60,000 having been contracted for by a special agent who visited the United States for the purpose of comparing the American and British varieties.

The condition of wheat exports from the Republic is shown by the fact that the shipments in 1899 were 1,713,429 tons as compared with 1,929,676 in 1900, but for 1901 (first half) 26,444,000 bushels only were exported.

Against 14,238,500 kilograms of tallow exported in 1899, 17,704,100 were shipped abroad in 1900. Other increases shown are 15,511 tons of frozen beef and 5,544 tons of linseed. In the frozen-beef trade the shipments from the River Plate have increased phenomenally, those for 1900 having been four times as great as in 1889, a further increase being noted for 1901. The frozen-mutton industry, on the other hand, appears to be almost stationary.

Of the 150,550 head of cattle exported in 1900, 38,562, or about 25 per cent, were sent to the United Kingdom, while of the 198,102 sheep, 178,969, or about 95 per cent, were shipped to British ports. It is important in this connection to note that for more than eight months

of the year the ports of the United Kingdom were closed against cattle and sheep from the Argentine Republic on account of the prevalence of the foot-and-mouth disease in the latter country. The decline in the wool shipments for 1900 was also due to the same cause. This disease was reported to have entirely disappeared in February, 1901, and strenuous measures were taken by the Government to prevent the possibility of its recurrence. In the message of the President delivered to Congress at its regular session in May, 1901, it was reported that the loss from decreased shipments of live stock had been balanced by exports of frozen meat, 1,056,441 carcasses of mutton and 152,749 quarters of beef having been shipped from the various ports of the Republic in the five months from January to May, inclusive.

The linseed crop for 1901 is reported as having been 500,000 tons, or about twice as much as the usual crop, which places the Argentine Republic in the front rank of flax-growing countries.

In the State of Tucumán the sugar-growing industry received increasing attention throughout the year, with the result that the crop attained larger proportions than heretofore. Machinery for the exploitation of this industry was furnished mainly by United States firms.

Viniculture constitutes one of the chief and growing industries of several sections of the Republic, the Province of Catamarca producing, in 1900, 1,799,013 liters of wine, the stock on hand on January 1, 1901, being 967,892 liters. This industry constitutes one of the principal sources of prosperity for the regions traversed by the Great Western Railroad.

In the Province of Santa Fé the wheat crop was reported as in excess of the average production. A considerable quantity of Italian seed wheat imported for the purpose having been sown, was found to be inferior to the native product. The grape crop of Mendoza Province was estimated as exceeding that of the previous year (1900) by fully 40 per cent.

The area devoted to the cultivation of maize in 1901 was estimated at nearly 1,200,000 hectares, while crop returns show an aggregate of over 28,000,000 quintals of 101.42 pounds each. This is an increase of about 5,000,000 quintals as compared with the crop of 1899, which was the average year, there having been a great falling off in 1900. The principal markets supplied with Argentine corn are those of England, France, Brazil, and Belgium.

The tariff schedule operative throughout the year 1900 continued in force for 1901 with but slight alterations.

The budget for the year 1901 provided for the disbursement of \$89,940,499.10 in national currency and \$26,025,175.82 in gold, the receipts being fixed at \$63,300,000 national currency and \$37,991,788 gold. A new issue of bank notes, printed by the Buenos Ayres mint,

was made early in the year in denominations of \$100, \$50, \$10, \$2, \$1, and 50 cents.

The report of the "Banco de la Nación" for December 31, 1900, stood as follows: Assets—shares, \$50,000,000; discounts in 1900, \$12,843 gold and \$82,930,113 paper; advances in current account, \$809,094 gold and \$135,804 paper; properties of the bank, \$3,497,555; cash, \$7,974,708 gold and \$44,191,902 paper. Liabilities—capital, \$50,000,000; branches, \$5,065 gold and \$2,120,941 paper; accounts in current account and time, \$592,765 gold and \$75,426,753 paper; judicial deposits, \$222,459 gold and \$18,320,907 paper; conversion fund, \$6,100,875 gold and \$1,143,081 paper; reserve fund, \$2,035,506 gold.

On October 8, 1901, Señor Don MARTÍN GARCÍA MÉROU was received by the President of the United States in the capacity of Envoy Extraordinary and Minister Plenipotentiary from the Argentine Republic near the Government of the United States.

Immigration into the Argentine Republic throughout the year 1900 was represented by 105,902 persons, Italians predominating, followed in order by Spaniards, French, Russians, Austrians, and Syrians. Other nations were represented by small numbers only.

On January 1, 1901, the population of the city of Buenos Ayres was reported to be 821,293, the Argentine capital being thus shown to be the second city of the Latin race in respect to population, Paris alone ranking it. The total population of the Republic on the date given was 4,800,000, of which 1,250,000 were foreigners and 3,550,000 natives.

At the opening of the year 1901 it was estimated that the extent of railroad trackage in the Republic was 16,563.5 kilometers, of which 2,007.2 kilometers were under State control. The total capital invested was reported to be in excess of \$525,000,000 gold.

The semiannual report of the Southern Railway of the Argentine Republic for the year 1900 showed an increase of net profits, as compared with the previous year, of £43,000, the net gain to the company during the twelve months being £1,170,000. The reports of the various railway companies in the Republic under British control were made public in May, 1901, and, in general, show gratifying results for the year 1900.

A consolidation of two of the steamship lines plying between Hamburg and American ports was reported in February, 1901, it being estimated that the registered tonnage of the company thus established would be 450,000.

Continual progress marks the development of the Republic in the matter of electricity, all the leading electrical engineering concerns of the United States being represented in the country at the opening of the year 1901, and the value of investments in electrical undertakings is estimated at \$40,000,000.

Telegraphic communication, via the Straits of Magellan, with Tierra del Fuego was one of the branches of public service which engaged the attention of the Government in the course of the year, 21 miles of cable having been purchased in London for the purpose.

In order to increase the general knowledge of improved agricultural machinery throughout the Republic, an expenditure of \$100,000 was authorized by the Cabinet, the implements to be distributed in the agricultural schools of Córdoba, Villa Casilda, and Las Delicias.

A new trade-mark law took effect on January 1.

The first South American Press Congress was held in Buenos Ayres during the month of April, 1901, and celebrated the centenary of Argentine journalism. Many questions were discussed, and various plans were formulated for the betterment of journalism and the conditions of literary activity.

Permission was granted by the Government to explore and work the sulphur deposits in the Territory of Los Andes. In the Province of Salta, the borax industry is reported to be assuming an important position, it being estimated that the shipments of this article to European ports for the year 1901 exceed 16,000 tons, exports of 4,000 tons being reported for 1900. The manufacture of oil, which, until 1890, had no place in the industrial life of the Republic, has attained a high grade of development, the City and Province of Buenos Ayres at present containing 12 oil-extracting mills, with a combined capital of \$1,535,000. All of these installations are provided with the best and most modern machinery, and the maximum daily production is approximately 650 tons.

Grain elevators and storehouses for the accommodation of the cereal crops were projected on a large scale, and a factory for the manufacture of castor oil was reported as nearing completion in the Province of Tucumán. Various new refrigerating and cold-storage plants have been erected, notably in the Provinces of Santa Fé, Buenos Ayres, and at Bahia Blanca. Breweries have been established within the past decade throughout the Republic, and the native beers have met with such favor that importations have materially decreased. In 1901 there were four breweries in Buenos Ayres, with a yearly capacity of 200,000 to 300,000 hectoliters. In Córdoba an English establishment turns out an annual production of 8,000 to 10,000 hectoliters, while smaller breweries flourish in Bahia Blanca, Rosario, Esperanza, Mendoza, San Juan, and other points of the Republic. The machinery and apparatus used in brewing is imported chiefly from Germany.

Bolivia.—The commerce of the country is mainly conducted through the ports of Antofagasta and Arica, Chile, and Mollendo, Peru, so that shipments of merchandise are, in most trade reports, credited to the countries in which those ports are situated rather than to Bolivia, the country of destination or origin. The total imports for the cal-

endar year 1900 were valued at 13,344,114.47 *bolivianos*, and the exports at 35,657,689.96 *bolivianos*. The countries exporting merchandise to the Bolivian Republic rank in importance as follows: Germany, Great Britain, Peru, Argentine Republic, and the United States, in the order named. For the first six months of 1901 the grand total of products for Bolivia imported through the port of Mollendo aggregated 2,571,365.21 *bolivianos*, and the exports for the same period through the same port amounted in value to 1,278,828.31 *bolivianos*. Statistics concerning Bolivian trade are necessarily delayed owing to the fact of their arriving in transit through other countries, whose entries must be differentiated from those of Bolivia. The receipts of the La Paz custom-house during the first seven months of 1901 aggregate a grand total of 811,256.33 *bolivianos*.

An idea of the advance made in the commercial relations between Bolivia and the United States may be obtained from the value of the exports from the latter to the former country for five years, from 1896 to 1900, inclusive, which showed a four-fold increase, with a corresponding increase in the number of shipping ports. The tin exports of Bolivia for the year 1900 sent to London are reported to have been 4,350 tons. This is more than the entire output of the celebrated Cornwall mines in that year, their total product having been 3,910 tons. The development of this industry is a source of constant interest to the Government, and new and improved machinery is continually imported with this object in view. It has been shown that, with proper enterprise, Bolivia is capable of rivaling the tin output of the Dutch East Indies and Australia. The rubber of this Republic, which forms the principal article of export from the port of La Paz, is of excellent quality and commands almost the same price as that of Para.

From a German report on commercial conditions existing in Bolivia it is shown that in the supply of cotton goods the United States ranks first in the Republic, Germany taking second place, and Great Britain third. France leads in the importation of wines and liquors, owing to the fact that a commercial treaty with that country has provided for the free entry of French wines. This, however, expires by limitation in May, 1902.

With a view to the development of railway communication within the limits of the Republic, a law was promulgated in January providing that the revenue receipts on alcohol and distilled liquors and on crude rubber in the Department of La Paz should, for three years, be applied to the construction of a line from Lake Titicaca to La Paz.

The exploration of the Upper Paraguay River was undertaken with the design of opening up a new trade route for the Republic. A complete trigonometrical survey of the country was projected during the course of the year and a contract was made with a Paris firm for surveying and mapping 40,000 square kilometers of territory and for the

laying off of a triangulation for that purpose. A delimitation of the boundary line with Paraguay was also determined upon, and the work of survey was begun in March, 1901. Geologists and other scientific experts accompanied the commission with a view to making accurate reports on the various mining properties encountered.

The "Bolivian Company," organized during the year through the agency of Sir MARTIN CONWAY, had for its object the development of various Bolivian industries, the opening of roads, etc., in the Provinces of Caupolicán and Larecaja.

As a result of the increased production of minerals in 1901, exchange rose from 17 and 18 *pence* the *boliviano* to 22½, and then to 22⅔. Numerous metallurgical establishments were also put in operation, and the opinion is held that, with sufficient capital and proper methods of exploitation, Bolivia could easily become the first gold-producing country of the world.

A treaty of extradition and a parcels-post agreement with the United States were entered into during the year, and a treaty of friendship and extradition with Italy was ratified on January 7, 1901. One of the stipulations of the latter agreement was that a commercial clause should be negotiated within two years from that date between the nations interested.

Brazil.—For the fiscal years 1900 and 1901 Brazilian exports to the United States are represented by the values \$58,073,457 and \$70,643,347, respectively, while for the same period imports from the latter country were worth \$11,578,119 and \$12,034,267, respectively.

For the calendar year 1900 the value of leading exports to Great Britain was represented by £852,531 as compared with £336,402 in 1899; imports from the United Kingdom for the same periods were valued at \$2,529,780 in 1900 and \$2,753,457 in 1899, thus showing very gratifying trade conditions.

Detailed statistics of the export trade of Rio de Janeiro and Santos for the calendar year 1900, as compiled by the Brazilian Bulletin of Commercial Statistics, show that, during the year cited, exports to the United States amounted to nearly as much as the exports to the whole of Europe. Out of a total export trade value of 473,780,219\$000, 212,315,527\$000 represents the share of the United States. For the first quarter of 1901 the total imports of the Republic were valued by the National Statistical Bureau at 68,171,265\$ (\$15,296,382.81) while the exports during that period were worth 205,495,868\$ (\$45,155,523.53).

A new consular invoice law went into effect on January 1, 1901.

The State of Pernambuco is said to be in a particularly prosperous condition with reference to the cotton-manufacturing industry, one mill having paid a dividend of 36 per cent in the year 1900, and other concerns paying dividends of 18 and 10 per cent, although lacking the most improved methods of exploitation, are reported.

A new industry, which will no doubt have far-reaching economic results, is the manufacture of butter in the State of Minas Geraes. At the opening of the year 1901 it was reported that 30 factories were in operation in that State, whose product was steadily supplanting the foreign article. As butter making in the Republic dates back only ten years, this showing is worthy of note. Various measures have been enacted affecting the transport of this product and tending to facilitate its distribution at home.

An interesting report on the conditions affecting the flour and wheat trade of the Republic was published during the year by Senhor CARVALHO, manager of the wharves at Rio de Janeiro, showing the status of foreign and domestic trade in these articles from 1876 to 1900, inclusive. A new feature of this branch of industry has appeared since 1888—the manufacture of flour in Brazilian mills from wheat imported from the United States and the Argentine Republic, the product for 1888 being represented by 10,000 tons, and in 1899 by 71,000 tons. The manufacture of jute bags for the shipment of coffee has proved one of the remunerative new industries of the year.

Coffee receipts at Santos and Rio de Janeiro, the two great coffee-shipping ports of the Republic, aggregated 10,361,000 bags in the season from July 1, 1900, to May 31, 1901, as compared with 8,656,000 bags in the season previous. It is estimated that the crop of 1900–1901 surpassed all previous records, 12,000,000 bags being the anticipated output. At the close of the year 1901 the estimate of the growing crop (to be marketed in 1902) was placed at 7,500,000 bags, and in view of the anticipated rise in the price of this important article of Brazilian trade, the outlook for agriculturists and business men generally was very bright.

The stock of rubber on hand in the State of Amazonas on December 31, 1900, was reported to be 245,000 kilograms. This State, which is the greatest rubber-producing district in the world, recently promulgated regulations requiring that all the rubber gathered shall be handled in Manãos. This city has developed marvelously within the past eight years, the present population being estimated at 52,900, as compared with 20,000 at the earlier period. The placing of the rubber lands under private control, and a more intelligent, systematic, and economical supervision of rubber gathering, will result in a greater regularity of supply and more stable prices for that commodity. The production of rubber in the Amazon Valley for the year 1900 is reported to have aggregated 25,807 tons. For the first half of 1901 exports of rubber from the State of Para amounted to 6,576,348 kilograms, and the port of Manãos shipped 10,412,256 kilograms during the same period.

Seeds of various products, regarded as suited to the climate and soil of the temperate regions of the Republic, were imported during the year from the United States through the Brazilian Minister at Wash-

ington, Mr. ASSIS-BRASIL. They were distributed to the various farmers desiring to make experimental use of new agricultural products. A congress for the discussion of the various phases of agricultural development and the application of the best means to overcome existing backward conditions was convened on September 20, 1901.

Immigration of a desirable character received the encouragement of the Government, and among other projects for the development of this matter the Minister of Agriculture, Commerce, and Public Works called for proposals for the introduction of 30,000 immigrants. According to a report from United States Consul-General SEEGER, up to July 1, 1901, nearly 2,700,000 foreigners had located in Brazil, Italian immigrants forming the largest proportion. German colonies are in a most flourishing condition, that of Blumenau, in the State of Santa Catharina, being one of the best foreign settlements in Brazil. The latest available statistics are for the year 1900, when 13,801 immigrants entered the Republic at Rio de Janeiro; principally from Portugal and Spain.

The naval force of the Republic was augmented by law, in 1901, and special provisions were made for reenlistments of marines and ex-sailors.

A decree authorizing the establishment of a permanent exhibition in the capital of the State of Minas Geraes was promulgated during the year and the date of opening approximately fixed for April, 1902. Foreign nations have been invited to participate.

On January 7, 1901, the Pernambuco American Commercial Institute was opened, the purpose of the institution being the development of knowledge along commercial and industrial lines. The system of instruction employed will be based upon United States models and follow the lines laid down in similar establishments in that Republic.

A line of steamers to ply between Para and European ports was authorized by law in the course of the year, and further steamship service with the port of New York was inaugurated by the South American Steamship Syndicate on November 16, 1901. The purpose of this company is to connect with Brazilian ports to the south of Santos, that city having until then formed the southern terminus of the line interested.

The Western Brazilian Cable Company made improvements of an important character, whereby the cost of cable communication between Brazil and the United States was greatly reduced, and at the same time facilities for more speedy intercourse were offered. This new line was opened from New York to the Azores Islands, connecting with Brazil via Lisbon, and the delays incident to transmission through the London offices are now avoided. The reduction in rates is about 25 per cent.

The estimated expenditures for the year 1901, as given in the budget and appropriated for by the National Congress, were 244,514,194 *milreis* paper and 37,509,985 *milreis* gold. The revenues were estimated at 286,082,200 *milreis* paper and 58,869,741 *milreis* gold.

A new revenue law went into effect on January 1, 1901. Part of the national debt and the interest thereon was met in April by a deposit of £2,300,000 in London banks. In his message to Congress, delivered May 3, 1901, President CAMPOS SALLES indicated the possibility of a further contribution to this fund of £1,800,000 by December, 1901, which sum would more than meet the obligations of the Republic. The financial year 1900 showed a surplus in the budget of 69,000 *contos*, and the first quarter of 1901 indicated an increase under every branch of revenue as compared with the corresponding period of 1900. The report of the Minister of Finance, made public on September 17, 1901, contained a résumé of the financial affairs of the Republic since 1898 and justified the various measures taken by the Government for the restoration of public credit, and it was shown that the finances of the country were on a more solid foundation than for years past. Specie payments of the foreign gold obligations have been resumed and Brazilian securities have risen appreciably.

For the first six months of 1901 public revenues received at the port of Rio de Janeiro amounted to 31,809,241\$975 as compared with 24,133,024\$514 for the same period of 1900. Increased receipts were also noted for the port of Santos, but Bahia and eight other custom-houses show a slight decline in revenue collections.

Gold mining by the St. John d'El Rey Mining Company in the State of Minas Geraes constituted one of the important mining industries of the year, it being stated that these mines were of far greater richness and more easily exploited than various others of greater renown. The sales of gold bullion for the first six months of the fiscal year 1901 amounted in value to £165,352.

On February 9, 1901, the discovery of large manganese deposits was announced in the State of Minas Geraes. Analyses of the ore showed an average of 59 per cent of metallic manganese, with no phosphorus and a very small percentage of iron. As 52 per cent of metallic manganese is the highest average reported heretofore for Brazilian manganese, the value of the new deposit is evident. Coal beds containing a fine grade of the product were discovered in the State of Amazonas, the richest being 6 miles from the Colombian frontier and extending to Tabatinga, on the Brazilian frontier. Other coal deposits of good commercial value exist in the State of Rio Grande do Sul, the working of which is said to be profitable.

The boundary award between Brazil and French Guiana as delivered in Berne on December 1, 1900, gave to the former country the maritime boundary which Portugal has steadily claimed since 1688. About

147,000 square miles of the disputed territory were awarded to Brazil and about 3,000 square miles to France. Military attachés were appointed by the Brazilian Government to the various legations in European capitals, Washington, Buenos Ayres, and Santiago, and the Brazilian Minister at Brussels was granted full power to ratify the protocols relative to the protection of industrial property, which were under consideration between Brazil and Belgium. On April 1, 1901, an agreement for the exchange of postal money orders with Belgium went into effect, the orders for both countries to be expressed in *francs* and fractions thereof, those payable in Brazil being convertible into national currency at the commercial rate of exchange on the date of their presentation at the post-office.

Chile.—A comparative examination of the commerce of Chile with foreign trade nations shows that during the ten years intervening from 1891 to 1900 the balance of trade has been in favor of the Republic, the imports during the decade being represented by 1,335,964,480 and the exports by 1,523,032,751 *pesos*. The principal countries from which imports were received in 1900 were Great Britain, Germany, United States, Australia, France, and Peru, in the order named. The total foreign commerce of Chile for the year was valued at \$296,212,777 (Chilean currency), of which \$128,538,142 represented the value of imports and \$167,674,635 the exports. The exports to the United States, according to United States figures, during the fiscal year 1901 were valued at \$8,645,604, as compared with a valuation of \$7,112,826 in 1900. United States products imported by Chile attained a valuation of \$5,294,726 in 1901 as against \$3,287,565 for the previous twelve months.

British trade statistics indicate a falling off in the quantity of wheat imported from Chile during the year 1900, as compared with the previous twelve months, but copper imports show an appreciable increase. The value of goods imported into the Republic from the United Kingdom was about the same for both 1899 and 1900. In April, 1901, it was reported from Santiago that 70,000 tons of wheat, chiefly from the western coast of the United States, had been received at that port. This indicated a marked increase of wheat imports, necessitated by certain climatic changes in the Republic.

In March, 1901, the Chilean Government ordered from the United States 16,000 tons of standard steel rails for railways, it being one of the large orders placed in the estimated expenditure of \$16,878,190 for the improvement of the lines of the Republic.

The authorized expenditure of public moneys for the year 1901 amounted to \$129,319,793.07. The estimated revenue, including a surplus of \$18,576,829.43 from the preceding year, amounted to \$123,104,051.43. The total customs receipts in the various custom-houses of the Republic for the year 1900 amounted to \$78,467,461,

against \$68,613,755 in 1899, the import duties for the two years being \$28,305,863 and \$21,368,586, respectively, and the export dues, \$50,161,598 and \$47,245,169.

The standing army of the Republic was fixed for the year at 17,385 men, of which 5,885 were officers or instructors, and 11,500 privates. The navy consisted of 16 vessels of war, 20 torpedo boats, 10 coast guard vessels, 2 transports, and 10 pontoons, or store vessels. The personnel was fixed at 5,260 men, including 612 chiefs and officials and 600 landsmen.

For the improvement of the harbor of Valparaiso the sum of £17,250 was appropriated by the National Congress, the President being also given authority to expend £10,000 in the acquisition of dredges for the deepening of the entrances to other ports of the Republic, further grants being made for improvements at various custom-houses.

Banking and insurance companies declaring dividends for the half year ending December 31, 1900, demonstrated the high status of public credit, several of the latter paying 20 per cent. In the month of September, 1901, the Commercial Union of Santiago held an Industrial and Commercial Congress, the primary object of which was a discussion of existing domestic trade conditions and the best methods of improving them.

In the message of the President to the National Congress on June 1, 1901, it was stated that there were established throughout the Republic 1,547 schools, as compared with 1,403 in the previous year. Lyceums for girls had been opened in Tacna, Talca, Cauquenes, and Chillan, and another was shortly to be established in Concepción.

During the year, the English Navigation Company and the South American Steamship Company greatly increased their tonnage, the latter extending its itinerary to Central America and to San Francisco. Other additions to maritime communication were reported, among them being a company under the flag of the United States, with steamers plying between San Francisco and Valparaiso, and another whose itinerary should include the Pacific ports between Panama and Coronel in Chile, with an extension from Guayaquil to Europe. A departure of moment in the shipbuilding industry of the Republic was the construction, during the year, of a steel steamer for light-house service, entirely of native material. The hull of the vessel was not, as previously, made from parts obtained from abroad.

The acquisition of the rights of construction of the Transandine Railway by the Transandine Construction Company, Limited, represented by W. R. GRACE & Co., of New York, seems to afford a guaranty for the speedy completion of this important line of communication. The transaction was completed on August 23, 1901, the former holders relinquishing their rights in favor of the company

named through the signature of a deed of sale. The completion of this line will effect a saving of twenty days in the journey between Chile and Europe, and will also materially shorten the trip from the Republic to the eastern ports of the United States.

The sulphur deposits of the Republic have received renewed attention and further impetus was given to their development. With a view to the beneficial management of the nitrate market, an agreement was entered into by the owners and producers of that commodity whereby the output of nitrate each year should be limited. The arrangement was based on an approximate annual production of 1,600,000 tons (subject to modification), and became effective on April 1, 1901, five years being fixed as the limit of its continuance.

A report on the condition of the nitrate industry for the calendar year 1900 showed a production for the year of 32,474,583 quintals, of which 31,549,653 were exported. The world's consumption for that year was stated to have been 30,443,020 quintals. The record of consumption was reached in March, 1901, when the whole amount for the world showed a total of 6,000,000 quintals. In a report covering the first quarter of 1901 the Permanent Nitrate Association reported a total production of 5,939,097 quintals as compared with 7,514,794 quintals in the corresponding period of 1900. The exports were 6,188,383 for 1901 (first quarter), against 6,610,095 for the same period of the preceding year. The estimate for the year's exports, as given in the message of President ERRÁZURIZ on June 1, 1901, reached a total of 39,500,000 Spanish quintals, on which it was figured the export duties would amount to \$45,725,000. A bill authorizing the sale of the nitrate properties of the Government was passed by the Chilean Congress during the year, the proceeds to be at the disposal of the Government.

A notable feature in the exports of copper for 1900 was the decrease in exports of ores and the increase in the bar copper and the regulus or matte sent abroad. The total production of gold in the Republic for the year 1900 was 2,449,004 grams, valued at \$1,714,315, United States currency, of which 2,120,403 grams were exported in bars and 2,680 grams in gold ore.

Various important contracts were entered into for the colonization of certain sections of the Republic, one of which included the settlement of 1,000 European families in the Territory of Magellan, within a period of eight years. The Austrian settlements in Patagonia are reported as very prosperous.

The death of Señor Don FEDERICO ERRÁZURIZ, President of the Republic, occurred on July 12, 1901. The deceased Executive had been in public life since 1876, and had occupied a high place among the notable men of his country. During the administration of President BALMACEDA he occupied the position of Minister of War, and was

Minister of Justice and Public Instruction under President MONTT. His presidential term was inaugurated in September, 1896, and from that time until his death he applied himself with great diligence to the solution of those economic and international questions which claimed the attention of the Government, and in which his great talents, vast learning, and knowledge of statecraft were of incalculable value.

Another sorrowful occasion for the Republic was the death, on August 20, 1901, of Señor CARLOS MORLA VICUÑA, Envoy Extraordinary and Minister Plenipotentiary for Chile near the Government of the United States. Señor MORLA VICUÑA was one of the best-known South American statesmen, and at the time of his death, in addition to his post as Minister, held that of Commissioner to the Pan-American Exposition at Buffalo, in which city he contracted the illness which terminated fatally.

Colombia.—The Republic of Colombia has an average export trade of about \$15,000,000 annually. For the fiscal year ending June 30, 1901, the receipts of Colombian merchandise by the United States were valued at \$3,230,652, as against \$4,307,814 in 1900. The imports of United States goods at Colombian ports for the same year were valued at \$3,142,052, as compared with \$2,710,688 in the preceding twelve months. For the eleven months of the calendar year 1901 United States statistics show that \$3,329,539 and \$3,024,488 represent the import and export valuations of trade with Colombia, as compared with \$2,824,633 and \$2,362,855 in the corresponding period of 1900.

A decree which went into effect on March 5, 1901, exempted from import duty certain food products, the same to continue in operation for sixty days. The export duties on native products were fixed by a decree of March 1, and were to be paid in national paper currency. Dating from May 15, 1901, the port charges of the Republic were made payable in gold. In October, 1901, a governmental decree was issued, whereby the import rates on articles imported into the Republic were increased 20 per cent.

At the beginning of the year 1901, according to official information, there were in the Republic of Colombia 605 kilometers (376 miles) of railways, eight of the nine Departments of the country being traversed by the lines.

The annual report of the Panama Railroad and Steamship Company for 1900 showed a very prosperous condition of affairs, the president of the company stating that "the year has been one of the most important in the history of the company." The inauguration of an "open-door policy" for the Panama route brought considerable additions to the steamship service, and the construction of new ships for the Atlantic line was deemed advisable. The total earnings for the year were \$2,655,196, an increase of \$460,152 as compared with 1899.

The coal mines situated on both sides of the Isthmus of Panama

were extensively exploited during the year, a company of Swiss capitalists being formed in Paris for the purpose.

An unprecedented gold shipment marked the month of March, 1901, 200 bars of the precious metal forming one item of transport from the interior of the Republic. In the same month it was reported that nearly \$1,000,000 was forwarded to Europe in one shipment.

The emerald mines of Muzo and Coscuez were offered for sale or lease during the course of the year, and it was decided by the Government to sell to the highest bidder, for a term of fifteen years, the exclusive right to develop the pearl and coral fisheries in Colombian waters.

Considerable quantities of coal from Norfolk, Va., U. S. A., were received at Colon, one shipment of 12,000 tons, distributed in four steamers, being reported.

In March, 1901, the "Colombian-United States Mining Company," with a capital of \$1,000,000, was incorporated at Wilmington, Delaware, United States, for the exploitation of the mines of the Republic.

An important decree affecting the registration of labels and trademarks in the Republic was issued November 29, 1900.

On March 2, 1901, Señor Don CARLOS MARTINEZ SILVA was received by the President of the United States as Envoy Extraordinary and Minister Plenipotentiary of the Colombian Republic near the Government of the United States.

Costa Rica.—The commercial and financial report of the Republic for the year 1901, as submitted to the National Congress by Señor ELOY TRUQUE, Assistant Secretary of the Treasury, indicates that by reason of the decline in coffee prices in foreign markets, Costa Rican trade conditions were temporarily straitened. The predicted rise in the value of this commodity will, however, readjust affairs, and as the coffee of the Republic is regarded by experts as unexcelled by that of any other region, no permanent injury to the trade is looked for. The consumption of Costa Rican coffee in the United States is constantly increasing, and the high prices it commands, compared with those obtained for coffees of the same grade from other countries, is proof of its growing popularity. The coffee exports of 1900 were valued at £589,000, of which 55 per cent were sent to Great Britain, 26 per cent to the United States, 15 per cent to Germany, and 4 per cent to other countries. A law abolishing the export duty on coffee became operative on September 1, 1901. The total value of the commerce of the country for the year 1900 was over \$12,000,000.

One of the most important items of increase in the foreign trade was shown to be in the banana industry, a comparison between the years 1881 and 1900 showing the shipments to have been 3,500 bunches, and 3,420,166 bunches for the two years, respectively. It was further

stated that the value of banana exports was exceeded by one article only, viz, coffee. An experimental shipment of bananas by means of barges towed by steam tugs was made in March, 1901, it having been calculated that the saving by this means of transportation would be fully 25 per cent. In the trade for 1900 and 1901 the United States figured for about 50 per cent in the import lists of the Republic as against 43 per cent in 1899, Germany's trade having fallen off one and one-half points, while that of Great Britain advanced from 19.6 per cent to 22.6 per cent in the years named.

A commercial treaty with France, providing for the reciprocal exchange of tropical products between the Republic of Costa Rica and the French colonial possessions and France proper at the lowest rate of customs duties, was entered into by the two interested countries and signed on June 7, 1901, at San José.

According to a governmental decree, import duties on foreign goods brought into the Republic were raised 50 per cent after April 28, 1901. The importations during the first half of the fiscal year 1900-1901 were comparatively heavy. According to United States statistics, the receipts of Costa Rican products during the fiscal year 1901 amounted in value to \$2,990,550, compared with \$2,980,030 in the previous 12 months. Imports from the United States received at Costa Rican custom houses were valued at \$1,946,726 in 1901 and \$1,462,355 in 1900. The tobacco industry is developing rapidly in the Republic, a significant indication of the fact being shown by the reduced importations of foreign manufactured tobacco.

On February 2, 1901, an issue of bonds to the amount of \$148,910.96, American gold, was authorized in conformity with Clause XIII of the Pacific Railway concession. This sum represents one-half of the estimated value of the railroads constructed during the months of July to December, 1900. Of this issue, \$111,000 was for delivery to the contractors, the remainder to be held by the Government in the nature of a guaranty, in accordance with the terms and provisions of the concessions. A further issue of bonds was ordered in April in part payment for the construction of 29.5 kilometers of railway completed between January 1 and March 31, 1901.

The net earnings of the Costa Rica Railway Company in 1900 amounted to £135,552, a sum sufficient to meet the interest on the capital invested and to increase the reserve fund.

In March the circulation of 30,000 *colones* was authorized by Presidential decree. These gold coins were made at the United States mint in Philadelphia in denominations of two *colones* each. In the same month Costa Rican bonds to the value of 642,300 *colones* were incinerated, having been issued in 1897 and 1899 and subsequently redeemed.

Cuba.—During the month of January, 1901, the total receipts from customs at the port of Havana were officially stated to have been \$879,325.18, import duties to the extent of \$705,234.59 forming the chief item of receipt. According to an order issued by the President of the United States, the export duty on tobacco was abolished after April 1, 1901. It was estimated that the abolition of this duty would cause a loss of revenue amounting to from \$800,000 to \$1,000,000 annually, but the Economic Commission, upon whose recommendation the order was issued, was of the opinion that the stimulus given to production would more than offset the loss. The exports affected amount to about \$20,000,000 per year. Modifications of the Cuban tariff as promulgated on September 27, 1901, provided for the reduction of the duty on railway equipments from 10 to 5 per cent ad valorem, the same reduction being made on machinery used in the manufacture of sugar.

For the first quarter of the year 1901 the customs receipts at all ports aggregated \$3,985,946.89, which was a slight decline as compared with the corresponding period of 1900, but an advance over the first three month of 1899. The falling off was due to decreased receipts at the port of Havana. A comparison of the total receipts from internal-revenue collections for the fiscal year ending June 30, 1901, with those for the preceding fiscal year shows a diminution of \$213,270.74 in 1901.

Active efforts were made during the year to introduce the cultivation of cotton into the noted Vuelta Abajo tobacco district of the island. The Western Railway Company of Havana procured a quantity of seed from Egypt, the sea-island plantations of Georgia, and the long sections of the Mississippi Valley. Plantation owners willing to experiment with the plant were furnished seed, gratis, and pamphlets printed in Spanish and containing all possible information with reference to the culture of the cotton plant were also issued. Fifty years ago cotton was cultivated on an extensive scale in this district. The total production of sugar in 1901 was 635,856 tons.

Sponge fishing has been one of the rapidly developed industries of the island of late years, it being estimated that the value of sponges exported from the port of Batabano each year is about \$1,000,000. This industry has grown up within the last fifteen years, France and the United States being the principal buyers. The iron mines opened at Chirivicos shipped their first cargo of ore on May 12, 1901; 2,200 tons comprised the shipment, which was destined for the United States. The Hamiyi Company, having a capital of \$2,000,000, with headquarters at New York, was incorporated in June, the purpose being to raise sugar cane and to manufacture sugar and other products. Another company located at Banes, and operating a large factory, established at a cost of \$750,000, found it necessary to enlarge the plant after two months' work.

On July 1, 1901, the National Bank of Cuba became the depository of the insular funds in Cuba and the fiscal agent of the United States Government, with main offices at Havana and branch establishments at Santiago, Cienfuegos, and Matanzas.

The second month of the calendar year 1901 was notable for the assembling of the Pan-American Medical Congress in the city of Havana. Valuable papers were presented on the subjects of hygiene and quarantine, and the various countries of Latin America were ably represented at the sessions, which lasted from the 4th to the 7th of the month.

From July 1 to December 31, 1900, the total number of immigrants arriving at the port of Havana was 14,578. The figures for the calendar year 1901 have not been made public as yet.

On April 1, 1901, the rates of postage and classification used in the United States went into operation for all mail matter passing between the United States and Cuba, those previously applied having been the same fixed for other countries belonging to the Postal Union.

The total revenues for the eleven months ending November 30, 1901, were \$14,355,000.26, as compared with \$14,565,202.07 for the same period of 1900 and \$13,378,557.40 for 1899.

The duty on exports was abolished April 1, 1901. The export duties collected during the first three months of 1901 amounted to \$267,440.42; during the eleven months ending November 30, 1900, \$893,703.14; eleven months ending November 30, 1899, \$676,545.90; from which it will appear that the customs revenues, exclusive of export duties, increased in 1901 over the previous year by \$416,060.91, or 3 per cent, and over the second preceding year by \$1,385,548.34, or 11 per cent.

Ecuador.—According to published statistics, the exports of the Republic of Ecuador for the year 1900 amounted in value to 15,419,222 *sucres* (\$6,940,199), the imports during the same period being valued at 13,431,179 *sucres* (\$6,057,462). The principal articles were cacao, ivory nuts, crude rubber, silver bullion and coin, straw hats, sugar, coffee, gold, and fruits. For that year the importations from the United States were valued at \$1,500,000, and the exports to that country at \$1,420,500, though the Treasury Department of the United States in its report gives slightly larger figures. During the fiscal year 1901, Ecuador exported to the United States products to the value of \$1,424,840, and imported United States goods to the amount of \$2,015,085. These imports show an increased valuation as compared with the preceding year, when the aggregate was \$1,216,008.

The cacao crop of Ecuador is always an important item in the country's trade, and in 1900 it is estimated that about one-half of the product was sent to France; the United States, England, Germany, and

Spain, in the order named, taking the bulk of the remainder. The estimate of production of this article for 1901, made in March, showed a great increase as compared with the preceding year, the entries for the first three months being 113,900 quintals as against 72,903 for the same period in 1900.

An import tax of 23 per cent *ad valorem* was placed by law on all articles brought into the Republic after January 1, 1901, and exports, with the exception of coffee, "toquilla" straw for the manufacture of hats, and ivory nuts, were, after December 15, 1900, subjected to a duty of 50 per cent *ad valorem*.

In the latter part of 1900, a decree of the National Assembly provided that the coffee tax of the Province of El Oro should be devoted to railway and navigation improvements and to certain municipal projects. The development of railroads constituted one of the important features of internal improvement throughout the year 1901—vast quantities of ties and rolling stock being imported from the United States in the furtherance of this object. It was estimated that the total purchases in the United States of rolling stock and materials would aggregate \$3,500,000 before the road would be in working order. In order to facilitate this very important public enterprise, the Ecuadorian Government directed its consular agents at the ports of New York, San Francisco, Liverpool, and Hamburg not to require fees for the registration of invoices of materials destined for the line. In February, 1901, a concession was granted for the construction of a wharf at Guayaquil, to be completed within three years from the date of contract.

On June 12, 1901, the Executive Power sanctioned a very important law providing for the establishment in the capital of a board of immigration, whose object shall be to attract and encourage foreign immigration and to found colonies in various parts of the Republic.

According to the law of November 4, 1900, the gold standard went into effect throughout the Republic, without in any degree interrupting or disturbing the usual commercial transactions of the country. The establishment of a French bank at Quito was one of the financial purposes of the year, a syndicate being formed in Paris, and the project receiving the favorable support of President ALFARO. The profits of the Bank of Ecuador in the year 1900 were 296,822.94 *suces*; the earnings of the Commercial and Agricultural Bank were 306,230.05 *suces*, and the profits of the Territorial Bank during the same period were 18,044.09 *suces*.

For the purpose of providing for the more thorough development of the gold fields of the Republic, the former Consul-General of Ecuador in the United States visited the latter country during the course of the year 1901 and arranged for the shipment of improved mining machinery.

A number of dredges were purchased and electrical appliances of various kinds were contracted for.

Important discoveries of coal deposits were reported on the Cotuhé River, a tributary of the Ica, the richest layers being about 6 miles from the Brazilian frontier and extending to Tabatinga. Asphalt deposits were also reported on the Island of Salango, off the coast of the Republic. A British-American company, organized for the exploitation of the various mineral deposits of the Republic, commenced operations during the year, with a capital of £1,000,000, upon lands and properties primarily under the control of the Ecuadorian Association. This association has the Guayaquil and Quito Railway under construction, the opening of which will contribute wonderfully to the development of Ecuador.

On November 18, 1901, a trial train was run over the new railway line from Busay to Quibí, a distance of 22 miles, which constituted the most difficult section of the Guayaquil to Quito line, now in course of construction. When the road was undertaken it was feared that the constructive impediments at this point would be insurmountable, but it is considered at the present time that the main problem of passing the Andes has been solved.

Guatemala.—During the fiscal year 1901 Guatemala exported to the United States products valued at \$3,512,445, as compared with \$2,402,978 in 1900. The imports received from the United States were worth \$1,424,814, as compared with \$785,462 in the previous twelve months.

The tariff schedule of the preceding year continued in force throughout the Republic during the first six months of 1901, a decree to that effect having been issued in December, 1900. Certain exemptions were, however, made in favor of imports from the neighboring Republics of Salvador, Honduras Nicaragua, and Costa Rica. A reduction of 30 per cent, provisionally granted in the customs tariff to merchandise imported from Europe and the United States, was extended for another period of six months dating from July, 1901. On August 12, 1901, a decree was issued by the Government providing that the duty of 6 *pesos* per quintal on coffee exported from the Republic should remain in force until June 30, 1902. This duty was first made effective in July, 1900. The coffee crop of 1901 was estimated at 480,000 quintals.

In January, 1901, a decree authorized the appointment of two male and two female teachers who should be sent to the United States, at Government expense, for the purpose of studying the methods and systems of instruction employed in that country.

In his annual message to the National Legislative Assembly, at the opening of its regular session in 1901, the President of the Republic

noted the moral and material advancement of the country, the improvement in the public highways, and the development of agriculture. The contract for the construction of the Northern Railway was also referred to as a work which, when completed, will be of the greatest benefit in the development of the latent resources of the country. The road leading to the northern part of the Republic has been opened for public traffic for about 15 leagues and other thoroughfares are being opened up.

With a view to the preservation and the proper exploitation of the forest lands of the Republic, special regulations governing the same were enacted during the year.

In January, 1901, definite steps for the completion of the Northern Railway were taken, and a contract was made with the "Central American Company, Incorporated," looking to this end. As a guaranty for the cost of construction, the Government of Guatemala proposed to issue \$4,000,000 in 6 per cent gold-bearing bonds, redeemable within ten years from the date of signing the contract, at which time all the road and rolling stock should become the property of the Government. On April 29, 1901, a contract was entered into between the Government and the Guatemala Central Railroad Company for the extension of the Patulul branch of that road from Patulul to Mazatenango. With the completion of this branch, connecting the Guatemala Central with the Occidental Railroad, the capital will be directly united with the north and west Provinces of the Republic.

A tramway, to be completed within five months from January 18, 1901, was authorized between the capital and Guarda Viejo, the concession carrying with it the free importation of the cars necessary for the exploitation of the road.

With the idea of protecting, fostering, and placing upon a better and more solid basis the mining industry of the Republic, the National Legislative Assembly passed a law prohibiting the holding of more than one mine by one individual in his own name; also, that corporations of three or more persons should not obtain concessions for the exploitation of more than three mines. Special provisions were made that the law should not conflict with previously acquired rights.

Haiti.—The general commercial conditions of the Haitian Republic are reported to be in a most favorable state. Merchants doing business with the United States have largely increased their orders for all classes of provisions and merchandise. This is probably due to the fact that subsequently to October 1, 1901, import duties were made payable in gold. In the fiscal year ended June 30, 1901, Haiti exported to the United States products to the value of \$1,199,240 as compared with \$1,184,797 in 1900. The imports from the United States in 1901 were worth \$3,424,662, compared with \$2,996,689 in the previous twelve months.

The provisions of a minimum tariff treaty with France were made operative from January 1 to June 30, 1901. This treaty affected certain specified articles imported by France from the Haitian Republic. In July, 1901, a law was enacted by the Haitian Congress granting special powers to the President of the Republic in matters affecting tariff rates. According to this law the President was authorized to increase the rates on foreign goods, when circumstances should seem to require, to a maximum tariff not to exceed the existing one by threefold.

An official statement issued by the National Bank of Haiti early in the year showed an improved financial condition throughout the Republic. The national debt was being gradually reduced, the revenue receipts were increasing, the expenses of the Government were being cut down, and the rates of exchange were lower than for many previous years, while the yield of leading articles of export was increasing, with a consequent larger exportation. On the whole, a prosperous condition of the country was evident. Government receipts in 1900 amounted to \$3,332,300.32 for export duties and \$4,293,097.32 for import duties, in both cases substantial gains over the previous year being shown. A reduced export duty on coffee, logwood, and certain other products became operative in September, 1901, it being further decreed that the surtax of 25 per cent on imports should be paid in United States gold. The loan which the Minister of Finance was authorized to contract for the purpose of retiring a certain amount of the present paper currency was restricted to \$500,000 by special legislation.

Regarding the importance and growth of the banana industry, the opinion has been expressed that the fertility of the soils of the island was such that from 15,000 to 20,000 bunches of bananas might be shipped fortnightly if the culture received such attention as it merited. The soil and climate of the Republic have been found thoroughly adapted to the growing of cotton, three varieties being produced, while the opportunities for fruit culture are reported as most favorable. Tobacco growing has received renewed attention during the year.

Honduras.—In the fiscal year 1901 the exports of Honduras products to the United States were valued at \$1,258,317, as compared with \$988,606 in the preceding year, while the imports from the United States for the two periods under comparison were \$1,115,009 and \$1,181,453, respectively.

The question of the canalization of the Patuca River was again taken up during the year by the National Congress and an arbitrator was appointed by the Government to settle a water-right controversy between the various claimants.

According to a report presented to the National Congress by the

Secretary of War, the total strength of the army of the Republic was shown to be 40,079 men.

The culture and production of rubber occupied public attention very largely throughout the course of the year, and thousands of seedlings were procured from the forests where they grow in a wild state, and transplanted for systematic cultivation.

On March 3, 1901, a contract for the construction of a line of railway from Omoa to a point on the Bay of Trujillo received the approval of the National Congress, the concessionaires being citizens of the United States. The contract carried with it stipulations for the completion of the line within six years from the date of signature, while certain sections were to be open for public service within two and four years, respectively. Right of way and local privileges, including the cutting of cabinet woods, were granted by the Government, while the colonization of the land grants was made an important feature of the contract. At the expiration of ninety-nine years the entire property was to revert to the Government without incumbrance and without the payment by the Government of any sum of money.

Mexico.—According to the statistics of the Treasury Department of the United States, the commerce between Mexico and the United States for the fiscal year ended June 30, 1901, is represented by Mexican exports to the value of \$28,868,011, as compared with \$28,640,053 for the preceding twelve months, while during the same period Mexico imported from the United States merchandise to the value of \$36,475,350 as against a valuation of \$34,974,961 in 1900, showing a gain of \$1,500,389.

For the first six months of the fiscal year 1901 the total foreign commerce of Mexico was: Imports, \$32,159,248.68 (gold), and exports, \$77,469,674.39 (silver). The silver valuation of the imports was \$65,067,118.76, thus making a difference in favor of exports of \$12,402,055.63. This commerce shows an increase, as compared with the corresponding period of the previous year, of \$6,132,864.76 for imports and of \$11,047,479.89 for exports. Germany ranked first on the import list in Mexican trade for the period referred to, merchandise to the value of \$3,786,460.93 having been received from that country; following, in order, France, the United States, and Spain. Exports were made chiefly to America and Europe, the United States being the principal buyer, to the amount of \$58,680,255.02 out of a total valuation of \$61,894,682.60 reported for the whole American continent. An important feature of the trade of the year was the development of commerce with Spanish ports, Barcelona being particularly noteworthy for imports of Mexican products. The trade value for the first nine months of the fiscal year—from July, 1900, to March, 1901, inclusive—was \$48,005,199.49 (gold) for imports and \$121,021,578.44 (silver) for exports, substantial gains being shown in

both items as compared with the corresponding period of the previous year. For the entire fiscal year the total imports were \$65,083,450.69, as compared with \$61,318,175 for the year preceding, while the exports for the two years were: 1900, \$150,056,360, and 1901, \$148,656,338.71 (silver valuation).

Though the official returns of the respective Governments of Mexico and the United States for the fiscal year 1901 differ materially respecting the share of each country in the commerce of the other, both sets of statistics indicate a remarkable growth in reciprocal trade. The discrepancies as to totals are due wholly to different methods of computing values. Imports by Mexico from the United States have increased 100 per cent in the last six years, and, according to the returns of both countries, have quadrupled within less than two decades. This satisfactory showing has a twofold significance. On the one hand it shows the rapid strides in the advance of Mexico, while on the other hand it indicates that manufactured products from the United States are proving adaptable to Mexican requirements.

Vast amounts of United States capital have been invested in Mexico within the past twelve or fifteen years, while the number of enterprises that are now being carried out or are projected is astonishing as well as unprecedented. These include railroads, mines, plantations, street railways, water and irrigation works, municipal enterprises of all kinds, and manufacturing plants and industrial undertakings in great numbers. For the most part these have procured, or will procure, the greater part of their equipments in the United States. However, at the same time they have furnished employment, or will furnish such, to thousands of citizens of Mexico.

The total receipts of the Government from all sources for the year 1900-1901 were \$64,261,076.39 and the total disbursements \$57,944,687.85, leaving an excess of receipts over expenditures of \$6,316,388.54. In the budget estimate for 1901-2 the receipts for the year are estimated at \$61,694,000 and the disbursements at \$61,577,990.24. On May 8, 1901, the Minister of Finance presented to the National Chamber of Deputies a bill authorizing the expenditure of \$10,000,000 from the reserve fund of the Federal Treasury for the prosecution of various works of public utility. Hospitals and asylums received \$1,800,000; schools, \$1,500,000; public buildings, \$1,300,000; telegraph lines, \$600,000; war vessels, \$2,500,000; national theater, \$1,800,000; paving, water, and sanitation, \$500,000. The Treasury statement at the conclusion of the fiscal year 1898-99 showed an available balance of \$22,679,925.10; at the expiration of the year 1899-1900 the balance was \$32,684,748.82, an increase of over \$10,000,000 in twelve months.

During the first half of the fiscal year 1901 the revenues exceeded \$31,000,000, the largest sum ever collected in the history of the

Government, and notwithstanding a somewhat lessening activity in commercial transactions, there was a continuous improvement in all branches of national resources.

In consequence of the premium on Mexican dollars in foreign markets and the consequent heavy exportation of silver coins, coinage regulations were considerably modified by presidential decree in January, 1901. In November, 1900, certain regulations were enacted with regard to the introduction of bars of precious metals into the mints, and so satisfactory were the results that from January to June, 1901, the entries of metals for coinage amounted in value to \$13,500,000, against \$9,000,000 in the preceding six months.

A company for promoting the investment of foreign capital in the Republic was organized early in the year, in Monterey. In March a syndicate of United States capitalists was reported to have purchased a tract of 500,000 acres of timber land situated in the body of the Sierra Madres, in the State of Chihuahua. The Mexican Sugar Refining Company, of New Orleans, designed to develop the fine sugar land on the Santa Fe estate, situated on the Papaloapam River in the State of Veracruz, and the Los Reyes Gold Mining and Milling Company, with an authorized capital of \$1,250,000, to work the group of mines known by that name in the State of Oaxaca, were incorporated; while rubber plantations, woolen manufactories, and numerous other industries received the aid of United States capital and enterprise.

Cotton manufacturing has been one of the advancing industries of the Republic in late years, and at the opening of the year 1901 it was estimated that 133 cotton, cloth, and yarn mills were in active operation. The Government revenue from these mills for the half year, January 1 to June 30, 1901, inclusive, is placed at \$788,244.90.

In January, 1901, a shoe manufacturing company, capitalized at \$500,000 gold, was established in the City of Mexico. A coal-discharging plant, the machinery of which was of United States invention and manufacture, was established in the harbor of Vera Cruz in the early part of the year. The capacity of the plant is stated to be 1,600 tons per day of ten hours. The exploitation of the petroleum industry engaged the attention of both native and foreign capitalists, and large quantities of oil-boring machinery were placed in operation. The product so far discovered is similar to the fuel oils of California and Texas, in the United States. A canning factory was established at Mazatlan in June, and in the same month a large packing house for meat products was reported as under construction at Uruapan.

Coal has been exploited extensively within the year, the mines of Piedras Negras being found particularly valuable. In the message of President Díaz, delivered to Congress on September 16, 1901, it was stated that during the second half of the fiscal year 1900-1901, 1,450 title deeds to mines, covering an area of 24,459 hectares, were issued,

which was an increase over the previous half year of 420 title deeds and 2,301 hectares. The total number of mining properties paying taxes was 11,865, representing an area of 126,396 hectares. The State of Durango occupies the first place with respect to number of properties, followed in order by Chihuahua and Sonora.

The San Luis Potosi and Rio Verde Railway, which is an extension of the main line about 170 kilometers from San Luis Potosi, was reported as nearing completion in February, 1901. As this road passes through one of the most fertile agricultural regions of the Republic, its value as a developing agent is evident. In February, 1901, a very complete system of tramways was reported in operation in the municipality of Guadalajara, the two companies controlling the system having nearly 40 miles of track in working order. In the Presidential message delivered in April, it was stated that during the preceding six months the railroads of the country had been increased by 268 kilometers. In September, 1901, the President, in a message to Congress, stated that the increase in mileage since his previous report had been 246 kilometers, the aggregate for the Republic at that time being 15,454 kilometers. The various companies throughout the Republic extended their lines subsequently, one of the important surveys reported being for a line connecting Chihuahua and the City of Mexico. The consolidation of several lines south of the capital city enabled trains to make through connections with the port of Vera Cruz and other ports on the Gulf of Mexico and the Pacific Ocean and with the terminals of the Tehuantepec road extending across the isthmus. The annual reports of the most important lines show prosperous conditions.

Shipping statistics for the year 1901 are not available, but those for 1900 show that the number of steamships entering the Pacific ports of the Republic were 203, and Gulf ports, 654, whose total carrying tonnage was 1,972,855 tons, besides sailing vessels to the number of 715. Four hundred and thirteen of these steamers were from the United States, 96 from Colombia, 78 from England, 45 from Germany, 20 from Belgium, 19 from Italy, and 1 from Denmark; the Mexican flag covering 69, while 448 sailed under the flag of the United States, and 124 under that of England. During the fiscal year 1898-99 the steamers arriving at Mexican ports with cargoes numbered 688, thus an advance of 169 in the number is shown.

A new service was inaugurated by the Leyland Steamship Company early in the year 1901 between London, New Orleans, and Vera Cruz, trips to be made at intervals of three weeks. German reports in the early months of the year presaged the opening of direct steamship service between Hamburg and Mexican ports, three steamers being at that time in course of construction at Hamburg and Bremen, the vessels to have accommodations for passengers, but designed mainly

for the carriage of freight. A regular line of steamers was also established between the ports of Antwerp, Havre, Havana, Vera Cruz, Tampico, Progreso, and New Orleans, the first sailing having been made on March 30, 1901, from Antwerp. A line of steamers to run between the Atlantic ports of the United States and those of Mexico was contracted for, the company being also granted the privilege of running steamers direct from any United States port to Coatzacoalcas, to facilitate traffic across the Isthmus of Panama.

A full report of the census returns was published in the "Diario Oficial" for January 3, 1901. This census, which had been ordered in the previous January, was completed on October 20, 1900, and shows a gratifying increase in the population of the Republic, 13,546,700 being the official number returned. The census of October 20, 1895, showed that the population was 12,632,427. The increase was specially noticeable in the northern States, where the establishment of new industries and the development of existing ones led to an influx of population.

The year 1901 was signalized by the completion of the elaborate drainage system of the capital city, a work which had been one of the vexed problems of each succeeding Government. The system consists of a tunnel 6 miles long extending through the mountains, and with it is connected a canal, the total length of the waterway being nearly 37 miles. The cost is estimated at about \$20,000,000, and may justly be considered as one of the great achievements of modern engineering.

For the purpose of irrigating some of the rich and fertile lands drained by the Yaqui River, the Cocorit irrigation canal was completed by the Government, and progress was made on the port works of Coatzacoalcas, Santa Cruz, Mazatlán, Manzanillo, and Tetuan. Much attention was given to the perfecting of the military arm of the public service, and a corps of reserve officers was established.

On the eighty-first anniversary of the independence of the Republic an international bridge between the United States and Mexico was opened to traffic at Nogales. The structure is 55 feet long, and has a roadway 16 feet in width.

In his message to Congress on April 1, 1901, President Díaz stated that 75 new post-offices had been established in the Republic within the preceding six months, a noteworthy increase in the amount of postal matter handled had been made, and that special money-order business with the United States had increased by 40 per cent. Postal revenues were also stated to have increased 15 per cent. The system of parcel-post exchanges was further extended in August, 1901. The general revenue from the post-office for the fiscal year 1901 was stated in the President's message of September 16 to have been \$2,139,000, and postal drafts exchanged between Mexico and the United States to have amounted to \$338,000, Mexican currency.

An important feature in the agricultural development of the Republic has been the interest taken by both native and foreign corporations in the cultivation of rubber plantations. Numerous companies were formed in the United States for the exploitation of this important article of trade, among them being the Tehuantepec Rubber Culture Company, the Mexican Plantation Company, the Leavenworth (Kansas) Coffee and Rubber Company, the Obispo Rubber Plantation, the San Pedro Rubber Company, and others.

The insect depredations committed in the orange and other fruit-growing districts led the Government to make practical efforts to protect the crops. A commission appointed to investigate the matter made a report early in the year to the effect that through the use of a liquid spray the destruction of fruit in the Yautepec district by insects had diminished 40 per cent. This solution of the question is of great value to one of the most important industries of the Republic.

In order to lend all possible encouragement to the development of the wine industry, with a view to supplanting the injurious alcoholic native drink (pulque) by a grape wine, the Department of Public Works distributed 190,000 choice grape cuttings among farmers and other persons willing to undertake the experimental culture of the vine. Sericulture also received Government aid, 244,500 silkworm eggs having been distributed by the Department of Agriculture. In sugar growing, many plantations were enlarged and new ones established, while extensive machinery was installed in various refineries. In the season of 1899-1900, the total sugar production of the Republic was computed at 78,000 tons, as compared with 50,000 tons for the preceding season; but conservative estimates place the product for 1900-1 as far above anything previously attained in this branch of industry. The native cotton crop is estimated as at least 2,000 tons larger than last year, one of the resultant effects of the abundance and cheapness of this commodity being the revival of the cotton textile industry.

The growth in value of the maize product of the Republic has been one of the features of the agricultural development of the country, it being reported in June, 1901, that Mexico ranked third among the cotton-growing nations of the world, its total crop in normal years being exceeded only by those of the United States and Austria-Hungary. Owing, however, to a long-continued drought, during the growing season of 1901, the cereal crops fell far below the average production, and to meet the scarcity the Mexican Government provided for the free importation of maize from October 1 to December 31. The duty on wheat was also reduced, and to still further meet the requirements of the agriculturists of the Republic, the President was authorized to buy and import foreign corn for distribution until March 31, 1902, at cost price. The creation of new tobacco plantations in the Republic has resulted in greatly increasing the output of this

article of trade, the total annual production being now estimated at about 17,000,000 pounds. The cultivation of coffee lands in the State of Oaxaca has given excellent results.

Nicaragua.—The commerce of the Republic of Nicaragua with the United States was represented in the fiscal year 1901 by exports to the value of \$2,035,636 as compared with \$1,520,266 in the previous twelve months, while imports from that country are shown by United States statistics to have been worth \$1,482,194 and \$1,817,869 in 1901 and 1900, respectively.

The foreign commerce of the Republic for the calendar year 1900, as indicated in the records of the Minister of the Treasury, published in September, 1901, shows imports valued at \$2,487,952 and exports worth \$2,836,557.

An indication of the renewed interest taken by Germany in the development of Latin-American commerce was shown by the establishment at Managua, early in the year, of a German Consulate-General, with jurisdiction over consulates in Nicaragua, Salvador, Honduras, and Costa Rica.

On December 2, 1900, the total debt of the Republic was, approximately, \$4,000,000, of which \$2,666,000 represented internal indebtedness, and about \$1,334,000 the foreign debt. During the year the Government floated a loan of 1,000,000 *pesos* (\$451,000) in accordance with a presidential decree issued February 4, 1901. The bonds were purchased by local merchants and business men, thus indicating their confidence in the stability of the Government. The bonds were guaranteed by 40 per cent of the customs duties collected at ports on the Atlantic coast and 10 per cent of those of the Pacific ports.

In order to advance the interstate relations between the Republics of Central America, a session of delegates from the various countries was held in the city of Salvador in February, at which it was agreed that the products of the States there represented should enjoy reciprocal free entry. In accordance with a treaty of reciprocity entered into in January between the Governments of Nicaragua and Chile, certain articles were admitted free of customs duties at the ports of the respective Republics. The duration of the treaty was fixed at five years, and will undoubtedly materially extend the commerce between the two countries. After April 1, 1901, the importation of wines into the Republic was governed by a decree promulgated January 1, the purpose of which was to promote and encourage such importation and to insure the purity of the wines. With a view to developing the trade with Spain, a special exhibition of Spanish products was established in the National Museum at Managua on the advice of the Consul-General of Nicaragua in Madrid.

The work of connecting the eastern and western sections of the railroad systems of the country was continued in 1901, President

ZELAYA having concluded a contract with a native firm to supply the rails and other materials to be used in the construction of this link, the contracting firm to accept in payment the Government's war charges on coffee at the ports of Corinto and Granada. Another important undertaking affecting the means of interior communication was the construction by a United States syndicate, of three cart roads leading respectively from Matagalpa, Nueva Segovia, and the Pis-Pis mines, to be completed and turned over to the Government within five years. The same syndicate also purchased the exclusive rights of navigating the River Segovia, the largest stream in Nicaragua, the road traffic being intended to cooperate with a regular steamboat service on said river and thus render the products of the interior sections of the Republic available for general trade. A railroad concession for a line of 100 miles from Matagalpa to the head of navigation on the Rio Grande was granted by the Government to a citizen of the United States, the road to be opened to public service within five years after the completion of the necessary surveys, every facility being accorded by the authorities of the Republic toward the speedy carrying out of the project.

A concession for the establishment of a line of steamers to ply on the Atlantic coast of Nicaragua was granted by the Government during the year. The concessionaire was guaranteed a monthly subvention of \$1,000, in addition to other substantial grants. The company, on its part, in addition to regular coastwise service between the various ports of the Republic, also obligated itself to make six trips a month between Bluefields and New Orleans. The mails were to be transported between those two points eight times monthly.

A dock at Corinto was contracted for at a cost of \$150,000 during the course of the year, the same to be completed within twelve months from the date of signing the contract.

A concession for the establishment of a thread and cloth mill was granted by the Government during the latter part of 1900, to extend for a term of five years from January 1, 1901. The cultivation of the rubber tree is one of the new and growing industries of the Republic, and one that promises ample return for time and labor. The agricultural industries of the Atlantic coast of the country have hitherto been almost exclusively confined to the growing of fruits, principally bananas, and until the present year but little attention has been given to rubber culture.

Though the soil of Nicaragua is peculiarly adapted to the culture of sugar cane, the industry is at present, with a single exception, in the hands of small operators. The one large plant manufacturing the sugar of commerce is English, and located at the town of Chichigalpa, on the Pacific coast. It is said to conduct an enormous business, almost the entire output going to Nicaraguan consumers.

Paraguay.—The latest available data concerning trade conditions of the Republic of Paraguay are obtained from the message of the President to Congress on the opening session on April 1, 1901. In this it is stated that the total value of imports for the year 1900 amounted to \$20,977,419, while the export valuation is given as \$21,382,894.83, the trade with the United States not being determinable from the statistics at hand.

According to statements embodied in the message of the President to the National Congress on April 1, 1901, the post-office, during the year 1900, handled 1,729,878 pieces of mail matter, and the business of the Government telegraph lines consisted of 83,560 messages. The number of industrial establishments in the country, outside of the capital, was stated to be 841, with a total capitalization of \$15,448,066.13, those of Asunción numbering 253.

The total receipts from exports and imports for the same year (1900) amounted to \$8,428,705.41, while the receipts from internal taxes were \$1,122,460.23.

With the opening of the year 1901 the use of the metric system became compulsory throughout the Republic. From the middle of September, 1900, until September 15, 1901, the work of substituting the new issue of bank notes for the old ones in circulation was carried on, the new notes having been printed by the American Bank Note Company, of New York.

Diplomatic relations with France were resumed in June, M. RÉNÉ OLIVIER being appointed by the French Government to represent that Republic in Paraguay.

An important measure, having for its object the internal development of the Republic, was passed by the Paraguayan Congress. This was the establishment of a fund to be employed in certain specified works of public utility, the moneys to be obtained from such public revenues as are set forth in the law.

The stone-quarrying industry of the Republic was given an impetus by the passage of a law exempting from duty, during a term of ten years, all imports of machinery for stone working and all exports of stone. The yerba-maté, or Paraguay tea plant, became the object of increased interest through the inauguration of the first systematic attempt at cultivating and preparing it on a large scale for the markets of the world. A quebracho factory for the extraction of the tannic substance of the plant was planned, while waterworks for the capital, and road building received the consideration of the Government. Increased telegraphic communication was established throughout various parts of the Republic, connection with outside countries being also extended.

The cultivation of coffee has been advanced throughout the year, and in order to still further stimulate interest in its growth the Agri-

cultural Bank of the Republic entered into contracts with competent persons for the establishment of plantations in various Departments, with the view of distributing a certain number of coffee plants to agriculturists, it having been demonstrated that Paraguay is well adapted to the production of a superior grade of coffee. The Bureau of Statistics, established in 1898, makes annual reports as to the agricultural development of the Republic, which is shown to be in a satisfactory condition, the various farinaceous and leguminous plants necessary in domestic service receiving the first attention, while the cultivation of fruits and other branches of pastoral life are not neglected. At the beginning of the year 1901 the live stock of various kinds in the Republic numbered 2,743,665 head, the value of the cattle industry being \$100,286,835. Agricultural and national industries received a further impetus in the course of the year through a loan contracted for by the Agricultural Bank for \$1,000,000. The loans of the bank to its patrons during 1899 amounted to \$1,279,780.11, and the capital on January 1, 1900, was \$3,025,723.57.

Peru.—In the fiscal year 1901 Peru exported products to the United States amounting in value to \$3,656,180, a great increase over the previous twelve months, when the total exports aggregated \$2,122,543 in value. The imports from the United States in 1901 were valued at \$3,126,934, being nearly double those of 1900, when they were worth \$1,662,475.

The customs tariff adopted for the years 1901 and 1902 is, in its main provisions, the same as the one promulgated November 4, 1886.

An extradition treaty with the United States was proclaimed on January 30, 1901.

A consumption duty on liquors, in addition to the import duties proper, was levied by executive decree, the provisions becoming effective early in the year.

Manufacturing industries have received the fostering care of the Government, with the result that the price of foreign-made articles has in many cases been greatly reduced and their importation diminished. Among the industrial establishments contributing to the manufacturing wealth of the Republic may be noted breweries and ice plants, brickyards, leather-dressing establishments, tanneries, furniture factories, turning out a high class of articles; cotton and woolen mills, and also factories for the manufacture of matches, brooms, chocolate, druggists' supplies, etc.

A company for the manufacture of bags and bagging from the ramie fiber was organized in Lima, in January, with a capital of £25,000, divided into 2,500 shares of 100 *soles* each. A line of Peruvian steamers to run between Panama and Valparaiso was authorized in May, 1901, the same to be subsidized by the Government. The execution of this project will decrease the freight and passenger rates between

the Peruvian ports and those of Chile, Ecuador, and Colombia. Another company was organized for the purpose of establishing a line to make regular trips between Lima and various European ports, stopping en route at Callao, Valparaiso, and Coronel.

Renewed interest was taken in the course of the year in the development of the copper mines of the Republic, and large sums of United States capital were expended in their exploitation. In connection with this work the building of 80 miles of railroad from Oroya was projected.

A company, formed in the city of Lima with a capital of \$243,500, had for its object the drainage of the inundated mines of the Cerro de Pasco region. These mines yielded minerals to the value of 4,600,000 *sols* during the calendar year 1900, copper forming the bulk of the product. The Canza Mining Company was organized for operating the mineral district of Canza, and, in addition to other improvements in method, erected a large smelter consisting of two modern furnaces. The mines in question were formerly operated extensively and at a handsome profit to the owners. Various other mining properties were exploited with success and, according to a report issued by the Bureau of Statistics of the Republic, the mining outlook in Peru is at the present time in a most promising condition and is attracting the attention of the miner, the capitalist, and the investor. The Santo Domingo mine in Carabaya Province is one of the fine ore-producers of the Republic, recent data crediting it with a monthly output valued at £18,000. The company operating it has spent £70,000 in opening and improving roads for the transportation of machinery, etc. Other mining companies operating extensively in the Republic were the Gold Ore Company of Inamburi, and the Huamanrauca Mining Company, whose copper exports were of the highest grade.

The Harvard University meteorological stations, which, for a number of years had been maintained at various points of high altitude in the Republic, were discontinued from the beginning of the year, it having been decided that enough data had been secured to determine all the more important climatic peculiarities. In January, a thorough inspection of the city of Lima was made, preliminary to the installation of a new sanitary system.

Sugar production in the Republic is increasing steadily, and it was estimated on August 20, 1901, that the output for the present year would not fall short of 140,000 tons. When it is considered that a decade ago the total amount manufactured was between 70,000 and 80,000 tons, the possibilities of this branch of industry are at once evident.

A colonization contract was entered into between the Peruvian Government and GUILLERMO SPEEDIE in May, 1901, for the settlement of the Pachitea River Valley.

In order to facilitate the interchange of telegraphic messages between Peru, Central America, and the United States, the proposition was entertained by the Governments interested, of constructing a telegraph line from the Argentine Republic, across Bolivia and Peru, to Ecuador, where it would connect with existing lines. This would obviate the necessity entailed upon South American Republics of relying upon English and French cables on the Atlantic and Pacific coasts.

Salvador.—The year 1901 proved a very prosperous one to the Republic of Salvador. The exports of coffee are estimated at 500,000 bags, the quality of which is demonstrated by the fact that both at Paris and Buffalo, during the course of the Expositions held in those cities, the coffee from Salvador received the highest possible awards. The crop of sugar is also reported to be greater than usual, the surplus available for export being stated at 100,000 bags. The trade of the country is constantly increasing and commercial relations with the United States are becoming of more importance each year.

Efforts were made on the part of the Government, during the course of the year, to increase the trade relations of the country with other nations, notably Great Britain, and the Consul-General in London was instructed to ascertain, to the fullest extent possible, details covering such relations and to make extended report thereon.

The exports of Salvador's products to the United States in the fiscal year 1901, according to statistics of the United States Treasury Department, were worth \$1,037,715, as compared with \$738,674 in the previous twelve months. The imports by Salvador from the United States in the same year were valued at \$738,722, in comparison with a valuation of \$679,440 in 1900.

At the opening of the year 1901, the Republic of Salvador was reported to be entirely free of foreign debt, the bonds covering such indebtedness having been redeemed and destroyed at the Palace of Justice in November, 1900. In his message to the National Assembly, delivered on February 20, 1901, President REGALADO referred with satisfaction to the improved economic conditions prevailing throughout the Republic. The "Banco Salvadoreño," in its report at the close of the year 1900, showed an authorized capital of \$6,000,000, with a reserve fund of \$500,000.

A summary of the customs tariff law effective throughout the year was published in January. The general purpose is protective; that is to say, raw materials that might, with the facilities of abundant cheap labor and water power which Salvador enjoys, be elaborated or manufactured in the Republic are scheduled at low rates of import duty, while manufactured articles of the same materials are scheduled at higher rates, according to the amount of mechanical or other labor necessary to produce the finished article. Also, special measures were

taken, through the granting of a ten years' exemption from export duty on the derived products, to promote and favor in every way possible the principal agricultural and mineral industries of the country, which constitute such a large and important part of the nation's wealth. Agricultural machinery or implements for the elaboration or improvement of agricultural products were also placed on the free list.

By a presidential decree in January, 1901, a special charge was fixed for consular invoices of goods destined for the ports of Salvador, which did not cross the Isthmus of Panama.

A new patent law was promulgated in May, 1901. Dating from April 27, 1901, a new trade-mark law became operative. On February 7, 1901, the treaty concluded between the Republics of Salvador and France, in regard to minimum tariff rates between the two countries, was published in the "Diario Oficial," the treaty having become operative on January 1, 1901. According to the terms of this treaty, the coffee, cacao, chocolate, vanilla, indigo, rubber, balsam, and some other products of Salvador enjoy the "most-favored-nation" treatment in France. It was to remain in force during the space of one year. In order to encourage the development of printing in the Republic, the paper used in printing offices was placed on the free list throughout the year.

The treaty of friendship, trade, and commerce between the Republic of Salvador and the German Empire, according to the time limit specified in the contract, will expire on May 23, 1902, and notification to that effect has been exchanged between the two countries.

Agricultural development received special attention from the Government throughout the year, one of the most important measures tending to this end being the establishment by law of a Central Board of Agriculture to meet at the capital. The duties of this Board were to put into practice the provisions of the agricultural code with respect to the encouragement, development, and protection of agriculture in all its branches. In the report made by Señor ZALDIVAR, Minister of Salvador near the Governments of the United States and France, it was stated that the coffee exhibited by the Republic of Salvador at the Paris Exposition ranked among the best and most desirable species displayed, and attracted much attention. The same was true in regard to cacao, the cultivation of which in the lowlands of the country has been satisfactory and encouraging.

A census of the Republic was ordered, beginning on March 1, 1901, and preparations were made to obtain complete and detailed statistics concerning the resources and population of the country. The "Diario del Salvador" published, on January 18, 1901, a carefully prepared estimate of the population of the Republic on January 1, giving the approximate number of inhabitants as 915,512.

A bounty for the cultivation of textile plants, especially the "maguey"

fiber, was established in 1901, 1 *peso* per thousand being offered to any cultivator of from 5,000 to 10,000 plants, the ratio for a greater number of plants being on a descending scale. The exportation of such fibers was also made the object of special favorable legislation.

Santo Domingo.—The soil of Santo Domingo is exceedingly productive and furnishes, for export, tobacco, coffee, cacao, sugar, mahogany, logwood, and a number of other tropical and subtropical products.

Considering the area and population of the Republic of Santo Domingo, it has a large commerce with the United States. Some of its products are also sent to France, from which country it secures a number of manufactured articles.

For the fiscal year 1901, the value of Dominican products sent to the United States was \$3,553,776 and in the previous 12 months \$3,680,413. The imports from the United States in the two periods named were \$1,800,385 and \$1,317,098 respectively. In the 11 months ending November 30, 1901, the Republic of Santo Domingo exported goods to the value of \$3,333,890 to United States ports and received therefrom merchandise valued at \$1,517,668, satisfactory increases being thus indicated for both branches of the trade of the Republic.

National statistics for the full year are not available, but an idea of the improved commercial conditions prevailing throughout the Republic within the past year may be obtained from a comparison of the customs receipts in February, 1901, with those of the same month in 1900. The total value cited for 1901, month of February, was \$222,269.83, while that of the corresponding period of 1900 was but \$147,340.67. In order to still further develop the export trade, on April 8, 1901, the President recommended the free exportation of all national products, and suggested that only the differential duties imposed for the amortization of the bills of the National Bank be collected. This recommendation was immediately acted upon by Congress, then in session, and a law embodying the provision became operative on May 1, 1901. It is estimated that about one-fourth of the total income of the Republic was received from export duties. Further modifications of the customs tariff were embodied in a decree issued on June 28, 1901, according to which a reduction of 25 per cent was made on the duties levied on certain specified articles.

Great improvements have been made in the postal and telegraph service of the country. The facilities for handling the mails rapidly and efficaciously have greatly increased, and telephone lines cross the Republic in all directions, rendering telephonic communication between the principal towns convenient and rapid. The railroad constructed between the municipality of Seyba and Romaña has contributed very considerably to the progress and development of that important region, and other concessions have received favorable action, it being the purpose of the Government to attract capital by offering

reasonable franchises for its investment in the development of the latent resources of the country.

With reference to cane-sugar production, it is stated that the immense fields near San Pedro de Macoris are unquestionably the finest and most fertile of the entire region of the Antilles. At Macoris seven large factories are situated, whose production in 1900 was 15,454,664 pounds. Conditions, however, in 1900 were not so favorable as usual, and it was anticipated that 1901 would be signalized by larger returns from the industry. The entry of Dominican coffees into France was granted under the minimum tariff clause applied to the most-favored nations, as stated in the message of President JIMENEZ at the opening of Congress. The same document urged the framing of a commercial reciprocity treaty with the United States, which action, in his opinion, would decrease the duties on certain articles of general use and at the same time secure a near and advantageous market for the natural products of the Republic.

Uruguay.—The volume of foreign trade of the Republic for the first six months of 1901 is stated by official reports to have been represented by \$12,509,331 for imports and \$17,782,249 for exports. In the former case a decline of \$231,952, as compared with the first six months of the previous year, is noted, whereas exports show an advance of \$76,611. Uruguay's trade with the United States in the fiscal year 1901 shows an export valuation of \$1,883,994 as compared with \$1,848,077 for the preceding year, and an import valuation of \$1,637,074 as against \$1,816,720 in 1900. According to a statement furnished by the Consul-General of Uruguay to the United States, the trade between Uruguay and the United States for the six months of 1901, from January 1 to June 30, inclusive, was represented by \$640,456.55 in exports from Uruguay, and by \$1,292,056.06 in imports from the United States.

In 1900 the total commerce of the Republic was represented, according to statistics published by the Department of Customs, by \$23,977,606 for imports and \$29,388,187 for exports. These figures show a slight decrease as compared with the previous year.

The exports of wool from Montevideo for the twelve months ending with October 31, 1901, amounted to 84,491 bales of 500 kilograms (1,102.30 pounds) each. The wool exports in the preceding twelve months showed a grand total of 51,437 bales.

A law for the coinage of nickel currency in the sum of \$500,000 was enacted by the Uruguayan Congress, the profits arising from which were to be expended in the following manner: \$40,000 in the building or acquirement of schoolhouses in the interior and in the improvement of school property; \$10,000 in the building of a sanitarium for the treatment of tuberculosis; \$20,000 in the improvement of the building occupied by Congress; \$15,000 for the Flores quarantine station, and

the remainder for the purchase of dredges and for canalization work on rivers.

A decree fixing the duty on tobacco at 12 cents per kilogram became operative under date of December 19, 1900.

On January 1, 1901, the public debt of Uruguay amounted to \$125,506,953.44, made up as follows: Internal debt, \$22,189,498.30; external debt, \$99,660,680; international debt, \$3,656,775.14.

The Latin-American Scientific Congress, called for March 20, 1901, in the city of Montevideo, was the outcome of the first meeting of that Congress in Buenos Ayres in 1898, at which time Montevideo was selected for the next convention. The Congress, consisting of over 100 delegates, representing every department of science and nearly all the Latin-American countries, was in session for two weeks. The papers read embraced scientific, historical, and sociological topics, and were received with marked appreciation.

In accordance with a call for bids for improvement works in the harbor of Montevideo, propositions were submitted on December 24, 1900. The successful bidders were a French syndicate under the firm name of Allard, Coiseau, Couvreaux, Dollfus, Duparchy, and Thiriot, whose bid for \$9,916,336.38 was according to the plans and specifications prepared by Engineer ADOLFO GUERARDO. In July, 1901, the engineer and the auxiliary personnel were at Montevideo making the final preparations for beginning the work, the material, machinery, and instruments having been shipped from France. The superintendent of construction was Mr. KUMMER of Germany.

The various railway reports for the 12 months ending June 30, 1901, show satisfactory conditions of traffic and receipts, and recommendations for increased service and enlarged facilities were made by the directors.

In January, 1901, Dr. JUAN CUESTAS, who had represented the Uruguayan Government near the United States in the capacity of Minister Resident since June 13, 1900, was raised to the rank of Envoy Extraordinary and Minister Plenipotentiary, and on the 28th of the month presented his credentials to the President of the United States.

One of the beneficial institutions of Uruguay is the Bank of the Republic, which, according to the message of President CUESTAS, delivered to the National Congress on February 15, 1901, is in a flourishing and prosperous condition. A feature of this bank is the loaning of small amounts to stock growers and planters who are engaged in business on a small scale and who would otherwise be unable to obtain the funds necessary for the marketing of their products.

The Uruguayan industrial world, realizing the economic loss entailed by the importation of goods manufactured from the raw material originally exported from the Republic, has turned its attention to the

establishment of textile manufactories, where the articles (principally woolen) are manufactured from the native product. In 1901, two large factories were running in Montevideo, and turning out a class of goods equal in quality and make to those from abroad. Blankets and woolen material for clothing are made, and it is purposed also to commence the weaving of mixed wool and cotton fabrics. In order to encourage the necessary cultivation of cotton, quantities of the best seed have been imported from the United States and distributed gratuitously to planters throughout the Republic. Premiums have been offered to stimulate both the quantity and quality grown, and the prices quoted for the native cotton are on a par with those given in European markets.

Various European ports which had been closed to Uruguayan cattle by reason of the plague which afflicted them, were opened again in 1901, the National Department of Agriculture and Live Stock having officially notified the Government of the total extinction of disease.

In June, 1901, the first trans-Atlantic steamer sailing under Uruguayan colors, and carrying a cargo from Spain, arrived at the port of Montevideo. This was an important event in the maritime history of the country, as, previously, coasting and river steamers only had engaged the attention of merchants and traders.

One of the new agricultural industries which commanded the attention of the Government was the development of viticulture. The crop of grapes harvested in 1900 amounted to 142,500 kilograms, and efforts were made, through the introduction of vine cuttings from abroad, to still further stimulate this important industry. The maize crop of the Republic was stated on June 6, 1901, to be promising the most favorable returns, the quantity being estimated at 200,000 metric tons, of which over 100,000 tons would be available for export.

Venezuela.—The Government budget for the fiscal year beginning June 1, 1901, provided for the disbursement of 37,000,000 *bolivars*, all of which is covered by the receipts (as estimated) from various sources.

National statistics with reference to the foreign commerce during the year 1901 are not yet available, but during the fiscal year which ended June 30, 1901, the exports to the United States (as obtained from United States official statistics) were valued at \$6,645,848 as compared with \$5,500,019 in 1900. The imports from the United States were worth \$3,271,877 in 1901 and \$2,452,757 in 1900.

On January 11, 1901, a decree was promulgated repealing the export tax of 100 *bolivars* on each kilogram of gold bullion shipped out of the country. The new parcels post convention made between Venezuela and the United States was ratified by the former country on January 9, 1901. Dating from May 1, 1901, the export taxes on coffee, cacao, cotton, and cattle were abolished and transit duties on

general products were advanced from $12\frac{1}{4}$ per cent to 25 per cent. Imported goods of foreign origin were divided into nine classes, as follows: Goods free of duty and goods liable to duties of 1.9, 4.8, 14.4, 24, 48.2, and 96.5 cents, and \$1.93 and \$3.86 per kilogram. Conditions governing copyright privileges in the Republic were published in January.

The exports of block balata rubber have of late years shown a steady advance, the quantity exported in 1900 being double that reported for the preceding year.

Coffee and cacao, which are the leading articles of export from the country, are reported to have been shipped from the port of La Guaira in the amount of 175,652 and 107,961 sacks, respectively, during the year 1900. France received the major portion of these exports, 115,670 sacks of the former and 66,805 sacks of the latter having been consigned to Havre. For the year 1900, the exports of the Republic, taken as a whole, showed a considerable increase as compared with the previous twelve months. The shipment of cattle on the hoof has been found more remunerative than exports of salted or dried meats, as the necessity of importing salt for curing purposes reduced the possible gain; consequently large numbers of animals were sent abroad during the year from the ports of Puerto Cabello and Guanto, it being found that favorable opportunities existed for the exportation of Venezuelan cattle to Great Britain and other European countries.

During the year all the mouths of the Orinoco delta were declared open to international navigation. The valley traversed by these delta streams is said to possess the richest commercial possibilities of the western world. Countless herds of cattle and horses may be raised there, and the forests yield large quantities of natural products, such as rubber, and quinine and other drugs, while traces of gold and other metals have been discovered. Under date of January 11, 1901, the Department of Encouragement of the Republic granted a lease in perpetuity of that portion of the unreclaimed lands on the right and left banks of the Orinoco River extending for a distance of 7 miles from either shore to Señor Don MAXIMILIANO GUEVARA, in consideration of an annual payment into the National Treasury of 400 *bolivars*. Several navigation concessions were also granted to persons desirous of exploiting various industries throughout the country, all tending to the development of previously uncultivated regions. A new industry receiving Government protection was the establishment of a plant for the manufacture of articles of crystal and glassware, in the Federal District. Exclusive privilege for such manufacture was granted for a period of ten years dating from January, 1901.

On April 3, 1901, the Gas and Electric Light Company of Caracas entered into a contract with the municipal government for the lighting of the city of Caracas.

In order to overcome the distressing conditions prevailing through the lack of sufficient water for domestic and agricultural purposes, the Government in the course of the year authorized the boring of artesian wells in various sections, part of the expense to be borne by the State. All machinery, apparatus, etc., was admitted free of duty of any class whatsoever.

The improvements of the wharf at Puerto Cabello, which harbor is reported by the United States Consul to be the best in the Republic, were completed in October, and the various facilities for handling the traffic of the port were found satisfactory. A contract was also made for improvements and the construction of a wharf at Caribe.

MINES AND MINERALS IN THE STATES OF MINAS GERAES AND BAHIA, BRAZIL.

[Published by request.]

The following list of the mines and minerals of the States of Minas Geraes, and Bahia of the Brazilian Union has been arranged by Senhor ALCIDES MEDRADO, Mining Commissioner for Brazil at the Pan-American Exposition at Buffalo in 1901.

Ajuda (S. Bartholomeu, Municipal district of Ouro Preto).—This property is 20 miles distant from the city of Ouro Preto, within easy reach of abundant wood and water supplies. The roads are excellent. The option can be easily obtained. The local formation is a decomposed mica schist containing veins of pure and pyritic quartz. One mine, the Tapera in S. Bartholomeu, is in operation with very crude machinery, from which quantities of gold are now being taken. Three assays gave values of \$7, \$8.50, and \$6 per ton, respectively. This might readily be purchased.

Analysis: Gold, per ton, 14 grams; No. 1 quartzite, without pyrite and schist, partly decomposed, gold, per ton, 17 grams; No. 2 quartzite, containing pyrite, gold, per ton, 12 grams.

Amazonas (Ouro Preto).—This mine is located in the city of Ouro Preto, on the Central Railway of Brazil, on the slope of the Serra das Lages. It belongs to the Tassarás group of mines. Water power in quantity is available in close proximity to the property. The reef has been explored, and much ore is visible.

Analyses: Gold, per ton, 468 grams; gallery No. 6, slightly ferruginous quartz, assay value, 26 grams per ton; arseno-pyritic mineral, assay value, 468 grams per ton.

Antonio Carpinteiro (Ouro Preto).—This mine is situated close to the city of Ouro Preto, about 2 miles from the Central Railroad of Brazil. It belongs to the Lages group of mines, with available water power close at hand. Much mineral is in sight.

Analysis: Average of four assays varying from 11 to 14 grams per ton, \$7.06.

Antonio Pereira (Ouro Preto).—This property is distant 12 miles from Ouro Preto, on an excellent road, and with ample water and wood supplies. The region is considered one of the richest in Minas Geraes. The district is rich enough to be worked with profit without machinery. A sample gave a value of \$14.25 per ton.

Analysis: Gold per ton, 28.5 grams.

Aroeira (Municipal district of Cuiethé).—This property is situated in a marvelously rich alluvial district. The aborigines, from time immemorial, have worked the sands for gold dust. It is at present distant 80 miles from the Leopoldina Railway, in a healthy district. Wood and water are abundant. Three assays gave values of \$118.50, \$121, and \$95 per ton, or an average of \$111.50 per ton.

Analysis: Quartz containing visible gold; average gold per ton (3 assays), 223 grams.

Aroeiras (Municipal district of Marianna).—This property is 20 miles distant from Ouro Preto. It belongs to a group of 15 mines worked superficially by the old colonists. Wood and water, the latter affording ample power, are at hand. Some two years ago an extensive landslide in this locality laid bare a large body of auriferous mineral of a character common in the district, readily worked by hydraulic mining, of a value of \$1.85 per ton. Two assays of the Aroeiras property gave \$6 and \$6.50 per ton.

Analyses (two assays): Twelve and 15 grams.

Mina da Barra.—This mine is situated near Santa Barbara. It belongs to the PENNA family. Gold is found in a vein of limonite, produced by the decomposition of pyrites. This mine, together with the neighboring mines, S. Bento, Pinta Bem, and Corrego da Onça, are operated by the São Bento Gold Estates Company, Limited, which was organized in 1897 with a capital of £250,000. The mines were acquired by the company for the sum of £175,000, and Mina da Barra has been actively worked for two years. Two galleries have been opened up and a plant established for the crushing of the ore and for treating it by the cyanide process. The ore is extracted at the rate of 3,000 tons per month and it yields, on an average, 12 grams of gold per ton. Owing to the porous and friable nature of the ore, it can, after being crushed in cylinders, be subjected at once to the cyanide process without being treated by amalgamation or any other process.

Analyses: Gold per ton, 27 grams; 3 assays, 20, 22, and 20 grams; fineness, 21.93 grams; ferruginous ore, gold per ton, 10 grams; ocherous sand, gold per ton (4 assays) 69, 105, 260, and 171 grams; limonite concretions, 45 grams; compact limonite, 15 grams.

Paul Ferrand: L'Or a Minas Geraes, volume 1, 1894. Statutes of the São Bento Gold Estates, Limited (Revista Industrial de Minas Geraes. No. 26), 1897.

Bento Rodrigues (Ouro Preto).—This mine is 24 miles from Ouro Preto. The ore is a pyritic quartzite, and three assays gave values of \$7, \$13, and \$13.50 per ton. Wood and water are plentiful.

Analyses: Gold per ton (2 assays), 14 and 26 grams; quartzite containing pyrite, gold per ton, 26 grams.

Boa Esperança (Municipal district of Caethé).—This mine is located south of Caethé. The deposit consists of a vein of white or grayish quartz, ranging from 0.30 to 2.50 meters in thickness and uncovered at a distance of 50 meters from its direction (worked for a distance of 50 meters along its dip).

The average grade of ore yields 25 grams of gold per ton, of which 6 grams are lost in the sands. From 50 to 60 tons of ore are treated per month by the most primitive processes. No machinery is used.

BIBLIOGRAPHY.

Paul Ferrand: L'Or à Minas Geraes, volume 1, 1894.

Boa Vista (Municipal district of Sabará).—This property, situated in the same district as the mines of Morro Velho, Faria, Raposos, and Gaia, is 12 miles from the railroad. It has been superficially examined, but ample proofs of the existence of gold have been obtained, an assay of a sample of decomposed pyritic sand giving a value of \$2 per ton.

Analysis: Pyrite and sesquioxide of iron (Fe_2O_3); gold per ton, 4 grams.

Borges (Sabará).—Situated south of Caethé in the western slope of the Serra do Socorro. The vein consists of gray quartz and a small quantity of arsenical pyrites.

The most important works are a stamp battery, having 16 stamps, and several galleries.

Reports of "Ouro Preto Gold Mines of Brazil," 1885 to 1899.

Calôeirdes (Ouro Preto).—This property contains a deposit of the famous "Jacutinga," the richest known auriferous mineral found in Brazil. It is a loose, dark sand, confined between layers of sandstone, and is absolutely free milling, requiring little power to crush. The Jacutinga carries \$25 per ton and the mineral at large \$12 per ton. Water and wood are abundant, and the road from Ouro Preto, distant 12 miles, is good.

Analysis: Jacutinga mineral, 50 grams; gold per ton in the mineral, 24 grams.

Cantagallo (Venda do Campo, Ouro Preto).—This mine, recently purchased by a Belgian company, is 12 miles from Ouro Preto. The mineral assays \$8.80 per ton.

Analysis: Gold per ton, 17.6 grams.

Curranca (Caethé).—This mine is situated south of Caethé. The deposit consists of a vein of white, sandy quartz embedded in colored schists. Its average width is 3 meters. It is still undeveloped.

Analysis: Gold per ton, 25 grams.

Currapato (Caethé).—This mine is located south of Caethé. The deposit consists of quartz and pyrites. The lode denominated "Cima" has an average width of 6 meters. It is owned by a company organized in 1892 under the title "Empresa de Mineração de Caethé," with a capital of 200,000 *milreis*, of which only 80 per cent has been paid in. This amount has been found insufficient for the work of development. If properly developed, the mine would be very profitable. The property consists of 250 hectares of mineral land. Steam motive power equivalent to 20 horsepower is used. It is probable that a large plant will be erected at a distance of about 4 kilometers from the mine and on much lower ground, where the ore can be easily transported for its mechanical preparation. The ore averages 140 grams of gold per ton.

Principal works: A gallery, or adit, 50 meters long, extending to the lower portion of the vein; a stamp mill, having 15 stamps; pumping machinery, mining apparatus, etc.

Analyses: Gold per ton, 51 grams; No. 1 bears the label "Minerico" (rich ore); gold per ton (assay on 50 grams), 2.938 grams; No. 3, sands from the filter (assay on 100 grams), gold per ton, 20 grams.

BIBLIOGRAPHY.

Paul Ferrand: *L'Or à Minas Geraes*, 1894.

Catta (Ouro Preto).—This property is in the city of Ouro Preto. The assay value is about \$6 per ton. Wood and water are abundant.

Analysis: Ferruginous mineral containing quartz fragments and sesquioxide of iron. Gold per ton, 3 grams.

Cattas Altas (Municipal district of Pitangui).—This mine, worked for many years by an English company, was abandoned in consequence of the falling in of the shaft and lack of capital to renew it. It is 70 miles from Ouro Preto, but the roads are good. The mineral is the celebrated Jacutinga. The output of gold in the time of working was registered daily in kilograms. Assays show a value of \$6 and \$6.50 per ton.

Analysis: Gold per ton (two assays), 13 and 12 grams.

Cattas Atlas de Noruega (Ouro Preto).—This property is 72 miles from the city of Ouro Preto. Wood and water are abundant. The mine was worked by the colonists, but abandoned when the depth attained proved an insuperable obstacle to their crude machinery. Two assays give values of \$11.90 and \$27.50 per ton.

Analysis: Gold per ton (2 assays), 23.8 and 55 grams.

Catta Preta (Santa Rita Durão, municipal district of Marianna).—The Catta Preta mine is located near the hamlet of Inficionado, and a number of miners have recently been prospecting here with the view of commencing extensive operations. The mine is but little known or developed, but if worked on a large scale would yield gold in paying quantities. Analyses of the ore made at the Ouro Preto School of Mines show an average yield of 25 grams per ton. The deposit covers a large extent of territory. The ore from this mine is made up of quartz and acicular crystals of tourmalines with visible native gold. When decomposed it forms a red clayish substance called "bugre." This is the only deposit in Minas Geraes in which the matrix or gangue of the ore is a compact mass of tourmaline crystals.

Carvalho Branco (Novoe Velho, municipal district of Marianna).—This mine (*Sumidouro*) is being worked by the owners, giving good results by a primitive system. Two assays gave values of \$6 and \$38 per ton.

Analyses: Gold, per ton (two assays), 12 and 76 grams.

Chacara (Ouro Preto).—This mine is located in the city of Ouro Preto, on the line of the Central Railway of Brazil, in the region of the Serra das Lages. Mineral is in sight, and exploration would be easy and inexpensive. Water power in abundance is available.

Analyses: Gold per ton, 12 grams; reef, 1 fathom wide, gold per ton, 12 grams, \$6.

Chiquinho (Marianna).—This mine, one of a group (*Sumidouro*) covering 24 square miles of country, is situated in a very rich alluvial district. An assay gave a value of \$8.75 per ton.

Analysis: Gold per ton, 17.5 grams.

Companhia Aurifera de Minas Geraes (Municipal district of Sabará).—The property of this company is situated at Honório Bicalho, on the Central Railway of Brazil. The company was organized in 1892, with a capital of 200,000 *milreis*, divided into 1,000 shares of 200 *milreis* each. This sum was later increased by a loan of 192,115 *milreis*, obtained from the "Banco da Republica," and by various private loans amounting to 211,190 *milreis*, thus raising the present capital of the company to 603,306 *milreis*. Of this amount 68,405 *milreis* were used for the purchase of the mining properties, and the rest was expended in the acquisition of mining equipment and in driving levels or galleries. The property of the company comprises 450 hectares of land. According to analyses of the ore made at the Ouro Preto School of Mines, it averages 28 grams, or \$14 worth of gold per ton.

Principal works: Four levels are being driven. The first has already reached the rich lode "Bahú," which was partly worked by the early miners; the second gallery is within 24 meters of the lode "Catta Alta;" the third is an intermediate level joining these two, and the fourth is the road through which the ore is carried to the surface. The machinery employed consists of a 20-stamp mill (Californian model), two Frue vanners, a Blake stone breaker, and a pulverizer or crusher of American manufacture. Motive power is furnished by a stream which has a flow of 500 liters per second. Other sources of water can be obtained when it becomes necessary to increase the motive power.

This is the only gold mining company of Brazil, organized with Brazilian capital which has continued mining operations without interruption. It has increased its capital enormously.

Analyses: Gold per ton (average of three assays, ore from the lode "Bahú"), 28.3 grams; quartzite with pyrite (average of three assays), gold per ton, 407 grams; No. 1, quartzite containing pyrite, gold per ton, 49 grams; No. 2, quartzite containing pyrite, gold per ton, 8 grams; No. 3, schist in contact with quartzite containing pyrite, gold per ton, 24 grams; No. 4, pyrite in schist, gold per ton, 51 grams; No. 5, gold per ton, 178 grams.

BIBLIOGRAPHY.

Report of the Companhia Aurifera de Minas Geraes, July 1, 1893. Rio de Janeiro, 1893.

Paul Ferrand: L'Or à Minas Geraes. Vol. 1. 1893.

F. de Paula Oliveira: Valor das jazidas metallíferas no Brazil (Revista Industrial de Minas Geraes, No. 9), 1894.

Congonhas do Campo (Ouro Preto).—This mine is situated on a branch of the Central Railway. The property was much worked by the colonists, and is situated in a region reputed to be very rich. The mineral is a quartzite and assays \$13 per ton.

Analysis: Gold per ton, 26 grams.

Crystaes (Raposos, municipal district of Sabará).—This mine is close to the railroad depot of Sabará. It was worked by the colonists and abandoned for the usual reasons—the increasing depth and lack of capital. It is one of the most favorably situated in the whole State, and the mineral assays \$15.60 per ton.

Analysis: Gold per ton, 31.2 grams.

Cuyabá (Sabará).—This property is operated by the well-known St. John d'El Rey Mining Company, Limited, which purchased it in 1877 for the sum of £7,000. This deposit consists of a series of parallel veins of fine-grained quartz containing iron pyrites in crystals, traversing black compact schists, known as *cantagallo*, *fonte grande*, *D. Domingos*, and *serrote*, and small veins of auriferous quartz in red clays, resulting from the decomposition of the rock, known as *terra vermelha*, *pitangueira*, and *babú*. The company began mining operations in 1878. The ore yields on an average 12.5 grams of gold per ton, but only 5.5 grams are recovered.

The total gold production of this property is about 700 kilograms. At the present time there is only one 15-stamp mill employed, and mining operations have been almost abandoned. Recently Mr. JOSÉ CHAVES undertook to work the mines for the company and has been developing them with profit. The company expects later on to develop them on a large scale.

Analysis: Average gold per ton, 12.5 grams.

BIBLIOGRAPHY.

Report of the St. John d'El Rey Mining Company, Limited, 1878, 1879, etc.

Cybrão (Marianna).—In the Cybrão deposits there are a number of veins of auriferous quartz containing mica, tourmalines, and needles of rutile. The veins are found in schists, associated with quartzites. The width of the veins ranges from $\frac{1}{2}$ to 1 meter. The quartz in these veins is sometimes transparent and again completely filled with tourmaline needles. The assays were made from specimens of the ore in which there was no visible gold, and therefore the percentage of gold obtained must be considered below the average, as this same ore has yielded in the pan washings coarse gold that is easily separable. The absence of pyrites and the nature of the quartz render the extraction of the gold very easy.

The gravels of the bed and banks of the Gualaxo River also deserve attention, in view of the nature of the neighboring rocks in which veins of quartz of uniform richness frequently occur.

Analyses: Assay No. 1, gold per ton, 10 grams; No. 2, 11 grams; No. 3, 16 grams. Gold per ton, 35 grams.

Dona Rita (Marianna).—This property like the Cavallo Branco, Chiquinho Aroeira and others, is situated in the Sumidouro district. The assay values of two samples were \$15 and \$6 per ton.

Analyses (2 assays): Gold per ton, 30 and 12 grams.

Dona Therezinha (Ouro Preto).—This mine forms part of the Tasaras group and is 3 miles from a railroad. Wood and water are abundant. Some veins contain arsenical pyrites, others are clean. The assay value of two samples of the former amounted to \$8 and \$42.40. One of the latter was valued \$39.50.

Analyses: Quartz containing arsenical pyrite, schist, and mica, gold per ton, 16 grams; quartz containing arsenical pyrite, gold per ton, 84.4 grams; quartz containing talcose schist and tourmaline, gold per ton, 79 grams.

Donato (Marianna).—The Donato mine (*Sumidouro*) is located east of Serra do Itacolomy, and in the same line with the Tinoco, Janubeiro, Aroeira, Dona Rita, Cavallo Branco, and Vasado mines. This is an exceptionally rich gold-bearing zone. Here are the gold workings of Vasado, which belong to the “Companhia Brasileira de Salitraes, Terras e Colonisação,” and those of Tinoco, Xiquinho, etc., all as yet undeveloped. The outcrops of these veins were mined by the open-cut method in two leading directions. They consist of small veins of quartz embedded in mica-schist, associated with hornblende. The veins traverse the mica-schist in different directions, covering a large area. The ore consists of white quartz, associated with a number of other minerals. Gold is visible in certain parts of the quartz. A large part of the ore body is decomposed, and it will be an easy matter to develop it if water can be obtained. The early miners only worked the soft part of the veins, leaving intact the hard quartz. Analyses made at the Ouro Preto School of Mines give the following result: Ore from the Donato mine, 15.5 grams of gold per ton; the Tinoco workings, 17.76 grams in the richest quartzite; gravel from the pan washings, 41.63 grams.

This is one of the few mines in which two systems can be employed in its development, namely, a stream of water for the soft portions and a stamp mill for the auriferous quartz. Washing the ore by means of a stream of water would yield a large percentage of gold and would make the extraction of the gold from the quartz veins easier.

Analyses: Donato mine, gold per ton, 15.5 grams; Tinoco mine, gold per ton, 17.76 grams; from sands left from the pan washings, gold per ton, 41.63 grams.

BIBLIOGRAPHY.

Reports of the “Companhia Brasileira de Salitraes, Terras e Colonisação.”

Estaca (Ouro Preto).—This mine is one mile distant from the Ouro Preto depot of the Central Railway. A sample assayed \$7.50 per ton. Water and wood are plentiful.

Analysis: Gold per ton, 15 grams.

Falcão (Ouro Preto).—This mine is situated at a distance of 18 kilometers from the city of Ouro Preto and 7 kilometers from the nearest

railway station. The deposit consists of three parallel veins of quartz and pyrites, varying from 3 to 4 meters in thickness.

Analyses: First vein, assay No. 1, gold per ton, 9 grams; No. 2, 11 grams. Second vein, specimen No. 1, gold per ton, 14 grams; No. 2 (covering of vein), no gold; No. 3, gold per ton, 27 grams.

Third vein, specimen No. 1, gold per ton, 3 grams; No. 2, no gold; Nos. 3, 4, and 5, traces of gold; No. 6, 25 grams; Nos. 7 and 8, traces of gold; No. 9, 5 grams; gold per ton (average of 2 assays), 12 grams; No. 10, gold per ton, 55 grams.

First vein: Gross weight of sample, 3.740 grams; reduced in the pan, 23 grams; gross weight of the litharge, 100 grams; gross weight of the gold "button," 3.0250 grams; weight of silver, 0.005 gram; gold per ton, 6.55 grams.

Residue from the stamps of the "Falcão" mine, gold per ton, 40 grams.

First vein: Specimen of ore taken from the roof of the shaft at the point where it meets the dark quartz, gold per ton, 7 grams; specimen taken from near the right-hand support in the roof of the same mine, gold per ton, 5 grams. Third vein, 10 meters from the road, left side, gold per ton, 4 grams; Estrada de Alegria, on the left side of the road from Estrada do Falcão to Alegria, gold per ton, 7 grams; vein below road, 0.30 meter thick, gold per ton, 20 grams; from another vein, below, on the same road, 0.50 meter thick, in the same level, gold per ton, 41 grams.

Faria (Sabará).—The mine of the Faria Gold Mining Company of Brazil, Limited, is situated in the vicinity of Villa Nova de Lima, 4 kilometers from Honório Bicalho, a station of the Central Railway. This mine was worked by the "Société des Mines d'Or de Faria," which was formed in 1887 with a capital of 1,800,000 *francs*, afterwards increased to 2,400,000 *francs*. After operating the mine for nine years the company was reorganized under the name of "Société Nouvelle des Mines d'or de Faria," with a capital of 1,600,000 *francs*, half of which was given to the old company. Finally, in 1896 a company was formed in London, known as the "Faria Gold Mining Company

of Brazil, Limited," for the purpose of acquiring these mines. The capital of the company was £60,000, of which £36,000 was offered to the stockholders of the old company.

Most of the ore yields as high as 18 grams of gold per ton and the average is from 6 to 7 grams per ton. This was the first mine of this region to use electrical machinery for the extraction of the ore. The works of the mine, the miners' houses, etc., are lighted by electricity. The gold from this mine is very fine, floating in the water in which it is treated to such a degree that only 42 per cent of the contents of the ore is recovered, although theoretically the ore yields 18 grams of gold per ton. Experiments are being made with different processes in the hope that one will be discovered to correct this. The company is being reorganized and modern plants are being installed. The directors of the new company expect an annual net income from the mine of £11,600. The old company extracted 148,892 grams of gold. The present company extracted from this mine from January 1, 1899, to January 1, 1901, 331,951 grams of gold, valued at £40,000.

The new company has installed modern plants—a Californian mill of 20 stamps, Frue vanners, and a chloride and cyanide plant for the treatment of the residue. A shaft has been sunk to a depth of 200 meters. Powerful pumps, operated by electricity, have been set up. The principal works are; An inclined shaft sunk to a depth of 225 meters; 3 levels, the last one being 180 meters from the surface; an adit 375 meters long for draining the mine; a drain 6 kilometers long; electric motive power for operating the extracting and pumping machinery and the different plants; 20-stamp mill; amalgamation pans; amalgamation barrels; 8 Frue vanners; chlorination plant, treating 150 tons per month, and cyanide plant, treating 1,000 tons of ore per month.

 Paul Ferrand: L'Or à Minas Geraes. Vol. 1. 1894.

Furnas de Caethé (Caethé).—These mines are situated 15 kilometers from Raposos, and are the property of BARON DA ESTRELLA and Dr. JOSÉ ALEXANDRE DE MOURA COSTA. The principal mines are Cotão, Fernando, Portão, Agua do Sapo, Paciencia, Mãe Isabel, and Quebra Braço.

Analysis: Average gold per ton, 28 grams.

Furquim (Marianna).—This mine was acquired by the Furquim Mining Company, which was organized in 1890 with a capital of 150,000 *milreis*, which in 1892 was increased to 600,000 *milreis*, of which only 150,000 *milreis* have been paid in. The company began

working in the gravel, but difficulties arose and operations were suspended. A California 30-stamp mill was introduced, but the company was obliged to suspend operations for want of funds. In 1896 the mining property was sold for a small amount to a Brazilian capitalist. The works are now at a standstill. The gold is found in small veins of gold-bearing quartz and in the alluvial deposits of the Carmo River.

Analyses: (1) Gold per ton, 5 grams; (2) 4 grams; (3) 12 grams; (4) 17 grams; (5) 7 grams; (6) 93 grams; (7) 98 grams.

Gabirola.—This mine, together with the Gaia mine, was acquired by the Morro Velho Company in 1862 for £11,583. It is located near Morro Velho, on land belonging to FERNÃO PAES. The vein of the Gabirola consists of compact quartz and fine pyrites and lies almost vertically. The ore yields, on an average, 14 grams of gold per ton, but only 7 grams are recovered. It was operated by the Morro Velho Company in 1868 and again in 1886.

Analysis: Gold per ton, 14 grams.

Itatiaiuassú.—This property is about 5 miles from the Sabará Railway depot. Averages of six assays gave values of \$2.75 and \$5 per ton. Water and wood are plentiful.

Analyses: Sample No. 1, gold per ton, 5.5 grams; No. 2, 6.66 grams; No. 3, 4 grams; first assay, gold per ton, 9 grams; second, 12 grams; third, 10 grams.

Jambeiro (Marianna).—This property is one of the Sumidouro group. Two assays gave values of \$5.50 and \$7 per ton. Wood and water are plentiful.

Analysis: Gold per ton (two assays), 11 and 14 grams.

Lages (Ouro Preto).—This is the property which gives its name to the Ouro Preto group of mines, situated in and around the city of that name. It is distant 1 mile from the Central Railway. A large body of ore is in sight. The veins are parallel and inclined at 35 degrees north and south. The mineral is pyritic and free milling (a frequent occurrence in this State, where the gold needs only thorough crushing to free it from the sulphurets). This group of mines is the most important in the Medrado concession.

Analyses: No. 1. Quartz and mispickel. Gold per ton, 77 grams; assay value, \$47.74. No. 2. Block of pyritic quartz. Gold per ton, 48 grams; assay value, \$29.64. No. 3. Quartz and oxidized pyrites. Gold per ton, 12 grams; assay value, \$7.44.

Lagôa.—(*Dourada, municipal district of Tiradentes*).—This property is 8 miles distant from the West of Minas Railway. No exact assay values are available, but the mineral is said to assay about \$17 per ton. The district affords ample wood and water.

Lavras Novas (Ouro Preto).—This mine is 5 miles from the Ouro

Preto depot of the Central Railway. The assay value of the vein is \$16.25 per ton. Wood and water are plentiful.

Analysis: Gold per ton, 32 grams.

Maquiné (Marianna).—This mine is one of the extremely rich Jacutinga formation, and is 12 miles from Ouro Preto. Wood and water are plentiful. Two assays gave values of \$405.51 and \$450.50 per ton.

Analysis: Jacutinga, with visible gold, 2 samples, gold per ton, 911 grams.

Maria da Vargem.—This property is 6 miles distant from the Central Railway. The assay values vary from \$1 to \$5.50 per ton. Wood and water are plentiful.

Analyses: (2) Gold per ton, 11 grams; (4) 4 grams; (5) 6 grams; (6) quartz gravel, 4 grams; (7) quartz, 3 grams; (8) 11 grams; (9) 2 grams.

Marzagão (Parish of N. S. da Conceição of Rio de Pedras, Morro de S. Vicente, municipal district of Ouro Preto).—This mine is situated 20 kilometers from Itabira do Campo, a station of the Central Railway. The bed is found in the metamorphic Eozoic rocks of the central plateau of Minas Geraes, which consist mainly of schists, such as mica schists, chlorite schists, quartose schists, clay schists, etc. The average height of the bed is 960 meters above sea level. The early miners worked the outcrops of the deposit for a distance of 8 kilometers, using the "open cut" method and employing water for the disintegration of the earthy matter. The property is owned by four men. Among other mines found here are the California, Ouvidor, Paciencia, Chacara, Engenho de Cuima, etc. The deposit consists of at least two veins of quartz, associated with pyrites, very near together and almost parallel, but not uniform in their mineralogical formation. These veins are embedded in schist, which constitutes the roof and floor of the vein. The flow of water from the Ouro Fino River, in junction with the Andaime, is 175.35 liters per second. In the vicinity are also the two small mountain streams Catana and Cunha de Ferro, the waters from which can be conducted to the mines by means of ditches or canals. Steam power equivalent to 250 horsepower can be obtained for the working of the mine.

This is the only mining property that is registered in the Torreus. It is estimated to cover 50 miles square.

Analyses: (1) Gold per ton, 30 grams; (2) 69 grams. Fineness of gold, 23.947. No. 3. Ore (weight), 100 grams. Gold and silver per ton, 26.7 grams.

BIBLIOGRAPHY.

C. Prates: Relatorio sobre a jazida aurifera de Marzagão (Revista Industrial of Minas Geraes, No. 4), 1894.

Matheus Leme.—This mine is 10 miles distant from Ouro Preto. The assay value is about \$6.80 per ton. Wood and water are plentiful.

Analysis: Gold per ton, 12.4 grams.

Mocó (Caethé).—This property is 20 miles distant from the Central Railway. A railway has been projected from thence and the track leveled to the close proximity of the mine. The assay value is \$11.50 per ton, and the locality one of the most healthy of the highland district.

Analysis: Gold per ton (average of two assays), 23 grams.

Montié (Congonhas do Campo, Ouro Preto).—This property is two miles distant from the Central Railway. The assay value is \$5.50 per ton.

Analysis: Gold per ton, 11 grams.

Moreiras (Ouro Preto).—This mine is one of the Ouro Preto group; also included in the Medrado concession. The ore is free milling and a large mass is in sight. Water power is abundant, and the property is but 4 miles from the Central Railway. Wood is abundant at a distance of 8 miles. Four assays give the following figures: \$2.50, \$2, \$2.25, and \$3.

Analyses: Gold per ton, 5, 4, 5, and 6 grams.

Morro do Ouro Fino (Ouro Preto).—This property is distant 1 mile from the railroad. The assay value of superficial samples ranges from \$1 to \$1.50 per ton.

Analyses: Gold per ton, first sample, 3 grams; second sample, 2 grams.

Morro do Paschoal (Ouro Preto).—This lode is 13 feet wide at the foot of the hill, where an adit has been driven; 500 feet vertical of the lode exists above the adit. The ore is a compact quartzite, showing visible gold. Like the rest of the Medrado concession, the mine is close to the Central Railway (2 miles), and ample water power is available. Three assays gave the following values: \$16, \$14, and \$26.50.

Analyses: No. 1, gold per ton, 32 grams; No. 2, 28 grams; No. 3, 53 grams.

Morro da Piedade (Ouro Preto).—This property belongs to the Tasaras group. Much mineral is in sight, and exploration is easy. Wood and water are abundant. The Central Railway is 4 miles distant. The mineral gives an assay value of \$19 per ton.

Analysis: Gold per ton, 38 grams.

Morro da Queimada (Ouro Preto).—This mine is one of the Lages group of the Medrado Concession. Assay values: \$7.50, \$1, \$6, \$0.50, and \$6.50.

Analyses: Gold per ton, 15, 2, 1, 12, and 13 grams.

Morro do Ramos (Ouro Preto).—This is one of the Lages group. The mineral, as far as exploration has been carried out, is poor, but

exploration has been confined to the surface. The assay values obtained equal about \$1.10 per ton.

Analysis: Gold per ton, 2.2 grams.

Morro de Sant' Anna (Marianna).—This mine was operated by the "D. Pedro North d'El Rey Gold Mining Company, Limited," which was organized in 1862, with a capital of £125,000. From 1863 to 1868, 2,427 kilograms of gold were extracted. Operations were continued until 1878, the ore from the mine averaging 15 grams of gold per ton. The profits of the company in 1867 amounted to £51,944, and in the three years, 1867, 1868, and 1869, to about £100,000. During this period 100 per cent dividends were paid. In 1878 mining operations were discontinued, the mine then having a depth of 212 meters. In 1888 the company was reorganized under the name of "D. Pedro Gold Mining Company, Limited," and operations were resumed. A level was driven to reach the richest of the ore bodies, No. 8, and new pumping and extracting machinery and plants for the preparation of the ore were installed.

The company at the present time is working the auriferous deposits at Maquiné, having many years ago abandoned the diggings at the place known as "Morro de Sant' Anna," notwithstanding the yield of gold from the ore of this vein was very fair. Gold appears in large pieces.

Most important works: A well-timbered tunnel or level for extracting the ore, which is a model of its kind; another tunnel to reach the richest of all the ore bodies, No. 8; mining and pumping machinery, and machinery for the mechanical preparation of the ore; German trommels, worked by compressed air; a small stamp battery to crush the coarse ore; pan washings; cables for the transmission of power to the pumping machinery; Pelton wheels as motors.

Analysis: Gold per ton (average of 3 assays), 7 grams.

Morro de S. João (Ouro Preto).—This is one of the Lages group of mines, situated near the city of Ouro Preto, 3 miles from the railroad. Wood and water are plentiful in the immediate vicinity.

Analysis: Gold per ton, 10 grams.

Morro de S. Sebastião (Ouro Preto).—Gold-bearing ore, pyritic quartz, mispickel, scorodite, and decomposed pyrites. Gold per ton, 25 grams, value \$12.50.

This mine forms part of the Lages group, 3 miles from the railroad, with abundant wood and water. The mineral is a quartz with pyrites and mundie, decomposed at outcrop but probably clean at depth.

Morro de S. Vicente (Ouro Preto).—This property is 8 miles distant from the Ouro Preto railroad depot. The assay value is from \$2 to \$2.25 per ton. The district affords abundance of wood and water.

Analyses: Two assays, gold per ton, 4.25 and 4 grams.

Morro Velho (municipal district of Sabará).—Operated by the English company known as "The St. John d'El Rey Mining Company, Limited," having a capital of £500,000. The vein is 180 meters long and 14 meters thick. The ore yields from 10 to 20 grams of gold per ton. The mine was discovered one hundred years ago and has been worked by the present company since 1830. The total gold production of this mine from 1836 to 1886 was £5,178,657, of which £1,657,769 was net income. From 1842 to 1867 an annual dividend of 25 per cent was paid to the stockholders. In 1867 there was a fire in the mine and operations were suspended for seven years for the purpose of opening up new shafts. From 1874 to 1882 a yearly dividend of 31 per cent was paid. From 1882 to 1886 no dividends were distributed. The next ten years were spent in sinking new shafts and setting up modern machinery. The yearly income from the mines from now on, after all expenses are deducted, will probably be £60,000.

Principal works: Two shafts sunk to a depth of 861.33 meters. A 120-stamp mill constructed after the California model; hydraulic motive power equivalent to 530 horsepower; modern machinery and apparatus for the extraction of the ore and for descending into and ascending from the mines. A force pump worked by hydraulic pressure for draining the old mine; an adit-level 307 meters long to afford ingress and egress, lined throughout with masonry. A new method has been adopted for the extraction of gold known as the oxygen process, invented by Mr. G. CHALMERS, superintendent of the mine, and Mr. WILDER, chief chemist. The property has a well-equipped foundry, blacksmith shop, two furnaces for second fusion, compressed air drills, an electric-light plant, Pelton wheels of different sizes, and extensive plants on the Ribeirão dos Crystaes and Rio do Peixe, where the electricity is generated for running the machinery for the extraction and dressing of the ore.

Beautiful crystals of quartz, dolomite, siderite, magnetic pyrites, and albite appear in groups in the center of the vein.

The mine has already been worked to a depth of 20 meters below sea level.

Company's Annual Reports.

The "Mining Journal" and "Mining World."

Nascente da Meia Pataca (municipal district of Cataguases).—This property is 10 miles distant from the railroad. The assay value is \$3.50 per ton. Wood and water are plentiful.

Analysis: Gold, per ton, 7 grams.

Ouro Podre (Ouro Preto).—The vein of this mine is 6 feet 6 inches wide, of friable quartzite. It is part of the Lages group, and has abundant wood and water supply close at hand. It belongs to the Medrado concession. The assay value of samples of the mineral is \$46.50 per ton.

Analysis: Gold, per ton, 93 grams.

Paciencia (Ouro Preto).—This property is 10 miles distant from the railroad. Wood and water plentiful. Assay value, \$21 per ton.

Analysis: Gold, per ton, 42 grams.

Padre Faria (Ouro Preto).—This property is situated in the city of Ouro Preto, 1 mile from the Central Railway depot, and forms part of the Medrado concession. Wood and water are plentiful. The assay value is from \$6 to \$7 per ton.

Analyses (3 samples): Gold, per ton, 14, 12, and 12.5 grams.

Padre Viegas (Ouro Preto).—This is one of the Ouro Preto group of mines in the Medrado concession.

Analysis: Gold, per ton, 13 grams; assay value, \$6.50.

Paíol (Ouro Preto).—The plantation of Paíol is situated about 20 kilometers to the north of Ouro Preto, between the villages of Antonio Pereira and St. Bartholomeu, in both of which are found auriferous deposits. The road running from Ouro Preto to the plantation is at present in very bad shape, but at a relatively small expense it could be put in fair condition. The boundaries of the property are well defined by mountain ranges. There is an abundance of wooded land, both on

the plantation and in the vicinity, from which lumber can be obtained at small cost. The water supply is not abundant, and it is important that a dam be built to store the water for use in the dry season. For many years gold has been obtained from the streams on the plantation by simply washing the sands.

The owner of the plantation, convinced that there were gold veins somewhere on the land, had a prospector come and make a thorough search, which resulted in the discovery of veins of gold-bearing quartz which outcrop at several points. Several samples of the vein and gold-bearing sands were obtained by the prospector and analyzed at the Ouro Preto School of Mines. This analysis was not very satisfactory, but as the borings from which the specimens were obtained were not deep, it is believed that richer ore can be obtained. In the opinion of the prospector the veins can be worked with profit. The outcrops indicate that the deposit is extensive and will furnish the company with ore for many years to come. The Paiol property is also valuable from an agricultural standpoint. Assay values, \$5.50, \$19.50, and \$54.50.

Analyses (3 samples): Gold per ton, 109, 11, and 39 grams.

Palacio Velho (Ouro Preto).—This is one of the Ouro Preto group of the Medrado Concession. Assay values, \$5, \$6, \$9.50, and \$5.15.

Analyses (4 samples): Gold per ton, 19, 12, 10, and 10.3 grams.

Pary (Municipal district of Santa Barbara).—The Pary mine, situated near the village of San Francisco, 12 kilometers from the city of Santa Barbara, was purchased in 1862 by the Santa Barbara Gold Mining Company, Limited, for the sum of £12,000. The capital of this company is £60,000. The vein of this mine is composed of fine granular quartz, iron, and arsenical pyrites, associated with varying quantities of hornblende, granatite, and mica. The company opened up several inclined planes and tunnels and extracted the ore until 1882, when the mine caved in, the depth then being 90 meters. A new shaft was sunk in 1884, but without results, and another was sunk in 1889, from which the ore is now being extracted. The company was reorganized in 1869 with a capital of £30,000, which, in 1880, was increased to £40,000.

The total production of the mine up to January, 1894, amounted to 2,682,452 grams of gold. The ore averages 10 grams of gold per ton. It contains a quantity of crystallized almandines. The profits of the mine from 1875 to 1881 amounted to about £29,000, or £5,000 per year. Since 1881 the profits have diminished, and at the present time the mine is not being operated.

Principal works: Several tunnels; a trench nearly 10 kilometers long, by which water is conveyed to the mines from the San Francisco River, furnishing motive power equivalent to 136 horsepower; 5 stamp batteries having a total of 61 stamps, and 2 pan amalgamators.

Analysis: Gold and silver per ton, 40 grams. Assay value, \$20.

Passagem (Ouro Preto).—This mine is situated 7 kilometers from Ouro Preto and is worked by the Ouro Preto Gold Mines of Brazil, Limited. The company has a capital of £400,000, with a yearly net income of probably £10,000. The ore yields on an average 15 grams of gold and 1.4 grams of bismuth per ton. This company has been in existence since 1883. The value of the ore produced from 1884 to 1888 was 3,894,672 *reis*; expenses, 3,190,854 *reis*; net income, 703,818 *reis*. In the periods from and including 1863 to 1873 and 1884 to 1894, 3,223 kilograms of gold were extracted; from 1894 to 1895, 473,430 grams; from 1895 to 1896, 550,582 grams, and in 1900–1901, 718,814 grams. After the installation of new Californian machinery the company expects to take out £80,000 worth of gold.

Most important works: Two inclined shafts, sunk to a depth of nearly 500 meters; modern extracting, pumping, and ventilating machinery; electric-light plant; California 80-stamp mill apparatus for the treatment of the ore by chlorination and cyanidation; a waterfall 63.60 meters high, having a flow of 450 liters per second, which, added to the water which flows from the mine, produces a total of 450 horse-power; a metallic aqueduct 73 meters long and 18 meters above the stream. This is the only mine which produces bismuth in paying quantities.

The vein contains an abundance of crystals of accidental minerals rarely found in other mines. These have been studied by Professor HUSSAK.

Analyses: Gold per ton, 82 grams; arsenical pyrites from the same mine, gold per ton, 189.6 grams.

Reports of the "Ouro Preto Gold Mines of Brazil" from 1885 to 1899.

Different numbers of the "Mining Journal" and the "Mining World."

Passagem (Municipal district of Queluz).—This property is 8 miles distant from the railroad. Wood and water are plentiful. The assay value of two samples was \$22.50 and \$19 per ton.

Analyses: Two samples, gold, per ton, 45 and 38 grams.

Paulina (Caethé).—This mine is worked by the owners of the S. Luiz mine. The vein was reached by an inclined plane. The vein consists of lines of ferruginous quartz and quartzite in schist, and is from 2 to 3 meters in width. The mine has been worked to a depth of 80 meters. A new gallery has been driven which will reach the ore in that part of the vein below its present depth. The ore averages \$12.50 per ton.

Analysis: Gold, per ton, 25 grams.

Pedra do Ouro (Antiga Jacutinga, Caethé).—This property is 20 miles from the railroad, but a new line to the town is partly constructed. Wood and water are plentiful. The assay values of nine samples were \$12.50, \$43, \$75, \$40, \$41, \$11.50, \$10, \$9, and \$12.50 per ton.

Analyses: Five samples, gold per ton, 25, 86, 151, 80, 82, and 23 grams; quartz, gold per ton, 20 grams; quartz containing pyrites, gold per ton (2 samples), 18 and 25 grams.

Pellucia (Ouro Preto).—Gold per ton, 22.4 grams, value \$11.20.

Piedade de Paraopeba (Ouro Preto).—This property is distant 6 miles from the railroad. Wood and water are plentiful. Two samples assayed \$24 and \$112 per ton.

Analyses: Micaceous quartzite, gold per ton, 48 grams; quartz containing arsenical pyrites, gold per ton, 224 grams.

Raposos (Sabará).—This mine is situated on the Central Railway near the village of Raposos. The bed consists of veins of quartz and auriferous pyrites. It was worked by the early miners, a 4-stamp mill being employed. The company operating the Passagem mine set up here an 18-stamp mill and worked the mine until 1893, having extracted 180 kilograms of gold, the ore averaging 5 grams of gold per ton. The mine at the present time is operated on a very small scale, a battery of 12 stamps only being employed. This mine has just been bought by the "St. John d'El Rey Mining Company, Limited," for the sum of £6,000.

Most important works: Three galleries, cutting different veins, which have been worked.

Rio Gualaxo (Ouro Preto).—These deposits are located at a distance of 24 kilometers from Ouro Preto. The "Companhia Minerallurgica

Brazileira," which was organized with a capital of 2,000 *contos*, for the purpose of working different mines, among them the alluvial deposits of Rio Gualaxo, has already, by changing the course of the river, drained a basin containing 5,000,000 cubic meters of auriferous gravel, which yields on an average 3 grams of gold per ton. The hydraulic process is used in working the gravel of the river bed.

Analysis: Gold per ton, 3 grams, value, \$1.50.

Romão (Antonio Pereira, Ouro Preto).—This property is 8 miles from the railroad. The assay value of a sample was \$88.80 per ton. Wood and water are plentiful.

Analysis: Gold per ton, average of three assays, 167.6 grams.

Roque Soares (Marianna).—The gold workings known as "Roque Soares" are located about 8 miles to the east of the city of Marianna. The property is within the municipal district of Marianna, State of Minas Geraes, and between the districts of Cachoeira do Brumado, S. Caetano de Marianna, and S. Sebastião. The property has an area of about 1,500 hectares and is traversed by seven streams, two of which have a considerable volume of water. These streams empty into the Carmo River, which traverses the northeastern part of the property. Gold is found along the banks and in the beds of these streams. Alluvial washings were formerly carried on in some of these streams. The three old workings are situated in the foothills. Gold was mined here in the first half of the last century by the open-cut process. No vein mining was undertaken at this period for the want of capital to purchase and set up the necessary machinery. Skilled labor also was lacking, as the work of excavation was performed entirely by slaves. CUSTODIO JOSÉ PAES, a Portuguese subject, was the first to work these deposits, and although he employed the most primitive methods, he succeeded in accumulating vast wealth. After his death the workings were discontinued and have remained idle up to the present time.

The present owners of the estate, when they acquired it, had in mind the exploitation of its mineral wealth, but it was found difficult, if not impossible, to raise domestic capital necessary for such an enterprise and, therefore, have decided to sell it. The sole proprietors and owners of this property are Col. MANOEL IGNACIO MACHADO DE MAGALHÃES and GORGONIO MACHADO DE MAGALHÃES. The boundaries are well defined. It is free of debt or onus of any kind. The Roque Soares deposits contain more than one auriferous vein in solid rock. The large diggings situated to the east contain one of these gold-bearing bodies, which extends in a north to south direction and unites with the chain of mountains running from Itacolomy Mountain to the boundary line between Minas Geraes and Espirito Santo. According to the deed of purchase and sale, executed in the city of Marianna on the 22d of June, 1896, and registered on the 23d of the same month, the boundaries of the property are as follows:

On the side of Olaria it is bounded by the property of MANOEL MOREIRA, deceased; on the side of Paredão, by land belonging to the heirs of DONATO GONÇALVES; on the side of Ramalho, by land which IGNACIO JOSÉ PAES sold to HONORIO RAMOS.

For the purpose of extracting the gold contained in the soil surrounding the large quartz vein of the gold digging lying to the east, the earthy matter was disintegrated by the action of a stream of water, thereby leaving the ore body exposed. The upper layers of this body consist of conglomerates, and in the joints and interstices are found sands rich in gold. These conglomerate formations also contain gold, but for lack of crushing machinery several tons of these have been piled up along one side of the canal.

There are two forests on the Roque Soares property, which furnish excellent timber for building purposes. One of these lies to the southwest, and is less than a kilometer from the three diggings, covering an area of several hectares. The other lies to the northeast, a little more than 1 kilometer from the diggings, and covers an area of 120 hectares. On the adjoining property is another wood on the southern slope of the mountain, which, together with the two already mentioned, are able to furnish all the timber needed for mining purposes for many years. In addition there are excellent pasture lands, admirably adapted to cattle raising. One field, comprising 120 hectares, has already been fenced off. The buildings consist of a one-story dwelling house, 52 feet by 23 feet, and a corn mill. Near the house is a small coffee plantation.

Analyses: Two samples, gold per ton, 48 and 56 grams, value \$24 and \$28.

Santa Cruz (Municipal district of St. John d' El Rey).—This property is 6 miles from the West of Minas Railroad. Three samples assayed \$59.50, \$55, and \$164 per ton respectively. Wood and water are plentiful. The mineral is a friable, ferruginous quartzite.

Analyses: Three samples, gold per ton, 119, 110, and 328 grams respectively.

Santa Rita (Municipal district of Sabará).—This property is 6 miles from the railroad. Wood and water are plentiful. The mineral, as far as is known, is poor, assaying \$1.50 per ton.

Analysis: Gold per ton, 3 grams.

S. Bento (Municipal district of Santa Barbara).—The São Bento Gold Estates, Limited. This mine is worked by an English company. Four assays gave values of \$15, \$37.50, \$1, and \$20.

Analyses: Four samples, gold per ton, 30, 75, 2, and 40 grams.

S. Francisco (Cattas Altas de Nouega).—This property is 10 miles from the Ouro Preto depot of the Central Railway. Wood and water are plentiful. The lode assays \$22.50 per ton.

Analysis: Gold per ton, 45 grams.

S. Luiz ou Juca Vieira (Caethé).—This mine is situated a few kilometers south of Caethé, and has been operated since 1891 by José AFFONSO & Co., with a capital of 50 *contos*. The vein consists of grayish quartz, associated with iron and arsenical pyrites, a little galena, stibine, chalcopyrite, and gold in fine grains and sometimes in threads. The mine is operated on a small scale. A 12-stamp mill treats, on an average, 360 tons of ore per month. The total production of gold from 1891 to 1893 was 43,155 grams. The vein is 4 meters thick. Steam motive power equivalent to 50 horsepower is used. The mine if worked on a large scale would yield gold in paying quantities. The deposit contains a large quantity of iron, sulphurets, arsenic, copper, lead, antimony, bismuth, etc., in which is native gold visible to the naked eye, as well as a large quantity of metallic sulphurets. The principal works are an engine built of wood, a tramway 125 meters long, over which the ore is carried, shafts, levels, etc.

Paul Ferrand: L'Or à Minas Geraes. Vol. 1. 1894.

John Taylor & Sons: Rapport sur les gisements aurifères de Saint Luiz à Caethé.

San Miguel de Piracicaba.—This property is 80 miles from the railroad. Wood and water are plentiful and the mineral is very rich; assays from 3 samples gave respectively \$22.25, \$341.35, and \$55.50 per ton.

Analyses: Three samples, gold per ton, 44.50, 682.70, and 111 grams.

Saragoça (Ouro Preto).—The Saragoça mine, located at Ouro Preto, consists of veins of compact quartz associated with small quantities of arsenical and iron pyrites containing gold visible to the naked eye. Ore bodies occur in these veins which are made up principally of arsenical pyrites. In these a considerable quantity of gold is found. The rock surrounding the vein is also impregnated with gold for some distance, as has been observed recently in the vicinity of Ouro Preto. The mine has been worked at intervals on a small scale. A 3-stamp mill worked by water power is in operation. The lode has an average thickness of but a few meters and can be worked with profit.

An analysis of specimens of the ore taken from one section of the lode showed 71 grams of gold per ton, while those from another part of the lode yielded 11 grams per ton. These lodes deserve to be carefully prospected. On account of their close proximity to Ouro Preto mining operations could very easily be carried on here.

Analyses: Quartz and pyrites, gold, per ton, 71 grams; quartz containing arsenical pyrites and schist, gold, per ton, 21 grams; pyritic sands from a small engine of the mine, gold, per ton, 10 grams;

quartz, quartzite with tourmalines and sesquioxide of iron, gold, per ton, 47 grams; quartz containing arsenical pyrites and schist, gold, per ton, 16 grams. Assay values, \$35.50, \$10.50, \$5, \$23.50, \$8, and \$5.50.

BIBLIOGRAPHY.

Leandro Dupré, jr., Estudo geologico e mineralogico da região E. de Ouro Preto, etc. (Archives of the National Museum). Vol. 3. 1878.

Tapera (S. Bartholomeu, Ouro Preto).—This property is 20 miles from the railroad. The lode is very rich, as is shown by the following assays: \$119, \$228.80, \$178.50, \$439.35, \$514, \$296, \$60, \$60, \$77.50, \$7.50, \$3.50, \$2, \$24.50, \$13, \$224, \$479, \$5.50, \$3.50, and \$27.50 per ton.

The mineral is a quartzite with arsenical pyrites, pyrrhotite, and chalcopyrite. Wood and water are plentiful and the roads are good for the transportation of heavy loads.

Analyses: Quartzite containing pyrite (2 samples), gold per ton, 236.9 and 457.6 grams; quartzite and arsenical pyrite; magnetic pyrite and chalcopyrite, gold per ton, 357 grams; sample A, gold per ton, 8,787 grams; sample B, 1,028 grams; sample C, 592 grams. Fifteen samples, gold per ton, 55, 120, 120, 175, 15, 7, 4, trace, trace, 49, 26, 448, 958, 11, and 17 grams.

Tassaras (Ouro Preto).—The Tassaras diggings are situated on the southern slope of the Serra das Lages in the vicinity of Ouro Preto, the former capital of the State of Minas Geraes, famous for its mineral wealth, especially gold. Two public highways traverse this region, one from Ouro Preto to Marianna and the other from Ouro Preto to Antonio Pereira. Traversing the first of these roads for a short distance one reaches Passagem, where a mining company has been working a bed of auriferous quartz for some years.

Baron ESCHWEGE, the distinguished geologist, describing the expedition to the State of Minas, mentions the gold diggings of the Serra das Lages, citing especially that of Morro da Piedade, which to-day forms part of the diggings known as Lavras Tassaras. The early miners confined their operations to the surface, subjecting the auriferous debris to the action of a stream of water which was conveyed from a dam which may still be seen on the top of the serra. The disintegrated material was carried by the current into large tanks, called "Mundéos." Several levels or tunnels of different sizes extend into the side of the serra.

There are several veins which outcrop on the side of the mountain. These veins are: "Piedade," composed of quartz and mispickel, containing a few tourmalines, common pyrites, scorodites, etc., and having a width of from 2 to $2\frac{1}{2}$ meters; "Côr de rosa," also of quartz colored with iron oxide, showing gold in the arsenical pyrites and in the hollow quartz which contains no pyrites; "Pedrão," which runs parallel with the "Côr de rosa," dipping about 58 degrees northeast, then

describing a curve, and finally running parallel with the vein "Piedade," dipping 26 degrees northeast. In addition to the veins mentioned, which are over 1.50 meters in thickness, there is a series of veins ranging from a few centimeters to 1.50 meters in thickness. The outcrops of these veins on the side of the Serra are about 200 meters above the Carmo River, which traverses this region, and which is able to furnish motive power for their development.

The surrounding rocks are itabirite micaceous quartzite, mica, schists, and variously colored schists. All these layers dip about 30 degrees southeast. Between them are seams or veins of quartz a few centimeters thick. These may be plainly seen in the interior of some of the old galleries, which are very wide. It is estimated that the vein "Piedade" is capable of yielding 180,000 tons of quartz ore, while the diggings taken together will yield 3,000,000 tons of quartz. The property is traversed by the streams Padre Faria, Tassara, and Ribeirão do Carmo, which furnish the water power required for the mining machinery. In addition to these there are falls a few kilometers away, from which additional power can be derived. The diggings can be easily worked, as galleries or levels extend to a considerable distance, through which the ore can be conveyed to the surface, where they have natural drainage. They cover an area of 600,000 square meters, which is larger than that of the "Passagem" mining property to which Dr. PAUL FERRAND refers in "L'Or à Minas Geraes" (vol. 2).

Analyses: Ferruginous quartz and pyrites, gold per ton, 471 grams; clayish schist, 68 grams; ferruginous clay, containing some quartz, 283 grams; quartz containing arsenical pyrites and mica, 19.6 grams; quartz containing mispickel and schist, 16 grams. Assay values, \$235.50, \$34, \$9.80, and \$8.

BIBLIOGRAPHY.

Custodio Braga: Relatório sobre a Jazida aurífera dos Tassaras.

Thesoureiro (Camargos, municipal district of Marianna).—This mine is 16 miles distant from the Central Railway. Various samples assayed \$23.80, \$13, \$8.80, \$69, and \$7 per ton. Wood and water are plentiful.

Analyses: Gold per ton (6 samples), 46.75, 25.96, 17.56, 138, 14, and 31 grams.

Tinoco (Marianna).—This is one of the Sumidouro group. Ten assays gave values respectively of \$8.88, \$2.48, \$4.23, \$20.82, \$4.45, \$180, \$2.50, \$9, \$151, and \$12.50 per ton. Wood and water are plentiful, and the railroad is 20 miles distant.

Analyses: Ten samples indicated, gold per ton, respectively of 17.76, 4.96, 8.46, 41.63, 8.9, 360, 5, 18, 302, and 25 grams.

Vasado (Marianna).—This property is 3 kilometers west of the Sumidouro, near Marianna, and 20 miles from Ouro Preto on the Brazilian Central Railway. It belongs to the "Companhia Brasileira de Salitras, Terras e Colonização." The property was not prospected until

1893. The ore varies greatly, ranging from 0.5 gram to 28.5 grams of gold per ton. In addition to gold and lead it yields a large quantity of silver. The vein is composed of white quartz, containing pyrites and argentiferous galena and grains of visible gold. There is a large body of ore visible, which carries galena equal to 7 per cent of lead and 1.05 per cent of silver. The ore yields \$45 of gold per ton. The bed is very rich and of great promise for this mine. The Brumado Falls, which have a flow of 83 liters per second, furnish motive power equivalent to 90 horsepower. A few galleries have been driven for a short distance. There is also an inclined plane. This is one of the few mines of this State which contain a great quantity of argentiferous galena, with visible metallic gold.

Analyses: Twenty-eight samples showed galena (1), galena in mica schist (1), pyrites in quartz (3), visible gold in quartz (2), quartz with calcite (1), quartz with calcite and pyrite (1), quartz containing pyrites and visible gold (2), quartz with carbon and gold (1), quartz containing amphibole (2), quartz containing muscovite (1), mica schist (3), mica schist and amphibole (1), mica schist containing pyrites (1), and quartz (9).

Paul Ferrand: L'Or a Minas Geraes. Vol. 1. 1894.

Reports of the "Companhia Brasileira de Salitraes, Terras e Colonisação."

Veieiro (Rodrigo Silva, Ouro Preto).—Analyses: Four samples—quartzite containing decomposed pyrites, three assays, 14, 10, and 10 grams gold per ton; quartzite and schist, in contact, 2.7 grams; quartz, quartzite, and pyrite, 2.8 grams; quartz containing decomposed pyrite (2 assays) 11 and 12 grams, or assay values ranging from \$1.30 to \$7.50.

Veieiro (Cougonhas do Campo, Ouro Preto).—Analysis: Gold per ton, 54 grams.

Velloso (Ouro Preto).—This is one of the Ouro Preto group in the Medrado concession. It was worked by the early Portuguese colonists, and is one of the most promising properties of the district. The Central Railway is 1 mile distant. The formation is a ferruginous conglomerate, or banket, with barren quartz. Two assays on this material gave values of \$17 and \$10.50 per ton.

Analyses: Gold per ton, 2 samples, 34 and 21 grams.

Venda do Campo (Ouro Preto).—This property is 6 miles from Ouro Preto. Nine samples assayed \$8, \$27.50, \$3.50, \$9.50, \$28, \$7.50, \$2.50, \$1.50, and \$31.50 per ton. Wood and water are plentiful. It was recently acquired by a Belgian company.

Analyses: Gold per ton, 9 samples, 16, 55, 7, 19, 56, 15, 5, and 3 grams; quartz containing pyrites, 1 sample, 63 grams per ton.

Vira Copos (Municipal district of Caethé).—Analysis: Gold per ton, 10 grams.

**LIST OF SPECIMENS OF BRAZILIAN MINERALS EXHIBITED AT
THE PAN-AMERICAN EXPOSITION AT BUFFALO, 1901.***

1. Transparent quartz crystal containing water bubble, Floresta, Marianna.
2. Crystal containing quartz, calcite, fine dolomite, and pyrite (auriferous), Passagem, Marianna.
3. Crystal of mispickel on quartzite (auriferous), Passagem, Marianna.
4. Slightly altered crystals of pyrite (auriferous), Passagem, Marianna.
5. Quartz crystal, with calcite and black tourmaline (auriferous), Passagem, Marianna.
6. Minute pyrite crystals in milky quartz, Passagem, Marianna.
7. Large cubical crystals of pyrite, also quartz, calcite, and tourmaline, Passagem, Marianna.
8. Black tourmaline crystals in calcite, Furquim.
9. Cyanite and muscovite crystals, Periquito, Marianna.
10. Crystallized calcite, covered with small pyrite crystals, Passagem, Marianna.
11. Geodic formation, containing calcite and pyrite (auriferous), Passagem, Marianna.
12. Blue cyanite needles.
13. Black tourmaline in crystallized calcite, Passagem, Marianna.
14. Limonite and quartz crystals, altered mica, Morro de Sant' Anna.
15. Asbestos pseu. pyrophyllite and martite crystals, Morro de Sant' Anna.
16. Cyanite needles, mica schist, Marianna.
17. Almandine crystals in granite and quartz, Passagem, Marianna.
18. Pyrite colored by oxide of iron (iridescent).
19. Pyrite colored by oxide of iron (iridescent).
20. Crystallized pyrite and calcite (auriferous), Passagem, Marianna.
21. Muscovite crystallization, illustrating black tourmaline formation, Floresta, Marianna.
22. Black tourmaline crystals in quartz, Furquim.
23. Limonite, Furquim.
24. Altered quartz, variety amethyst.
25. Arseno pyrite crystals, Passagem, Marianna.
26. Altered pyrite in quartz crystal group, Floresta, Marianna.
27. Milky quartz, calcite, and pyrite, Passagem, Marianna.
28. Needles of pyrophyllite in pyritic quartz, Passagem, Marianna.
29. Visible gold in calcite containing pyrite, Passagem, Marianna.
30. Quartz containing pyrite, Passagem, Marianna.
31. Calcite with pyrite (magnetic), Passagem, Marianna.
32. Muscovite crystals, Passagem, Marianna.
33. Quartz, calcite, and dolomite crystals with pyrite, Passagem, Marianna.
34. Mica schist, containing garnets, Passagem, Marianna.
35. Pyrite and calcite crystals (mineral auriferous), Passagem, Marianna.
36. Quartz geode, containing pyrite, calcite, and dolomite, Passagem, Marianna.
37. Calcite and dolomite geode, also pyrite (auriferous), Passagem, Marianna.
38. Transparent quartz and dolomite crystals, Morro de Sant' Anna.
39. Transparent quartz, illustrating conchoidal fracture, Rio do Carmo, Marianna.
40. Limonite geode, Rio do Carmo, Marianna.
41. Quartz and calcite crystals, with black tourmaline, Passagem, Marianna.
42. Quartz conglomerate, with argentiferous mica, Floresta, Marianna.
43. Quartz, with arsenical pyrites, Passagem, Marianna.
44. Pyrite on quartz matrix, Passagem, Marianna.
45. Pyrite and calcite in black schist, Floresta, Marianna.
46. Geode of quartz and calcite, in mica schist matrix, Passagem, Marianna.

*The exhibits included a large number of other specimens which are not described here for lack of space.

47. Crystallized siderite, also dolomite (auriferous), Passagem, Marianna.
48. Quartz crystal group.
49. Needles of rutile and tourmaline in quartz crystal.
50. Transparent quartz containing tourmaline, Tripuhy, Ouro Preto.
51. Transparent quartz and calcite, on quartzite, Morro de Sant' Anna.
52. Quartz, calcite, and pyrite crystals on quartzite, Passagem, Marianna.
53. Pyrite containing visible gold, Passagem, Marianna.
54. Crystallized calcite, Passagem, Marianna.
55. Quartz, calcite, and dolomite crystals, also talc, Passagem, Marianna.
56. Calcite, with pyrite crystals, also mica containing tourmaline, Passagem, Marianna.
57. Altered pyrite, Marianna.
58. Quartz conglomerate, with mica and siderite, Passagem, Marianna.
59. Milky quartz, with copper traces, Passagem, Marianna.
60. Not specified.
61. Pyrrhotite and siderite crystals on milky quartz, Morro Velho.
62. Quartz conglomerate with mica, Floresta, Marianna.
63. Massive arsenical pyrite with visible gold, Passagem, Marianna.
64. Mica schist containing muscovite crystals, Passagem, Marianna.
65. Quartz containing arsenical pyrite, Passagem, Marianna.
66. Reticular black tourmaline needles, Roque del Soares.
67. Opalescent crystals of quartz with one needle of tourmaline.
68. Quartz crystals with altered faces, Rosario, Marianna.
69. Quartz crystal incrustated in calcite, Minada Agua, Marianna.
70. Small calcite crystals, Passagem, Marianna.
71. Massive dolomite and calcite, also pyrite and tourmaline, Passagem, Marianna.
72. Arsenical pyrite and quartz.
73. Martite crystals in tourmaline.
74. Albite, calcite, pyrite, and mica crystals, Passagem, Marianna.
75. Milky quartz, with pyrite, Passagem, Marianna.
76. Conglomerate, containing muscovite, tourmaline, and mispickel, Passagem, Marianna.
77. Siderite fragment, Floresta, Marianna.
78. Ferromanganese containing silicon, Miguel Burnier.
79. Quartz conglomerate, with pyrite and fractured granite, Passagem, Marianna.
80. Cyanite and granite in crystallized quartz, Passagem, Marianna.
81. Milky quartz, Passagem, Marianna.
82. Pyrite crystals on quartzite, San Antonio, Marianna.
83. Auriferous pyrite in conglomerate, Rio do Carmo, Marianna.
84. Quartz containing dolomite and siderite, Passagem, Marianna.
85. Pyrite crystallized (auriferous), Passagem, Marianna.
86. Massive black tourmaline, with muscovite crystals, Passagem, Marianna.
87. Almandine, with tourmaline, hornblende, and muscovite, Pary.
88. Crystallized pyrite on quartz (auriferous), Passagem, Marianna.
89. Crystallized quartz and dolomite (auriferous), Passagem, Marianna.
90. Quartz, massive pyrophyllite, and syenite, Passagem, Marianna.
91. Crystallized muscovite in tourmaline, Passagem, Marianna.
92. Muscovite in mica schist, Floresta, Marianna.
93. Pyrite and tourmaline (auriferous), Passagem, Marianna.
94. Calcite and mica crystals, Passagem, Marianna.
95. Quartz geode, containing pyrite, Passagem, Marianna.
96. Visible gold in quartz, calcite, and muscovite crystals, Morro de Sant' Anna.
97. Crystals of calcite and pyrite with massive tourmaline, Passagem, Marianna.
98. Crystals of arsenical pyrite and specular oligist, Passagem, Marianna.

99. Pyrite crystals in calciferous quartz, Passagem, Marianna.
100. Decomposed pyrite, Passagem, Marianna.
101. Mispickel, siderite, and dolomite with black tourmaline, Passagem, Marianna.
102. Calcite conglomerate, Passagem, Marianna.
103. Iridescent oligist, Morro de Sant' Anna.
104. Smoky quartz.
105. Mica in feldspar (auriferous), Passagem, Marianna.
106. Minute tourmaline crystals, Passagem, Marianna.
107. Not specified.
108. Iridescent pyrite in quartz, calcite, and dolomite, Passagem, Marianna.
109. Visible gold in arsenical pyrite, Passagem, Marianna.
110. Quartz geode containing malachite and calcite, also tourmaline, Itacolumy, Marianna.
111. Arsenical pyrite in quartz, also tourmaline, Morro de Sant' Anna.
112. No mineral.
113. Geode containing calcite, dolomite, pyrite, quartz, and mica, Passagem, Marianna.
114. Magnetic pyrrhotite, Passagem, Marianna.
115. Lenticular black needles of tourmaline.
116. Calcite crystallized in auriferous tourmaline, Passagem, Marianna.
117. Foliated talc, São Sebastião.
118. Transparent and massive quartz, Morro Velho.
119. Martite.
120. Not specified.
121. Conglomerate of quartz, calcite, and mica, Passagem, Marianna.
122. Arsenical pyrite, Passagem, Marianna.
123. Calcium concretions.
124. Massive calcite with crystallized calcite and pyrite, Passagem, Marianna.
125. Cyanite needles in massive quartz, Floresta, Marianna.
126. Not specified.
127. Pyrite crystals in tourmaline, Passagem, Marianna.
128. Geode with terrec concretions.
129. Massive black tourmaline, Cattas Altas, Matto Dentro.
130. Black tourmaline crystals.
131. Quartz, calcite, and pyrite crystals, Passagem, Marianna.
132. Calcite, dolomite, crystallized siderite, also massive pyrite, Passagem, Marianna.
133. Quartz conglomerate containing magnetic pyrite, tourmaline, and dolomite, Passagem, Marianna.
134. Pyrophyllite and black tourmaline, Passagem, Marianna.
135. Dolomite and calcite, also altered pyrite in quartz, Passagem, Marianna.
136. Quartz with altered arsenical pyrite, Passagem, Marianna.
137. Quartz containing decomposed pyrite, Morro de Sant' Anna.
138. Pyrite, decomposed.
139. Argentiferous mica (iron stained), Marianna.
140. Pyrite conglomerate, Passagem, Marianna.
141. Pyrite crystallized.
142. Tourmaline in crystallized calcite, Passagem, Marianna.
143. Bright quartz, with pyrite.
144. Not specified.
145. Arsenopyrite, crystallized, Morro de Sant' Anna.
146. Crystallized pyrite (auriferous), Passagem, Marianna.
147. Geode with essonite, Morro de Sant' Anna.
148. Crystal of quartz, Bagagem.
149. Auriferous pyrite conglomerate, Morro Velho.
150. Conglomerate containing pyrite, quartz, and feldspar, Passagem, Marianna.

151. Quartz crystal.
152. Crystallized quartz, Tripuhy, Ouro Preto.
153. Arsenopyrite, also pyrite on quartzite, Passagem, Marianna.
154. Auriferous pyrite, with needles of bismuth, Passagem, Marianna.
155. Pyrite in quartz, Passagem, Marianna.
156. Siderite crystals and mica, calciferous mineral, Floreta, Marianna.
157. Crystallized pyrite with traces of copper, Passagem, Marianna.
158. Quartz variety amethyst, Diamantina.
159. Calcite and quartz with altered pyrite, Passagem, Marianna.
160. Group of smoky quartz crystals, Bucão, Marianna.
161. Quartz and arsenopyrite crystals, Morro de Sant' Anna.
162. Iridescent pyrite on quartz, Morro Velho.
163. Siderite, calcite, and tourmaline crystallized, also bismuth, Passagem, Marianna.
164. Crystallized quartz and calcite, Passagem, Marianna.
165. Quartz group, with graphite.
166. Transparent and opalescent quartz, Passagem, Marianna.
167. Quartz containing tourmaline, Passagem, Marianna.
168. Transparent quartz, with milky quartz veins, Passagem, Marianna.
169. Crystallized dolomite and siderite, Morro Velho.
170. Transparent quartz and siderite, Morro Velho.
171. Smoky quartz, Miguel Burnier.
172. Calcite, dolomite, siderite crystals, and pyrite on quartz, Passagem, Marianna.
173. Quartz crystal group, Passagem, Marianna.
174. Pyrite crystals on calcite (auriferous), Passagem, Marianna.
175. Transparent quartz, Rio do Carmo.
176. Quartz crystal, Rio do Carmo.
177. Quartz crystal containing pyrite and black tourmaline, Morro de Sant' Anna.
178. Quartz containing tourmaline (auriferous), Passagem, Marianna.
179. Quartz crystal, with specks of pyrite, Passagem, Marianna.
180. Quartz, with calcite crystals, Passagem, Marianna.
181. Black tourmaline in calcite matrix, Passagem, Marianna.
182. Crystallized calcite, dolomite, mica, quartz, and arsenopyrite, Passagem, Marianna.
183. Crystallized quartz and calcite, Passagem, Marianna.
184. Quartzite and mica with pyrite, Passagem, Marianna.
185. Oligist and pyrite in calcite matrix, Rodrigo Silva.
186. Crystallized siderite in mica schist, Passagem, Marianna.
187. Siderite and mica crystal group, Passagem, Marianna.
188. Crystallized dolomite, with siderite and quartz, Passagem, Marianna.
189. Quartz crystal, with tourmaline and pyrite, Passagem, Marianna.
190. Quartz geode, containing limonite after pyrite, Passagem, Marianna.
191. Pyrite and calcite crystals, with tourmaline, Passagem, Marianna.
192. Pyrite conglomerate (magnetic), Morro Velho.
193. Quartz geode containing pyrite, Passagem, Marianna.
194. Quartz containing rose tourmaline needles, Passagem, Marianna.
195. Quartz geode containing muscovite.
196. Decomposed arsenopyrite, Passagem, Marianna.
197. Crystallized calcite, surrounding pyrite and tourmaline.
198. Muscovite, Marianna.
199. Quartzite, containing micaceous oligist, biotite, and galena.
200. Iron-stained concretions.
201. Crystallized quartz and calcite with iridescent pyrite, Passagem, Marianna.
202. Crystallized pyrite and calcite (auriferous), Passagem, Marianna.

203. Iridescent pyrite on quartz, Passagem, Marianna.
204. Calcite, quartz, and pyrite, Passagem, Marianna.
205. Crystallized calcite with iridescent pyrite, Passagem, Marianna.
206. Crystallized calcite and pyrite, Passagem, Marianna.
207. Crystallized almandine, Passagem, Marianna.
208. Mica and pyrite crystals, also needles of cyanite, Passagem, Marianna.
209. Crystallized pyrite and calcite with tourmaline, Passagem, Marianna.
210. Black tourmaline needles in quartz, Furquim.
211. Quartz, arsenopyrite, mica, and bismuth, Morro de Sant' Anna.
212. Quartz with veins of pyrite and siderite, Passagem, Marianna.
213. Quartz with arsenical pyrite, Morro de Sant' Anna.
214. Decomposed pyrite.
215. Iron-stained quartzite, Morro de Sant' Anna.
216. Iridescent pyrite on calcite, also tourmaline, Passagem, Marianna.
217. Pyritic quartz, Passagem, Marianna.
218. Oligist with mica, Marianna.
219. Quartz calcite and dolomite.
220. Crystallized quartz, calcite, and mica, Floresta, Marianna.
221. Mispickel crystals on calcite and quartz, Passagem, Marianna.
222. Crystallized pyritic calcite.
223. Arsenical pyrite (auriferous), Passagem, Marianna.
224. Crocoite crystals on talcose schist.
225. Quartz impregnated with sulphur, Passagem, Marianna.
226. Pyrite crystals in granite, Passagem, Marianna.
227. Black massive tourmaline with calcite, Passagem, Marianna.
228. Talc and crussite.
229. Pyritic quartz with vermilion ocher.
230. Quartzite containing visible gold, S. Bartholomeu.
231. Magnetic pyrite, Passagem, Marianna.
232. Crystals of transparent quartz, Santa Barbara, Matto Dentro.
233. Crystallized calcite with altered magnetic pyrite, Passagem, Marianna.
234. Crystallized pyrite and calcite (auriferous), Passagem, Marianna.
235. Conglomerate formation of pyrite and quartz, Marianna.
236. Crystallized calcite and quartz colored by copper carbonate.
237. Crystallized pyrite on quartz matrix.
238. Quartz crystal group, covered with quartzite.
239. Arsenopyrite and tourmaline in conglomerate.
240. Crystallized dolomite, calcite, and siderite (auriferous), Passagem, Marianna.
241. Decomposed pyrite with sulphur deposit, Furquim.
242. Brilliant quartz naturally laminated, Passagem, Marianna.
243. Crystallized calcite containing iridescent pyrite, Passagem, Marianna.
244. Pyrite conglomerate (auriferous), Passagem, Marianna.
245. Black tourmaline with geodic formation containing calcite and pyrite crystals,
Passagem, Marianna.
246. Quartz geode containing partly altered pyrite, Passagem, Marianna.
247. Quartz, calcite, and pyrite, Passagem, Marianna.
248. Pyrite crystals on quartz, Passagem, Marianna.
249. Black tourmaline needles in talc, Furquim.
250. Crystallized calcite with auriferous tourmaline, Passagem, Marianna.
251. Transparent quartz crystals, Passagem, Marianna.
252. Crystallized calcite, ablite, and pyrite in massive pyrite, Passagem, Marianna.
253. Transparent quartz containing tourmaline, Passagem, Marianna.
254. Crystallized calcite and pyrite with transparent quartz, Passagem, Marianna.

255. Quartz with black tourmaline and pyrite, Passagem, Marianna.
256. Quartz containing crystals of pyrite (auriferous), Passagem, Marianna.
257. Crystallized calcite and quartz, with black tourmaline, Passagem, Marianna.
258. Calcite with magnetic pyrite crystals, Passagem, Marianna.
259. Calcite geode with quartz and siderite crystals, Passagem, Marianna.
260. Stilbite, Passagem, Marianna.
261. Quartz geode with pyrite and limonite, Passagem, Marianna.
262. Dolomite, calcite, and pyrite crystals (auriferous), Morro Velho.
263. Crystallized pyrite with decomposed siderite, Passagem, Marianna.
264. Transparent quartz crystal.
265. Geode with limonite needles.
266. Calcareous needles of wavellite.
267. Yellow fibrous asbestos.
268. Needles of cyanite.
269. Crystallized calcite and pyrite, Passagem, Marianna.
270. Smoky quartz crystals, Rodrigo Silva.
271. Smoky quartz with pyrite crystals.
272. Transparent quartz.
273. Milky quartz.
274. Group of quartz crystals, Morro Velho.
275. Pyrite matrix with crystallized quartz and calcite, Passagem, Marianna.
276. Geode containing crystallized pyrite, quartz, calcite, and dolomite, Passagem, Marianna.
277. Banded quartz pebble.
278. Crystallized pyrite, Passagem, Marianna.
279. Crystallized pyrite, Passagem, Marianna.
280. Transparent quartz crystal, Diamantina.
281. Rolled quartz colored by manganese, Rio do Carmo, Marianna.
282. Itabirite, Rio do Carmo, Marianna.
283. Crystallized magnetic pyrite and calcite with quartz, Passagem, Marianna.
284. Martite in conglomerate, Antonio Pereira.
285. Pyrite crystallized, Passagem, Marianna.
286. Group of quartz crystals, variety amethyst, Barra Longa.
287. Crystallized oligist, Cattas Altas.
288. Crystallized oligist, Rodrigo Silva.
289. Rolled specimen of rutile.
290. Crystallized muscovite in mica schist, Floresta, Marianna.
291. Transparent quartz crystal, Marianna.
292. Pyrophyllite impregnated with martite, Morro de Sant' Anna.
293. Pyrite (auriferous), Passagem, Marianna.
294. Ferruginous hornblende crystallized, Piranga.
295. Calcareous geode.
296. Crystallized calcite and muscovite in mica schist, Floresta, Marianna.
297. Crystallized quartz, Floresta, Marianna.
298. Calcite, pyrite, dolomite, and tourmaline in quartz, Passagem, Marianna.
299. Crystallized quartz containing siderite, Floresta, Marianna.
300. Calcium concretions.
301. Needles of pyrophyllite.
302. Needles of pyrophyllite in quartz geode.
303. Crystallized calcite, also granular pyrite in quartz, Passagem, Marianna.
304. Crystallized pyrite in cyanite and mica schists, Passagem, Marianna.
305. Altered pyrite, Floresta, Marianna.
306. Crystallized tourmaline.
307. Tourmaline, in calcareous formation, Furquim.

308. Black tourmaline and pyrite in quartz, Passagem, Marianna.
309. Geodic formation containing specular oligist, Santa Rita Durão.
310. Stalactites calcareous.
311. Massive tourmaline iron stained, Rio do Carmo, Marainna.
312. Silky needles of pyrophyllite.
313. Rolled quartz in conglomerate, Rio do Carmo, Marainna.
314. Mica schist colored by copper, Marianna.
315. Crystallized siderite altered.
316. Crystallized calcite, Passagem Marianna.
317. Black tourmaline geodic formation, Santa Rita Durão.
318. Limonite, Ouro Preto.
319. Iridescent pyrite on quartz, Passagem, Marianna.
320. Needles of cyanite, Marianna.
321. Stalactite calcareous formation, Caeira, Ouro Preto.
322. Rose marble variety calcite, Rodrigo Silva.
323. Quartz crystal group, Rio do Carmo, Marianna.
324. Muscovite in black tourmaline, Furquim.
325. Crystallized calcite and dolomite (auriferous), Passagem, Marianna.
326. Crystallized pyrite, also pyrophyllite and quartz, Passagem, Marianna.
327. Quartz with specular oligist, Marianna.
328. Altered pyrite, Passagem, Marianna.
329. Black tourmaline in talc, Furquim.
330. Not specified.
331. Rose marble variety calcite.
332. Pyrite and quartz crystals with massive tourmaline, Passagem, Marianna.
333. Crystallized pyrite with copper traces, Passagem, Marianna.
334. Crystallized quartz and pyrrhotite with auriferous quartzite, Morro Velho.
335. Transparent quartz group, with pyrrhotite, Morro Velho.
336. Pyrite crystallized and compact.
337. Quartzite and talc with tourmaline needles.
338. Limonite after pyrite.
339. Cyanite needles on talc.
340. Quartzite containing decomposed pyrite, Morro de Sant' Anna.
341. Black quartzite, Passagem, Marianna.
342. Iridescent pyrite on quartz and talc, Santa Rita Durão.
343. Quartz with altered pyrite, Taquaral, Ouro Preto.
344. Crystallized pyrite (magnetic), Passagem, Marianna.
345. Visible gold in quartz geode containing siderite and pyrite, Passagem, Marianna.
346. Crystallized siderite in quartz, Passagem, Marianna.
347. Altered pyrite in quartz, Passagem, Marianna.
348. Quartz geode containing pyrite.
349. Group of quartz crystals, Itabira do Campo.
350. Crystallized calcite in mica schist, Passagem, Marianna.
351. Quartz crystals, Diamantina.
352. Siliceous chalcedonic concretions.
353. Transparent quartz crystal, Marianna.
354. Visible gold in quartz, Furquim.
355. Quartz geode, with crystallized pyrite, Passagem, Marianna.
356. Pyrite crystals, Passagem, Marianna.
357. Quartz crystal, Floresta, Marianna.
358. Not specified.
359. Crystallized muscovite and calcite, with decomposed siderite, Floresta, Marianna.
360. Crystallized black tourmaline, Salinas.

361. Tourmaline crystal, Salinas.
362. Quartz crystal containing topaz, Rodrigo Silva.
363. Quartz crystal.
364. Quartz crystal group, Floresta, Marianna.
365. Quartz crystal group, Tripuhy, Ouro Preto.
366. Yellow quartz crystal, Diamantina.
367. Quartz crystal, Rio do Carmo, Marianna.
368. Quartz crystal, Tripuhy, Ouro Preto.
369. Quartz crystal.
370. Quartz crystal, Passagem, Marianna.
371. Calcareous crystallization, Miguel Burnier.
372. Quartz crystal group in pyrite matrix, Passagem, Marianna.
373. Green tourmaline in talc, Barra do Furquim.
374. Quartz crystal in calcite containing pyrite, Passagem, Marianna.
375. Calcareous crystallization containing decomposed siderite.
376. Quartz crystal, with altered siderite, Morro de Sant' Anna.
377. Black tourmaline crystal in mica and pyrite, Passagem, Marianna.
378. Quartz crystal and pyrite, Passagem, Marianna.
379. Crystallized pyrite, with quartz, Passagem, Marianna.
380. Almandine in auriferous matrix, Pary.
381. Crystallized brotite, Passagem, Marianna.
382. Pyrite and malachite, Camargos, Marianna.
383. Quartz containing iridescent pyrite, Camargos, Marianna.
384. Quartz crystal group, Marianna.
385. Limonite stalactites, Antonio Pereira.
386. Auriferous pyrite, Morro Velho.
387. Quartz variety amethyst, Itabira do Campo.
388. Calcite concretions.
389. Magnetic and specular oligist, Santa Rita Durão.
390. Rolled cinnabar, Rodrigo Silva.
391. Black tourmaline, Santa Rita Durão.
392. Colored talc, Passagem, Marianna.
393. Pyrite, Passagem, Marianna.
394. Quartz and asbestos, Passagem, Marianna.
395. Silky needles of asbestos in quartz.
396. Crystallized muscovite, Floresta, Marianna.
397. Sericite variety mica, conglomerate, Ouro Preto.
398. Conglomerate with visible gold, Ouro Preto.
399. Black tourmaline and brilliant pyrite, Santa Rita Durão.
400. Cubic crystals of pyrite, Passagem, Marianna.
401. Cubic crystals of pyrite, Passagem, Marianna.
402. Crystallized pyrite, Passagem, Marianna.
403. Crystallized arsenopyrite, Passagem, Marianna.
404. Brilliant pyrite crystals, Passagem, Marianna.
405. Decomposed calcite, Cachoeir do Campo.
406. Black tourmaline, Passagem, Marianna.
407. Rolled quartzite, Sêro.
408. Quartz containing muscovite, Passagem, Marianna.
409. Black tourmaline and arsenopyrite covered with calcite, Morro de Sant' Anna.
410. Transparent quartz crystal.
411. Quartz pebble containing gold.
412. Rolled quartz, Sabará.
413. Rolled calcite.
414. Quartz crystal, Marianna.

415. Topaz crystal.
416. Transparent quartz crystal containing rutile needles.
417. Transparent quartz crystal inclosing needles of rutile, Bucão, Marianna.
418. Aquamarine.
419. Quartz, variety amethyst.
420. Crystallized quartz with pyrite and limonite, Passagem, Marianna.
421. Quartzite containing mica, also visible gold.
422. Micaceous quartzite with auriferous pyrite, Furquim.
423. Magnetic pyrite in quartz (auriferous), Passagem, Marianna.
424. Auriferous pyrite, Passagem, Marianna.
425. Quartzite and decomposed pyrite (auriferous), Joao Menezes.
426. Quartzite and pyrite (auriferous), Rodrigo Silva.
427. Pyrite crystals in quartz, Passagem, Marianna.
428. Almandine in quartz.
429. Pyrite in quartz, Floresta, Marianna.
430. Stalatic limonite, Ramos, Marianna.
431. Iridescent pyrite, Passagem, Marianna.
432. Crystallized calcite (decomposed), Floresta, Marianna.
433. Magnetic arsenopyrite with calcite, Passagem, Marianna.
434. Not specified.
435. Crystallized transparent quartz, with calcite and siderite, Passagem, Marianna.
436. Essonite, Maño de Sant' Anna.
437. Crystallized quartz, with altered pyrite, Morro de Sant' Anna.
438. Black tourmaline, Santa Rita Durão.
439. Crystallized pyrite, Santa Rita Durão.
440. Massive pyrite, Santa Rita Durão.
441. Micaceous hematite.
442. Lamillar schist (terric), Santa Rita Durão.
443. Almandine, crystallized, Pary.
444. Limonite stalactite, Antonio, Pereira.
445. Crystallized muscovite, with pyrite, Floresta, Marianna.
446. Crystallized pyrite on quartz, Passagem, Marianna.
447. Terric manganiferous concretions, Marianna.
448. Tourmaline, with magnetic pyrite, Santa Rita Durao.
449. Crystallized siderite with calcite, Passagem, Marianna.
450. Talc, carrying serpentine, Caraça.
451. Martite crystals.
452. Transformed pyrite.
453. Calcite crystals, Passagem, Marianna.
454. Agate, variety quartz.
455. Micaceous oligist, Morro de Sant' Anna.
456. Compact asbestos.
457. Group of crystallized muscovite, Periquito.
458. Siderite crystals, Floresta, Marianna.
459. Group of calcite quartz and pyrite, Passagem, Marianna.
460. Monazite, Bahia.
461. Almandine and pyrope, crystallized.
462. Crystallized pyrope.
463. Cymophane and chrysoberyl, Diamantina.
464. Rolled quartz, Salinas.
465. Crystallized lilac topaz, Fazenda do Capão.
466. Argentiferous galena.
467. Crystallized staurolite, Rio Mucury.
468. Excellent pyrite crystals.

469. Crystallized martite, Marianna.
 470. Crystallized martite, Antonio Pereira.
 471. Crystallized quartz, Salinas.
 472. Altered pyrite, Marianna.
 473. Itabirite with visible gold.
 474. Quartz and tourmaline with visible gold, Morro de Sant' Anna.
 475. Not specified.
 476. Hematite, Morro de Sant' Anna.
 477. Iridescent pyrite.
 478. Crystallized siderite, Passagem, Marianna.
 479. Pyrite crystallized.
 480. Silicon concretions, Marianna.
 481. Lamellar talcose schist containing visible gold, Carrapato.
 482. Needles of cyanite and decomposed granite.
 483. Calcite and pyrite in mica schist, Passagem, Marianna.
 484. Needles of cyanite, Passagem, Marianna.
 485. Native gold in pyrite, also massive tourmaline, Passagem, Marianna.
 486. Native gold in conglomerate of pyrite, tourmaline, siderite, and mica, Passagem, Marianna.
 487. Quartz and calcite crystals with auriferous pyrite, Passagem, Marianna.
 488. Quartzite containing auriferous pyrite, S. Bartholomeu.
 489. Auriferous conglomerate, pyrite, quartz, and tourmaline, Passagem, Marianna.
 490. Quartz with crystallized pyrite and calcite, Passagem, Marianna.
 491. Crystallized quartz and pyrite, also decomposed schist.
 492. Wavellite, Marianna.
 493. Micaceous quartzite (auriferous), S. Bartholomeu.
 494. Pyrophyllite with ferruginous schist, Rio do Carmo, Marianna.
 495. Native gold in magnetic pyrite, Passagem, Marianna.
 496. Decomposed pyrite, Passagem, Marianna.
 497. Limonite stalactite, Marianna.
 498. Crystallized almandine, Passagem, Marianna.
 499. Not specified.
 500. Crystallized muscovite and calcite in mica schist, Passagem, Marianna.
 501. Auriferous quartzite, Furquim.
-

A SUBSTITUTE FOR RUBBER.

The "Scientific American" of November 30, 1901, states that the young shoot of the Rocky Mountain grease-wood plant has a milky sap and the old wood a resinous gum which is soluble in carbon bisulphide and in other known hydrocarbon solvents of rubber. From the young grease-wood sap two inventors have discovered a method of making artificial India rubber. The plant is bruised between rollers, whereby the bark is loosened and the woody fiber of the larger stems crushed. The entire mass is then inclosed in a vessel, mechanically agitated, and exposed to the action of carbon bisulphide, naphtha, or other solvent of India rubber. After exposure for some hours to the

action of the solvent—heat being applied, if necessary—the liquid is strained off. The liquid solvent and contained gum are then placed in a closed vessel and the volatile solvent driven off by heat. The gummy mass that will volatilize in the still or receiver is then washed in water, either warm or hot, and is then subjected to repeated rollings. The gum resulting is of a brown color, highly flexible and elastic, combustible, and seems to possess the characteristics of India rubber, except that it has rather a balsamic odor, differing from the odor of commercial rubber. The gum can be vulcanized by the addition of a quantity of sulphur in the same manner as the India rubber of commerce.

TRADE OPPORTUNITIES IN LATIN AMERICA.

A recent French commercial report contains the following with reference to the agricultural implement trade in South America:

“In South America many different conditions prevail; in Brazil, for example, there is hardly any opening for modern agricultural implements, although, of course, there is a steady demand for machinery adapted to cultivating coffee and preparing it for the market. In Chile the farmers are more progressive, but only low-priced goods are asked for, and unless such can be supplied there is little prospect of business. The articles most in demand are furrow plows, scarifiers, hoes, seed drills, chaff cutters, harvesting machinery, and grinding mills. In Peru, not only corn sowing, cultivating, harvesting, thrashing, and grinding appliances are salable, but also rice-cultivating machinery and weighing appliances. The importation of agricultural implements into the Argentine Republic has increased rapidly of recent years. This is specially the case with regard to British thrashing machines, of which nearly 900, varying in capacity from 9 to 10 horsepower, were imported in 1896. There is also a good demand for sugar-cane machinery and maize hullers (shellers).”

The Board of Education of Porto Rico will soon ask bids for a school building to be erected in Ponce. Bids will also be asked for the construction of the proposed Carnegie Library in San Juan, for which \$60,000 has been donated.

If the plans of Señor JULIO A. ARCE, C. E., of 11 Pizarro street, Arequipa, Peru, are adopted, much material for the inauguration of a waterworks system at Aplao will be required.

According to the “Jornal do Commercio,” of Juiz de F6ra, State of Minas Geraes, Brazil, a company has been formed for the purpose of supplying Ouro Preto with electric lights. The company will need machinery, wire, and other necessary articles.

A correspondent of the "British Trade Journal" states that there is a good opening in Peru for the sale of small corn mills (grinders), rice cleaners, and mills for grinding wheat into flour. Agricultural implements or machinery for preparatory work is also needed. These should be manufactured so as to be adapted to the employment of hand labor, oxen, or windmills.

The Minister of Finance of Chile has called for bids to furnish the Government with 4,000 reams of 500 sheets each of stamped paper during the years 1903 and 1904. The bids are to be examined on May 15, 1902, by a commission composed of the President of the Tribunal of Accounts and the Director and Auditor of the Treasury at Valparaiso.

"Dun's Review" of November 23, 1901, reports that a shipment of 500 electrical cars is now on the way to Buenos Ayres, Argentine Republic, from St. Louis, Missouri, forming the largest single consignment of the kind ever made from that city.

The municipal prefecture of Rio de Janeiro, Brazil, will receive bids during ninety days (presumably from November 1, 1901) for the construction of a model abattoir, and one or several cold-storage plants. The duration of the concession is thirty years. A security of 10,000 *milreis* is required. The proposals should be addressed to the Hygiene Administration at Rio de Janeiro.

TRADE WITH SPANISH AMERICA.

The Consul-General of Mexico at New York advises that the imports through that port during the month of November, 1901, were as follows:

Henequen.....bales..	10,747	Hair.....bales..	24
Coffee.....sacks..	759	Lead bullion.....bars..	139,227
Hides.....bales..	7,047	Metals.....boxes..	232
Hides, loose.....number..	6,799	Ores.....sacks..	15,242
Ixtle.....bales..	5,078	Sarsaparilla.....bales..	286
Goatskins.....do....	694	Vanilla.....cases..	1
Deerskins.....do....	500	Alligator skins.....number..	46
Crude rubber.....do....	49	Bones.....packages..	100
Tobacco, leaf.....do....	368	Honey.....barrels..	463
Cigars.....boxes..	168	Cedar.....logs..	197
Broom root.....bales..	4,149	Mahogany.....do....	741
Chicle gum.....do....	1,636	Copper bullion.....pounds..	9,095
Fustic.....pieces..	12,589	Oranges.....cases..	2,450
Tecali marble.....blocks..	288	Red pepper.....do....	918

During the month of November, 11 ships, carrying 171,669 packages, cleared from New York, and 12 ships, bringing 220,892 packages from Mexico, entered that port.

The Consul of the Republic of Nicaragua at San Francisco reports that during the month of November, 1901, the exports from that city to the different ports of Nicaragua were as follows:

Articles.	Quantity.	Weight.	Value.
		<i>Kilos.</i>	
Beer	94 packages..	6,277	\$514.00
Caustic soda	6 tks..	1,836	110.00
Coal oil	110 cases..	3,993	183.50
Corks	1 sacks..	14	20.00

According to advices from the Mexican Consul at Nogales, Arizona, merchandise to the value of \$149,274.30 entered the Mexican Republic through that port during the month of October, 1901. Of this amount, \$98,513.30 came from the United States, \$29,360 from England, \$8,673 from France, \$11,040 from Germany, \$902 from Austria, \$480 from Italy, and \$300 from Japan. During the same month Mexico shipped through said port into the United States the following products:

Articles.	Weight.	Value.
		<i>Pesos.</i>
Copper bullion	4,700,345 pounds..	751,941
Hides	151,443 do..	12,022

Salt	152 pounds..	4
Leaf tobacco	2,336 pounds..	1,345
Leather		46
Total		987,427

The Consul-General of Venezuela at New York has furnished some interesting data regarding the exportations from the port of New York to Venezuela during the month of November, 1901. This data shows that the shipments during the month referred to consisted of 56,453 bundles of merchandise weighing 3,100,464 kilograms, valued at \$278,209.58. During the same period in 1900 the shipments aggregated 56,571 packages, weighing 4,111,286 kilograms, valued at \$301,413.13.

Reports from the Vice-Consul of Mexico at Mobile, Alabama, show that during the month of December, 1901, four ships entered that port from Progreso, Yucatan, bringing a cargo of 31,030 bales of henequen, weighing 3,524 tons, and during the same period three ships cleared, carrying 32,039 packages of merchandise, weighing 2,281 tons, destined to the Mexican ports of Progreso and the island of Carmen.

BOOK NOTES.

Books and pamphlets sent to the Bureau of American Republics, and containing subject-matter bearing upon the countries of the International Union of American Republics, will be treated under this caption in the *Monthly Bulletin*.

“World Politics at the end of the Nineteenth Century, as influenced by the Oriental Situation,” by PAUL S. REINSCH, Ph. D., LL. B., Assistant Professor of Political Science in the University of Wisconsin (The MacMillan Company, New York, 1900). This volume is one of the series of the Citizens’ Library of Economics, Politics, and Sociology, edited by RICHARD T. ELY, Ph. D., LL. D., Director of the School of Economics, Political Science, and History of the University of Wisconsin. The introductory part of this work gives a general view of the forces at work, covering the various elements of intellectual and economic life that influence modern politics. The second part treats of what the author considers the true center of interest in present international politics, namely, the Chinese Question. In part 3 the consequences of the Chinese situation on European politics are traced. Part 4 is devoted to German imperial politics, included in which is a chapter on German Colonization in South America, while part 5 contains “Some considerations on the position of the United States as a factor in oriental politics.” The treatment of each subject is suggestive rather than exhaustive. The whole material of the book is focussed upon the Chinese problem. An outline map of the Chinese Empire is inserted as a frontispiece, the whole forming a 12mo. volume of 366 pages.

A Text-Book of Commercial Geography, by CYRUS C. ADAMS, B. A., F. A. G. S., etc., New York, D. Appleton & Co., 1901 (12mo., 505 pp.). In this work the author has endeavored to limit the contents to those dominating features of commerce and industry that should be most strongly impressed upon the student. The facts of commerce are treated as the effect of conditions that determine the quality and quantity of trade. The effort is made throughout the book to connect cause and effect; to trace the small streams of commerce, and also to show the causes that give them direction and volume. Geographic and many other controlling influences, such as inventions, governmental aids or impediments, and the improvement of products, industrial processes, and means of transportation are therefore made prominent. Only the commodities entering most extensively into trade are treated in this text-book. By-products, which are more properly subjects for treatment in handbooks, are not mentioned. Each product is treated in relation with the commerce of the land to which it is indigenous or in which its manufacture is a salient industrial feature. Naturally, the products of Latin-American countries come in for a goodly share of attention, six chapters being devoted to them. The work is embellished with sixteen illustrations and numerous maps and charts.

“Die Insel Haiti” (The Island of Haiti), by L. GENTIL TIPPENHAUER, formerly general inspector of the polymathic school, government engineer and staff officer, engineer of the community of Port au Prince, published by F. A. BROCKHAUS, Leipzig, is a very interesting book, containing 693 pages, and illustrated with numerous fine engravings. Starting with a short preface and an explanation of the geographical situation and the climate of the country, the author gives the history of the origin of Haiti. Next the soil, the plains, and the mountains are fully described, while the chapter relating to the customs and habits of the people which follows leads to a dissertation on their language and literature. Parts 3, 4, and 5 are respectively devoted to the church, emigration of the white race, and the present political situation as compared with that of the past. Part 5 contains chapters on journalism, army and naval affairs, finance, postal matters, etc. The volume closes with a list of important works published since the year 1500 relating to Haiti.

A Bulletin of the Agricultural Department of the United States recently issued deals extensively with the growing of pineapples and of the general operations connected with their production on a large scale. A history of the pineapple family (*Bromeliaceæ*) is given, and the fact of its discovery as an available food product coincident with the exploration of South America by the Spaniards is commented

upon. The pineapple supply of the United States is contributed to by Porto Rico, the Bahama Islands, Jamaica, Salvador, and Trinidad, and the present area under cultivation within the country is continually increasing. It was with the purpose of stimulating this branch of fruit culture that the bulletin was prepared by the Department, and all facts relating to cultivation, disposition of the crop, soil, gathering, shipping, markets, prices, fertilizers, planting, irrigation, canning, and diseases are adequately dealt with.

“The Mineral Industry, its Statistics, Technology, and Trade,” founded and edited by RICHARD P. ROTHWELL, late editor of the “Engineering and Mining Journal,” and completed by JOSEPH STRUTHERS, Ph. D., Columbia University, New York. Volume IX of this most valuable publication, issued in 1901, contains the statistics, technology, and trade of the mineral industry of the United States and other countries up to the end of the year 1900. In this work it is stated that the total value at the point of production of the mineral and metal output of the United States in 1900 was \$1,365,608,583 as compared with \$1,218,214,637 in 1899, a gain of \$147,393,946 for the year. Statistics of the production of a number of other countries are given in which those of Chile and Mexico figure prominently. The volume also contains a number of special articles on mineral topics contributed by persons of high professional standing.

Mr. ROBERT T. HILL, geologist of the United States Geological Survey, has contributed to the “Engineering and Mining Journal” of New York (issue of November 2, 1901) an article on the “Geographic and Geologic Features of Mexico,” together with notes on the relation of these features to the mineral products of the country named. According to this, Mexico is divided physiographically into four geographic provinces, which are, in a manner, distinct economic areas. These may be classified as (1) The Gulf Coastal Plain; (2) The Cordilleran Plateau; (3) The Sonoran province; and (4) The Tehuantepecan province. The peculiarities of two of these classifications are described at some length by the author. These are those designated as (2) and (3), the former being the chief seat of metallic mining, while the latter is also rich in minerals.

The “Boletim do Serviço de Estatística Commercial” (Bulletin of Commercial Statistics) of Brazil, for the first quarter of 1901, has been received at the library of the Bureau of the American Republics. It is a folio volume of 400 pages, compiled by Mr. J. P. WILEMAN, containing statistics of the import and export trade of Brazil for the first three months of the year. The “Boletim” is of inestimable service in making known the resources and trade development of Brazil, and includes statistics of the coffee exports at the several Brazilian ports, exchange operations and fluctuations, and shipping data.

The most beautiful specimen of typographical art, including that of the bookbinder, that reached the library of the Bureau of the American Republics during the year 1901 was Volume II of "The World's Work." This volume includes the monthly numbers of this most excellent illustrated magazine, beginning with May and ending with October, 1901. A comprehensive index enables the reader to locate at a glance any of the subjects treated in this "history of our time." The publishers, Messrs. Doubleday, Page & Co., 34 Union Square East, New York City, are to be congratulated.

The "Chorographia do Brasil" (Chorography of Brazil), by ALFREDO MAREIRA PINTO, published by FRANCISCO ALVES, Rio de Janeiro, has been received by the library of the Bureau of the American Republics and proves to be a very valuable work, being now in its sixth edition. It contains an historical and descriptive sketch of each State in the Republic, and is illustrated by 23 colored maps which show the benefits of the agricultural and mineral sections of the country.

The Abbey Press, of New York, has published in a neat little volume of 26 pages "A classified list of Minerals, Precious and Other Stones," prepared by Mr. FELIX J. TROUGHTON. The list contains the names of both the common and uncommon varieties of minerals, etc., with a short description or definition of each. A copy has been presented to the Library of the Bureau of the American Republics.

"Republik Chile" (The Republic of Chile) is the title of a small volume (100 pages) that has been published by F. A. BROCKHAUS, Leipzig, and has recently been received by the Bureau of the American Republics. It contains 36 illustrations and 1 map, and gives the reader a very good idea of Chilean life. The author's name is not given.

BOLETÍN MENSUAL

DE LA

OFICINA DE LAS REPÚBLICAS AMERICANAS,

Unión Internacional de Repúblicas Americanas.

VOL. XII.

ENERO, 1902.

No. 1.

CANAL INTEROCEÁNICO.

CONVENCIÓN CELEBRADA ENTRE LOS ESTADOS UNIDOS Y LA GRAN BRETAÑA PARA FACILITAR LA CONSTRUCCIÓN DE UN CANAL PARA BARCOS QUE REUNA LOS OCÉANOS ATLÁNTICO Y PACÍFICO, FIRMADA EN NOVIEMBRE 18 DE 1901.

Los Estados Unidos de América y Su Majestad EDUARDO VII, Rey del Reino Unido de la Gran Bretaña é Irlanda, y de los dominios británicos de Ultramar, y Emperador de la India, animados por el deseo de facilitar la construcción de un canal para barcos que reuna los Océanos Atlántico y Pacífico por la vía que se considere más conveniente y á ese fin remover cualquier obstáculo que pudiera surgir de la convención de 19 de abril de 1850, comunmente llamada tratado Clayton-Bulwer, para la construcción de dicho canal bajo los auspicios del gobierno de los Estados Unidos, sin menoscabo del “principio general” de neutralización establecido en el artículo 8 de aquella convención, han nombrado como plenipotenciarios al efecto:

El Presidente de los Estados Unidos á JOHN HAY, Secretario de Estado, y Su Majestad EDUARDO VII al muy honorable Lord JULIÁN PAUNCEFOTE, G. C. B., G. C. M. G., Embajador Extraordinario y Plenipotenciario de Su Majestad en los Estados Unidos:

Quienes, habiéndose comunicado mutuamente sus plenos poderes y halládoslos en propia y debida forma, han convenido en los siguientes artículos:

ARTÍCULO 1º. Las altas partes contratantes convienen en que el presente tratado sustituya á la mencionada convención de 19 de abril de 1850.

ART. 2º. Se conviene en que el canal pueda ser construido bajo los auspicios del Gobierno de los Estados Unidos, ya directamente y á

sus propias expensas, ya por donación ó empréstito de dinero á individuos ó corporaciones, ó por suscripción ó compra de acciones, y en que, con sujeción á lo prescrito en el presente tratado, dicho Gobierno tenga y disfrute todos los derechos incidentales á dicha facultad, así como el exclusivo de proveer á la reglamentación y administración del canal.

ART. 3°. Los Estados Unidos adoptan como base para la neutralización de dicho canal las siguientes reglas, que en substancia son las mismas incorporadas en la convención de Constantinopla, firmada el 28 de octubre de 1888, para la libre navegación del canal de Suez, á saber:

I. El canal será libre y estará abierto á la navegación para los buques mercantes y de guerra de todas las naciones, que observen estas reglas, en condiciones de entera igualdad, de modo que no habrá distinción en perjuicio de ninguna nación, ni de sus ciudadanos ó súbditos, por lo que respecta á condiciones ó tarifas de tráfico ni de otra clase. Esas condiciones y tarifas serán justas y equitativas.

II. Jamás será bloqueado el canal, ni dentro de él se ejercerá ningún derecho de guerra, ni se cometerá acto alguno de hostilidad. Los Estados Unidos estarán, sin embargo, en libertad de mantener á lo largo del canal la policía militar que sea necesaria para protegerlo contra desórdenes y actos fuera de la ley.

III. Ningún buque de guerra perteneciente á una nación beligerante se aprovisionará ni pertrechará en el canal, excepto en cuanto sea estrictamente necesario, y el tránsito de dichos buques de guerra por el canal se efectuará con la menor dilación posible, de acuerdo con los reglamentos vigentes, y con sólo aquellas intermisiones que puedan resultar de las necesidades del servicio.

Las presas quedarán sujetas en todo á las mismas reglas que los buques de guerra de los beligerantes.

IV. Ningún beligerante podrá embarcar ni desembarcar en el canal, tropas, municiones, ó materiales de guerra, excepto en caso de algún obstáculo accidental en el tránsito, y entonces dicho tránsito se pondrá expedito de nuevo á la mayor brevedad posible.

V. Las disposiciones de este artículo se aplicarán á las aguas adyacentes al canal á distancia de 3 millas marítimas de cada extremo. Los buques de guerra de un beligerante no podrán permanecer en dichas aguas más de veinticuatro horas seguidas, excepto en caso de detención forzosa; y entonces deberán partir tan pronto como les sea posible. Pero un buque de guerra de un beligerante no podrá partir hasta después de pasadas veinticuatro horas de la salida de un buque de guerra del otro beligerante.

VI. La maquinaria y los edificios establecimientos, y talleres de todas clases, que se necesiten para la construcción, mantenimiento y explota-

ción del canal serán considerados como partes del mismo para los propósitos de este tratado, y así en tiempo de guerra como en tiempo de paz gozarán completa inmunidad contra todo ataque, ó agresión de algún beligerante y contra cualquier acto que pudiera disminuir su utilidad como parte del canal.

ART. 4°. Queda acordado que ningún cambio de la soberanía territorial, ó de las relaciones internacionales, en el país ó países por donde haya de atravesar el canal, afectará el principio general de neutralización, ó las obligaciones de las altas partes contratantes bajo el presente tratado.

ART. 5°. El presente tratado será ratificado por el Presidente de los Estados Unidos, con el consentimiento y aprobación del Senado de los mismos, y por Su Majestad Británica, y las ratificaciones serán canjeadas en Wáshington, ó en Londres, á la mayor brevedad posible, dentro de tres meses, á contar desde esta fecha.

En fe de lo cual los plenipotenciarios respectivos han firmado este tratado y selládolo con sus sellos. Hecho por duplicado en Wáshington, el 18 de noviembre de 1901.

JOHN HAY.
PAUNCEFOTE.

DATOS GENERALES SOBRE LA EXPOSICIÓN PAN-AMERICANA DE BÚFALO EN 1901.

México fué el país latino que envió á la Exposición mayor número de productos y objetos. En ella obtuvo 600 premios, 78 de los cuales fueron medallas de oro.

Chile obtuvo 419 premios, 51 de los cuales fueron también medallas de oro.

La República Argentina obtuvo 22 medallas de oro, 22 de plata, 26 de bronce y 347 menciones honoríficas. De estas últimas hubo 325 por muestras sueltas de cereales.

Después de estos países vinieron Cuba, que obtuvo 232 premios, y el Ecuador, que alcanzó 185. La una y el otro tuvieron edificios propios.

México gastó cerca de \$70,000 en oro, para cubrir sus gastos en la Exposición. Chile había votado con el mismo objeto la cantidad de \$500,000, de que una parte se gastó en la construcción del hermoso edificio de hierro en que exhibió sus productos.

La República Argentina sólo votó la suma de \$30,000 en moneda nacional.

Los premios adjudicados á los varios países que tomaron parte en dicha exposición fueron los siguientes:

REPÚBLICA ARGENTINA.

DESCUBRIMIENTO DE ORO.

“El Tiempo” de Montevideo anuncia el descubrimiento de oro en ciertas arenas de la costa de la República Argentina, cerca del Cabo Vírgenes. Se ha presentado una instancia al Gobierno, pidiendo permiso para efectuar reconocimientos, en un área de 100,000 metros cuadrados, en busca de este metal precioso. También se ha presentado una solicitud análoga para examinar una sección de la costa comprendida entre el Cabo Vírgenes y el punto llamado Canadón Lucacho, y además se ha pedido permiso para explorar ciertas regiones en la Tierra del Fuego, donde se supone que existen minerales valiosos.

SERVICIO DE VAPORES Á LOS PUERTOS DEL SUR.

El Cónsul Británico de Buenos Aires anunció á su Gobierno el establecimiento de un nuevo servicio de vapores por la “Hamburg South American Company” (Compañía Sur Americana de Hamburgo), con el nombre de “Línea Nacional del Sur,” entre Buenos Aires y la parte meridional de la República, incluyendo Punta Arenas. Desde el 15 de octubre último ha habido un vapor de este clase cada veinte días, y los que se emplean en este servicio son todos de 4,000 toneladas. Se anunció también que el Gobierno de la Argentina ofrece hasta el mes de mayo de 1902, un pasaje libre en los transportes nacionales á los individuos y familias que hayan comprado terrenos en las mencionadas regiones, incluyendo en la franquicia un número limitado de animales domésticos, carretones, herramientas, muebles, y el material para la construcción de casas.

LOS BOSQUES DE TUCUMÁN.

El Director del Departamento de Inmigración y Trabajo de Tucumán presentó recientemente una Memoria al Ministro de Agricultura de la República, relativa á las ventajas que se han de obtener del desarrollo del comercio de maderas de aquella provincia. Se hace constar que dentro de los límites de Tucumán hay como 8,000 kilómetros cuadrados de bosques, en su mayor parte vírgenes, abundantes en maderas finas, de grande aplicación á los trabajos de ebanistería, fábrica de carruajes, etc., y en quebracho y otros palos de utilidad bien conocida. Muchos de estos árboles son corpulentos, y en algunos casos llegan hasta una altura de 20 metros.

EL NUEVO PUERTO DE SAN CLEMENTE.

Según anuncia el Boletín Mensual de la Cámara de Comercio Francesa de Buenos Aires, el Gobierno de la República Argentina ha aprobado las bases de un contrato propuesto por el Inspector general de navegación y puertos para la construcción y explotación de un puerto comercial en la Bahía de San Clemente en el Atlántico del Sur. Los Señores JORGE GUERRERO Y MARTÍNEZ ITUNO son los contratistas en cuyo favor se ha otorgado la concesión. El nuevo puerto estará situado entre el cabo de San Antonio y la boca del río San Clemente.

EXPORTACIÓN DE GANADO Y PRODUCTOS ANIMALES.

Durante los primeros nueve meses de 1901 el número de ganado vacuno en pie exportado de la República Argentina ascendió á 108,241 cabezas. Las exportadas durante el mismo período en 1900 fueron 126,896. Los carneros exportados en ese período de 1901 fueron 22,643. Los exportados en 1900 fueron 194,505. Las carnes refrigeradas pesaron 31,646 toneladas, contra 15,309 toneladas que fue el peso de las exportadas durante nueve meses en 1900. Los carneros helados exportados pesaron 45,828 toneladas, contra 43,648 toneladas de los que se exportaron en nueve meses en 1900. Las exportaciones de tasajo en los períodos que se han comparado, fueron 14,828 toneladas en 1901, y 9,274 toneladas en 1900. Las exportaciones de lana aumentaron de 82,828 á 177,717 toneladas. Las exportaciones de mantequilla aumentaron de 1,445,569 libras á 1,626,572 libras, y las exportaciones de queso aumentaron de 1,333 libras á 2,968 libras.

NOTICIAS DE MINAS.

Según informes recibidos de Jujuy, más de 10,000 toneladas de mineral se han sacado de las minas de cobre de La Unión, habiéndose además decubierto una nueva veta de 4 metros de espesor. Estas minas están á 40 leguas de distancia de Jujuy en la línea del proyectado ferrocarril boliviano.

BOLIVIA.

COMERCIO DE BOLIVIA.

CONSULADO GENERAL DE BOLIVIA,

New York, Diciembre 12, 1901.

Hon. W. W. ROCKHILL,

*Director de la Oficina de las Repùblicas Americanas,**Washington, D. C.*

MUY SEÑOR MÍO: Cumpló con mi oferta de dar á la Oficina de su cargo todos los datos que á mi juicio serían de gran utilidad darles publicidad para dar á conocer el incremento constante del comercio de Bolivia.

Los datos oficiales que me tomo la libertad de darle son tomados de la Memoria presentada al Congreso de Bolivia, por el Sr. Ministro de Hacienda é Industria, Dr. DEMETRIO CALVIMONTÉ.

MOVIMIENTO COMERCIAL.

El monto de las internaciones, ó valor declarado de las mercaderías que han ingresado al territorio de Bolivia por sus aduanas, sin tomar en cuenta la del Acre, alcanzan á la suma de \$13,500,000, y el de los valores exportados, incluidos los del Acre, en lo que de ello conocemos, á la de \$35,500,000, resultando así un exceso de \$22,000,000 en favor de la exportación, lo que demuestra que el comercio internacional alcanzó á \$49,000,000 en el presente año.

Los artículos que mayor valor representan en la importación son:

Algodones cuyo valor medio alcanza á	\$1, 700, 000
Comestibles cuyo valor medio alcanza á	1, 500, 000
Lanas (tejidos de) cuyo valor medio alcanza á	1, 300, 000
Mercería y ferretería cuyo valor medio alcanza á	800, 000
Vinos y licores cuyo valor medio alcanza á	600, 000
Ropa hecha cuyo valor medio alcanza á	500, 000

Corresponde á Alemania el primer lugar entre las naciones cuya importación es mayor:

Ella alcanzó á	3, 300, 000
Sigue la Inglaterra, con	2, 300, 000
Sigue el Perú, con	2, 000, 000
Sigue la República Argentina (ganado en casi su totalidad), con	1, 000, 000
Siguen los Estados Unidos, con	900, 000
Sigue la Francia, con	800, 000

Las internaciones del Perú están exentas en su mayor parte del pago de derechos.

La importación de productos chilenos está valorada en \$700,000, mercadería que, como la de procedencia peruana, no paga derecho aduanero alguno.

Resulta pues, que por razon de las franquicias comerciales de que gozan estas dos últimas naciones, se deja de percibir un rendimiento aduanero de medio millón de pesos por lo menos.

La exportación está representada principalmente por los siguientes artículos:

Plata	\$13, 000, 000	Estaño	\$8, 000, 000
Goma elástica	10, 000, 000	Cobre	1, 000, 000

Los rendimientos de las aduanas han alcanzado á la suma de \$4,038,486 en la forma siguiente:

Agencia aduanera de Bolivia en Antofagasta....	\$2, 221, 580. 94	Aduana de Uyuni	87, 076. 51
Agencia aduanera de Bolivia en Arica	418, 190. 44	Aduana de Tupiza.....	12, 231. 58
Aduana de La Paz.....	885, 825. 54	Aduana de Tarija	123, 123. 87
Aduana de Oruro.....	34, 623. 87	Aduana de Puerto Suarez..	143, 859. 54
		Aduana de Villa Bella ...	111, 975. 85
		Total	4, 038, 486. 14

CASA NACIONAL DE MONEDA.

El movimiento de este establecimiento en los diez últimos años, hasta 1899 inclusive, representa las siguientes cifras:

Barras y piñas de plata compradas 1,411,481 marcos, 2½ onzas, habiéndose acuñado la suma de \$15,291,541.17, alcanzando á la suma de \$2,556,806.38 el resultado de la liga y la tolerancia ponderal de 8 por ciento.

Durante los diez y ocho meses últimos, se rescataron barras y piñas 53,904 kilogramos, ó sea 215,616 marcos, que representan un valor de \$2,435,159.33. La moneda acuñada alcanzó á la suma de \$2,555,908.57, y el rendimiento de la gestión última representa la suma de \$109,418.36, sin incluir el valor de los residuos vendidos en Europa.

La industria minera ha ofrecido en Bolivia un poderoso elemento de retorno; hoy alcanza á un grado notable de progreso y hace presumir que continuará en esa vía.

El cobre, estaño y otros metales que constituyen la riqueza minera de Bolivia han tomado notable incremento, de la que dan suficiente testimonio la exportación de ellos, la renta que producen y las concesiones adjudicadas.

En el segundo semestre del año 1899 y primero de 1900, ascendían á 699 las concesiones mineras hechas ó solicitadas, con 15,295 hectareas; mientras que en el año 1900 y primer semestre del presente, ellas alcanzan á 1,172 con 31,315 hectareas.

SUSTANCIAS INORGÁNICAS NO METÁLICAS.

Hasta el ingreso al año 1900 se adjudicaron 119 concesiones, con 9,320 estacas, ó sea 596,480 hectareas, sobre tierras que contienen esme-

raldas, carbón de piedra, petróleo, turba, borax, calcita, azufre, diferentes sales, etc., y en el curso de dicho año, y primer semestre del presente, se han adjudicado además 56 concesiones con 7,371 estacas ó 471,744 hectareas, lo que demuestra la riqueza de nuestro suelo y la importancia que alcanzarán á tener las empresas fundadas en la explotación de esas sustancias, preparando así un nuevo recurso fiscal y económico.

PRIVILEGIOS.

Durante los últimos diez y ocho meses, se han concedido privilegios á los Señores JULIO M. TRIGO, ANTONIO CAMPONOVO, ANGEL LOMBARD, GREGORIO SPALDING Y CA. y CESAR CABALLERO, respectivamente, para elaborar licor de palma, para pulimento de mármol, transformación de la fuerza hidráulica del río Desaguadero en energía eléctrica, mejoras introducidas en arados de disco rotatorio, y beneficio de minerales de bismuto oxidados y sulfurados por cloruración, mediante una solución de depósitos sucesivos de agua, ácido sulfúrico y sal; y se tramitan actualmente, conforme á las prescripciones de la ley del ramo, solicitudes para establecer nuevo sistema de beneficio en los metales de oro, de estaño y cobre por el procedimiento de lixiviación, para la elaboración de quinina por un nuevo método, para aprovechar los humos de hornos como calórico para fundir minerales y para el establecimiento de fábricas de sombreros, tejidos de algodón y ladrillos.

GOMA.

En el trascurso del segundo semestre del año pasado y primer semestre del presente, en el Departamento de La Paz se han concedido á los peticionarios 7,264 estradas, y en Santa Cruz 9,590 estradas; en Cochabamba 500 estradas hecha en el primer semestre del presente año.

Exportación de Bolivia durante el primer semestre del año de 1901.

Me suscribo del Sr. Director como su muy atento y obsecuente servidor.

GERARDO ZALLES,
Consul General de Bolivia.

LICITACIÓN PARA ALUMBRADO ELÉCTRICO.

En la República de Bolivia las ciudades de Sucre, La Paz, Cochabamba y Potosí, ofrecen positivas ventajas para el establecimiento de fábricas de alumbrado eléctrico servidas por motores hidráulicos.

La primera de las ciudades nombradas puede aprovecharse de las corrientes del río Cachimayo, que se encuentra á poca distancia de la población; la de La Paz, del río Choqueyapu que corre por el centro de la ciudad; la de Cochabamba, del río Rocha, y principalmente del Coloni, que á la distancia de treinta kilómetros de la ciudad desarrolla una cascada de más de cien metros de altura; y la de Potosí, de las aguas de las lagunas.

Los derechos de las empresas que establecieren esta clase de industrias se hallan convenientemente resguardados por la ley.

El año 1888 se instaló en La Paz el servicio de alumbrado eléctrico, situando la fábrica en la parte alta de esta ciudad, á fin de aprovechar las corrientes del río.

El contrato vigente entre el Concejo Municipal y la empresa, con-signa la siguientes cláusulas de obligación.

La Empresa hace el servicio del alumbrado público de la ciudad con

425 focos de luz incandescente y de fuerza de 16 bujías cada una, y 8 focos de arco voltaico de fuerza de 3,000 bujías cada uno.

La Empresa no dá luz á la población en las noches de luna, y en las demás sólo hace el servicio hasta h. 1 a. m.

El Concejo Municipal subvenciona á la empresa con la suma de Bs. 26,000, pagadera por mensualidades anticipadas.

El término del contrato es de ocho años, de los que han corrido cinco.

Para el caso de que alguna empresa quisiese aprovecharse de estos elementos naturales para el establecimiento de tranvías ú otra clase de industrias, debe tener en cuenta que el decreto de 8 de mayo de 1858 asegura á los importadores de máquinas ó métodos de fabricación ó industria, que no fueren antes conocidos en la República, un privilegio exclusivo de diez años. Este término puede ser prolongado por resolución legislativa.

Las subvenciones que pagan las municipalidades son por el servicio público. En cuanto á la iluminación privada, las empresas harían sus contratos con los propietarios en las condiciones más aceptables.

La población de Sucre es.....	20, 907
La de La Paz.....	46, 000
La de Cochabamba.....	21, 896
La de Potosí.....	20, 000

Aunque en este memorandum ciertos puntos de toma de agua están nombrados, una empresa seria, con amplios capitales, tendría el derecho de elegir los puntos de toma y de extender sus operaciones á cualquier punto de la República; se acordaría á tal empresa una concesion al respecto, entregándosele libre de todo gravámen el uso de las aguas nacionales, siempre que éstas, después de producir la fuerza requerida, fueren devueltas á su propio cauce. El uso de aguas privadas es cuestion de arreglo con los propietarios.

En caso de que llegase á organizarse una empresa como sociedad anónima, pagaría al Estado el 2 por ciento anual de sus utilidades líquidas.

Vencido el término del privilegio, el Gobierno podría acordar á otras empresas que quisiesen llevar el mismo giro de negocios, concesiones iguales á la primitiva, sin que en ningún caso, y en igualdad de condiciones, pueda hacer preferencias ilegales.

NOTA.—Debe tenerse en cuenta que la subvención de bolivanos 26 mil, que la municipalidad de La Paz paga á la empresa de alumbrado eléctrico, quizá no podría ser erogada por las municipalidades de las otras localidades por tener menos rentas.

La Paz, noviembre 10 de 1901.

GUILLERMO SANJINÉS.

Oficial Mayor de Gobierno y Fomento.

TRATADOS CON LOS ESTADOS UNIDOS.

Un cablegrama fechado en La Paz el 9 de diciembre de 1901, anuncia que el Congreso Nacional de Bolivia, aprobó en la mencionada fecha, dos tratados con los Estados Unidos. El primero de estos es un tratado de extradición, y el segundo es relativo á giros postales entre Bolivia y los Estados Unidos.

BRASIL.**INFORMES DE DOS COMPAÑÍA DE MINAS DE ORO.**

El informe de la Compañía de Minas de San Juan del Rey, correspondiente á los seis meses que terminaron el 31 de agosto de 1901, se hizo público en una reunión de los Directores de dicha Compañía, que tuvo lugar en Lóndres el 5 de diciembre de 1901. La cantidad del mineral sacado de la mina “Morro Velho” durante los seis meses, fué 80,487 toneladas, contra 77,872 toneladas sacadas durante el mismo período en 1900. Debido al menor rendimiento de oro puro por tonelada, la ganancia realizada en los seis meses sólo ascendió á £41,693, ó sea una disminución de £28,000, comparada con la realizada en el mismo período en 1900. El mineral rindió 33 ehelines y 5 peniques de oro puro, por tonelada, en los referidos seis meses de 1901 contra un promedio de 42 ehelines y 6 peniques por tonelada, en el mismo período del año anterior.

En diciembre se celebró también en Lóndres la décima junta general ordinaria de accionistas de la compañía en comandita de minas de oro del Brasil, titulada “Ouro Preto.” El informe del contador muestra una ganancia de £5,107 4s. 5d., que es una cantidad considerablemente menor que la que representa la realizada en los doce meses anteriores. Esta disminución fué debida á la subida de los cambios. La cantidad de mineral triturado sólo fué 64,082 toneladas, contra 65,644 toneladas que se trituraron durante el año anterior. El valor del oro producido en 1901, fué £87,037 10s. contra £88,247, 2 ehelines y 7 peniques en 1900.

LA INDUSTRIA DEL TABACO EN BAHÍA.

El Cónsul inglés en Bahía informa que el negocio del tabaco essin duda el más importante de aquella localidad. La última cosecha fué mayor que la anterior, pero de inferior calidad. La mayor parte de los embarques fueron para Alemania (dos terceras partes para Bremen, y el resto para Hamburgo), y todos los “mangotes” (manojos de tabaco burdo grasio) se enviaron á Baviera para hacer rapé.

En el Brasil el tabaco en rama se escoge y se divide en varias clases (de 6 á 12), según su calidad, antes de exportarlo. Este comercio lo tienen prácticamente monopolizado catoree casas, ocho de las cuales son alemanas, y las otras brasileras ó portuguesas. Las casas

alemanas son las más importantes, y operan en combinación con otras de Bremen sobre una base de participación en ganancias y pérdidas. Alemania no sólo suministra el capital necesario, sino también los obreros, que vienen al Brasil como principiantes, después de haber pasado un período de aprendizaje en su país, donde adquirieron cierto conocimiento en el comercio de tabaco, junto con una buena idea de las necesidades de los compradores, y nociones del idioma portugués. Después de cierto tiempo, estos dependientes viajan por el interior del Brasil para hacer compras de cosechas, y de esa manera entablan amistad con los cultivadores. Con el transcurso del tiempo se establecen por su cuenta ó se asocian á las casas ya establecidas con las cuales trabajaron primeramente.

Las cosechas se compran con frecuencia hasta yse pagan al contado, antes de recogerse, de suerte que en estas transacciones se corre un gran riesgo desde el principio, el cual se aumenta por virtud de las constantes fluctuaciones en el valor del *milreis*. Se ganan gruesas sumas en el comercio del tabaco, pero también es cierto que las pérdidas guardan relación con las ganancias; y en 1900, por ejemplo, las primeras resultaron muy graves, debido á la mala calidad del producto y á la mayor cantidad que había para la exportación, así como también al hecho de que el tipo del cambio se elevaba constantemente.

LA INDUSTRIA DEL CORCHO.

En un número reciente de la Revista Agrícola se llama la atención hacia la gran riqueza de plantas suberosas que hay en el Brasil. Algunos de estos árboles, como, por ejemplo, el *Conarus suberosa*, rinde una gran cantidad de corcho. Aunque el corcho que se saca de estas plantas no esté en hojas ó láminas grandes, como las que se obtienen de los árboles de su clase del viejo mundo, sirve perfectamente para los usos industriales. Para la explotación de este artículo se necesita muy poco capital.

LAS ENTRADAS DE AZÚCAR Y DE ALGODÓN EN PERNAMBUCO.

Durante los diez años que empezaron en 1891-1892 y terminaron en 1900-1901, las entradas de azúcar y de algodón en Pernambuco, según la estadística oficial, fueron en sacos y pacas las siguientes:

Años.	Azúcar.	Algodón.	Años.	Azúcar.	Algodón.
	<i>Sacos.</i>	<i>Pacas.</i>		<i>Sacos.</i>	<i>Pacas.</i>
1891-92.....	1, 835, 355	167, 990	1896-97.....	1, 488, 106	169, 867
1892-93.....	1, 776, 259	312, 112	1897-98.....	1, 758, 421	240, 572
1893-94.....	2, 387, 933	312, 258	1898-99.....	1, 461, 980	135, 579
1894-95.....	2, 777, 415	193, 667	1899-1900.....	1, 712, 826	289, 826
1895-96.....	2, 062, 568	172, 427	1900-1901.....	1, 974, 013	158, 925

LA POBLIÓN EXTRANJERA EN RÍO DE JANEIRO.

Según la estadística que ha preparado el Cónsul general alemán de Río de Janeiro, hay en la actualidad 2,705,000 extranjeros, en el Brasil,

distribuidos como sigue: 1,300,000 italianos; 800,000 portugueses; 300,000 alemanes; 100,000 españoles; 80,000 polacos; 10,000 franceses; 5,000 ingleses; 500 norteamericanos, y 110,000 de otras nacionalidades.

NUEVA LÍNEA TELEFÓNICA.

Se ha establecido comunicación telefónica entre Aracaju, capital del Estado de Sergipe, y las ciudades de Alagoas y Pilar.

NACIMIENTO DEL RÍO JAVARY.

El Dr. CRULS, Director del Observatorio del Río de Janeiro y Jefe de la Comisión Brasileira, nombrada, para comprobar la posición del nacimiento del río Javary que constituye el brazo izquierdo del Amazonas, ha regresado á Manáos con sus compañeros, después de haber terminado con éxito su misión. La comisión descubrió la existencia, en latitud sur, 7° 1' 22'', de un brazo del Río Javary, desconocido hasta ahora.

CUBA.

PRODUCCION AZUCARERA—ZAFRA DE 1900-1901.

Estado general de la producción de azúcar en el año de 1900 á 1901, comparada con la del año de 1899 á 1900.

ECUADOR.

UN TRIUNFO FERROVIARIO.

El día 18 de noviembre de 1901 se hizo un viaje de prueba por la nueva línea de ferrocarril desde Busay hasta Quibí, ó sea una distancia

de 22 millas, que es la parte más difícil de la de Guayaquil á Quito, que en la actualidad se está construyendo. Cuando se empezó la obra, se temía que fuere imposible vencer los impedimentos que dicho trayecto ofrecía, pero en la actualidad se cree que se ha resuelto el problema de pasar los Andes.

ESTADOS UNIDOS.

COMERCIO CON LA AMÉRICA LATINA.

RELACIÓN DE LAS IMPORTACIONES.

En la página 40 aparece la última relación del comercio entre los Estados Unidos y la América latina, tomada de la compilación hecha por la Oficina de Estadística del Departamento de Hacienda de los Estados Unidos. Estos datos se refieren al valor del comercio arriba mencionado. La estadística corresponde al mes de noviembre de 1901, comparada con la del mes correspondiente del año anterior, y también comprende los datos referentes á los once meses que terminaron en noviembre de 1901, comparados con igual período de 1900. Debe explicarse que las estadísticas de las importaciones y exportaciones de las diversas aduanas referentes á un mes cualquiera, no se reciben en el Departamento de Hacienda hasta el 20 del próximo mes, necesitándose algún tiempo para su compilación é impresión, de suerte que los datos estadísticos correspondientes al mes de noviembre, por ejemplo, no se publican sino en enero.

REVISTA DEL AÑO DE 1901.

El año de 1901 empezó para los Estados Unidos de América, considerados en conjunto y como nación, en circunstancias de una prosperidad nunca igualada. Las cifras arrojadas por la estadística del comercio y de la industria del país merecieron con razón el epíteto de “pavorosas” con que el Presidente McKINLEY las calificó en su discurso en Búfalo, en la Exposición Pan-Americana, el 5 de setiembre del mismo año. La producción agrícola, la de los bosques y las minas, la de las fábricas de todas clases, había llegado á ser, como es, tan enorme, que bien pudo decir el lamentado Presidente, con más que ordinaria previsión y prudencia, que el problema que hay que resolver, y el que demanda urgente é inmediata atención, es el de encontrar mercados para el exceso de tanta riqueza. “No debemos adormecernos,” dijo Mr. McKINLEY, “con la imaginaria y caprichosa seguridad de que podremos siempre venderlo todo. * * * Lo que producimos, en exceso de lo que consumimos, tiene que hallar salida en el exterior.”

El consumo había aumentado en gran parte, porque según el censo del año anterior, la población de los Estados Unidos había llegado á 76,303,387 habitantes, lo que representa un incremento de 13,233,631 en los diez años transcurridos desde 1890, ó sea más de 1,000,000 de habitantes por año. Pero el problema está en pie, sin embargo, y por reciprocidad ó de otro modo, es preciso evitar la plétora. En este sentido se ha trabajado con bastante éxito durante el año á que se refiere esta revista.

El presupuesto para el año económico de 1901-2, que se presentó al Congreso en diciembre de 1900, exigía el desembolso de \$626,741,762.24, divididos entre las diferentes oficinas federales de la manera siguiente: para el Departamento de Estado, \$2,125,148.76; para el del Tesoro, \$158,869,136.43; para el de la Guerra, \$176,658,345.75; para el de Marina, \$88,913,248.76; para el de lo Interior, \$170,799,705.09; para el de Correos, \$6,295,877; para el de Agricultura, \$4,669,050; para la Oficina del Trabajo, \$177,980; para el Departamento de Justicia, \$6,993,170; en tanto que los ramos legislativo y ejecutivo del Gobierno percibieron \$10,956,700.45 y \$283,400, respectivamente.

Según el informe publicado por el Departamento del Tesoro el 1º de febrero de 1901, la suma total de numerario que en aquella fecha había en circulación era \$2,190,780,213, contra \$2,003,149,355 en igual fecha en 1900; y el capital por cabeza ascendía á \$128.38.

Otro informe del Departamento del Tesoro que cubre todo el año económico terminado el 30 de junio de 1901, indica que las rentas ordinarias correspondientes al año, fueron \$587,685,337, ó sea un aumento de \$20,444,485 respecto de las de 1900, que hasta entonces habían sido las más altas. Como el total de los egresos ascendió á \$509,967,353, resultó un sobrante de \$77,717,984. La reserva de oro de \$150,000,000 se ha conservado intacta, y en la existencia de numerario del país hubo un aumento de más de \$88,000,000 en oro, \$37,000,000 en moneda de plata, y cerca de \$16,000,000 en notas y certificados. El 1º de julio de 1901 la circulación por cabeza era \$28.

El total del comercio extranjero de los Estados Unidos durante el año económico que terminó el 30 de junio de 1901, muestra un aumento de \$66,004,407, comparado con el del año anterior. El total general correspondiente á 1901 fué \$2,310,428,573, contra \$2,244,422,266 en 1900. El valor de las mercancías de todas clases importadas de 1901 á 1902 fué \$822,673,016, contra \$849,941,184 del año anterior, ó sea una disminución de \$27,268,168, que hace un 3.21 por ciento. La reducción en el valor de las importaciones tuvo lugar principalmente en la seda, los cueros y las pieles crudas, la lana y la goma, y en la mayor parte de estos productos, la baja se debió, á la baja en los precios, más bien que á la disminución en las cantidades. Por ejemplo, las importaciones de goma elástica en 1901 fueron por valor de \$28,455,383, y las de 1900 por \$31,376,867. Pero la cantidad importada en 1901

fué 55,265,259 libras, y la importada en 1900 49,377,138 libras. Las importaciones de lana disminuyeron de 155,928,455 libras que valían \$20,260,936 en 1900, hasta 103,583,505 libras valuadas en \$12,229,881 en 1901.

Las exportaciones de mercancías en 1901 se valoraron en \$1,487,755,557, y las de 1900, en \$1,394,483,083. El aumento durante el año económico de 1901, comparado con el de 1900, fué de \$93,272,465, ó sea como un 6.69 por ciento. La disminución aparente en el ramo de manufacturas que ascendió á \$23,342,583, se debe principalmente á la falta de datos sobre las exportaciones para Hawai y á Puerto Rico, las cuales se calculan como en \$25,000,000, y consistieron principalmente en artículos manufacturados. Sin embargo, las exportaciones de 1901 resultan inferiores á las de 1900 en dos artículos de manufactura importantes á saber, el cobre y los géneros de algodón. Esta disminución se debió á los pocos pedidos de cobre que vinieron de Europa, y á la suspensión temporal del mercado para géneros de algodón en China. El resumen oficial de las importaciones y exportaciones de los Estados Unidos durante el año económico de 1901, comparado con el 1900, fué como sigue:

IMPORTACIONES.	1901.	1900.
Comestibles y animales.....	\$22, 227, 898	\$218, 501, 098
Materia prima que se usa en los procedimientos de manufactura doméstica.....	269, 763, 404	302, 426, 746
Artículos entera ó parcialmente manufacturados que se usan como material en las manufacturas, etc.....	79, 080, 716	88, 433, 549
Artículos manufacturados ya listos para el consumo.....	130, 662, 903	128, 900, 697
Artículos que no son de primera necesidad y artículos de lujo, etc....	120, 938, 095	111, 670, 094
Total.....	822, 673, 016	849, 941, 184
EXPORTACIONES.		
Productos agrícolas.....	944, 059, 568	835, 858, 122
Productos de manufacturas.....	410, 509, 173	433, 851, 756

Total de productos nacionales.....	1, 460, 553, 809	1, 370, 763, 571
Productos extranjeros reexportados.....	27, 301, 748	23, 719, 511
Total general.....	1, 487, 755, 557	1, 394, 483, 082

Las importaciones libres de derechos, en 1901, representaron un 43.27 por ciento del total, en tanto que la proporción que entró libre de derechos en 1900 fué un 43.21 por ciento. El total de los derechos recaudados en las aduanas en 1901 fué \$238,786,741, contra á \$2,033,164,871 en 1900.

En 1901 se importó oro por valor de \$66,051,187, al paso que las exportaciones de dicho metal precioso en el mismo año ascendieron á \$53,179,137. En 1900 las importaciones de oro ascendieron á \$44,573,184, y las exportaciones ascendieron á \$48,266,759. Las importaciones de plata en 1901 se valoraron en \$36,384,041, y las

exportaciones ascendieron á \$64,285,180. En el año económico de 1900 las importaciones de plata ascendieron á \$35,256,302, y las exportaciones ascendieron á \$56,712,275.

El valor del algodón exportado de los Estados Unidos durante el año económico de 1901 fué mayor que en ningún año económico anterior en la historia del país. El valor total del algodón y de los productos de algodón durante ese período, representó un término medio de más de un millón de pesos diarios. El valor del algodón exportado en 1901 fué \$313,673,443, contra \$241,832,737, en 1900, y el valor total del algodón, los géneros de algodón, el aceite de semilla de algodón, y otros productos de esta planta, ascendió á \$365,405,707. La cantidad de algodón embareado para mercados extranjeros fué 6,508,450 pacas, que pesaron 3,330,890,448 libras, contra 6,090,144 pacas que pesaron 3,100,583,188 libras en 1900. Estas exportaciones no fueron tan grandes en cuanto á cantidad como en los años de 1895, 1898, y 1899, pero el precio por libra excedió al de todos los años anteriores. Durante la última década las exportaciones de algodón rindieron para los productores una suma total de más de \$2,000,000,000.

Las exportaciones de café para Europa y los Estados Unidos durante los diez años que comenzaron el 1^o. de julio de 1891 y terminaron el 30 de junio de 1901, subieron á 124.277,610 sacos, ó sea un promedio anual de 12,427,761 sacos.

Las exportaciones de café de todos los países para los Estados Unidos durante los diez años comprendidos de 1891-92 á 1900-1901, ascendieron á 50,531,347 sacos, ó sea un promedio anual de 5,053,135 sacos. Las exportaciones para los Estados Unidos durante los doce meses que terminaron el 30 de junio de 1901, ascendieron á 5,843,883 sacos, de los cuales el Brasil suministró 4,722,919 sacos, ó sea un 80.8 por ciento, y los demás países 1,120,964 sacos, ó sea un 19.2.

El promedio del valor por libra en 1901, comparado con el de 1900, de todo el café americano importado por los Estados Unidos en 1901, fué como sigue: el brasilero, 6.75 centavos, ó sea un aumento de 5.71 centavos; el de otros países de la América del Sur, 8.13 centavos, ó sea un aumento de 7.83 centavos; el mexicano, 9.54, ó sea un aumento de 9.38 centavos; el de la América Central, 10.01 centavos, ó sea un aumento de 9.95 centavos, y el de las Antillas, 7.91 centavos, ó sea un promedio igual al de 1900.

Las mercancías que los Estados Unidos importaron de las Repúblicas latino-americanas y de las islas y colonias en las cuales la mayoría de los habitantes son de origen latino (ó hablan un idioma derivado del latín), ó de toda la América excepto la América Británica y la Isla de Puerto Rico, en 1901, muestran un valor total de \$212,599,851, contra \$180,591,514 de 1900. El aumento total correspondiente á dicho año fué \$32,008,337, ó sea más de un 17.72 por ciento.

Las exportaciones de los Estados Unidos para estos mismos países y colonias durante el año económico de 1901 ascendieron en su totalidad á \$133,551,673, contra \$124,562,445 en 1900. El aumento total en 1901 fué \$8,989,228 ó sea un aumento de 7.72 por ciento, sobre el de 1900.

El cacao es ya uno de los artículos que más se importan de la América latina. El importado en los Estados Unidos durante el año económico que terminó el 30 de junio de 1901, subió á 45,924,353 libras, valuadas en \$6,472,829, contra 41,746,872 libras valuadas en \$5,657,283, en 1900.

Durante el año económico de 1901-1902 la importación de goma elástica cruda en los Estados Unidos ascendió á 55,275,529 libras, contra 49,377,138 libras importadas en 1900 y 51,063,066 libras importadas en 1899. El valor total de estas importaciones fué \$28,455,383 en 1901; \$31,376,867 en 1900, y \$31,707,630 en 1899.

La siguiente tabla muestra las importaciones de este artículo en 1901 y 1900, según las respectivas procedencias:

	1901.		1900.	
	Libras.	Valor.	Libras.	Valor.
Gran Bretaña	7,461,673	\$4,241,959	8,611,061	\$5,562,580
Alemania	1,673,234	794,534	1,750,498	892,346
Otros países de Europa	7,854,828	4,807,637	6,626,648	4,776,989
Centro América	1,279,099	679,001	1,428,224	792,250
México	297,691	135,767	420,612	201,326
Las Antillas Inglesas	45,578	17,757	12,291	4,639
Brasil	34,900,198	16,963,533	28,173,787	17,954,490
Otros países de Sud América	1,255,041	587,557	1,642,191	876,554
Indias Orientales	466,056	203,167	643,793	284,141
Otros países	42,131	24,471	66,033	31,522

En el año económico de 1901 los Estados Unidos importaron plátanos por valor de \$6,550,186, contra \$5,887,835, en 1900 y \$5,665,588 en 1899. Las importaciones de la América latina durante cada uno de los tres años mencionados fueron las siguientes:

Países.	1901.	1900.	1899.
De la América Central	\$2,660,278	\$2,333,361	\$1,816,843
Cuba	2,510,283	2,067,549	2,762,949
Antillas Inglesas	467,345	158,049	61,258
América del Sur	646,108	998,860	732,431
Total	6,284,014	5,557,819	5,373,481

La siguiente tabla muestra el valor de las importaciones que los Estados Unidos han hecho de los principales productos tropicales durante el año económico de 1901, expresándose la proporción procedente de la América latina, hasta donde ha sido posible determinarla en vista de los informes preliminares de la Oficina de Estadística del Departamento del Tesoro:

	Total de importaciones.	Total de la América latina.
Azúcar.....	\$87,551,974	\$48,304,691
Café.....	62,861,399	59,533,231
Goma elástica en bruto.....	28,455,383	18,383,615
Fibras.....	22,932,506	8,067,548
Frutas y nueces.....	19,584,612	7,734,775
Tabaco en rama.....	16,289,324	9,873,038
Goma.....	6,639,139	^a 753,696
Cacao en bruto.....	6,472,829	5,645,469
Algodón en rama.....	6,787,613	488,008
Especias.....	3,563,046	^a 333,520
Madera.....	1,752,612	1,345,351
Maderas de ebanistería.....	1,240,732	(b)
Palos de tinte.....	864,986	835,714
Seda sin labrar.....	30,051,365	(c)
Te.....	11,014,981	(b)

Esponjas.....	717,550	(e)

^a Informes incompletos.^b Ninguno de la América latina.^c En parte de la América latina.

Durante el año económico que terminó el 30 de junio de 1901, y el que le precedió, los Estados Unidos importaron de la América latina minerales de oro y plata, y oro plata en pasta y monedas, en el orden que sigue:

	Oro.		Plata.	
	1901.	1900.	1901.	1900.
América Central.....	\$568,953	\$668,330	\$802,426	\$1,063,834
México.....	6,348,531	4,505,966	29,480,370	29,723,002
Las Antillas.....	646,985	2,636,411	125,290	233,002
América del Sur.....	623,308	436,766	2,646,572	2,002,662
Total.....	8,187,777	8,247,473	33,054,658	33,022,500

Al comenzar el año de 1901, la estadística oficial demostró que los Estados Unidos ocupaban el puesto principal entre las naciones exportadoras del mundo, y se daba mayor importancia á este hecho por razón de que hace menos de veinticinco años ese puesto era el cuarto en la lista. En 1875, las exportaciones de productos nacionales de los Estados Unidos ascendieron á \$497,263,737 y en 1900 á \$1,453,013,659, ó sea un aumento de 190 por ciento. Al comparar el valor de las exportaciones de los Estados Unidos en la década de 1890 á 1900, se muestra el siguiente aumento: en las hechas para Europa un 63 por ciento; para Asia, un 163 por ciento; para Australia, un 132 por ciento; para África, un 416 por ciento; para el Canadá, un 108 por ciento, y para la América del Sur, un 20 por ciento. El examen del comercio de exportación de los Estados Unidos durante los nueve meses del año común que terminaron el 30 de septiembre, comparado con el de otros países, muestra que esta República todavía continúa á la cabeza de las naciones exportadoras.

No sólo han sido mayores las exportaciones de productos nacionales,

en cuanto á su valor real, que las exportaciones de cualquiera otra nación, sino que el promedio mensual durante el año de 1901 ha sido el mayor que jamás se ha visto en un período de nueve meses, habiendo ascendido á \$113,935,020 por mes. El exceso de las exportaciones sobre las importaciones durante los nueve meses mencionados, fué \$399,270,546. El maíz ha sido exportado en grandes cantidades, y esto representa prácticamente una innovación en el comercio de los Estados Unidos. Las cifras de los últimos tres años económicos en cuanto á este cereal, son las siguientes: en 1899 se exportaron 174,089,488 *bushels*; en 1900 209,318,284 *bushels*; en 1901 177,817,965 *bushels*, en tanto que durante el año común de 1° de enero á 1° de septiembre, de 1901, se exportaron 124,301,529 *bushels*.

Durante el mes de enero de 1901, del puerto de Nueva York se embarcó material de construcción por valor de \$60,000 para la República Argentina.

Durante estos últimos años las exportaciones de productos minerales de los Estados Unidos á todos los países del globo constituyen uno de los rasgos notables en el comercio extranjero de este país. Las exportaciones de hierro y acero en 1900 ascendieron á \$130,000,000; las de aceites minerales de todas clases á \$75,000,000; las de cobre á \$60,000,000; las de carbón de piedra y coke á más de \$22,000,000; las de oro á \$52,787,523, y las de plata á \$59,272,668. Sin contar el oro y la plata, se indica un aumento de 218 por ciento, comparado con el año de 1890, en tanto que incluyendo estos dos metales preciosos, la proporción de aumento es 210 por ciento.

En la conferencia anual celebrada en Moscow, Rusia, por la Asociación de Fabricantes y Comerciantes se resolvió enviar peritos á los Estados Unidos, á fin de estudiar y aplicar, si era posible, al mercado ruso, los métodos americanos de desarrollo del comercio, habiéndose reconocido en el curso de la discusión, que los Estados Unidos eran la nación comercial é industrial más grande y progresiva del mundo. Las memorias sobre la industria y el comercio del continente europeo advierten la próxima competencia que hará el aceite de maíz americano en los mercados del mundo, habiéndose reconocido que, desde el punto de vista industrial, dicho aceite tiene un gran valor y es digno rival de todos los otros.

El impulso que se ha dado al movimiento comercial entre la costa occidental de los Estados Unidos y los países de la América Latina del lado del Pacífico, ha aumentado en un grado notabilísimo, y varias flotas de grandes vapores de carga han entrado ya á tomar parte en el campo que antes ocupaba solamente una compañía. Una empresa tiene ya en vía de construcción un vapor de 4,000 toneladas, y otra ha celebrado un contrato para la construcción de otros cuatro de doble hélice y de 5,000 toneladas, destinados al servicio de pasajeros.

El capital invertido en estos cinco buques representa de \$2,000,000 á \$3,000,000. Sin embargo, los peritos en materias comerciales opinan que el desarrollo comercial con la América del Sur por ahora no es tan halagüeño que haga abrigar la esperanza de que el capital invertido rinda pronta utilidad.

La gran actividad que existe en el desarrollo de las industrias del hierro y acero, puede demostrarse teniendo á la vista los informes de 1897, 1898, 1899 y 1900, que muestran que 60,000,000 de toneladas representan el promedio anual de embarques de los minerales necesarios de la región del Lago Superior, mientras que durante los cuarenta años anteriores el total de los embarques sólo ascendió á 110,000,000 toneladas de mineral, ó sea un promedio anual de 2,750,000 toneladas.

Las minas de cobre de los Estados Unidos también han ganado á causa de los grandes pedidos de este metal que se han hecho durante los últimos años, siendo así que el producto del primer trimestre de 1901 ascendió á 67,163 toneladas métricas, contra 65,193 durante el mismo período del año anterior. Los informes oficiales muestran que el año de 1900 cerró el siglo con la mayor producción de carbón de piedra que jamás se ha obtenido en los Estados Unidos, continuando así esta república á la cabeza de los países productores de este artículo.

Se fabricaron en grandes cantidades todas clases de materiales para ferrocarriles, sobre todo locomotoras y carros de acero, al paso que la manufactura de rieles de acero ha tenido un gran impulso, debido al hecho de que en todos los mercados del mundo se ha demostrado ya la superioridad del artículo de fábrica americana.

Como una prueba de la gran estima en que se tiene en Alemania la maquinaria agrícola fabricada en los Estados Unidos, puede citarse el hecho de que en el curso del presente año dicho imperio comisionó á un perito especial para que visitase no sólo los grandes talleres de los Estados Unidos donde dichas máquinas se fabrican, sino también los grandes centros agrícolas donde se demuestre prácticamente su eficacia y utilidad. El objeto de estas investigaciones fué generalizar todavía más en Alemania la maquinaria americana, por cuanto el Barón HERMAN, perito agrícola especial, agregado á la Embajada alemana en Wáshington, había informado acerca de la superioridad de los métodos de explotación agrícola empleados en los Estados Unidos.

El día 26 de marzo de 1901 se celebró en la ciudad de Nueva York, la reunión anual de la Asociación de Fabricantes de Seda de América, y los informes presentados en ella relativos al estado de la manufactura de seda en esta República, así como los grandes pedidos de géneros del mismo material se consideraron muy halagüeños. Desde que comenzó el año de 1901, se dice que el consumo de las telas de seda de casi todas las clases y grados, ha aumentado grandemente, y que, por consecuencia, se ha abierto cierto número de establecimientos para la fabricación de artículos de seda. Uno de los rasgos más notables

del desarrollo industrial del país durante el año lo constituye el ramo del petróleo, siendo así que se han cavado pozos de una enorme capacidad productiva en varias partes de la República, y especialmente en el Estado de Texas.

Durante el año económico que terminó el 30 de junio de 1901, el número de buques construidos en los Estados Unidos y matriculados oficialmente, ascendió á 1,173, y su capacidad total fué 401,285 toneladas. Este cálculo no incluye las falúas, botes de canales, etc. Sólo dos veces se había superado este tonelaje total: una en 1854 en que hubo el mayor de todos, y otra en 1855, en que se llegó á 583,450 toneladas.

El Director de la Oficina de Investigaciones Geológicas calcula el valor total de los minerales producidos en los Estados Unidos durante 1900, en \$1,070,108,889, ó sea más del duplo del obtenido en 1890, que fué de \$619,512,173. Si se tiene en cuenta que el total de 1890 fué más del duplo del 1880, en que \$360,319,000 representaron el producto mineral de todo el país, resulta evidente el enorme desarrollo efectuado en las últimas dos décadas.

Entre los productos metálicos del país, el primer puesto corresponde al hierro en lingotes, cuyo valor total en 1900 ascendió á \$259,944,000. El cobre ocupa el segundo lugar, y su valor ascendió á \$98,494,039; el tercer lugar corresponde al oro, cuyo valor ascendió á \$79,322,281, y el cuarto á la plata, cuyo valor comercial fué de \$36,958,537. El valor del plomo, el zinc y el aluminio, también muestra importantes aumentos comparado con el que tuvieron el año de 1890.

Entre los productos no metálicos, el carbón de piedra es con mucho el artículo más importante, pues representa un 59.3 por ciento del total, que vale \$221,133,513 (la clase bituminosa), al paso que el antracita de Pennsylvania representa \$85,757,851. En vista de la anunciada disminución de la producción de carbón de piedra en el mundo, los informes oficiales de la Oficina de Investigaciones Geológicas expresan que en los Estados Unidos hay una superficie de carbón de piedra muy amplia que aun no se ha explotado, la cual será suficiente para abastecer al mundo entero durante muchos años.

El Jefe de la Sección de Estadística del Departamento de Agricultura calcula que la cosecha de algodón de los Estados Unidos, en el año de 1900 á 1901, asciende á más de 9,000,000 de pacas. En el curso del año se anunció que el cultivo del té, que durante varios años el Gobierno había recomendado, había pasado ya del período de experimentación, siendo así que las plantaciones de esta yerba en la Carolina del Sur habían rendido una cosecha que representaba un 12 por ciento más que en 1900. Este producto se vendió á \$1 la libra al por menor, y el precio por mayor fué bastante alto para dejar utilidad á los cultivadores.

El valor de los nueve productos agrícolas principales del país durante el año de 1900 ascendió á \$2,275,116,372, ó sea un aumento de

\$284,430,298, sobre el total del año de 1899. Las frutas procedentes de California continúan encontrando enormes mercados. Los limones, procedentes de esta parte del país, tienen cualidades que los hacen superiores á las frutas ácidas de otros países.

El Departamento de Agricultura de los Estados Unidos ha publicado informes mensuales sobre las cosechas en todo el país, y estos informes se han insertado regularmente en el BOLETÍN MENSUAL durante todo el año.

Á principios de enero de 1901 se comenzó la obra de reunir telegráficamente las diferentes islas del grupo Filipino, y el *Burnside* tendió 600 millas de cable para el servicio del Gobierno.

Entre las medidas importantes que el Gobierno tomó este año, estuvo el establecimiento de una Oficina Nacional de Pesos y Medidas, una orden del Comisionado de Navegación disponiendo que la estadística de entradas y salidas de todos los puertos se lleve de una manera uniforme, y de acuerdo con un sistema establecido.

Á principios del año de 1901, la Revista de Dun ('Dun's Review') publicó un interesante artículo acerca del costo relativo de la vida en los Estados Unidos en la actualidad, comparado con el de hace cuarenta años. Examinando los artículos de consumo y la cantidad de ellos que cada individuo necesita, resulta que en 1° de enero de 1901, se podía comprar con \$78.60 tanto como con \$100 en 1860. En el escrito de que se trata se muestra que en 1860 el capital por cabeza era \$513.93, en tanto que en 1901 se calculaba en \$1,232.05 por cabeza. Se estimaba que en 1860 el valor de los productos manufacturados, agrícolas, de la pesca y las minas ascendía á \$60.39 por cabeza, y en 1901 á \$238.86.

La estadística ferroviaria oficial muestra que el total de millas de ferrocarril en la República el 30 de junio de 1900 (que fué la fecha del último informe oficial publicado), era 193,345.78, ó sea un aumento de 4,051.12 de millas, comparado con el año anterior. Para hacer operar estas compañías se necesitaron 1,017,653 personas, y el total del capital invertido fué \$11,491,034,960.

Después del mes de abril de 1901, los buques de las diferentes compañías de vapor de la América del Sur, que navegan regularmente entre los puertos sudamericanos y el de San Francisco, han hecho escala en los diferentes puertos de Costa Rica, Guatemala, Nicaragua y Salvador, y tomado cargamentos á tipos de flete muy ventajosos para los exportadores. También se dice que los vapores regulares de Panamá han aumentado sus embarques de la América Central, y que por consecuencia las clases superiores de café de los países comprendidos en esa parte de América, que antes se habían trasportado á través del istmo ó dando vuelta al Cabo de Hornos, se envían en la actualidad á Nueva York y á Europa por vía de San Francisco.

COMERCIO EXTRANJERO EN NOVIEMBRE DE 1901.

El informe publicado por el Departamento del Tesoro de los Estados Unidos muestra que el comercio extranjero de estos, durante el mes de noviembre de 1901, ascendió á \$208,703,319, comparado con \$202,056,364 que fué el total en el mes de noviembre de 1900. El valor de las importaciones en el mes de noviembre de 1901 fué \$72,498,873, que comparado con 1900 arroja un aumento de \$7,144,833. Las exportaciones durante el mes de noviembre de 1901 se valuaron en \$136,204,446, ó sea una disminución de \$497,878, comparadas con las del mes de noviembre de 1900. De las importaciones que se hicieron en el mes de noviembre de 1901, las que entraron libres de derecho representaron un 45.44 por ciento de la cantidad total, comparadas con un 41.83 por ciento durante el mismo mes del año anterior. El gran aumento en las importaciones se debió principalmente á la recepción de artículos que se emplean en los procedimientos de fabricación en los Estados Unidos. La cantidad de derechos cobrados en las aduanas en el mes de noviembre de 1901 ascendió á \$19,526,377, contra \$18,550,297 que se cobraron durante el mismo mes del año de 1900.

Las importaciones hechas en los once meses que terminaron en noviembre se valuaron en \$800,426,231, que comparadas con las de 1900 que se valuaron en \$760,452,507, muestran un aumento de cerca de \$40,000,000. La cantidad de derechos de aduana cobrados durante ese período en 1901 ascendió á \$224,833,333, contra \$219,264,909 que se cobraron en once meses en 1900.

Las exportaciones hechas en el mes de noviembre de 1901 muestran un aumento en el valor de los productos agrícolas, minerales, de la pesca y demás nacionales, así como en los productos extranjeros reexportados, pero muestran una disminución en los productos manufacturados enviados al extranjero, si se las compara con las del mismo mes en 1900. Durante los once meses que terminaron en el mes de noviembre de 1901, las exportaciones se valuaron en \$1,328,186,131, contra \$1,332,056,242 correspondientes al mismo período de 1900. Esta disminución de \$3,870,111 es realmente ficticia y debida únicamente al hecho de que en la relación correspondiente al año de 1900, se incluyó el valor de las exportaciones para Puerto Rico, mientras que en 1901 se omitió esta partida.

Las importaciones de oro en el mes de noviembre de 1901, y en los once meses que terminaron en dicho mes, se valuaron en \$5,269,611, y en \$49,808,291 respectivamente, contra \$12,641,988, y \$49,808,291 correspondientes á los mismos períodos de 1900. Las exportaciones de oro durante el mes á que se ha hecho referencia, ascendieron á \$15,905,612, y las que se hicieron durante los once meses alcanzaron á \$52,598,928.

Las importaciones de plata en el mes de noviembre de 1901 se valuaron en \$2,796,532, y \$28,358,192 fue el total en los once meses que con él terminaron. Durante los períodos mencionados, las exportaciones de plata ascendieron á \$4,689,208 y \$50,914,826 respectivamente.

Las importaciones y exportaciones durante el mes de noviembre de 1901, comparadas con las del mismo mes en el año de 1900 se clasificaron de la manera siguiente:

Clasificación.	1901.	1900.
IMPORTACIONES.		
Comestibles y animales.....	\$16,351,215	\$20,127,014
Materia prima que se emplea en los procedimientos de fabricación nacional.....	25,870,811	19,195,143
Artículos enteros ó parcialmente manufacturados que se usan como material.....	8,489,764	6,650,112
Artículos manufacturados ya listos para el consumo.....	11,188,160	9,703,038
Artículos de lujo, etc.....	10,598,923	9,678,733
Total.....	74,498,873	65,354,040
EXPORTACIONES.		
Productos agrícolas.....	95,408,013	94,358,665
Productos de manufactura.....	30,154,895	32,281,487
Productos de minas.....	3,204,118	2,989,559
Productos de los bosques.....	3,895,061	4,179,186
Productos de la pesca.....	1,418,817	1,076,635
Productos de diversas fuentes.....	139,190	90,026
Total de productos nacionales.....	134,220,094	134,965,558
Productos extranjeros reexportados.....	1,984,352	1,735,766
Total.....	136,204,446	136,702,324

INGRESOS Y EGRESOS DE LA HACIENDA PÚBLICA EN EL AÑO TERMINADO EL 30 DE JUNIO DE 1901.

El Honorable LYMAN J. GAGE, Secretario del Tesoro de los Estados Unidos, anuncia que los ingresos del Gobierno, correspondientes al año económico que terminó el 30 de junio de 1901, fueron como sigue:

INGRESOS.	
Renta interior.....	\$307,180,663.77
Aduanas.....	238,585,455.99
Ganancia realizada en la acuñación de moneda y depósitos de plata y oro en barras, etc.....	12,731,256.94
Rentas del Distrito de Columbia.....	3,986,176.19
Derechos consulares, de patentes y de terrenos.....	3,414,933.49
Ventas de terrenos públicos.....	2,965,119.65
Pensión para los hospitales marítimos, para ropa, y fondos de depósito.....	1,778,454.91
Contribución impuesta á los bancos nacionales.....	1,681,473.05
Ventas de terrenos de los indios.....	1,493,321.24
Intereses pagados por los ferrocarriles del Pacífico.....	1,316,516.62
De diversas fuentes.....	841,216.03
Derechos de aduana, multas, confiscaciones, etc.....	711,791.43
Ventas de materiales de artillería.....	703,054.42
Fondos de inmigrantes.....	585,082.70
Fondos de depósitos del Departamento de Estado.....	537,621.58
Fondos permanentes de los asilos de soldados.....	492,623.66

Rentas de propiedades del Gobierno.....	\$450, 698. 49
Fondos para la medición de terrenos públicos.....	247, 258. 90
Ventas de terrenos y edificios.....	236, 897. 53
Contribución sobre la piel de las focas y rentas de las islas que son cria deros de estos animales.....	232, 655. 75
Fondos de premios á los apresadores durante la guerra con España.....	217, 490. 60
Fondos para premios destinados á los fondos de la pensión de la marina en la guerra con España.....	217, 477. 76
Producto de los bonos de Arkansas redimidos.....	85, 000. 00
Fondos procedentes de depredaciones cometidas en terrenos pú- blicos.....	75, 977. 70
Fondos procedentes de derechos de matrículas en el Territorio de Alaska.....	84, 087. 90
Fondos de una parte del pago de la deuda del Ferrocarril Central del Pacífico.....	4, 576, 247. 10
Venta de una reclamación de los Estados Unidos contra Sioux City, y la Compañía del Ferrocarril del Pacífico.....	2, 122, 841. 24
Dividendo recibido á cuenta del Ferrocarril de Pacífico de Kansas.....	133, 942. 89
Servicio postal.....	111, 631, 193. 39
Total de ingresos.....	699, 316, 530. 92

EGRESOS.

Los egresos correspondientes al mismo período fueron los siguientes:

Gastos del gobierno civil incluidas las relaciones exteriores, los edifi- cios públicos, la recaudación de rentas, el Distrito de Columbia, y otros gastos diversos.....	\$117, 327, 240. 89
Gastos del gobierno militar, incluso los ríos y puertos, las fortale- zas, los arsenales, las fortificaciones de la costa, y los gastos de guerra con España y en las Filipinas.....	144, 615, 697. 20
Gastos de la marina, inclusa la construcción de nuevos buques, su maquinaria, armamento, equipo, mejoras introducidas en los arsenales, y gastos de la guerra con España y en las Filipinas....	60, 506, 978. 47
Gastos del departamento de indios.....	10, 896, 073. 35
Pensiones.....	139, 323, 621. 99
Intereses de la deuda pública.....	32, 342, 979. 04
Déficit de la renta postal.....	4, 954, 762. 21
Servicio postal.....	111, 631, 193. 39
Total de egresos.....	621, 598, 546. 54
Superávit, \$77,717,984.38.	

PRESUPUESTO DE INGRESOS Y EGRESOS PARA EL AÑO ECONÓMICO DE 1902-1903.

Según el informe del Secretario del Tesoro de los Estados Unidos, las rentas del Gobierno correspondientes al año económico de 1902 á 1903, se calculan con arreglo á las leyes vigentes del modo que sigue:

De las aduanas.....	\$250, 000, 000
De la renta interior.....	282, 000 000
De diversas fuentes.....	40, 000, 000
Del servicio postal.....	116, 633, 042
Total.....	688, 633, 042

Los egresos para el mismo período se calculan de la manera siguiente:

Gastos del gobierno civil.....	\$110, 000, 000
Gastos del gobierno militar	70, 000, 000
Gastos del departamento de indios.....	11, 000, 000
Pensiones.....	137, 000, 000
Intereses de la deuda pública.....	29, 000, 000
Gastos del servicio postal	116, 633, 042
Total de egresos.....	588, 633, 042
Superávit, \$100,000,000.	

LAS MEDALLAS DE LA EXPOSICIÓN PAN-AMERICANA DE BUFFALO EN 1901.

Las medallas adjudicadas por la Exposición Pan-Americana de Buffalo, fuéron de tres clases, á saber: de oro, de plata y de bronce, y todas tienen 2½ pulgadas de diámetro. El anverso muestra un grupo que representa el poderío de la inteligencia sobre la fuerza física. Una mujer joven representa la primera y un búfalo aparece como símbolo de la segunda, estando ambas figuras circundadas de festones de roble. En el reverso de la medalla aparece el indio del norte dándole la pipa de la paz al del sur. Los dos han puesto á un lado sus armas y están engolfados en una conversación amistosa.

El dibujante, Señor HERMAN ATKINS MACNEIL, de la ciudad de Nueva York, se propuso hacer algo que fuere típicamente americano.

EL CONGRESO GEOGRÁFICO INTERNACIONAL.

El Presidente de la Comisión Ejecutiva del Congreso Geográfico Internacional ha informado al Profesor ALEJANDRÓ GRAHAM BELL, miembro de la Sociedad Geográfica Nacional de los Estados Unidos, que la próxima reunión de dicho Congreso se celebrará en la ciudad de Washington en 1904. El primer Congreso Geográfico Internacional tuvo lugar en Amberes, Bélgica, en 1871. La reunión que ha de efectuarse en Washington en 1904 será la primera que se celebre fuera de Europa, y cuanto se diga será poco para encomiar su importancia conso respecto á la ciencia geográfica, y sobre todo á exploraciones árticas y tropicales.

POBLACIÓN POR RAZAS Y SEXOS.

De la población total de los Estados Unidos que en 1900, incluyendo el ejército, la marina, y los habitantes de Hawai, ascendió á 76,303,387 habitantes, había 39,059,242 hombres, ó sea un 51.13 por ciento, y 37,244,145 mujeres, ó sea un 48.81 por ciento, lo cual muestra una proporción levemente mayor de mujeres que en 1890, época en que la proporción fué de 51.23 y 48.76 respectivamente. El aumento total de población en la década fué de 13,233,631, ó sea un 21 por ciento,

formado de 6,744,179 hombres y 6,489,452 mujeres, que representaban un aumento de un 20.9 por ciento en los primeros y un 21.1 por ciento en las segundas.

El excedente de hombres en todo el país alcanza á 1,815,097. Con excepción de once de los Estados y Territorios, el número de ellos excede en todos al de las mujeres. Los exceptuados se encuentran prácticamente en la costa del Atlántico. El Estado de California contiene el mayor excedente de hombres, es decir, 156,009. Minnesota contiene 113,586; Texas, 109,000, y Pennsylvania, 106,966. Las secciones del norte y del sur del Atlántico, incluso los Estados de Maine y de Florida, sólo tienen 4,769 hombres en exceso de las mujeres, y si de esta lista se separa el Estado de Pennsylvania, habrá una mayoría de 102,198 mujeres. El excedente de éstas en los Estados del sur se encuentra principalmente en la raza negra, de la que en todo el país hay 54,347 en exceso de los varones.

Al compararse el aumento relativo de los blancos y los negros durante la expresada década, resulta una ligera disminución en estos últimos, siendo así que el aumento de los primeros es un 21.4 por ciento, comparado con un 18.1 por ciento en los segundos. Esta disminución relativa existe tanto en los Estados del sur como en otras partes, y muestra que los blancos en esa sección del país han aumentado en una proporción mayor que los de la raza de color.

El elemento de origen extranjero sólo ha aumentado un 12.4 por ciento, y la población nativa ha aumentado un 22.5 por ciento desde 1890.

En cuanto á las razas, en 1900 la población comprendía 66,990,802 blancos, y 9,312,585 personas de color. Considerado en conjunto, el elemento de color, es decir, los negros, los indios, los chinos, etc., se nota un aumento de 17.8 por ciento desde 1890 hasta la fecha.

LA INDUSTRIA SEDERA EN LOS ESTADOS UNIDOS.

Aun cuando no fuera desde el punto de vista comercial, siempre sería interesante, como todo trabajo evolutivo de la constancia y energía industrial de un pueblo, el observar y medir los progresos que en breve espacio de tiempo se han alcanzado en los Estados Unidos en la manufactura de géneros de seda.

La generación que inició esos progresos no ha desaparecido, ni ha envejecido lo bastante para no poder engalanarse todavía con los productos de aquellos esfuerzos. Hace cuarenta años la fabricación de tejidos de seda en los Estados Unidos era cosa insignificante y á más de insignificante por el volumen, inapreciable por la calidad de los productos. Basta decir, que de toda la seda usada en este país, apenas un miserable 13 por ciento era manufacturado en él; todo el 87 por ciento restante venía de fuera. En la actualidad los términos se han invertido, y según cálculos bien fundados, tiénese por seguro que al

final del presente año las estadísticas dirán que los Estados Unidos no importan sino el 13 por ciento de la seda elaborada que consumen.

Hoy día, con la vasta adición que á la demanda lleva el crecimiento de la población, y más que nada el aumento de la riqueza individual, este país ha llegado á ser uno de los más grandes manufactureros de tejidos de seda, si no el primero de todos, en el mundo.

Hé aquí la escala en que se han venido realizando estos progresos. En 1860 se fabricaba en los Estados Unidos, como se ha dicho, tan sólo un 13 por ciento de los géneros de seda consumidos por su población. En 1870, ya se fabricaba el 23 por ciento; en 1880 la fabricación llegó al 38 por ciento; en 1890 subió á 55; y en 1898 el avance fué más enérgico, llegando al 75 por ciento.

Como bien puede comprenderse, la importación de la seda en rama ha crecido en este país á medida que ha disminuido la importación de las telas extranjeras. En la actualidad los Estados Unidos consumen la tercera parte del total de la seda en rama que se produce en el mundo. En este particular los comienzos fueron sumamente modestos. Hasta el año de 1875, los Estados Unidos importaban tan sólo 1,101,681 libras de seda en rama y 5,737 libras de seda hilada, que valían por todo unos 4,525,000 pesos, mientras que en el año fiscal que finalizó en junio de 1900 las importaciones de seda en rama é hilada fueron de 6,297 fardos, que contenían más de 10,500,000 libras, y cuyo valor era de 32,785,455 pesos.

El establecimiento de la industria de la seda sobre firmes bases se cuenta desde 1860, que fué cuando las sedas francesas fueron admitidas libres de derechos en los mercados ingleses. Una grande industria en este ramo se había desarrollado en Inglaterra antes de aquella época, y de allí, como de Francia, se surtían indistintamente los Estados Unidos. Operóse entonces en Inglaterra un trastorno industrial muy notable. Abiertas como fueron las aduanas inglesas á los géneros de seda franceses, cerráronse muchos telares en Inglaterra, y no pocos tejedores se vinieron de allá para los Estados Unidos, trayendo consigo sus máquinas y sus expertos brazos.

No faltaron tentativas en este país desde remotos tiempos, para establecer la industria de la seda en todos sus ramos, desde la cría del gusano hasta la manufactura completa de los géneros. La Corona alentó esas tentativas, y lo mismo hizo el Gobierno independiente, pero todo ello quedó reducido, practicamente, al establecimiento de determinado número de fábricas, en donde se torcía seda para coser y se hacían algunos otros artículos. Muchos de esos establecimientos existen todavía y tenían vida desde antes que los tejedores ingleses viniesen á este país en 1860.

Aunque los establecimientos de preparar, hilar y tejer la seda forman el fundamento de la industria en los Estados Unidos, y aunque sus productos en el año alcanzarán probablemente á la suma de

\$100,000,000, ó acaso más, no es este todo el beneficio que el país deriva de ellos, ni á ellos se limita la ocupación de brazos y capital movidos por esta próspera industria.

Al lado de la industria central van otras menores y complementarias, tales como la de la tintura, la impresión ó estampado y el aderezado, la de fabricación de maquinaria, la de los traficantes en seda en rama y de los comerciantes en géneros y tejidos, y por ese estilo muchas otras que dependen de aquélla. Difícil cosa sería por cierto determinar cuánto representan en capital y en brazos; pero en la fabricación de cintas, géneros, sedas de costura, trenzas, bandas para sombreros, encajes, flecos, adornos y pasamanería, hay actualmente invertidos unos 120,000,000 de pesos, y se da ocupación á unos 100,000 obreros. Cerca de 150 por ciento de los productos de la seda está representado por géneros anchos; el 25 por ciento corresponde á las cintas, y tal vez un 10 por ciento á las sedas para coser en máquina, quedando un 15 por ciento para todos los demás.

LA INDUSTRIA DEL ALUMBRADO ELÉCTRICO.

En un número reciente de la "Revista Eléctrica" se consignan datos estadísticos relativos á la industria del alumbrado eléctrico de los Estados Unidos, expresándose el capital invertido, así como el número de estaciones que actualmente funcionan en cada Estado y Territorio. El total general de éstas es 2,842, y el del capital, en 1° de septiembre de 1901, \$668,830,312.

LA INMIGRACIÓN EN 1901.

La inmigración en los Estados Unidos parece que va en aumento, y que mejora también en calidad. El número total de pasajeros de proa que llegaron en el año económico de 1901, ascendió á 487,918, ó sea un aumento de 39,346, ó como un 9 por ciento, sobre el del año económico de 1900. Dos mil veinte de los comprendidos en este aumento vinieron de puertos canadenses. La adición á la cifra expresada, de 74,950 extranjeros que vinieron como pasajeros de popa, hace un total de 562,868 inmigrantes durante todo el año. Por tanto, se ve que la corriente de inmigración aumenta. Más de dos terceras partes de los inmigrantes de proa eran hombres, y más de tres cuartas partes de éstos tenían de 14 á 45 años de edad. Poco menos de una cuarta parte del expresado número, ó sea 117,587, no sabía leer ni escribir. Cincuenta y seis mil trescientos doce trajeron al país más de \$30 cada uno, pero 294,860 trajeron sumas menores. La proporción de aumento de la inmigración italiana durante el año fué un 36 por ciento, ó sea una proporción tres veces mayor que la proporción de aumento de toda Europa. El aumento respectivo de todos los demás países europeos apenas hacía en su totalidad una cuarta parte del aumento de Italia. El Comisionado

de Inmigración hace constar en el Informe de que se han tomado las cifras que anteceden, que si bien es verdad que llegaron más inmigrantes durante el año económico de 1901 que en los doce meses anteriores, el número de los inmigrantes rechazados fué considerablemente menor.

ESTADÍSTICA DE LA PRODUCCIÓN DE PLATA.

El informe publicado por el Director de la Casa de Moneda de los Estados Unidos, muestra que la producción de plata en el mundo durante el año de 1900 fué la mayor hasta ahora consignada en la historia, siendo así que ascendió á \$178,769,769 onzas finas, ó sea un aumento de 1,572,513 onzas sobre la de 1899. También se consigna otro hecho no menos interesante, á saber, que el total de la acuñación de moneda durante el año de 1900, fué \$177,011,902, ó sea un aumento de \$10,664,980 sobre la del año anterior. También se consigna en dicha memoria el hecho de que en todo el mundo se acuñó menos oro en 1900 que en 1899, expresándose que en 1900 se acuñaron \$354,936,497 y en 1899 \$466,110,414.

LOS BOSQUES VALIOSOS DE LAS FILIPINAS.

Un corresponsal del "New York Tribune," escribe de Manila con fecha 1° de septiembre de 1901, acerca de la riqueza que contienen los bosques filipinos, y dice que en las islas abunda una gran variedad de árboles que rinden resinas valiosas, y que la goma elástica y la guta-percha abundan mucho en Mindanao y Tawi-Tawi. Del insignificante y relativamente desconocido puerto de Cotabato, en la isla de Mindanao, se embarcó guta-percha para Singapore el año pasado por valor de \$200,000. La Oficina de Inspección de Bosques calcula que dentro de los límites del archipiélago se producen por lo menos diez y siete clases de palo de tinte, y otros árboles que rinden aceites esenciales ó medicinales muy valiosos. En una palabra, puede decirse sin exageración, que es enorme la riqueza en maderas de aquellas islas, y que sólo falta su inteligente explotación. En todas partes parece haber bosques que son útiles para todos los fines imaginables.

EL CARBÓN DE PIEDRA EN ALASKA.

El Capitán CHARLES A. F. BROUARD regresó al Estado de Wáshington en noviembre de 1901, después de haber invertido cinco años en explorar diferentes partes de Alaska. En ese tiempo visitó todas las localidades desde Kotzebue Sound hasta el Océano Ártico, habiendo además hecho un mapa de la costa desde Kotzebue Sound hasta Point Hope. Según su relación, toda la orilla del norte de la sonda referida hasta el Océano Ártico, ó sea una distancia de 300 millas, es un inmenso lecho de carbón bituminoso, y con él podría abastecerse el

mundo por varios años. Sin embargo, este carbón no parece ser muy bueno para los vapores ni para las locomotoras; pero puede utilizarse para los fines domésticos.

UN SUSTITUTO DE LA GOMA ELÁSTICA.

El "Scientific American" correspondiente al 30 de noviembre de 1901, dice que el retoño de la planta denominada "greasewood," que crece en las Montañas Rocallosas, contiene un zumo lácteo de que puede sacarse goma. Su parte sólida también contiene una goma resinosa, soluble en bisulfito de carbono y en otros disolventes de goma elástica ya conocidos, como por ejemplo, el hidrocarburo. Dos inventores han descubierto un método para hacer goma elástica artificial del zumo antedicho. La planta se exprime entre cilindros, que aflojan la corteza y trituran la fibra leñosa de las espigas mayores. Entonces toda la masa se coloca dentro de una vasija, la cual se agita mecánicamente, y se la somete á la acción del bisulfito de carbono, la nafta ú otro disolvente de goma elástica.

Después de someterse algunas horas á la acción de éste, y de aplicarse el calor, si es necesario, se cuela el líquido y se le coloca en una vasija cerrada, extrayéndose el disolvente volátil por medio del calor. Después se lava con agua caliente la masa de goma que se ha de volatilizar en el alambique ó recipiente, y se la pasa varias veces por los cilindros. La goma resultante tiene un color moreno, es muy flexible, elástica y combustible, y parece poseer los rasgos característicos de la goma elástica, salvo que tiene un olor un tanto balsámico que se diferencia del olor de la que se usa en el comercio. La goma puede vulcanizarse agregándole una cantidad de azufre, lo mismo que se hace con el caucho ordinario.

LA INDUSTRIA DE LA SAL.

La Oficina del Censo ha expedido un informe relativo á la industria de la sal de los Estados Unidos, en el cual se expresa que en 1900 había 159 salinas con un capital de \$27,123,364. El valor de la producción correspondiente al año fué \$7,966,897, y el total de los gastos ascendió á \$6,507,169. La producción de sal en los Estados Unidos ha aumentado constantemente desde el año de 1850. En los últimos cincuenta años, el capital empleado ha aumentado de \$2,640,885 á \$27,123,364, al paso que el valor del producto ha aumentado de \$2,222,245 á las cifras ya mencionadas.

LA INDUSTRIA DEL AGUARRÁS.

La Oficina del Censo expidió el 11 de noviembre de 1901 un informe preliminar relativo á la industria del aguarrás y la brea en los Estados Unidos. Dicho informe muestra la extensión de esta industria en el

año de 1900 en que se tomó el censo, comparado con el año de 1890. Según este informe, el valor total de los dos productos derivados de una misma fuente el año de 1900 fué \$20,344,888, comparado con el valor total en 1890 que ascendió á \$8,077,379. En 1900 el número de los establecimientos productores era 1,502 y 670 en 1890. El capital invertido hasta que se hizo la última comparación representaba un total de \$11,832,845, comparado con un total general de \$4,063,379 en 1890. El número de empleados en 1900 ascendió á 41,864 y á 15,266 en 1890. El total de sueldos pagados en 1900 ascendió á \$8,390,632, en tanto que en 1890 la suma total pagada sólo alcanzó á \$2,933,547.

HAITÍ.

INDUSTRIA DEL CAFÉ.

El Cónsul General de Bélgica, en Haiti envió recientemente á su Gobierno un informe relativo á la industria del café en aquella, República, del cual se extracta lo siguiente:

En la actualidad los cafetales en Haití comprenden un área de 50,000 hectáreas (ó sea 125,500 acres). El cafeto se introdujo en país en 1715, poco más ó menos, y su cultivo se aumentó rápidamente. Los agricultores conocen muy pocas regiones que reúnan en un grado mayor que ésta, las condiciones esenciales para este cultivo, á saber, fertilidad del terreno, calor, humedad y otras condiciones generales. Dícese que las colinas, cuya altura varía desde 1,300 hasta 1,600 pies, son especialmente propicias para el cultivo de dicha planta. La siguiente relación muestra el número de libras de café exportadas de la República durante los años que á continuación se mencionan:

1894-95	75, 371, 665	1897-98	67, 437, 593
1895-96	47, 643, 451	1898-99	61, 622, 184
1896-97	73, 057, 397	1899-1900	72, 122, 781

Hay un derecho de exportación de \$3.86½ por quintal que se impone á todo el café que sale de la República.

MÉXICO.

LAS OPORTUNIDADES QUE OFRECE EL ESTADO DE TAMAULIPAS.

Dice el "Monterrey Times" que el Estado de Tamaulipas era uno de menos poblados y menos conocidos de México, hasta que se construyó el Ferrocarril de Monterrey al Golfo Mexicano. Gracias á la terminación de esta línea y á las mejoras que el Gobierno introdujo en

Tampico, se obtuvo el desarrollo de dicho Estado, y aunque el Ferrocarril del Golfo ha tenido algunos años muy malos, los trabajos se han continuado con constancia á pesar de las dificultades que ha sido necesario vencer, y los resultados justifican, con creces, el tiempo invertido y el trabajo. Se ha demostrado que los ricos valles del sur de Tamaulipas, con su gran abastecimiento de agua, se prestan á convertirse en una fuente casi inagotable de producción, de que podrán obtenerse las primeras frutas y legumbres para los mercados de los Estados Unidos. Se cree que en el curso de diez años, los grandes centros mineros, comerciales y fabriles del norte de Texas obtendrán de Tamaulipas sus abastecimientos de azúcar, arroz, legumbres y frutas.

NOTAS DIVERSAS.

El "Nouveau Monde" anuncia que el Señor Don SEBASTIÁN DE MIER presentó hace poco en París, sus credenciales como Embajador Extraordinario y Ministro Plenipotenciario de México, cerca del Gobierno Francés. Hubo el canje de las felicitaciones de costumbre.

El día 15 de octubre de 1901, el Gobierno de los Estados Unidos concedió una patente número 684573 á Mr. HENRY W. HOWE, residente en la ciudad de México, por su invento denominado "un cerrador de sacos."

EL COMERCIO DE GÉNEROS DE ALGODÓN.

Un informe acerca del comercio de México, publicado recientemente en el "British Trade Journal," trata principalmente del comercio de géneros de algodón de la República, y dice que hace menos de cincuenta años que la mayor parte del comercio de México en este artículo se hacía con casas inglesas. En dicho país, el comercio general con la Gran Bretaña estaba también en un estado bastante floreciente hasta 1872 y 1873, pero desde la inauguración de los ferrocarriles Central y Nacional Mexicanos, los fabricantes de los Estados Unidos han aumentado anualmente sus transacciones, sobre todo en géneros de algodón. Aludiendo á las condiciones de los negocios en general, el informe dice que en la actualidad el comercio británico se limita á unas cuantas agencias (por no existir establecimientos comerciales de importancia), que se hacen cargo de cumplir las órdenes por medio de muestras y catálogos.

Refiriéndose especialmente al comercio de géneros de algodón, se hace constar que las importaciones de esta clase de mercancías muestran una gran disminución tanto en cuanto á la cantidad como al valor de las mismas. En 1900, la cantidad importada fué 42,599,263 yardas, contra 49,029,863 yardas en 1899, en tanto que el valor correspondiente á los dos años fué £728,867 y £741,556, respectivamente. La disminu-

ción parece haber ocurrido principalmente en los géneros de algodón de menos de treinta hilos, puesto que en el año referido el número de yardas importadas sólo alcanzó á un total de 15,374,634 contra, 21,459,474 en 1899, y 16,203,118 en 1898. En este ramo especial encuentra el Reino Unido la mayor competencia, no sólo por parte de las fábricas mexicanas, sino también por parte de los Estados Unidos. En 1900 la producción de géneros de algodón por piezas fué \$11,802,986 piezas, contra 10,782,349 de 1899, y representaban un aumento de cerca de 9.5 por ciento. Los datos estadísticos publicados correspondientes al 31 de diciembre de 1900, acusan que el número de fábricas de géneros de algodón que pagan contribuciones al Gobierno era 149, de las cuales 15 estaban cerradas, en tanto que en la misma fecha en 1899, el número de fábricas era 137, y 10 de ellas estaban cerradas para efectuar reparaciones ó introducir mejoras en ellas. Este aumento en el número de fábricas y en el producto consiguiente, ha producido el efecto correspondiente en el mercado de importación.

La existencia que hay en la actualidad, así la parte importada como la de fabricación doméstica, es mayor que la demanda, y el resultado es que varias fábricas han tenido que trabajar menos horas ó cerrarse por completo. Este estado de los negocios ha de continuar necesariamente hasta que se haya consumido el sobrante, y las importaciones del extranjero tendrán que disminuir en proporción al aumento del producto nacional. El sistema que en la actualidad han adoptado muchas de las fábricas, consiste en doblar la pieza de la misma manera que se hace en el extranjero, y poniéndole una marca en inglés, se hace muy difícil para una persona que no sea entendida en la materia, distinguir entre uno y otro artículo, especialmente por el hecho de que los diseños que se emplean son muy semejantes. Los precios al por menor varían desde 8 centavos hasta 15 centavos por metro. Además de los géneros en piezas, las fábricas de la República en 1900 produjeron 4,256,529 libras de hilo de algodón, que se usa casi enteramente en la fabricación de los rebozos ó chales de este material que usan las mujeres de todas las clases sociales, y cuyos precios varían, según la calidad, desde \$1.25 hasta \$50 cada uno.

DEPÓSITOS DEL FERROCARRIL DE PROGRESO.

El ferrocarril de Mérida y Valladolid, con su extensión de Mérida á Progreso, según el "Mexican Herald," ha obtenido del Gobierno Federal una concesión para el establecimiento de depósitos en Progreso, donde las mercaderías extranjeras podrán ser canjeadas y depositadas hasta que los derechos de aduana sean pagados. El capital ha sido fijado en \$1,000,000, con poder de aumentarlo si fuera menester. La compañía del ferrocarril ha depositado en el tesoro federal, como garantía, la suma de \$100,000 en bonos del tres por ciento de la deuda

interior. La compañía gozará de exención de derechos é impuestos á más de ciertos privilegios durante el período de 25 años. La concesión es por 40 años.

ARREGLOS POSTALES.

El Gobierno mexicano ha expresado al Departamento de Correos en Washington el deseo de que los derechos de aduana impuestos sobre artículos enviados por el correo de los Estados Unidos para entregarse á personas en la Ciudad de México, sean en adelante aforados en Nuevo Laredo, México. De acuerdo con esta solicitud el Departamento de Correos de los Estados Unidos ha ordenado á todas las estafetas de los ferrocarriles, autorizadas para el canje de correspondencia con las estafetas en México que esta clase de correspondencia sea enviada á Nuevo Laredo.

SANEAMIENTO DEL PUERTO DE VERACRUZ.

Según el texto de la concesión otorgada á PEARSON y CIA. para el saneamiento y provisión de agua potable del primer puerto de la República, los trabajos han sido contratados en la suma de \$3,964,-493.94, siendo el precio de las obras del saneamiento \$1,713,998.94 y el de las obras de aguas potables y filtradas \$2,250,495.

EXPORTACIÓN DE HENEQUÉN.

Durante el mes de septiembre próximo pasado, se exportaron 44,646 pacas de henequén, con un peso de 7,280,643, kilos. El valor de esa exportación, al precio medio del producto, fué de \$2,540,944.41.

NUEVA INSTITUCIÓN AGRÍCOLA.

Es probable que dentro de poco tiempo se establezca en el país una estación agrícola experimental, como las que tan buenos resultados han dado para el desarrollo de la agricultura en los Estados Unidos y otros países de Europa. El Sr W. D. OWEN, presidente de la Compañía Agrícola de Ubero, presentó el Gobierno mexicano un proyecto relativo al establecimiento de dicha estación, ofreciendo el terreno necesario, y pagar, además, una suma no menor de \$5,000 oro que se invertirán en hacer los principales gastos, si el Gobierno acepta el proyecto.

RECURSOS NATURALES DE LA BAJA CALIFORNIA.

“La Soberanía Popular,” periódico que se publica en La Paz, capital del distrito de La Baja California, en un artículo reciente relativo á esa parte de la República mexicana, dijo que la mayor parte de los terrenos de esa región son minerales, siendo así que la atraviesa una prolon-

gación de las montañas de la Sierra Nevada. Las minas de Boleo y el Progreso son bien conocidas, y Calmalli, Rosarito y la famosa mina de Santa Clara son también centros mineros importantes. Son igualmente muy conocidas las pesquerías de conchas, de ostiones y de Carey en la bahía de La Paz (que es una parte del Golfo de California) y las salinas de la isla del Carmen. Los terrenos de esa región son muy fértiles, y el inconveniente principal no lo constituye tanto la sequía como el abandono de los cultivadores. El cultivo de la vid y la fabricación de vinos y aguardientes constituyen la industria principal de los habitantes, siendo así que la exportación de estos productos es la fuente principal de renta de la península.

NOTAS DIVERSAS.

El "Diario Oficial" correspondiente al 11 de octubre de 1901 contiene los pormenores de un contrato celebrado entre el Gobierno mexicano y la sociedad de S. PEARSON & SONS, para llevar á cabo la obra de sanitación de la ciudad de Veracruz. El costo total se calcula en \$4,000,000, en plata.

Con el nombre de "La Rescatadera," se ha formado una compañía en Bruselas, para explotar minas en México. Su capital social es 1,000,000 de francos.

NICARAGUA.

CONDICIONES MINERAS Y AGRÍCOLAS DE RAMA.

El Señor J. P. MORGAN en una comunicación dirigida al BOLETÍN MENSUAL, fechada en Rama el 23 de diciembre de 1901, dice que, á su juicio, los habitantes de otros países no tienen una idea correcta de Nicaragua y de los recursos naturales del país. Durante sus extensos viajes por la América Central y del Sur, ha encontrado pocos países que superen á Nicaragua en ventajas naturales, siendo así que su clima es muy salubre, la fiebre amarilla desconocida, aún en la costa del Atlántico, el terreno sumamente fértil, y los habitantes inteligentes y por lo general activos y gozando de prosperidad.

Las industrias mineras y agrícolas son muy extensas y lucrativas. En el Departamento de Zelaya hay muchas plantaciones de goma elástica, y se dice que en una de ellas hay 500,000 plantas en estado de desarrollo. En todos los puntos del departamento hay plantaciones de plátanos, y en los alrededores de Rama se encuentran algunas minas muy ricas. Una mina denominada "El Mico," ubicada á una distancia de Rama, que puede andarse en 6 ó 7 horas á caballo, en la actualidad emplea un molino de 20 trituradores y un gran número de obreros. La roca de donde se toma el mineral tiene 22 pies de espesor, y hay

Los productos de toda la renta aduanera en 1899 habían sido \$2,389,050.60, ó sea \$612,175.10 ménos que en 1900.

El valor total de las importaciones en Nicaragua en 1900 fué de \$2,577,964.52 en oro, distribuidos como sigue:

Por Corinto	\$1,371,841.68
Por Bluefields.....	715,600.84
Por El Castillo	356,796.05
Por San Juan del Sur	133,721.95
Total	2,577,964.52

El de las exportaciones ascendió á \$8,542,646.80, en moneda nacional, distribuidos como sigue:

Por Corinto	\$4,352,838.10
Por Bluefields.....	2,927,065.08
Por El Castillo	1,136,786.24
Por San Juan del Sur.....	125,957.38
Total	8,542,646.80

Reduciendo á oro esta suma, al tipo corriente, se tiene \$2,577,964.52.

Resulta, pués, que la exportación excede á la importación, calculando por valor, en oro, no menos que en \$269,584.41.

La renta de licores produjo en Nicaragua en 1900 la suma de \$992,799.17.

En 1899 había llegado sólo á \$959,087.35, ó sea \$33,711.82, menos que en 1900.

DEUDA EXTERIOR.

Nicaragua no tiene otra deuda exterior que la llamada “inglesa,” contraída en 1886.

El total del empréstito, que entonces se negoció en Londres, fué por 285,000 libras esterlinas ó \$1,425,000, con intereses al seis por ciento, sin amortización. El pago se garantizó con hipoteca del ferrocarril nacional hasta la cantidad de 200,000 libras, ó \$1,000,000, y con la Aduana de Corinto por el resto.

En 1895 se hizo un arreglo entre el Gobierno de Nicaragua y el Consejo de tenedores de bonos, por el cual, entre otras cosas, se redujo el interés á $4\frac{1}{2}$ por ciento.

Los bonos nicaragüenses que á raíz de este arreglo se cotizaban con trabajo en la Bolsa de Londres á 42, se venden hoy en el mismo mercado á 61, y aumenta la demanda.

PERÚ.

EL COMERCIO DE CEMENTO.

En el Perú, con excepción de unos cuantos hornos de poca importancia, no existen fábricas de cemento. En 1897 las importaciones perua-

nas de cemento ascendieron á 1,348 toneladas, de las cuales 1,212 vinieron de Alemania, 88 de Inglaterra, y 48 de Chile. El siguiente año las importaciones alcanzaron á 2,348 toneladas, habiéndose importado de Alemania un 75 por ciento, un 14 por ciento de Chile, y el 11 por ciento restante de Inglaterra y Bélgica. Durante el año de 1899, que fué el último en que pudo utilizarse dicha estadística, las transacciones continuaron aumentando y llegaron á 3,662 toneladas. Los países exportadores durante este período fueron los siguientes: Alemania, 2,895 toneladas; Bélgica, 423 toneladas; Inglaterra, 172 toneladas; los Estados Unidos, 165 toneladas; Chile, 5 toneladas, é Italia, 2 toneladas.

Á juzgar por los edificios, pavimentos y aceras que están en vía de construcción en Lima, hay razón para creer que las cifras correspondientes á los años de 1900-1901, serán mayores que las de los años anteriores. La introducción de cemento alemán, que comenzó hace ya muchos años, le ha proporcionado á dicho país una ventaja con la cual es muy difícil competir, en tanto que ciertos contratistas y arquitectos le dan una fama al cemento alemán que los peritos en la materia declaran que, por lo menos, es exagerada. La única ventaja verdadera que existe en la importación del cemento alemán en la actualidad, consiste en los métodos de transporte y en la venta por medio de consignaciones.

Los agentes exportadores de Hamburgo saben sacar el mejor partido posible de los buques de vela que van á Chile y al Perú, remitiendo grandes cargamentos á los dueños de buques, los cuales se envían como balastre, ó á tipos de flete muy bajos, por no haber otras mercancías pesadas ó adecuadas para embarcarse en buques de vela á estos países. Esto hace que el fabricante alemán pueda vender á un precio mucho más bajo y realizar, no obstante, una ganancia lucrativa. Por consecuencia, si los fabricantes de cemento extranjeros desean crear un mercado consumidor importante y permanente en El Perú, tienen que fijar el precio de sus productos de manera que puedan competir ventajosamente con los precios de Alemania.

SALVADOR.

RIQUEZA DEL IZOTE.

La planta tan usada en el país para cercas, que en él y en México se llama izote y que los botánicos conocen con el nombre de *yuca gloriosa*, *yuca filamentosa*, es una verdadera riqueza que hasta ahora se ha desperdiciado y que de hoy en adelante se puede aprovechar, exportando la fibra de sus hojas. La casa comercial de Amsinck y Compañía de New York ha ofrecido quince centavos por libra de las fibras del

izote; pidió dos mil toneladas á la República mexicana y no se le han podido mandar. La fibra del izote es muy apreciada en los mercados manufactureros, por sus notables cualidades, pues á su finura y suavidad reúne una resistencia notable. La planta tiene unas cien hojas poco más ó menos, de dos á tres pies de largo y dos á tres pulgadas de ancho.

PROSPERIDAD DE LA REPÚBLICA.

El Presidente del Salvador, en su Mensaje al Congreso, enviado el 20 de febrero de 1901, dió cuenta del estado de las rentas y del comercio en el orden que sigue:

Los ingresos del Gobierno en 1900 ascendieron á \$6,337,729.06, distribuidos en esta forma:

Derechos de importación	\$3, 473, 162. 03
Derechos de exportación	550, 410. 86
Renta de licores	1, 827, 961. 76
Otras fuentes	486, 194. 41
	<hr/>
	6, 337, 729. 06

Comparada esta suma con la obtenida por los mismos conceptos el año anterior, se nota un aumento de \$1,857,274.45.

Añadiendo á los \$6,337,729.06 de ingresos fiscales, lo obtenido por empréstitos, \$269,098.82, y el saldo en caja del año anterior, resulta que el Gobierno contó con un total de \$6,784,751.31 para hacer frente á sus obligaciones.

Los egresos ascendieron por todos conceptos á \$6,751,027; de manera que quedó un saldo de \$33,732.44.

La exportación por todos los puertos de la República, representada por 365,499 fardos, fué por valor de \$9,142,690.

Las importaciones ascendieron, también en valor, á \$6,000,570.

El exceso de la exportación sobre la importación fué por tanto de \$3,142,120.

Los siguientes artículos fueron exportados de Nueva York para el Salvador, durante el año que terminó el 30 de junio de 1901: -

Frazadas.....	\$167, 525	Almidón.....	\$4, 513
Maquinaria	55, 222	Cueros.....	4, 549
Drogas	41, 466	Petróleo	882
Alambre.....	23, 297	Artículos misceláneos.....	48, 683
Aceite	9, 061		
Ferretería	9, 422	Total	369, 697
Utensilios eléctricos	5, 077		

PRODUCTOS MINERALES.

Los principales productos minerales de la República son las piedras de construcción, el yeso, los minerales de plata, plomo, estaño, hierro, mercurio, antimonio, oro y cobre, el cristal de roca, la piedra caliza y el carbón de piedra.

Las principales distritos minerales del Salvador son tres, á saber, el de San Miguel, el de Cabanas y el de Metapán.

Los minerales más ricos del distrito de San Miguel se encuentran en el departamento de este nombre y en los de la Unión y Morazán. Abundan en estas lugares el sulfuro y el cloruro de plata. Hay también minas de oro, de las cuales las más notables son las llamadas San Bartolo, Capetillos y el grupo de Eva.

En el distrito de Cabañas, que es considerado como más rico que el de San Miguel, hay muchas minas de oro, y entre ellas las de San Enrique, La Cola del Toro, El Compañero, el Cerro de Avila y La Pepita. En el lugar llamado Charlatenango se encuentran cobre y manganeso.

El distrito de Metapán se distingue principalmente por sus minas de hierro. Tiene también minas de zinc, plomo, cobre, plata y oro.

URUGUAY.

DECRETO SOBRE LA MONEDA DE NÍQUEL DADO EN MONTEVIDEO, 13 DE NOVIEMBRE DE 1901.

Habiendo recibido el Banco de la República Oriental del Uruguay, procedente de la Casa de Moneda de Berlín, la primera partida de moneda vellón de níquel, cuya acuñación y circulación autorizó la ley de 6 de diciembre de 1900, el Presidente de la República acuerda y decreta:

ARTÍCULO 1°. Póngase desde el día de mañana 14 en circulación la referida moneda de níquel importante en trescientos cincuenta y cuatro mil cuatrocientos pesos (\$354,400) distribuida como sigue: doscientos sesenta mil pesos (\$260,000) en piezas de cinco centésimos (\$0.05), cincuenta y nueve mil cuatrocientos pesos (\$59,400) en piezas de dos centésimos (\$0.02), y treinta y cinco mil pesos (\$35,000) en piezas de un centésimo (\$0.01); así como las demás partidas que sucesivamente se reciban hasta completar la suma de quinientos mil pesos (\$500,000), autorizada por la ley.

ART. 2°. En cumplimiento del artículo 8° de la ley citada, que acuerda un plazo de ocho meses para la conversión y retiro total de la moneda de cobre, fijase el período comprendido entre el día 14 del corriente noviembre y el día 13 de julio de 1902.

ART. 3°. Comuníquese, publíquese, etc.

VENEZUELA.

DEPÓSITOS DE CARBÓN DE PIEDRA.

“The Mining Journal” de Londres, dice que según informes de Mr. E. CORTESSES, ingeniero de minas europeo, el carbón de piedra se

encuentra extensamente esparcido por toda Venezuela. Dicho carbón pertenece á la época oligocena. Los principales depósitos se encuentran al sur de Carúpano y cerca de los ríos Casani, Naricual, Capiricual, Querecual y Araguaita. En el Naricual el carbón de piedra contiene 1.25 por ciento de humedad, 38.43 por ciento de elementos volátiles, y 2.83 por ciento de ceniza. La cantidad de coke que produce es un 58.49 por ciento, y la potencia calorífica es 9,052.8 calóricos.”

DERECHO DE EXPORTACIÓN SOBRE EL GANADO.

El Presidente Provisional de los Estados Unidos de Venezuela, en uso de las atribuciones de que está investido por el Acuerdo de la Asamblea Nacional Constituyente, fechado el 28 de marzo del corriente año, decreta:

ARTÍCULO 1°. Se crea transitoriamente el impuesto nacional de ocho bolívares por cada res vacuna que se exporte para el extranjero, con excepción de las vacas.

ART. 2°. Por cada vaca horra que se exporte para el extranjero, se pagará el impuesto de veinte bolívares, debiendo los interesados solicitar del Ministerio de Hacienda permisos especiales para cada embarque.

ART. 3°. El presente Decreto empezará á regir desde su publicación en la “Gaceta Oficial,” y el Ministro de Hacienda queda encargado de reglamentarlo y cuidar de su ejecución.

ART. 4°. Dése cuenta al Congreso Nacional en sus próximas sesiones.

Dado, firmado, sellado con el Sello del Ejecutivo Nacional y refrendado por el Ministro de Hacienda, en el Palacio Federal de Caracas, á 26 de noviembre de 1901. Año 91° de la Independencia y 43° de la Federación.

CIPRIANO CASTRO.

DECRETO SOBRE DROGAS.

El Presidente Provisional de los Estados Unidos de Venezuela, en uso de las atribuciones de que está investido por el Acuerdo de la Asamblea Nacional Constituyente, sancionado el 28 de marzo del corriente año, decreta:

ARTÍCULO 1°. Las drogas, medicinas y productos químicos patentados, que se introduzcan por las Aduanas de la República, pagarán el derecho de sexta clase por kilogramo, peso bruto, quedando así comprendidos en dicha sexta clase del Arancel de Importación.

ART. 2°. El 50 por ciento del producto de este derecho, se destina al fomento de la Renta de Instrucción Pública.

ART. 3°. Quedan comprendido en este Decreto las drogas, medicinas y productos químicos que salgan del puerto de su procedencia, desde el día 10 inclusivo del presente mes.

ART. 4°. Los Ministros de Hacienda y de Instrucción Pública quedan encargados de la ejecución de este Decreto, correspondiendo al primero su reglamentación.

Dado, firmado, sellado con el Sello del Ejecutivo Nacional y refrendado por los Ministros de Hacienda y de Instrucción Pública, en el Palacio Federal de Caracas, á 6 de diciembre de 1901. Año 91° de la Independencia y 43° de la Federación.

CIPRIANO CASTRO.

BIBLIOGRAFÍA.

En esta sección del Boletín Mensual se tratará de los libros y folletos enviados á la Oficina de las Repúblicas Americanas, que se refieren á asuntos relacionados con los países de la Unión Internacional de Repúblicas Americanas.

El canje de publicaciones de Centro y Sud América puede efectuarse por conducto de la "Smithsonian Institution," Wáshington, D. C., por medio de las agencias de distribución que tiene en aquellos países, y que son las siguientes:

Argentina: Museo Nacional, Buenos Aires.

Bolivia: Oficina Nacional de Inmigración, Estadística y Propaganda Geográfica, La Paz.

Chile: Universidad de Chile, Santiago.

Colombia: Biblioteca Nacional, Bogotá.

Costa Rica: Oficina de Depósito, Reparto y Canje Internacional, San José.

El Salvador: Museo Nacional, San Salvador.

Guatemala: Instituto Nacional de Guatemala, Guatemala.

Honduras: Biblioteca Nacional, Tegucigalpa.

México: Todos los envíos gozan de la franquicia del correo.

Nicaragua: Ministerio de Relaciones Exteriores, Managua.

Paraguay: Oficina General de Informaciones y Canje y Comisaría General de Inmigración, Asunción.

Perú: Biblioteca Nacional, Lima.

Uruguay: Oficina de Depósito, Reparto y Canje Internacional, Montevideo.

Venezuela: Musco Nacional, Caracas.

“La América Central y del Sur,” es el título que llevan dos tomos de geografía y viajes que ha preparado A. H. KEANE, Miembro de la Real Sociedad Geográfica, publicados por la casa de STANFORD, de Londres, después de haberlos revisado cuidadosamente Sir CLEMENTS R. MARKHAM, Miembro de la Real Sociedad. El primer tomo trata exclusivamente de la América del Sur en tanto que en el segundo se trata extensamente de la América Central. La obra está profusamente ilustrada, habiéndose copiado los grabados y mapas de la obra titulada “Stanford’s Compendium of Geography and Travel.”

“De Buenos Aires al Iguazú: Crónicas de un viaje periodístico á Corrientes y Misiones.” El título que antecede indica la índole de un interesante libro escrito por el Señor DON MANUEL BERNÁRDEZ y publicada en Buenos Aires en 1901. Dicha obra contiene una relación amena y bien ilustrada de un viaje de Buenos Aires á las Caídas del Iguazú, que el autor opina que son la mayor maravilla de toda la América. Dice que son 40 pies más altas y 2,500 yardas más anchas que las del Niágara, y que sus alrededores son más pintorescos que los de estas últimas.

La edición correspondiente al mes de septiembre de 1901 de la “Revista Comercial é Industrial de Minas,” de Santiago, Chile, se consagra principalmente á hacer una descripción del proyectado ferrocarril desde Pedegua á Chincolco. Este número contiene asimismo un artículo conmemorativo muy apropiado del difunto presidente DON FEDERICO ERRÁZURIZ, cuya muerte, acaecida cuando estaba ya próximo á terminar su período presidencial, causó un duelo sincero en toda la República, y fué causa de que se recibieran pésames sentidos de todo el mundo civilizado.

La casa editora de E. P. DUTTON & Co., de Nueva York, anuncia lo que se dice ser el primer libro sobre el tabaco y su uso desde que apareció el de FAIRHOLT sobre el mismo tema en 1859, y dicho libro, escrito por W. A. PENN, lleva el título de “The Soverane Herbe.” La expresada obra resulta ser una historia completa de la planta, y ha de comprender otros muchos detalles nuevos que jamás se habían considerado en conjunto. Este asunto es de gran interés para todos los países americanos, puesto que la mayor parte de ellos cultivan el tabaco ya para el consumo doméstico, ya para la exportación, como materia prima ó elaborado.

La “Mining and Engineering Journal” correspondiente al mes de octubre de 1901 consagra un espacio considerable á un estudio de las

industrias mineras y metalúrgicas de México. Estudia la geología general del país y advierte que ésta indica haber abundantes depósitos de minerales metalíferos, principalmente oro, plata, plomo y cobre, y dice, además, que la faja de terresio que se extiende entre Chihuahua por el norte y Oaxaca por el sur es probablemente la región argentífera más rica del mundo entero. El artículo está acompañado de varias tablas, mapas y grabados, que no sólo comprenden las condiciones conocidas é indicadas de las minas sino que también trata de los métodos que se aplican para obtener los minerales.

Un Boletín del Departamento de Agricultura de los Estados Unidos, publicado recientemente, trata extensamente del cultivo de la piña y de las operaciones generales relacionadas con su producción en gran escala. Se hace una historia de la familia de la piña (*Bromeliaceæ*) y se comenta el hecho de su descubrimiento como un producto alimenticio utilizable que coincidió con la exploración de la América del Sur por los españoles. Cuba, Puerto Rico, las Islas Bahamas, Jamaica, San Salvador y Trinidad abastecen de piña á los Estados Unidos, y se dice que el área actual cultivada en este país aumenta continuamente. Este Boletín lo ha publicado el Departamento con el fin de estimular este ramo de cultivo de frutas, y trata de una manera adecuada de todos los hechos que se relacionan con el cultivo, la venta de la cosecha, el terreno, la recogida, el las embarque, los mercados, los precios, las abonos, la siembra, el riego, el envase y enfermedades de la planta.

BOLETIM MENSAL

DA

SECRETARIA DAS REPUBLICAS AMERICANAS,

União Internacional das Republicas Americanas.

VOL. XII.

JANEIRO DE 1902.

No. 1.

REPUBLICA ARGENTINA.

DESCOBRIMENTO DE OURO.

O “Montevideo Times” annuncia que se descobriu ouro nas areias da costa da Republica Argentina na vizinhança do Cabo das Virgenes. O Governo recebeu uma petição para exploração de ouro em uma area de 100,000 metros quadrados. Tambem solicitaram permissão para examinar uma secção da costa que fica entre o Cabo das Virgenes e Canadon Lucacho, assim como para explorar certas secções da Terra do Fogo onde se suppõe existir ouro.

SERVIÇO de VAPORES ENTRE BUENOS AIRES E OS PORTOS DO SUL.

O Consul Britannico em Buenos Aires informou ao seu Governo o estabelecimento pela HAMBURG SOUTH AMERICAN COMPANY de um serviço de vapores entre Buenos Aires e os portos do sul da Republica, inclusive Punta Arenas. Esta nova linha será denominada a “National Southern Line,” e fará viagens de 20 em 20 dias a partir de 15 de Outubro. Dous paquetes de 4,000 toneladas cada um serão empregados neste serviço. Diz-se tambem que até Maio de 1902, o Governo argentino offerecerá passagem gratis nos paquetes nacionaes a individuos e familias que comprarem terrenos nas regiões indicadas, assim como ao transporte de um numero limitado de animaes, carroças, instrumentos de agricultura, moveis e materiaes de construcção de cada familia.

BRAZIL.

POPULAÇÃO ESTRANGEIRA DO RIO DE JANEIRO.

Segundo estatisticas organizadas pelo Consul Geral da Allemanha em Rio, ha actualmente no Brazil 2,705,000 estrangeiros, divididos

por nacionalidades assim: Italianos, 1,300,000; Portuguezes, 800,000; Allemaes, 300,000; Hespanhões, 100,000; Polacos, 80,000; Francezes, 10,000; Inglezes, 5,000; Norte Americanos, 500; outras nacionalidades, 110,000.

NOVA LINHA TELEPHONICA.

Estabeleceu-se communicação telephonica entre Aracajú, capital do Estado de Sergipe e as cidades de Alagoas e Pilar.

AS NASCENTES DO JAVARY.

O Sr. Dr. CRULS, director do Observatorio do Rio e chefe da commissão brasileira nomeada para verificar, conjunctamente com a commissão boliviana, a posição da nascente do Rio Javary, tributario do Amazonas pela margem esquerda, regressou a Manãos com seus ajudantes, depois de ter concluido sua missão, descobrindo a commissão mixta a 70° 1' 22" de latitude Sul um affluente do Javary até agora desconhecido.

ESTADOS UNIDOS.

REVISTA DO ANNO DE 1901.

O anno de 1901 começou para os Estados Unidos de America, considerados em conjuncto e como nação, em circumstancias de uma prosperidade nunca igualada. As cifras arrojadas pela estatistica do commercio e da industria do paiz mereceram com razão o epitheto de “pavorosas” com que o Presidente MCKINLEY as qualificou em seu discurso em Buffalo, na Exposição Pan-Americana, o 5 de Setembro do mesmo anno. A produção agricola, a das florestas e as minas, a das fabricas de todas as classes, havia chegado a ser, como é, tão enorme, que bem pôde dizer o lamentado Presidente com mais que ordinaria previsão e prudencia, que o problema que havia de resolver, e o que demandava urgente e immediata attenção, era o de encontrar mercados para o excesso de tanta riqueza. “Não devemos descansar na imaginaria segurança de que poderemos sempre vender todo o que produzimos em excesso do que consumimos e comprar pouco ou nada.”

O consumo tinha augmentado em grande parte, porque, segundo o recenseamento do anno anterior, a população dos Estados Unidos tinha chegado a 76,303,387 habitantes, o que representa um augmento de 13,233,631 nos dez annos transcorridos desde 1890, ou seja mais de um milhão de habitantes por anno. Mas o problema estava em pé, sem embargo, e por reciprocidade ou de outro modo, era preciso cortar a plethora. Neste sentido se tem trabalhado com bastante exito durante o anno a que se refere esta revista.

O orçamento para o anno fiscal de 1901-1902, apresentado ao Con-

gresso em Dezembro de 1900, auctorizou o Governo a despende a quantia de \$626,741,762.24, divididos assim por ordem de departamentos: Departamento de Estado, \$2,125,148.76; Departamento do Thesouro, \$158,869,136.43; Departamento da Guerra, \$176,658,345.75; Departamento da Marinha, \$88,913,248.76; Departamento do Interior, \$170,799,705.09; Departamento de Correios, \$6,295,877; Departamento de Agricultura, \$4,669,050; Secção de Trabalhos, \$177,980; Departamento da Justiça, \$6,993,170; Corpo Legislativo, \$10,956,700.45, e Poder Executivo, \$283,400. Segundo dados publicados pelo Departamento do Thesouro no dia 1º de Fevereiro de 1901, a quantia de dinheiro em circulação nos Estados Unidos naquella data era \$2,190,780,213, contra \$2,003,149,355 na mesma data do anno de 1900. Se calcula que para o 1º de Fevereiro de 1901, por termo médio, a cada um dos habitantes dos Estados Unidos correspondia \$128.38, calculando que a população era de 77,195,000. No dia 2 de Janeiro de 1901, só as instituições bancarias da cidade de Nova York repartiram em dividendos a enorme somma de \$140,000,000, o que mostra um augmento de \$10,000,000 sobre os dividendos pagos no anno anterior.

O relatório das transacções do Departamento do Thesouro do exercicio findo em 30 de Junho de 1901, indica que em nenhuma epocha na historia do paiz têm tido as condições financeiras uma base mais solida. As rendas ordinarias para o anno ascenderam a \$587,685,337, que é \$20,444,485 em excesso das rendas do anno de 1900. O total das despesas foi de \$509,967,353, o que deixa um saldo de \$77,717,984. O fundo de reserva de \$150,000,000 em ouro tem sido conservado intacto. A circulação monetaria do paiz foi augmentada durante o anno por \$88,000,000 em moeda de ouro, \$37,000,000 em moeda de prata, e quasi \$16,000,000, em bilhetes e certificados. A circulação por cabeça em 1º de Julho de 1901, era \$28.

O volume do commercio exterior dos Estados Unidos durante o exercicio que terminou o 30 de Junho de 1901, excedeu ao do anno precedente em \$66,004,407. O valor total deste commercio em 1900-1901 foi de \$2,310,428,573, contra \$2,244,424,266 para o exercicio de 1899-1900. O valor das mercadorias de todas as classes que se importaram durante o exercicio de 1901, foi de \$822,673,016, comparado com \$849,941,184 para o exercicio anterior, o que mostra uma differença para menos de \$27,268,168, ou seja 2.21 por cento.

Essa diminuição parece ser devida mais á redução experimentada nos preços de algumas das mercadorias estrangeiras importadas, que á uma contracção no numero ou quantidade das mesmas. Isto se nota especialmente com respeito á seda crua, os couros e peles, lã e a borracha.

A borracha importada nos Estados Unidos em 1900-1901 representa um valor de \$28,455,383, contra \$31,376,867 em 1899-1900, a quantidade de libras introduzidas nos dous annos em comparação sendo de

55,275,259 e 49,377,138, respectivamente. Respeito da lã, as importações diminuíram de 155,928,455 libras, no valor de \$20,260,936 em 1900, a 103,583,505 libras no valor de \$12,529,881 em 1901.

O valor total das exportações dos Estados Unidos em 1901, subiu a \$1,487,755,557, e como o das do anno anterior foi só \$1,394,483,082, resulta que tem havido um augmento de \$93,272,475, que equivale a um 6.69 por cento. A apparente diminuição havida nas exportações de manufacturas, importando em \$23,342,583, é devida principalmente á falta de estatísticas que mostrem as exportações para Hawaï e Porto Rico, as quaes são calculadas em cerca de \$25,000,000, e consistiam principalmente de manufacturas. Ha sem embargo dous importantes artigos de exportação em que em vez de augmento resulta ter havido diminuição. Estes artigos são o cobre e os generos de algodão. Se suppõe que isto tem dependido de uma diminuição do pedido na Europa respeito do cobre, e da paralysação do mercado chino a respeito dos generos de algodão por causa da guerra.

Os seguintes quadros representam a estatistica official do commercio de importação e exportação dos Estados Unidos nos dous annos fiscaes de 1901 e 1900.

Estatistica official.		1901.	1900.
IMPORTAÇÕES.			
Productos alimenticios e animais vivos		\$222, 227, 898	\$218, 510, 098
Materia prima para usarse nas industrias nacionaes		269, 763, 404	302, 426, 746
Artigos manufacturados em todo ou em parte, introduzidos para servir como materiaes nas fabricas do paiz.....		79, 080, 716	88, 433, 549
Artigos promptos para o consumo		130, 662, 903	128, 900, 697
Artigos de uso voluntario, de luxo, etc.....		120, 938, 095	111, 670, 094
Total.....		822, 673, 016	849, 941, 184
EXPORTAÇÕES.			
Productos da agricultura		944, 059, 568	835, 858, 122
Productos das fabricas		410, 509, 173	433, 851, 756
Productos das minas		39, 267, 647	37, 843, 742
Productos das florestas.....		54, 312, 830	52, 218, 112
Productos da pesca		7, 743, 313	6, 326, 620
Miscellaneos		4, 561, 278	4, 665, 218
Total de productos nacionaes.....		1, 460, 453, 809	1, 370, 763, 571
Productos estrangeiros reexportados		27, 301, 748	123, 719, 511
Total geral.....		1, 487, 755, 557	1, 394, 483, 082

As importações que se fizeram livres de direitos em 1901 representaram o 43.27 por cento do total, enquanto que as de 1900 representaram o 43.21 por cento.

A importancia dos direitos aduaneiros arrecadados em 1901 ascendeu a \$238,786,741, enquanto que os cobrados o anno anterior só chegaram a \$233,164,871.

A importação de ouro em 1901 subiu a \$66,051,187, contra \$44,573,184 no anno anterior. A exportação do mesmo metal em 1901 representou \$53,179,137, contra \$48,266,759 no anno anterior. A importação de prata em 1901 foi por valor de \$36,384,041, contra \$35,256,302 do anno anterior. A exportação do mesmo metal em 1901 foi de \$64,285,180, contra \$56,712,275 do anno anterior.

O valor do algodão em rama, exportado pelos Estados Unidos, foi maior no exercício de 1901 que em todos os demais anteriores. Esse valor ascendeu no anno citado a \$313,673,443, contra \$241,832,737 no anno fiscal de 1900. A quantidade de algodão em rama, exportada em 1901, foi de 6,508,450 fardos, com um peso total de 3,330,890,448 libras, contra 6,090,144 fardos, com um peso total de 3,100,583,188 libras em 1900. Esta quantidade não foi tão grande, sem embargo, como nos annos de 1895, 1898 e 1899; porem, o preço por libra tem sido muito maior que o de qualquer outro anno. Durante os ultimos dez annos, as exportações de algodão têm dado a seus productores mais de \$2,000,000,000.

A quantidade de café entregue ao consumo na Europa e nos Estados Unidos no periodo dos dez annos transcorridos desde o 1º de Julho de 1891 até o 1º de Julho do 1901, representa um conjuncto de 124,277,610 saccas, o que dá para cada anno 12,427,761 saccas.

O café de todas as procedencias importado nos Estados Unidos durante a mesma decada representa a quantidade de 50,531,347 saccos, ou seja, por termo médio, de 5,053,135 saccas por anno. O café importado de 1900 a 1901 representa 5,843,883 saccas, das quaes, 4,722,919 saccas foram importadas do Brazil e 1,120,964 saccas dos demais paizes. O preço médio por libra do café importado nos Estados Unidos em 1901 foi como segue: café do Brazil, 6.75 centavos; café dos outros paizes da America do Sul, 8.13 centavos; café do Mexico, 9.54 centavos; café da American Central, 10.01 centavos; café das Antilhas, 7.91 centavos.

As mercadorias importadas pelos Estados Unidos em 1901 procedentes das Republicas latino-americanas e suas possessões coloniaes ou de toda a America salvo o Canadá e Porto Rico, foram no valor de \$212,599,851, contra \$180,591,514 no anno anterior, o que mostra um augmento em favor de 1901 de \$32,008,337, que equivale a um 17.72 por cento.

As exportações dos Estados Unidos para os mesmos paizes no anno que acaba de terminar representaram um valor de \$133,551,673, contra \$124,562,445, que foi o das do anno precedente, accusando por consequente um augmento de \$8,989,228, ou seja um 7.72 por cento.

O cacáo é já um dos artigos mais importantes que se importam da America latina. Durante o anno economico que terminou o 30 de Junho de 1901, as importações que os Estados Unidos fizeram ascenderam a 45,924,353 libras, avaliadas em \$6,472,829, comparadas com 41,746,872 libras avaliadas em \$5,657,283, durante o anno economico de 1900.

Durante o anno economico de 1901-1902 a importação de gomma elastica crua nos Estados Unidos ascendeu a 55,275,529 libras, contra 49,377,138 libras importadas em 1900 e 51,063,066 libras importadas em 1899. O valor total destas importações foi \$28,455,383 em 1901; \$31,376,867 em 1900 e \$31,707,630 em 1899.

A seguinte tabella mostra as importações deste artigo em 1901 e 1900, segundo as respectivas procedencias:

Paizes.	1901.		1900.	
	Libras.	Valor.	Libras.	Valor.
Grã Bretanha.....	7,461,673	\$4,241,959	8,611,061	\$5,562,580
Allemanha.....	1,673,231	794,534	1,750,498	892,346
Outros paizes da Europa.....	7,854,828	4,807,637	6,626,648	4,776,989
America Central.....	1,279,099	679,001	1,428,224	792,250
Mexico.....	297,691	135,767	420,612	201,326
As Antilhas.....	45,578	17,757	12,291	4,639
Brazil.....	34,900,198	16,963,533	28,175,787	17,954,490
Outros paizes da America do Sul.....	1,255,041	587,557	1,642,191	876,584
India.....	466,056	203,167	643,793	284,141
Outros paizes.....	42,131	24,471	66,033	31,522

Os Estados Unidos importaram bananas por valor de \$6,550,186 durante o exercicio de 1901, contra \$5,887,835 em 1900 e \$5,665,588 em 1899. Da America latina as importações foram como segue:

Paizes.	1901.
Da America Central.....	\$2,660,278
De Cuba.....	2,510,283
Das Antilhas britannicas.....	467,345
Da America do Sul.....	646,108
Total.....	6,284,014

O seguinte quadro mostra o valor total dos principaes productos tropicaes importados nos Estados Unidos durante o exercicio de 1901, com a proporção, até onde esta póde determinar-se pelos relatorios preliminares da Repartição de Estatistica do Departamento do Thesouro, procedente da America latina:

Productos Tropicoes.	Valor total das importações.	Valor das importações procedentes da America latina.
Assucar.....	\$87,551,974	\$48,304,691
Café.....	62,861,399	59,533,231
Borracha.....	28,455,383	18,383,615
Fibras.....	22,932,506	8,067,548
Fructas e nozes.....	19,584,612	7,734,775
Tabaco não manufacturado.....	16,289,324	9,873,038
Gommas.....	6,639,139	* 753,696
Cacao.....	6,472,829	5,645,469
Algodão não manufacturado.....	6,787,613	488,008
Especiarias.....	3,563,046	* 333,520
Madeiras:		
Madeiras de construcção.....	1,752,612	1,345,351
Toros.....	1,240,732	(b)
Madeiras de tinturaria.....	864,986	835,714
Seda não manufacturada.....	30,051,365	(c)
Chá.....	11,014,981	(c)
Arroz e farinha de arroz.....	2,296,337	-----
Cortiça e suas manufacturas.....	2,270,997	(b)
Raiz de alcaçuz.....	1,737,097	(b)
Casca de quina.....	1,025,546	(b)
Anil.....	1,402,894	(b)
Baunilha.....	875,229	(b)
Esponjas.....	717,550	(b)

* Não se pode obter estatisticas exactas.

^b Parte procedente da America latina.

^c Nenhuma parte procedente da America latina.

Durante o anno economico que terminou em 30 de Julio de 1901, os Estados Unidos importaram ouro e prata, em minerio, em barra e em moeda pelos valores que seguem. Estas importações vão comparadas com as do anno economico anterior:

Paizes.	Ouro.		Prata.	
	1901.	1900.	1901.	1900.
America Central	\$568, 953	\$668, 330	\$802, 426	\$1, 063, 834
Mexico.....	6, 348, 531	4, 505, 966	29, 480, 370	29, 723, 002
As Antilhas	646, 985	2, 636, 411	125, 290	233, 002
America do Sul	623, 308	436, 766	2, 646, 572	2, 002, 602
Total.....	8, 187, 777	8, 247, 473	33, 054, 658	33, 022, 500

Ao começar o anno de 1901, a estatística official mostra que os Estados Unidos occupavam o primeiro lugar entre as nações exportadoras do mundo. Ha menos de vinte e cinco annos que na lista das nações exportadoras correspondia aos Estados Unidos o quarto lugar. Em 1875 as exportações de artigos do paiz feitas pelos Estados Unidos, alcançaram a \$497,000,000, e em 1900 ascenderam a \$1,453,013,659, o que mostra um augmento durante aquelle periodo equivalente a 190 por cento. Comparando-se os valores das exportações dos Estados Unidos para 1900 e 1890, vê-se a seguinte porcentagem de augmento para a decada: As exportações para a Europa têm augmentado um 63 por cento; para Asia, um 163 por cento, Australia, um 132 por cento; Africa, um 416 por cento; Canada, um 108 por cento, e a America do Sul, um 20 por cento.

O exame do commercio de exportação dos Estados Unidos durante os primeiros nove mezes de 1901, comparado com o de outros paizes, mostra que a grande Republica todavia continua á cabeça das nações exportadoras. Não só têm sido maiores as exportações dos Estados Unidos em quanto a seu valor real, que as de qualquer outro paiz, mas a média mensal durante o anno de 1901 tem sido a maior até agora conhecida em igual periodo de tempo, havendo ascendido a \$113,935,-020 por mez. O excesso das exportações sobre as importações durante o periodo alludido foi de \$399,270,546. De grande importancia têm sido os embarques de milho dos Estados Unidos para paizes estrangeiros. As cifras para os ultimos tres annos fiscaes são: 1899, 174,089,488 *bushels*; 1900, 209,318,284 *bushels*; 1901, 177,817,965 *bushels*, enquanto que para o anno commum de 1901, até 1º de Setembro, se exportaram 1,124,301,529 *bushels*.

Embarcaram-se no porto de Nova York, em Janeiro de 1901, com destino á Republica Argentina, materiaes typographicos por valor de \$60,000.

As exportações de productos mineraes dos Estados Unidos têm augmentado enormemente nos ultimos annos. As exportações de ferro e de aço em 1900 ascenderam a \$130,000,000 em numeros redondos; oleos

mineraes de todas as classes, \$75,000,000; cobre, \$60,000,000; carvão de pedra e coke, \$22,000,000; ouro, \$52,787,523, e prata, \$59,272,668. De 1890 a 1900, as exportações de productos mineraes, não incluindo-se as de ouro e de prata, augmentaram um 218 por cento, ao passo que incluindo-se esses dous metaes preciosos, a proporção de augmento foi de 210 por cento.

Na reunião annual que celebrou em Moscow, Russia, a Associação de Manufactureiros e Comerciantes se resolveu enviar peritos russos para os Estados Unidos afim de estudar os methodos americanos e, si for possivel, applical-os ao desenvolvimento do commercio russo, havendo-se reconhecido no curso da discussão que os Estados Unidos eram a nação commercial e industrial mais grande e progressiva do mundo. Os periodicos industriaes e commerciaes da Europa advertem a proxima competencia do azeite de milho americano, nos mercados havendo-se reconhecido que, desde o ponto de vista industrial, o dito azeite tinha um grande valor e era um digno rival, das classes mais antigas e conhecidas de azeite de comer.

Um grande impulso tem sido dado recentemente ao commercio entre a costa occidental dos Estados Unidos e os paizes latino-americanos do lado do Pacifico, e um grande numero de vapores capazes de conduzir carregamentos de grande tamanho tem invadido o campo, que estava antes occupado exclusivamente por uma companhia. Uma companhia de vapores está construindo para este commercio um vapor de 5,000 toneledas, e outra companhia tem feito contractos para a construcção de quatro vapores de duas helices da velocidade de 18 nós e de 5,000 toneladas de capacidade, esses cinco vapores representando a somma de \$2,000,000 a \$3,000,000; porem, a perspectiva do desenvolvimento commercial com a America do Sul é tão brilhante que as duas companhias abrigam a esperanza de que receberão beneficios satisfactorios do desembolso do seu dinheiro.

Pode-se obter uma idea do grande desenvolvimento das industrias de ferro e aço, do facto de que os embarques médios por anno destes dous mineraes dos districtos mineiros do Lago Superior, durante os quatro annos corridos de 1897 a 1900 inclusive, se calculam em 60,000,000 de toneladas, emquanto que o total por quarenta annos atraz alcança a 110,000,000 toneladas, ou seja a média de 2,750,000 toneladas por anno. A producção do cobre tambem tem augmentado como resultado da grande procura deste metal nos ultimos annos, sendo de 67,163 toneladas metricas a producção no primeiro trimestre de 1901, contra 65,193 toneladas no mesmo periodo do anno anterior. Segundo dados officiaes a producção de carvão de pedra no anno de 1900 foi a maior que se tem visto, continuando os Estados Unidos em ser a nação que occupa o primeiro lugar entre as productoras deste artigo.

Houve um augmento na fabricação de materias para vias ferreas, notavelmente locomotivas e carros de aço. A manufactura de trilhos

de aço foi dado grande impeto devido ao facto de que a superioridade do artigo Americano tinha sido demonstrada em todos os mercados do mundo.

Como prova do grande merito em que se têm na Allemanha as machinas agricolas fabricadas nos Estados Unidos, o dito paiz nomeou um perito especial para visitar as fabricas de machinas agricolas nos Estados Unidos e fazer um estudo cuidadoso do emprego de ditas machinas com o objecto de introduzil-as mais geralmente na Allemanha.

A reunião annual da Associação de Manufactureiros de Seda da America se effectuou o 26 de Março de 1901, e os relatorios sobre a condição da manufactura de sedas e a procura destas, foram verdadeiramente animadoras. Em consequencia de haver augmentado notavelmente a procura de artigos de seda, desde o principio do presente anno, são varias as novas fabricas que se tem installado. Um dos mais notaveis factores do desenvolvimento industrial do paiz durante o anno tem sido a producção do petroleo, poços de enorme capacidade productora tendo sido excavados em diversas partes da Republica, notavelmente no Estado de Texas.

Os navios construidos nos Estados Unidos e officialmente enumerados pela Repartição de Navegação do Governo durante o anno fiscal que terminou o 30 de Junho de 1901, chegaram á cifra de 1,173, com 401,285 toneladas em bruto. Neste numero não se comprehendem os botes de canal, as embarcações sem mastros, etc. Um resultado deste tamanho não se tem visto nunca mais que duas vezes na historia do paiz, ou seja em 1854 e em 1855, em que se chegou a 583,450 toneladas.

O valor total dos productos mineraes de todas as classes que se produziram no paiz durante o anno de 1900, é calculado pelo Director da Repartição de Estudos Geologicos em \$1,070,108,889, ou seja mais do dobro do total em 1890, que foi de \$619,512,173. Quando se considera que o total em 1890 foi mais do dobro do de 1880, anno em que ascendeu a \$360,319,000, pode-se ter idea do enorme desenvolvimento havido nas duas ultimas decadas.

Entre os productos metallicos, o ferro em linguados occupa o primeiro lugar, sendo no valor de \$259,944,000 em 1900. O cobre, com uma producção avaliada em \$98,494,039, occupa o segundo lugar; o ouro, com um valor de \$79,322,281, occupa o terceiro lugar, segue-lhe a prata, com um valor de \$36,958,537. Os valores do chumbo, zinco e aluminio tambem mostram um augmento consideravel comparados com os de 1890.

Entre os productos não metallicos, o carvão de pedra é a mais importante, sendo o carvão betuminoso no valor de \$221,133,513, e o carvão anthracite, no de \$85,757,851. O carvão constitue o 59.3 por cento do valor total dos productos não metallicos. Dizem os relatorios officiaes da Repartição de Estudos Geologicos que existem bastantes territorios nos Estados Unidos ainda não explorados, sufficientes para abastecer o mundo de carvão por muitos annos.

A produção de algodão nos Estados Unidos, segundo as estatísticas do Departamento de Agricultura, para o anno de 1900-1901 é calculada em mais de 10,000,000 fardos. O cultivo do chá tem sido experimentado nos Estados Unidos por muitos annos em 1900. As plantações de chá da Carolina do Sul produziram 12 por cento mais que em 1899. Este producto vendeu-se a retalho por \$1 a libra, e em globo a preços que renderam ao Governo muito bons beneficios. O valor dos nove principaes productos agricolas dos Estados Unidos durante o anno de 1900 subiu á cifra de \$2,275,116,372, o que mostra um augmento de \$284,430,298 comparado com o anno de 1899. As fructas da California continuaram ganhando a supremacia nos mercados. A analyse chimica dos limões procedentes desta secção do paiz mostra que contêm certas qualidades que os fazem superiores aos limões estrangeiros.

Os relatorios mensaes relativos á condição da lavoura apresentados pelo Departamento de Agricultura, foram publicados no *BOLETIM MENSAL* regularmente durante o anno.

Em principios de Janeiro de 1901, se começou a obra de lugar por cabo as differentes ilhas do archipelago Philippino e o navio *Burnside* collocou 600 milhas de cabo.

Uma das importantes medidas que o Governo tomou durante o anno foi o estabelecimento de uma Repartição Nacional de Afinação de Pesos e Medidas Legaes. De grande importancia tambem foi a circular expedida pelo Commissario de Navegação, dando instrucções destinadas a assegurar estatísticas uniformes da tonelagem dos navios que entram e sahem dos portos dos Estados Unidos.

No periodico intitulado "Dun's Review," correspondente ao mez de Janeiro de 1901, appareceu um interessante artigo sobre o custo relativo da vida nos Estados Unidos na actualidade, comparado com o de ha quarenta annos. Tomando em consideração todos os artigos de consumo e a quantidade que necessita cada individuo resulta que no dia 1º de Janeiro de 1901 com \$78.60 se pode comprar o que em 1860 não se tivesse podido conseguir por menos de \$100. A riqueza em 1860 se calculou em \$513.93 por cabeça, enquanto que para o primeiro de Janeiro de 1900 se estimava em \$1,232.05. O valor dos productos das manufacturas, a agricultura, a pesca e as minas se calculou em 1860 em \$60.39 por cabeça, e em 1900 alcançou a \$238.86. Segundo estatísticas officiaes, a extensão das vias ferreas da Republica no dia 30 de Junho de 1900, foi de 193,345.78 milhas, ou seja um augmento de 4,051.12 milhas comparada com o anno anterior. O numero de empregados foi de 1,017,653, e o capital empregado nas vias ferreas foi de \$11,491,034,960.

Desde o mez de abril de 1901, os vapores das diversas companhias sul-americanas de vapores que fazem viagens regulares entre San Francisco e portos da America do Sul, têm tocado nos diversos portos de Costa Rica, Guatemala, Nicaragua e Salvador, e têm recebido a bordo

cargas a preços que tem sido vantajosos aos exportadores. Também se diz que os vapores regulares de Panamá estão trazendo carregamentos da America Central e uma grande quantidade de café produzido naquellas regiões, que até agora havia sido sempre transportado atravez do isthmo ou dando a volta ao Cabo de Horn, está agora levando-se para Nova York e a Europa por via de San Francisco.

No dia 1º de Maio, a Exposição Pan-Americana de Buffalo foi aberta ao publico, ainda que a inauguração official não realizou-se até o dia 20 do mesmo mez. Durante seis mezes a Exposição offereceu oppor-tunidades para o exame dos productos dos diversos paizes do Hemispherio Occidental, e acredita-se que foi a melhor exposição dos recursos de toda a America que até agora se tem realizado. Um factor importante da exhibição do Governo foi a colleção da Secretaria das Republicas Americanas organizada com o objecto de mostrar a magnitude de sua obra, desde os dias da sua criação.

Os premios adjudicados aos varios paizes que tomarun parte na dita exposição foram os seguintes:

Paizes.	Medalhas.			Menção honrosa.	Total.
	Ouro.	Prata.	Bronze.		
Argentina	19	21	25	22	87
Bolivia	4	3	7	15	29
Brazil	1	1	2	-----	4
Canada	13	23	17	34	87
Chile	51	98	110	160	419
Costa Rica	8	9	12	24	53
Cuba	38	55	57	82	232
Equador	22	39	55	69	185
Colónias francezas	3	11	13	5	32

Total	887	1,159	1,147	1,384	4,557

A CONDIÇÃO DAS COLHEITAS EM JANEIRO.

Segundo as estatisticas do Departamento de Agricultura, publicadas em Janeiro, a colheita de trigo nos Estados Unidos em 1901 foi, pela média, de 14.8 bushels por geira, comparado com 12.3 bushels em 1900 e 1899, e 13.3 bushels, a producção média dos ultimos dez annos.

A superficie que se acaba de semear de trigo de inverno se calcula em 32,000,000 geiras, ou seja um augmento de 5.6 por cento sobre a area calculada para o anno de 1900.

A area semeada de centeio de inverno é calculada em 1,250,000 geiras, o que accusa um augmento de 2.9 por cento sobre a area semeada em 1900.

O Departamento de Agricultura não tem recebido informações relativas á condição do trigo de inverno desde o 1º de Dezembro de 1901. Naquella data a condição deste cereal foi de 86.7 por cento, comparada com 97.1 por cento na mesma data de 1900.

PRODUÇÃO NACIONAL DE LÃ.

Segundo o relatório annual da Associação Nacional dos Manufatureiros de Lã, o numero de ovelhas nos Estados Unidos o 1º de Abril de 1901 era 41,920,900, comparado com 41,883,065, o numero existente no paiz o 1º de Janeiro de 1900, segundo o calculo feito pelo Departamento de Agricultura. A colheita total de lã este anno foi de 265,502,328 libras. Si a este se juntar o producto da lã arraneada—37,000,000 de libras—o producto total para 1901 será de 302,502,328 de libras, que representa um total de 126,814,690 libras de lã limpa. O peso médio do toirão foi de 6.33 libras, contra 6.46 libras em 1900.

A tosquia de lã de 1893 foi a maior jamais registrada, ascendendo a 348,538,138 libras, ou, depois de limpa, a 151,103,776 libras. A mais diminuta colheita havida nos ultimos annos foi a de 1897, que attingiu a 259,153,251 libras ou sómente a 111,661,581 libras de lã limpa. A colheita de 1901 é pouco superior á de 1888, quando a colheita total attingiu a 301,876,121 libras. O Departamento de Agricultura não fez o recenseamento das ovelhas nos rebanhos em 1º de Janeiro deste anno, como o fazia em annos anteriores.

CONSUMO DO ASSUCAR.

O consumo total do assucar nos Estados Unidos em 1900 foi de 2,219,847 toneladas, e em 1901 deveria attingir a 2,360,585 toneladas, baseando-se este calculo no augmento médio annual havido no consumo deste producto durante os ultimos dezanove annos que é de 6.34 por cento. Desta quantidade, 1,000,000 toneladas, em numeros redondos, serão fornecidas pela industria nacional, concorrendo a Luisiana com 350,000 toneladas; as fabricas de assucar de beterraba dos Estados Unidos com 150,000 toneladas; Hawaii, com 350,000 toneladas e Porto Rico, com 150,000 toneladas. O resto, 1,360,385 toneladas, procederá do estrangeiro pagando direitos de importação.

NÚMERO DE AGENCIAS POSTAES.

Ao terminar-se o exercicio findo em 30 de Junho de 1901, havia nos Estados Unidos 76,945 agencias postaes, sendo 208 de 1ª classe, 940 de 2ª classe, 3,318 de 3ª classe, e 72,479 de 4ª classe.

COMMERCIO ESTRANGEIRO NO MEZ DE NOVEMBRO DE 1901.

O resumo official do commercio exterior dos Estados Unidos no mez de Novembro, expedido pela Repartição de Estatistica do Departamento de Comercio Exterior, é o seguinte:

mento do Thesouro dos Estados Unidos, mostra que o total do commercio neste mez ascendeu a \$208,703,313, contra \$202,056,364 no mesmo mez de 1900. O valor das importações que se receberam nos varios portos da Republica em Novembro de 1901, foi de \$72,498,873, ou seja \$7,144,833 mais que em Novembro de 1900. O valor das exportações feitas durante esse mez foi de \$136,204,446, o que mostra uma diminuição de \$497,878 comparado com o do mesmo mez de 1900. Das importações feitas em Novembro de 1901, as que entraram livres de direitos representam um 45.44 por cento do total, contra 41.83 por cento no mesmo mez do anno anterior. O grande augmento havido nas importações foi devido quasi todo á materia prima que se usa nas industrias nacionaes. Os direitos aduaneiros cobrados em Novembro de 1901, montaram a \$19,526,377, contra \$18,550,297 para o mesmo mez de 1900.

As importações effectuadas durante os onze mezes findos em Novembro de 1901, foram avaliadas em \$800,426,231, contra \$760,452,507 em 1900, o que mostra um augmento de cerca de \$40,000,000. A importancia dos direitos aduaneiros que se cobraram durante esse periodo foi de \$224,833,333, contra \$219,264,909 nos mesmos mezes de 1900.

As exportações feitas em Novembro de 1901, indicam um augmento no valor dos productos da agricultura, das minas, da pesca e productos miscellaneos, assim como nos productos estrangeiros reexportados, mas uma diminuição no valor dos productos manufacturados comparado com o do mesmo mez de 1900. As exportações realizadas durante os primeiros onze mezes de 1901, foram avaliadas em \$1,328,186,131, contra \$1,332,056,242 no mesmo periodo de 1900. Essa apparente diminuição de \$3,870,111 se deve principalmente ao facto de que o valor das exportações para Hawai e Porto Rico incluiu-se nas estatisticas do commercio exterior dos Estados Unidos em 1900, o que não succede em 1901.

As importações de ouro feitas no mez de Novembro e nos primeiros onze mezes de 1901 se avaliaram em \$5,269,611 e \$49,808,291 respectivamente, comparadas com \$12,641,988 e \$49,808,291 nos mesmos periodos do anno anterior. As exportações de ouro nos periodos a que se tem feito referencia foram \$15,905,612 e \$52,598,928, respectivamente. As importações de prata que se fizeram em Novembro de 1901 foram avaliadas em \$2,796,532. As importações de prata feitas nos primeiros onze mezes de 1901 foram no valor de \$28,358,192. As exportações desse metal durante os periodos a que se tem feito referencia foram avaliadas em \$41,689,208 e \$50,914,826, respectivamente.

A classificação das importações e exportações durante o mez foi como segue, comparando-se os valores com os consignados durante o mesmo mez em 1900.

Classificação.	1901.	1900.
IMPORTAÇÕES.		
Productos alimenticios e animacs.....	\$16,351,215	\$20,127,014
Materia prima para indústrias nacionaes.....	25,870,811	19,195,143
Artigos manufacturados em todo ou em parte para usarem-se como material nas fabricas.....	8,489,764	6,650,112
Artigos promptos para o consumo.....	11,188,160	9,703,038
Artigos de luxo, etc.....	10,598,925	9,678,733
Total.....	72,498,873	65,354,040
EXPORTAÇÕES.		
Productos de agricultura.....	95,408,013	\$94,358,665
Productos de fabricas.....	30,154,895	32,281,487
Productos de minas.....	3,204,118	2,989,559
Productos de florestaes.....	3,895,061	4,179,186
Productos de pesca.....	1,418,817	1,666,635
Productos de miscellaneos.....	139,190	90,026
Total de productos nacionaes.....	134,220,094	134,965,558
Artigos estrangeiros reexportados.....	1,984,352	1,736,766
Total geral.....	136,204,446	136,702,324

HAITI.

A INDUSTRIA DO CAFÉ.

O Consul-geral da Belgica nas Antilhas ultimamente dirigiu ao seu Governo um relatorio sobre a industria do cafe em Haiti, do qual transcrevemos o seguinte:

As plantações de cafe de Haiti cobrem uma area de 50,000 hectares. A planta foi introduzida no paiz em 1715 e foi logo cultivada em grande escala. Ha poucas regiões onde se reúnem em maior gráo as condições essenciaes para o cultivo do cafe, que são fertilidade do solo, calor, humidade, etc. Diz-se que as collinas que são de 1,300 a 1,600 pes de altura, são especialmente apropriadas ao cultivo do cafe.

O seguinte quadro mostra as exportações de cafe que se effectuaram de 1894 a 1900, inclusive:

	Libras.		Libras.
1894-95.....	75,371,865	1897-98.....	67,437,593
1895-96.....	47,643,451	1898-99.....	61,622,184
1896-97.....	73,057,397	1899-1900.....	72,122,781

Todo o cafe exportado da Republica paga um imposto de exportação de \$3.86 $\frac{2}{3}$ por quintal.

MEXICO.

DESENVOLVIMENTO DA INDUSTRIA MINEIRA.

O "Bulletin Commercial," de Bruxellas, em um artigo sobre o Mexico, diz que a produçção das minas de prata do Mexico este anno será maior que a de qualquer anno anterior. Ainda que a exploração de

minas não mais é lucrativa nos Estados centraes, outr'ora tão famosos por suas riquezas, essa industria tem desenvolvido extraordinariamente na parte septentrional da Republica, especialmente no Estado de Chihuahua. Diz-se que o arraial de Parral que está situado alli é destinado a ser o mais importante de todo o Continente Americano.

As exportações de productos mineraes durante os primeiros onze mezes do exercicio de 1900-1901 (de 1º de Julho de 1900 a 31 de Maio de 1901) foram no valor de 91,000,000 pesos prata, o que representa mais de 65 por cento do total das exportações. O total das exportações realizadas durante esse mesmo periodo ascenderam a 137,000,000 pesos prata. Os productos mineraes que se exportaram consistiam quasi exclusivamente de ouro e de prata em minerio e em barra.

O valor das importações durante o periodo de que se trata ascendeu a 120,000,000 pesos prata. Como um numero consideravel destas minas pertencem a companhias estrangeiras, o valor recebido pelas exportações de prata não fica todo no Mexico, mas é distribuido na forma de dividendos aos accionistas francezes, inglezes e especialmente aos americanos.

PRODUÇÃO DA PRATA.

O correspondente do "Chicago Record-Herald" na cidade do Mexico, referindo-se á produção da prata na Republica do Mexico, diz que dos \$112,205,742, moeda americana que representam a produção de prata do mundo em 1900, \$35,576,900 correspondem á produção dos Estados Unidos e \$34,269,494 á do Mexico. Diz tambem que a quantidade de prata que se cunhou durante o exercicio que terminou em 30 de Junho de 1901, foi no valor de \$18,290,640, ao passo que as exportações de prata foram avaliadas em \$56,814,552, o que faz uma produção total de \$75,105,392 em moeda mexicana.

URUGUAY.

COLHEITA DE CEREAE.

A "Review of the River Plate" diz que a colheita de trigo do Uruguay em 1898-99 foi de 194,966 toneladas, o que equivale a 710 kilogrammas por hectare. Em 1899-1900, a colheita de trigo foi de 187,553 toneladas, o que representa uma produção de 570 kilogrammas por hectare. A area plantada de milho foi de 145,668 hectares. A produção desse cereal foi de 77,093 toneladas, ou 528 kilogrammas por hectare. Segundo a dita publicação, o anno passado foi muito desastroso para o Uruguay, pois só exportou 319 toneladas de trigo e

10,000 toneladas de milho, contra 37,401 toneladas de trigo e 472 toneladas de milho em 1900. As exportações de farinha de trigo feitas durante os primeiros oito mezes do anno foram de 20,599 saccos, dos quaes 12,065 saccos foram enviados para o Brazil, 8,405 saccos para o Chile e 120 para as Maluinhas.

VENEZUELA.

DEPOSITOS DE CARVÃO.

O Sr. E. CORTESE, um perito mineiro da Europa, em um artigo publicado no "Mining Journal" de Londres, diz que o carvão encontra-se distribuido em toda a parte de Venezuela. É invariavelmente do periodo Oligoceno. Os centros principaes de carvão ficam ao sul de Carupano, nos rios Casani, Naricual, Capiricual, Querecual e Araguaita. O carvão de Maricual contem 1.25 por cento de humidade, 38.43 por cento de substancias volateis, e 2.83 por cento de cinzas. Dá 58.49 por cento de coke e o poder calorifico é de 9,052.8 calorias.

UM SUBSTITUTO DA BORRACHA.

O "Scientific American," correspondente a 30 de Novembro de 1901, diz que os rebentos da planta denominada "greasewood," que cresce nas Montanhas Rochosas, contem um succo lacteo e a madeira secca contem uma gomma resinosa que é soluvel em bisulphito de carbono e em outros dissolventes de gomma elastica já conhecidos. Dous inventores descobriram um methodo para fazer gomma elastica artificial do sumo do rebento de dita planta. A planta é esmagada entre cylindros, por meio dos quaes se desprende a casca e se tritura a fibra lenhosa das espigas maiores. Então toda a massa se colloca dentro de uma vasilha, a qual se agita mechanicamente e se submette á acção do bisulphito de carbono, a naphtha ou outro dissolvente de gomma elastica. Depois de submetter-se algumas horas á acção do dissolvente, applicando-se-lhe o calor, si fôr necessario, o liquido se passa por um filtrador. Então o dissolvente liquido e a gomma que contem se collocam em uma vasilha cerrada e se extrahe o dissolvente volatil por meio do calor. Depois a massa de gomma que se ha de volatilizar no alambique se lava com agua quente e se passa varias vezes pelos cylindros. A gomma resultante tem uma côr morena, é muito flexivel, elastica e combustivel, e parece possuir os caracteristicos da gomma elastica,

salvo que tem um cheiro um tanto balsamico que se differença do cheiro da borracha que se usa no commercio. A gomma pode vulcanizar-se accrescentando-lhe uma quantidade de enxofre, o mesmo que se faz com a gomma elastica que se conhece no commercio.

BIBLIOGRAPHIA.

Nesta secção do *Boletim Mensal* se tratará dos livros e folhetos enviados á Secretaria das Republicas Americanas que se referem a assumptos de interesse aos paizes da União Internacional das Republicas Americanas.

“World Politics at the End of the Nineteenth Century, as Influenced by the Oriental Situation” (Politica do Mundo no fim do Seculo XIX, como influenciada pela Situação Oriental), pelo Dr. PAUL S. REINSCH, Professor substituto de Sciencia Politica da Universidade de Wisconsin (publicado pela casa editora de MACMILLAN, Nova York, 1900. Este volume pertence á serie intitulada “Citizens’ Library of Economics, Politics, and Sociology,” editada pelo Dr. RICHARD T. ELY, Director da Escola de Economia Politica e Historia da Universidade de Wisconsin. Na introduccão deste livro faz-se uma resenha geral dos diversos elementos da vida intellectual e economica que influem na politica moderna. A segunda parte do livro trata do que o auctor considera como o verdadeiro ponto de interesse na actual politica internacional, isto é, a questão chinesa. A terceira parte revista as consequencias da situação chinesa sobre a politica da Europa. A quarta parte é consagrada á politica imperial allemã e á colonisação allemã na America do Sul, e a quinta parte contem “algumas observações sobre a posição dos Estados Unidos como factor na politica oriental.” Cada assumpto é tratado de modo antes suggestivo do que detalhado. A questão chinesa concentra toda a attenção do auctor. Um mappa do Imperio Chinez é inserido no frontispicio. O livro em seu conjuncto constitue um volume em 12 de 366 paginas.

“The Mineral Industry, its Statistics, Technology and Trade” (A Industria Mineira, sua Estatistica, Technologia e Commercio) organizada e editada por RICHARD P. ROTHWELL, ex-redactor do “Engineering and Mining Journal,” e concluida por JOSEPH STRUTHERS, Ph. D., Universidade de Columbia, Nova Nork. O volume IX desta valiosissima publicação, que sahio á luz em 1901, contem as estatisticas, technologia e commercio da industria mineira dos Estados Unidos e outros paizes até o fim do anno de 1900. Segundo esta obra, o valor total do producto das minas dos Estados Unidos em 1900 foi de \$1,365,608,583, comparado com \$1,218,214,637 em 1899, o que mostra um augmento de \$147,393,946 em favor de 1900. Dão-se as estatisticas da produção de mineraes de varios outros paizes, entre os quaes figuram o Chile

e o Mexico. O volume contem tambem varios artigos especiaes sobre assumptos de mineração, os quaes foram escriptos por pessoas de alta reputação profissional.

“A Text-book of Commercial Geography” (Um Livro de Geographia Commercial para Uso das Escolas) por CYRUS C. ADAMS, publicado por D. APPLETON e COMPANHIA, 1901, Nova York. Neste livro o auctor trata das feições dominantes do commercio e da industria que devem ser mais firmemente gravadas no espirito do estudante. Neste livro o auctor salienta as influencias geographicas e outras, taes como invenções, subvenções ou impostos governamentaes, melhoramentos dos productos, dos processos industriaes e meios de transporte, sobre o commercio. Sómente as principaes mercadorias são tratadas. Cada producto é considerdo em relação com o commercio do paiz de que é originario, ou em que sua manufactura é uma das principaes industrias. Naturalmente, os productos dos paizes latino-americanos recebem mais attenção, seis capitulos sendo consagrados a elles. A obra contem 16 illustrações e grande numero de mappas e cartas.

BULLETIN MENSUEL

DU

BUREAU DES RÉPUBLIQUES AMÉRICAINES,

Union Internationale des Républiques Américaines.

VOL. XII.

JANVIER 1902.

No. 1.

RÉPUBLIQUE ARGENTINE.

DÉVELOPPEMENT ÉCONOMIQUE.

Les données suivantes ayant trait au développement de la fortune publique de l'Argentine, ont été fournies, au cours d'une entrevue, par M. GARCÍA-MÉROU, ancien Ministre de l'agriculture et actuellement Envoyé extraordinaire et Ministre plénipotentiaire de cette République à Washington.

Les pays argentins, dit M. MÉROU, semblent appelés à un développement rapide. Ils attirent beaucoup d'immigrants; leur climat est salubre et la configuration du pays rend les communications faciles.

Les produits de la République Argentine sont très variés car elle contient trois zones: les zones torride, tempérée et froide. Les immenses prairies naturelles des provinces de Buenos-Ayres, Santa-Fé, Cordoba, Entre-Rios, Corrientes, et le territoire de Central Pampa servent à l'élevage d'animaux domestiques de tout genre.

L'espèce bovine est représentée par 22,000,000 de têtes, l'espèce chevaline par 5,000,000 et l'espèce ovine par 85,000,000.

L'Argentine produit plus de moutons que l'Australie; elle exporte 240,000 tonnes de laine par an.

Sur le territoire de la République, 4,835,620 hectares sont consacrés à la culture du froment, du seigle, de l'alfalfa, du maïs, de l'orge, du tabac, de la canne à sucre et des vignes.

En 1899, la statistique donnait la répartition suivante: Froment, 2,049,683 hectares; seigle, 1,244,182; alfalfa, 713,091; orge, 54,574; canne à sucre, 55,469; tabac, 15,796; vignobles, 33,469 hectares.

Le reste (581,543 hectares) est consacré, en général, à la culture du maïs, des arbres fruitiers et des légumes de toute espèce.

On ne rencontre presque plus, dans le pays, de bétail vivant à l'état sauvage; on améliore la race chaque année par l'introduction de produits estimés en Europe, tels que les Durham, Shorthorn, Hereford, Polled Angus, Jersey, etc. Cette importation a atteint en 1899 le chiffre de 2,187 têtes de bétail choisi. Ces produits sont dispensés de tout droit d'entrée.

Cette même année, le total des exportations de produits agricoles s'est élevé à 115,546,906 piastres, se répartissant comme suit: animaux vivants, 9,027,996; produits animaux, 102,409,004; produits d'animaux préparés, 3,542,077; autres produits dérivés, 567,829 piastres.

Le chiffre total des exportations de l'exercice précité a atteint un peu plus de 184,000,000 de piastres; celui des importations a été de 116,000,000, ce qui donne en faveur de la République Argentine une balance de 70,000,000.

En 1899, les vingt lignes ferrées en exploitation atteignaient une longueur de 16,564 kilomètres, et dans quelques années, quand tous les travaux projetés auront pu être exécutés, elles auront un développement de 27,207 kilomètres. Sur ces vingt lignes, seize sont anglaises et quatre appartiennent au gouvernement argentin.

L'usage des tramways se généralise dans les villes de l'Argentine. Les lignes urbaines et suburbaines atteignent une longueur de plus de 1,000 kilomètres. Le capital qui y a été consacré s'élève à plus de 200,000,000 de francs et il est presque tout entier d'origine anglaise.

Quelques petites lignes de tramways électriques à Buenos-Ayres sont allemandes.

Les lignes télégraphiques ont un développement de 15,074 kilomètres et représentent un capital engagé de 25, 890,000 francs.

On trouve dans l'Argentine d'immenses forêts dans les provinces de Salta, Santiago del Estero, Corrientes, ainsi que sur les territoires nationaux de Chaco, Formosa et Misiones. Elles produisent des essences très variées, fournissant en général des bois très résistants. Ils sont tous de nature à être employés dans les travaux de construction et d'ébénisterie.

Durant la période de 1895-1899, environ 8,000 tonnes de bois ont été exportées, et le chiffre de la production a beaucoup augmenté pendant l'exercice 1900.

L'exploitation de ces régions boisées est facilitée par un système de rivières qui se déversent toutes dans le Rio Parana, lequel va former avec le Rio Uruguay le Rio de la Plata.

Des sources de pétrole ont été découvertes dans la province de Mendoza et l'on a signalé, sur plusieurs points du territoire, l'existence de gisements de charbon.

LES RÉCOLTES DE L'EXERCICE 1901-2.

D'après des données officielles communiquées par la Légation de Belgique à Buenos-Ayres, au "Bulletin Commercial," la superficie des terrains ensemencés pendant la saison courante s'élève à 3,296,066 hectares pour le blé et à 782,880 hectares pour le lin.

Ces chiffres se décomposent comme suit, pour les différentes régions:

Provinces.	Froment.	Lin.
	<i>Hectares.</i>	<i>Hectares.</i>
Buenos-Ayres	972, 736	192, 479
Santa-Fé	1, 383, 603	435, 996
Cordoba	583, 198	88, 205
Entre-Rios	281, 529	66, 200
Autres provinces et territoires (chiffre approximatif)	75, 000

Le total desensemencements de blé a diminué de 83,000 hectares, en comparaison de l'année dernière (1900).

Quant au lin, l'impulsion considérable qui a caractérisé sa culture en 1900 ne s'est pas arrêtée, ainsi que l'indiquent les chiffres suivants: 258,412 hectares cultivés en 1899; 607,352 en 1900, et 782,880 en 1901.

La grande sécheresse du mois d'août et du commencement de septembre a causé des dommages importants aux champs en général. Vers la fin de ce dernier mois, heureusement, les pluies sont venues changer, dans une certaine mesure, les pronostics défavorables que l'on faisait au sujet des prochaines récoltes. Dans plusieurs régions, on a pu faire de nouvelles semailles et dans quelques-unes on semait encore à la fin du mois de septembre.

Pour ce qui regarde les pronostics traduits en chiffres au sujet des récoltes de la saison en cours, voici l'estimation d'une des plus importantes maisons d'exportation de Buenos-Ayres: blé, rendement total, 1,600,000 tonnes, dont 800,000 pour l'exportation; graine de lin, rendement total, 200,000 tonnes, dont 180,000 pour l'exportation.

DÉCOUVERTE D'OR.

D'après le journal "Montevideo Times," on aurait découvert de l'or dans les sables de la côte de la République Argentine, près du cap Virginie. Une pétition a été adressée au gouvernement demandant l'autorisation de faire des recherches dans ces environs sur un espace de 100,000 mètres carrés. Des permissions semblables ont été demandées pour explorer la côte située entre le cap Virginie et Canadon Lucacho ainsi que certaines régions de la Tierra del Fuego, où l'on pense y trouver des minerais.

BOLIVIE.

TRAITÉS AVEC LES ETATS-UNIS.

Une dépêche de la Paz, du 9 décembre 1901, dit qu'à cette date le Congrès National de Bolivie a approuvé deux traités avec les Etats-Unis. Le premier est un traité d'extradition et le second pourvoit à l'échange de mandats-postaux entre la Bolivie et les Etats-Unis.

NOUVEAU TRAMWAY.

Le journal "Buenos-Aires Handels-Zeitung" dit que l'on est en train de construire un nouveau tramway à Cochabamba qui reliera cette ville à Quillo-Collo. Il sera fini dans un an. Cette publication ajoute que l'on a projeté de construire une autre ligne qui ira jusqu'aux provinces de Del Valle et d'Arami.

BRÉSIL.

CONVENTION AVEC LA RÉPUBLIQUE ARGENTINE POUR LA PROTECTION DES MARQUES DE FABRIQUE.

Le 30 octobre dernier, une convention pour la protection des marques de fabrique fut signée à Rio-de-Janeiro, par M. le Dr. MANOEL GOROSTIAGA, Ministre Plénipotentiaire de la République Argentine à Rio-de-Janeiro et le Dr. OLYNTHO DE MAGALHÃES, Ministre des Affaires Etrangères du Brésil.

D'après les clauses de cette convention, les manufacturiers et les marchands du Brésil et de la République Argentine qui ont des marques de fabrique enregistrées dans leurs pays respectif, conformément aux règles prescrites par la loi, pourront aussi les faire enregistrer dans l'autre pays, en se conformant aux lois et règles du pays dans lequel l'enregistrement sera effectué.

Les ratifications de ce traité seront échangées aussitôt que possible à Rio-de-Janeiro, lequel cessera d'être en vigueur six mois à partir de la date où l'une ou l'autre des deux parties contractantes notifiera l'autre du désir de le terminer.

RAPPORTS DES COMPAGNIES D'EXPLOITATION DE MINES D'OR.

Le rapport de la "St. John del Rey Mining Company" pour les six mois finissant le 31 août 1901, fut publié à une réunion des directeurs de la compagnie qui eut lieu à Londres le 5 décembre 1901. D'après ce document, 80,487 tonnes de minerai auraient été extraites de la mine "Morro Velho" pendant cette période, contre 77,872 tonnes pen-

dant les mêmes six mois de 1900. Étant donnée la diminution du rendement d'or pur par tonne, le bénéfice, pendant le premier semestre de l'année, ne se montait seulement qu'à £41,693, soit £80,000 de moins que pendant la même période de 1900. Durant les six mois de 1901 dont il s'agit dans le rapport, la valeur moyenne d'or pur, par tonne, se montait à 33s. 5d., contre une moyenne de 42s. 6d. par tonne pendant la période correspondante de l'année précédente.

La dixième réunion des actionnaires de la "Ouro Preto Gold Mines of Brazil, Limited," eut lieu à Londres en décembre. Le rapport des auditeurs montre que les opérations de la compagnie ont produit un bénéfice de £5,107. 4s. 5d., qui est une somme considérablement moins forte que les gains des douze mois précédents. Cette diminution fut due à la hausse du taux de la Bourse.

La quantité de minerai broyé était de 64,082 tonnes, contre 65,644 tonnes pendant l'année précédente. La valeur d'or produit en 1901 se montait à £87,037, contre £88,247, 2s. 7d. en 1900.

LE COMMERCE DU CIMENT.

D'après les renseignements communiqués par la Légation de Belgique à Rio-de-Janeiro au "Bulletin Commercial" de Bruxelles, sur le commerce du ciment au Brésil et spécialement à Rio-de-Janeiro et dans les Etats de Minas Geraes, Espirito Santo et Bahia, on évalue l'importation annuelle du ciment au Brésil à environ 26 millions de kilogrammes.

La consommation du ciment est considérable dans ce pays, où l'usage de ce produit est général; on l'emploie pour les trottoirs, les cours intérieures, les escaliers, les corridors, etc.

Des travaux importants pour l'assainissement, l'éclairage électrique, la traction électrique, les quais, vont être exécutés dans les principales villes, entre autres à Rio-de-Janeiro, Saint-Paul, Bahia, Pernambuco, Belem de Para et Manáos. La demande de ciment va sans doute augmenter.

L'industrie nationale est fort peu développée; une seule fabrique mérite d'être citée, celle de Radovalho, dans l'Etat de Saint Paul.

La vente de ce produit se fait généralement à 90 jours, avec 2 pour cent d'escompte.

Pendant l'année 1900, les importations à Rio de Janeiro ont été comme suit:

Pays de provenance.	Barils.
Belgique	122,387
France	818
Allemagne	17,144
Angleterre	3,924
Divers	424
Total	144,387

D'après une information donnée récemment par le "Diario Official," l'importation du ciment dans tout le Brésil, pendant le premier semestre de 1901, aurait été de 12,743,096 kilogrammes, et pendant le mois de juin de 3,064,697 kilogrammes.

Les droits d'entrée sont fixés de la façon suivante par le tarif des douanes de 1897, actuellement en vigueur:

Ciments romains ou Portland et similaires bruts ou en poudre, 20 reis par kilogramme; la tare est de 10 pour cent en barils ou caisses; en sacs, poids brut pour net.

Carreaux en ciment unis ou de couleur dits mosaïques, avec ou sans incrustations de marbre, par mètre carré, 3,200 reis; la tare est la même que pour les ciments.

Il n'y a aucune maison d'importation de ciment dans cet Etat. Le ciment y est introduit par les importateurs de Rio de Janeiro. Aucune marque ne jouit d'une préférence absolue. Les négociants achètent à celui qui leur offre le plus d'avantages sous le rapport du prix et du crédit. Il n'existe non plus aucune statistique sur les quantités importées.

Les importations de ciment à Bello Horizonte (capitale de l'Etat) pendant une période de sept mois et demi, c'est-à-dire depuis le mois de mars, 1901, jusqu'au 14 octobre, 1901, ont atteint le chiffre de 1,300 barils. Au 15 octobre 1901, le ciment était vendu en détail de 20 à 21.50 milreis le baril.

La marque la plus demandée, parce qu'elle est la moins chère, est l'Aigle noir (Aguia preta).

Il est difficile, faute de statistiques, de connaître la quantité de ciment qui entre dans l'Etat de Saint Paul. Pour donner une idée de l'importance de la consommation, il suffira de dire que non seulement la ville de Saint-Paul, mais aussi la plupart des villes de l'Etat de ce nom, s'occupent actuellement de l'établissement des égouts, pour lesquels on emploie une grande quantité de ciment. Les trottoirs, les cours intérieures des maisons, les escaliers, les corridors sont tous faits en ciment.

Les pays de provenance sont la Belgique, l'Allemagne (marque Germanie), l'Angleterre (marque Portland) et la France (de Boulogne).

Presque toujours on demande des ciments de première qualité et à prise rapide.

Plusieurs essais ont été faits en vue de la production de cet article dans l'Etat. La fabrique RADOVALHO produit un ciment excellent, mais en très petite quantité. Il paraîtrait que cette affaire ne peut pas prendre plus de développement, parce qu'elle ne possède pas assez de carrières.

L'importation de ciment dans l'Etat de Bahia a diminué à cause de la crise générale.

En 1900, les entrées ont été comme suit: de Hambourg, 8,155 barils;

d'Anvers, 3,925; de Londres, 2,200; de Liverpool, 250 barils. Jusqu'au 15 octobre, 1901, le port de Hambourg seul a envoyé 2,549 barils.

L'usage du ciment est général pour les constructions et les canalisations.

La qualité préférée est la moyenne: elle doit avoir une force de résistance à la tension de 25 kilogrammes après sept jours et 40 kilogrammes après vingt-huit jours, par centimètre carré.

La consommation du ciment dans l'Etat d'Espirito Santo est relativement très faible. On peut évaluer à environ 3,500 à 4,000 barils la moyenne annuelle de l'importation dans tout l'Etat.

Toutefois dès que la situation économique et financière se sera améliorée, la reprise des travaux publics et particuliers donnera lieu à une augmentation sensible de la consommation du ciment.

Les marques allemandes prédominent jusqu'à présent.

Il en est du ciment comme de la majeure partie des articles allemands qui se consomment à Victoria; leur préférence s'impose aux importateurs à cause des facilités du transport maritime, certaines lignes de Hambourg faisant escale dans ce port. La question du fret est la plus importante, car le fret vapeur équivalant à peu près au double du coût de la marchandise. Et la preuve en est qu'on importe du ciment, même des Etats-Unis, chaque fois qu'un voilier, venant de New York, fait escale à Victoria.

CRÉATION D'UNE COMPAGNIE DES DOCKS À RIO-DE-JANEIRO.

Le "Diario Oficial" brésilien du 8 novembre dernier, a publié le texte d'un décret autorisant l'organisation à Rio-de-Janeiro d'une Compagnie des Docks.

Les articles XV, XVI et XVII de ce décret visent la rémunération qui sera donnée à la compagnie pour les services qu'elle rendra à la navigation et à l'importation, c'est-à-dire:

1°. Des taxes identiques à celles que perçoit la Compagnie des Docks de Santos;

2°. A partir du 1^{er} janvier et pendant quarante ans, une taxe qui ne pourra pas être supérieure à 2 pour cent de la valeur de l'importation, et qui sera calculée de façon à assurer un intérêt de 6 pour cent aux capitaux engagés dans l'entreprise. La douane ne donnera libre pratique aux navires ou libre circulation aux marchandises que lorsque ces taxes auront été acquittées.

CHILI.

ADJUDICATION DE PAPIER.

Le Ministre des finances demande des offres pour la fourniture de 4,000 rames de papier timbré, de 500 feuilles chacune, pendant les années 1903 et 1904.

Les offres seront examinées le 15 mai 1902 par une commission formée du président du Tribunal des comptes et des directeurs du Trésor et de la comptabilité.

POSE D'UN CÂBLE.

Le gouvernement chilien se propose de faire établir un câble destiné à relier Punta Arenas à Puerto Montt. Les soumissions seront reçues aux légations chiliennes à Londres, Paris, Berlin et Rome, où les intéressés pourront s'adresser pour prendre connaissance des conditions de l'entreprise et des cahiers des charges.

ÉTATS-UNIS.

REVUE DE L'ANNÉE 1901.

L'année 1901 commença aux Etats-Unis d'Amérique, considérés ensemble comme une nation, avec les évidences d'une prospérité sans égale. D'après les statistiques du commerce et de l'industrie du pays, cette prospérité mérite l'épithète "d'effrayante" que M. le Président McKINLEY lui donna dans le discours qu'il prononça le 5 septembre à l'Exposition Pan-Américaine. Dans toutes les branches de l'industrie, l'avancement constaté a été surprenant, les produits de toutes natures ont été si abondants que l'on peut dire avec le regretté Président que le problème à résoudre et qui demandait une solution immédiate a été de trouver des marchés pour l'excédent d'une aussi grande production. "Nous ne devons pas nous laisser aller à l'idée que nous pouvons toujours trouver un débouché pour nos produits; ce que nous produisons en plus de ce que nous consommons doit trouver des marchés à l'extérieur."

La consommation a augmenté en rapport avec la population des Etats-Unis, qui, d'après le recensement de l'année précédente, se montait à 76,303,387 habitants, représentant une augmentation annuelle de 1,000,000 d'habitants. Mais le problème est encore à résoudre, et soit par réciprocité ou n'importe quel autre moyen il faut éviter un encombrement. On a travaillé dans ce sens avec grand succès pendant l'année en question.

Le budget pour l'année fiscale 1901-2, soumis au Congrès au mois de décembre 1900, se montait à \$626,741,762.24, réparti de la façon suivante entre les différentes branches de l'administration: Ministère des Affaires Etrangères, \$2,125,148.76; Ministère des Finances, \$158,869,136.43; Ministère de la Guerre, \$176,658,345.75; Ministère de la Marine, \$88,913,248.76; Ministère de l'Intérieur, \$170,799,705; Ministère des Postes, \$6,295,877; Ministère de l'Agriculture, \$4,669,050; Bureau du Travail, \$177,980; Ministère de la Justice, \$6,933,170; ven-

dant que les crédits alloués aux branches des pouvoirs exécutifs et législatifs se montaient respectivement à \$10,956,700.45 et \$283,400.

D'après un rapport publié le 1^{er} février 1901 par le Ministère des Finances, le total de la monnaie en circulation se montait à cette date à \$2,190,780,213, contre \$2,003,149,355 à la même date de 1900.

Le rapport concernant les transactions du Ministère des Finances pendant l'année fiscale finissant le 30 juin 1901, indique que, jamais auparavant, les finances de la République n'ont été dans d'aussi bonnes conditions. Les revenus ordinaires se sont montés, pendant l'année, à \$587,685,337, soit \$20,444,485 de plus que ceux de l'année 1900, considérés cependant comme étant les plus forts qui aient jamais été produits antérieurement. Le total des dépenses se montait à \$509,967,353, laissant un surplus de \$77,717,984. La réserve d'or de \$150,000,000 n'a pas été touchée et la monnaie en circulation dans le pays a augmenté de plus de \$88,000,000 en or, \$37,000,000 en monnaie d'argent et près de \$16,000,000 en billets de banque. La circulation par tête était au 1^{er} juillet 1901, de \$28.

Un rapport concernant les institutions monétaires de Porto-Rico fut publié dans le BULLETIN MENSUEL du mois de février 1901, page 344.

Pendant l'année fiscale finissant le 30 juin 1901, le total du commerce extérieur a dépassé de \$66,004,407 celui de l'année fiscale antérieure. Le total général pour l'année 1901 se montait à \$2,310,428,573, contre \$2,244,424,266 en 1900. Pendant l'année fiscale 1900, la valeur des marchandises, de toutes sortes, importées était de \$322,673,016, contre \$349,941,184, valeur des importations pendant les douze mois antérieurs, soit une diminution de \$27,268,168 ou d'environ 3.21 pour cent. La réduction dans la valeur des importations s'est fait remarquer principalement dans la soie écrue, les peaux et les cuirs, la laine et le caoutchouc, et dans la plupart de ces articles la diminution de valeur a été en partie due à la baisse des prix plutôt qu'à la réduction des quantités. Par exemple, en 1901, la valeur des importations de caoutchouc ne se montait seulement qu'à \$28,455,383, contre \$31,376,867 en 1900; la quantité importée en 1901 était de 55,275,259 livres, contre 49,377,138 livres en 1900. Les importations de laine ont diminué de 155,928,455 livres, évaluées à \$20,260,936 en 1900 à 103,583,505 livres, évaluées à \$12,529,881 en 1901.

En 1901 les exportations de marchandises étaient évaluées à \$1,487,755,557, contre \$1,394,483,082 en 1900, soit un excédent sur l'année fiscale 1900 de \$93,272,475, ou d'environ 6.69 pour cent. La diminution apparente constatée dans les produits manufacturés, se montant à \$23,342,583, est due principalement à l'absence de chiffres montrant les exportations aux Iles Sandwich et à Porto-Rico, estimées à \$25,000,000 environ et consistant, en majeure partie, en produits manufacturiers. Cependant, les exportations de deux articles importants de manufacture ont été moins grandes en 1901 qu'en 1900, ce sont celles

du cuivre et des toiles de coton, et cette diminution est due à ce qu'en Europe le cuivre a été moins demandé et qu'en Chine les marchés ont été fermés momentanément aux toiles de coton.

Voici quelles étaient sommairement et d'après les statistiques officielles les importations et exportations des Etats-Unis pendant l'année fiscale 1901, comparées avec celles de l'année fiscale 1900:

Classification.	1901.	1900.
IMPORTATIONS.		
Denrées alimentaires et animaux	\$222, 227, 898	\$218, 510, 098
Articles bruts entrant dans les différents procédés de l'industrie du pays	269, 763, 404	302, 426, 746
Articles entièrement ou partiellement manufacturés destinés à être employés comme matériaux dans les manufactures et les arts mécaniques	79, 080, 716	88, 433, 549
Articles manufacturés pour la consommation	130, 662, 903	128, 900, 697
Articles de luxe, etc.	120, 938, 095	111, 670, 094
Totaux	822, 673, 016	849, 941, 184
EXPORTATIONS.		
Produits agricoles	\$944, 059, 568	835, 858, 123
Produits manufacturiers	410, 509, 173	433, 851, 756
Produits miniers	39, 267, 647	37, 843, 742
Produits forestiers	54, 312, 830	52, 218, 112
Produits des pêches	7, 743, 313	6, 326, 620
Produits divers	4, 561, 278	4, 665, 218
Totaux des produits du pays	1, 460, 453, 809	1, 370, 763, 571
Marchandises étrangères réexportées	27, 301, 748	23, 719, 511
Totaux généraux	1, 487, 755, 557	1, 394, 483, 082

En 1901, les articles importés exempts de droits de douane représentaient 43.27 pour cent du total, pendant que le pourcentage douanier était, durant l'année fiscale 1900, de 43.21. Le total des droits de douane perçus se montait en 1901 à \$238,786,741, contre \$233,164,871 en 1900.

La valeur de l'or importé en 1901 se montait à \$66,051,187, pendant que les exportations de ce métal précieux durant les douze mois de l'année fiscale étaient évaluées à \$53,179,137. En 1900 les importations d'or se sont montées à \$44,573,184 et les exportations à \$48,266,759. Les importations d'argent en 1901 étaient évaluées à \$36,384,041 et les exportations à \$64,285,180. Pendant l'année fiscale 1900 les importations d'argent étaient évaluées à \$35,256,302 et les exportations à \$56,712,275.

La valeur du coton brut exporté des Etats-Unis pendant l'année fiscale 1901 a été plus grande que celle de n'importe quelle année dans les annales du pays. La valeur totale du coton brut et de ses produits s'est montée, pendant cette période, à plus de \$1,000,000 par jour. La valeur totale du coton brut exporté en 1901 se montait à \$313,673,443, contre \$241,832,737 pendant l'année fiscale 1900, et la valeur totale du coton, des cotonnades, des huiles de coton et autres produits de cette plante s'élevait à \$365,405,707. La quantité de coton brut expédiée aux marchés étrangers était de 6,508,450 balles, pesant 3,330,890,448

livres, contre 6,090,144 balles pesant 3,100,583,188 livres en 1900. En quantité, les exportations n'étaient pas si grandes que celles des années 1895, 1898 et 1899, mais le prix par livre étant beaucoup plus élevé, la valeur a dépassé de plusieurs millions de dollars le montant reçu pour cet article pendant n'importe quelle autre année. Pendant la décade passée, les exportations de coton ont rapporté aux producteurs une somme totale d'argent de plus de \$2,000,000,000.

Pendant les dix années commençant le 1^{er} juillet 1891 et finissant le 30 juin 1901, il a été livré en Europe et aux Etats-Unis 124,270,610 sacs de café, ou une moyenne annuelle de 12,427,761 sacs.

Pendant les dix années de 1891-92 à 1900-1901 la quantité de café livrée aux importateurs des Etats-Unis, par tous les pays, s'est montée à 50,531,347 sacs, ou une moyenne annuelle de 5,053,135 sacs. Les livraisons aux Etats-Unis se sont montées, pendant les douze mois finissant le 30 juin 1901, à 5,843,883 sacs, dont 4,722,919 sacs, ou 80.8 pour cent, ont été fournis par le Brésil; tous les autres pays ayant fourni 1,120,964 sacs, ou 19.2 pour cent de la quantité.

Voici quel était en 1901 le prix moyen par livre, comparé avec celui de 1900, de chacun des cafés américains importés par les Etats-Unis en 1901: Brésilien, 6.75 cents, contre 5.71 cents en 1900; autres pays de l'Amérique du Sud, 8.13 cents, contre 7.83 cents en 1900; Mexique, 9.54 cents, contre 9.38 cents en 1900; Amérique Centrale, 10.01 cents, contre 9.95 cents en 1900; et les Antilles, 7.91 cents, étant le prix moyen pour l'année 1900.

La valeur totale des marchandises importées par les Etats-Unis des Républiques latine-américaines, des îles et colonies dont la majorité des habitants descend des races latines ou parle une langue dérivée du latin—en un mot, de toute l'Amérique sauf le Dominion du Canada et l'île de Porto-Rico—s'est montée, en 1901, à \$212,599,851, contre \$180,591,594 pendant l'année fiscale 1900. Le gain total pour l'année était de \$32,008,337, ou plus de 17.72 pour cent.

Pendant l'année fiscale 1901, les Etats-Unis ont exporté dans ces mêmes pays pour \$133,551,673 de marchandises, contre \$124,562,445 pendant l'année fiscale 1900. L'augmentation en 1901 se montait à \$8,989,228, soit un gain de 7.72 pour cent environ sur 1900.

Le cacao devient rapidement un des articles les plus importants qui soit importé de l'Amérique Latine. Pendant l'année fiscale finissant le 30 juin 1901, les Etats-Unis ont importé de ces pays 45,924,353 livres de cacao évaluées à \$6,472,829, contre 41,746,872 livres évaluées à \$5,657,283 pendant l'année fiscale 1900.

Pendant l'année fiscale 1901, les Etats-Unis ont importé 55,275,529 livres de caoutchouc brut, contre 49,377,138 livres pendant l'année fiscale 1900 et 51,063,066 livres pendant l'année précédente. La valeur totale des importations se montait respectivement en 1901, 1900 et 1899 à \$28,455,383, \$31,376,867 et \$31,707,630.

Voici quelles étaient, en 1901 comparées avec celles de 1900, les quantités et valeurs de caoutchouc que les Etats-Unis ont importées des pays suivants:

Pays.	1901.		1901.	
	Livres.	Valeurs.	Livres.	Valeurs.
Grande-Bretagne	7,461,673	\$4,241,959	8,611,061	\$5,562,580
Allemagne	1,673,234	794,534	1,750,498	892,346
Autres pays d'Europe	7,854,828	4,807,637	6,626,648	4,776,989
Amérique Centrale	1,279,099	679,001	1,428,224	792,250
Mexique	297,691	135,767	420,612	201,326
Antilles	45,578	17,757	12,291	4,639
Brésil	34,900,198	16,963,533	28,175,787	17,954,490
Autres pays de l'Amérique du Sud	1,255,041	587,557	1,642,191	876,584
Indes Orientales	466,056	203,167	643,793	284,141
Autres pays	42,131	24,471	66,033	31,522

Pendant l'année fiscale 1901, les Etats-Unis ont importé pour \$6,550,186 de bananes, contre \$5,887,835 en 1900 et \$5,665,588 en 1899. Voici quelles ont été les valeurs des bananes importées par les Etats-Unis, de l'Amérique latine, pendant l'année 1901.

Amérique Centrale	\$2,660,278
Cuba	2,510,283
Indes Occidentales Anglaises	467,345
Amérique du Sud	646,108

Totaux 6,284,014

Voici quelles ont été, d'après les rapports préliminaires du Bureau des Statistiques du Ministère des Finances, les valeurs des principaux produits tropicaux importés par les Etats-Unis pendant l'année fiscale 1901, ainsi que la proportion, aussi exacte que possible, fournie par l'Amérique latine:

Articles.	Total des importations.	Totaux des importations provenant de l'Amérique latine.
Sucre	\$87,551,974	\$48,304,691
Café	62,861,399	59,533,231
Caoutchouc brut	28,455,383	18,383,615
Fibres	22,932,506	8,067,518
Fruits et noix	19,584,612	7,731,775
Tabac en femelle	16,289,324	9,873,038
Gomme	6,639,139	*753,696
Cacao brut	6,472,829	5,645,469
Coton brut	6,787,613	488,008
Epices	3,563,046	*333,520
Bois d'ébénisterie:		
Préparé	1,752,612	1,345,351
Blocs	1,240,732	(b)
Bois de teinture	864,986	835,714
Soie écarlate	30,051,365	(c)
Thés	11,014,981	(c)
Riz et farine de riz	2,296,337
Liège	2,270,997	(b)
Régisse	1,737,097	(b)
Ecorce de quinquina	1,025,546	(b)
Indigo	1,402,894	(b)
Vanille	875,229	(b)
Eponges	717,550	(b)

* Rapports incomplets.

b Provenant en partie de l'Amérique latine.

c Ne provenant pas du tout de l'Amérique latine.

Les valeurs des minerais, lingots et monnaie d'or et d'argent importés par les Etats-Unis de l'Amérique latine, pendant l'année fiscale finissant le 30 juin 1901, comparées avec celles de l'année fiscale antérieure sont les suivantes:

Pays.	Or.		Argent.	
	1901.	1900.	1901.	1900.
Amérique Centrale	\$568,953	\$668,330	\$802,426	\$1,063,834
Mexique.....	6,348,531	4,505,966	29,480,370	29,723,002
Antilles.....	646,985	2,636,411	125,290	233,002
Amérique du Sud.....	623,308	436,766	2,646,572	2,002,662
Totaux.....	8,187,777	8,247,473	33,054,658	33,022,500

Au commencement de l'année 1901, les statistiques officielles ont montré que les Etats-Unis étaient à la tête des nations exportatrices du monde, ce qui est prodigieux étant donné qu'il y a vingt cinq ans la République occupait la quatrième place sur la liste. En 1875 les exportations des produits des Etats-Unis se montaient à \$497,263,737 et en 1900 atteignaient une valeur de \$1,453,013,659 soit, pendant cette période, un pourcentage d'augmentation de 190 pour cent. En comparant la valeur des exportations des Etats-Unis en 1890 avec celle de 1900, voici le pourcentage étonnant d'augmentation que l'on constate: Les exportations en Europe ont augmenté de 63 pour cent; celles en Asie, de 163 pour cent; en Australie, 132 pour cent; en Afrique, 416 pour cent; en Canada, 108 pour cent; dans l'Amérique du Sud, 20 pour cent. Si on fait une comparaison entre le commerce d'exportation des Etats-Unis pendant les neuf mois de l'année civile finissant le 30 septembre, et celui des autres pays, on constatera que les Etats-Unis sont encore à la tête des nations exportatrices. Non seulement la valeur des produits du pays a été plus grande que celle des exportations de n'importe quel autre pays, mais pendant l'année 1901, la valeur moyenne mensuelle a été la plus haute qui ait jamais été constatée pendant une période de neuf mois, atteignant la somme de \$113,935,020 par mois. Pendant les neuf mois dont il s'agit, la valeur des exportations a dépassé celle des importations de \$399,270,546. Un article important d'exporta été l'embarquement de maïs qui représente pratiquement un nouveau développement dans le commerce d'exportation de la République. En ce qui concerne les farines, voici le nombre de boisseaux exportés pendant les trois dernières années fiscales: 1899, 174,039,488 boisseaux; 1900, 209,318,284 boisseaux; 1901, 177,817,965 boisseaux; pendant que 124,301,529 boisseaux furent exportés pendant l'année civile 1901 jusqu'au 1^{er} septembre.

Pendant les dernières années, une des choses les plus remarquables dans le commerce extérieur du pays, a été les exportations, dans toutes les parties du globe, des produits miniers des Etats-Unis. En 1900, les exportations de fer et d'acier ont atteint en chiffres ronds, la somme

de \$130,000,000; les huiles minérales de toutes classes sont citées comme s'étant montées à \$75,000,000; le cuivre, \$60,000,000; le charbon et le coke, plus de \$22,000,000; l'or, \$52,787,523 et l'argent, \$59,272,668. A l'exclusion de l'or et de l'argent, l'augmentation, comparée avec 1890, est indiquée comme étant de 218 pour cent et en comprenant ces deux métaux précieux, le taux d'augmentation est de 210 pour cent.

Pendant une réunion annuelle de l'association des marchands et des manufacturiers qui a eu lieu à Moscon, Russie, il fut décidé d'envoyer aux Etats-Unis des experts afin d'étudier et si possible, d'appliquer au marché russe, les méthodes employées par les Américains pour l'extension du commerce. Les journaux commerciaux et industriels du continent européen ont constaté la concurrence prochaine, sur les marchés du monde, de l'huile faite avec la graine de maïs américain ayant aussi reconnu que, au point de vue industriel, cette dernière avait une plus grande valeur et était une rivale sérieuse des différentes variétés d'huiles de table les plus vieilles et les plus connues.

Le trafic entre les côtes occidentales des Etats-Unis et les Etats de l'Amérique latine situés sur le Pacifique, s'est étendu d'une façon prodigieuse; de nouvelles lignes de bateaux à vapeur ont été créées entre ces ports et la perspective d'un plus grand développement commercial est plus belle que jamais.

Le mouvement impétueux qui s'est produit dans les industries du fer et de l'acier, peut, d'après les rapports, être approximativement estimé pour les années 1897, 1898, 1899 et 1900 à 60,000,000 de tonnes qui représentent la quantité moyenne annuelle de minerai qui a été expédiée des régions du Lac Supérieur, pendant que durant les quarante dernières années le total des embarquements était de 110,000,000 tonnes de minerais, ou une moyenne annuelle de 2,750,000 tonnes. Les mines de cuivre des Etats-Unis ont aussi profité des demandes énormes des dernières années pour ce métal, le rendement pendant le premier trimestre de 1901 ayant été de 67,163 tonnes métriques contre 65,193 tonnes pendant la même période de l'année précédente. Les rapports officiels montrent que l'année 1900 a fini le siècle en produisant la plus grande quantité de charbon qui ait jamais été enregistrée aux Etats-Unis, et a continué la suprématie des Etats-Unis parmi les pays du monde producteurs de charbon.

On a fabriqué aux Etats-Unis, en plus grande quantité, toutes sortes de matériel de chemin de fer, particulièrement des wagons en acier, des locomotives et des rails d'acier, ces derniers ayant été prouvés être, sur les marchés du monde, supérieurs à tous ceux fabriqués à l'étranger.

Comme preuve de l'estime dont jouissent, en Allemagne, les machines agricoles construites aux Etats-Unis, ce pays a nommé, dans le courant de l'année dernière, un expert spécial pour visiter non seulement les manufactures où ces machines sont construites, mais encore les grands

centres agricoles où leur utilité peut être pratiquement démontrée. Ces investigations ont eu pour but de faire employer davantage en Allemagne les machines construites en Amérique. M. le Baron HERMAN, expert agricole à l'ambassade allemande à Washington, ayant reconnu, dans un rapport, la supériorité des méthodes d'exploitation agricole aux Etats-Unis.

La réunion des membres de l'Association des fabricants de soieries a eu lieu dans la ville de New York le 26 mars 1901, et les rapports concernant cette industrie furent on ne peut plus encourageants. Depuis le commencement de l'année 1901, les demandes pour les soieries de toutes sortes et de toutes qualités ont augmenté considérablement et ont eu, pour résultat, l'établissement de nouvelles fabriques. Un des faits les plus remarquables du développement industriel du pays, pendant l'année, a été la production de pétrole, des puits produisant d'énormes quantités de cette huile minérale ayant été creusés dans les différentes parties de la République, particulièrement dans l'Etat du Texas. Pendant l'année fiscale finissant le 30 juin 1901, le nombre officiel de vaisseaux construits aux Etats-Unis s'est chiffré à 1,173, d'une capacité totale de 401,285 tonnes. Les chiffres ne comprennent pas les petites embarcations. Le tonnage de ces vaisseaux n'a été dépassé que deux fois dans les annales du pays, le maximum ayant été atteint en 1854 et 1855 avec 583.450 tonnes.

La valeur totale des minéraux de toute espèce se montait en 1880 à \$360,319,000, était en 1890 plus du double qu'en 1880, ou de \$619,612,175 et en 1900 deux fois autant environ que le total de 1890, ou de \$1,070,108,889. Ces chiffres sont une preuve du progrès énorme fait pendant les deux dernières décades.

La fonte est à la tête des produits métalliques du pays, la valeur totale en 1900 étant de \$259,944,000. Le cuivre occupe le second rang, avec une production évaluée à \$98,494,039; l'or, le troisième, avec une valeur productive se montant à \$79,322,281, et l'argent, le quatrième, avec une valeur commerciale de \$36,958,537. Les valeurs du plomb, du zinc et de l'aluminium, comparées avec celles de 1890, ont aussi augmenté.

Parmi les produits non-métalliques, le charbon est le plus important et constitue 59.3 pour cent du total, avec une valeur totale de \$221,133,513 pour les variétés bitumineuses. L'anthracite de la Pennsylvanie vient après, avec une valeur de \$85,757,851. Malgré la prédiction d'une diminution dans la production de charbon du monde, les rapports officiels du Service géologique disent qu'il existe encore aux Etats-Unis assez de charbon non-exploité pour approvisionner le monde de combustible pendant un grand nombre d'années à venir.

La récolte probable de coton des Etats-Unis était estimée par le statisticien du Ministère de l'Agriculture à plus de 9,000,000 de balles pour l'année 1900-1901. La culture du thé, qui pendant plusieurs

années a attiré l'attention du gouvernement, n'est plus, disent les rapports publiés pendant le courant de l'année, à l'état d'expérience, les plantations de la Caroline du Sud ayant produit une récolte 12 pour cent plus abondante en 1900 que pendant les douze mois précédents. Le produit s'est vendu en détail \$1 la livre et en gros à un prix profitable aux cultivateurs.

Pendant l'année 1900, la valeur des neuf principaux produits agricoles du pays a atteint la somme de \$2,275,116,372, soit une augmentation \$284,430,298 en comparaison de l'année 1899. Les fruits de la Californie continuent à se vendre en très grandes quantités sur les marchés, particulièrement les citrons que les analyses chimiques ont trouvé posséder certaines propriétés qui les rendent supérieurs à tous les fruits citriques de tous les autres pays.

Pendant toute l'année, le BULLETIN du Bureau des Républiques Américaines a reproduit chaque mois les rapports mensuels publiés par le Ministère de l'agriculture des Etats-Unis sur les conditions moyennes des récoltes, d'un bout à l'autre du pays.

Au commencement du mois de janvier 1901, des travaux furent commencés pour faire communiquer, par câble, les différentes îles qui forment l'archipel des Philippines et le navire *Burnside* fila du câble sur une longueur de 600 milles.

Une des mesures les plus importantes prise par le Gouvernement, pendant le courant de l'année, fut l'établissement d'un Bureau national de poids et mesures centenant tous les modèles, types de poids et mesures employés dans la République.

Au commencement de l'année 1901 la "Dun's Review" publiait un article intéressant, montrant ce que l'existence aux Etats-Unis coûtait actuellement en comparaison de ce qu'il fallait d'argent pour vivre il y a quarante ans. En prenant en considération tous les articles de consommation et les quantités nécessaires à l'existence de chaque individu, on a trouvé qu'au 1^{er} janvier 1901 on pouvait vivre beaucoup mieux avec \$78.60 qu'avec \$100 en 1860. Pendant cette dernière année, la richesse par tête était estimée à \$513.93; en 1901 elle était évaluée à \$1,232.05. En 1860 la valeur des produits agricoles, manufacturiers, miniers et des pêches était estimée, par tête, à \$60.39, et en 1901 à \$238.86.

Les statistiques officielles des chemins de fer montrent qu'à la date du 30 juin 1900 la longueur totale des chemins de fer aux Etats-Unis était de 193,345.78, soit 4,051.12 milles de plus que pendant n'importe quelle année depuis 1893. Le nombre de personnes employées par les chemins de fer était au 30 juin 1900 de 1,017,653, et les fonds placés dans les différentes compagnies se montaient à \$11,491,034,960.

Postérieurement au mois d'avril 1901, les bateaux à vapeur appartenant à plusieurs compagnies de navigation à vapeur de l'Amérique du Sud et faisant un service régulier entre les ports de l'Amérique du

Sud et San Francisco, ont fait escale dans les différents ports de Costa-Rica, Guatémala, Nicaragua et Salvador et ont pris à bord des cargaisons à des prix avantageux pour les exportateurs. On dit aussi que les bateaux à vapeur qui font régulièrement le service de Panama ont trouvé avantageux d'augmenter leurs chargements de l'Amérique Centrale, et, en conséquence, les variétés supérieures de café provenant des pays qui se trouvent situés dans cette section et qui jadis étaient transportées à travers l'isthme ou étaient obligées de contourner le Cap Horne, sont maintenant expédiées à New-York via San Francisco.

Le 1^{er} mai 1901, les portes de l'Exposition Pan-Américaine de Buffalo furent, avec les cérémonies d'usage, ouvertes au public, quoique la dédicace officielle ne fut pas faite avant le 20 du même mois. Pendant six mois, l'Exposition a offert l'occasion d'étudier les produits des différents pays de l'hémisphère occidental, et on croit que jamais auparavant il n'y a eu un tel étalage des ressources de toutes les Amériques.

COMMERCE EXTÉRIEUR EN NOVEMBRE 1901.

Le rapport publié par le Ministère des Finances des Etats-Unis montre que, pendant le mois de novembre 1901, le commerce extérieur des Etats-Unis s'est monté à \$208,703,310, contre \$202,056,364 pendant le même mois de 1900. Pendant le mois de novembre 1901, la valeur des importations s'est élevée à \$72,498,873, contre \$7,144,833 pendant le mois de novembre de l'année antérieure. Les exportations, pendant le mois de novembre 1901, étaient évaluées à \$136,204,446, soit une diminution en comparaison de celles du mois de novembre 1900. Pendant le mois de novembre 1901, les articles importés exempts de droits de douanes représentaient 45.44 pour cent de la valeur totale des importations, contre 41.83 pour cent pendant le même mois de l'année précédente. La grande augmentation constatée dans les importations fut principalement due à la réception des articles entrant dans les différents procédés de l'industrie du pays. Le total des droits de douanes perçus pendant le mois de novembre 1901 se montait à \$19,526,377, contre \$18,550,297 pendant le même mois de 1900.

Pendant les onze mois finissant avec le mois de novembre, les Etats-Unis ont importé pour \$800,426,231 de marchandises, contre \$760,452,507 en 1900; soit une augmentation de près de \$40,000,000. Le total des droits de douanes perçus pendant cette période, en 1901, se montait à \$224,833,333, contre \$219,264,909 pendant les onze mois de 1900.

Durant le mois de novembre 1901, les exportations des produits agricoles, miniers, des pêches et divers ainsi que la réexportation des marchandises étrangères, ont augmenté, mais une diminution s'est produite dans les produits manufacturés expédiés à l'étranger en com-

paraison du même mois de 1900. Pendant les onze mois finissant le 30 novembre 1901, les exportations étaient évaluées à \$1,328,186,131 contre \$1,332,056,242 pendant la même période de 1900. Cette diminution de \$3,870,111 est plus apparente que réelle, étant donné le fait que le rapport de 1900, comprenait la valeur des marchandises exportées à Porto-Rico et aux îles Sandwich, omise en 1901.

Pendant le mois de novembre 1901 et les onze mois finissant le 30 novembre de la même année, les importations d'or étaient évaluées respectivement à \$5,269,611 et \$49,908,291 contre \$12,641,988 et \$49,808,291 pendant les mêmes périodes de 1900. Durant le même mois dont il s'agit, les Etats-Unis ont exporté pour \$15,905,612 d'or et pendant les onze mois pour \$52,598,928.

En novembre 1901, les importations d'argent étaient évaluées à \$2,796,532 et pendant les onze mois finissant avec le mois de novembre, à \$28,358,192. Pendant les périodes citées, les exportations d'argent étaient évaluées respectivement à \$41,689,208 et \$50,914,826.

Voici quelles étaient, d'après les statistiques officielles, les exportations et importations des Etats-Unis pendant le mois de novembre 1901, comparées avec celles du même mois de l'année antérieure:

Classification.	1901.	1900.
IMPORTATIONS.		
Denrées alimentaires et animaux.....	\$16,351,215	\$20,127,014
Articles bruts entrant dans les différents procédés de l'industrie du pays.	25,870,811	19,195,143
Articles entièrement ou partiellement manufacturés destinés à être employés comme matériaux dans les manufactures et les arts mécaniques.	8,489,764	6,650,112
Articles manufacturés pour la consommation.....	11,188,160	9,703,038
Articles de luxe.....	10,598,923	9,678,733
Totaux.....	72,498,873	65,354,040
EXPORTATIONS.		
Produits agricoles.....	95,408,013	94,358,665
Produits manufacturés.....	30,154,895	32,281,487
Produits miniers.....	3,204,118	2,989,559
Produits forestiers.....	3,895,061	4,179,186
Produits des pêches.....	1,418,817	1,066,635
Produits divers.....	139,190	90,026
Totaux des produits du pays.....	134,220,094	134,965,558
Marchandises étrangères réexportées.....	1,984,352	1,736,766
Totaux généraux.....	136,204,446	136,702,324

PÊCHE DE LA BALEINE EN 1901.

D'après le "Bradstreet's" de New York, on n'aurait capturé cette année que 28 baleines franches; c'est le résultat le moins favorable obtenu depuis de nombreuses années.

L'année dernière, il y avait encore 200,000 livres de fanons de baleine sur le marché américain, mais le 15 octobre de cette année, le stock descendait à 78,500 livres.

Lors d'une vente récente, les fanons de baleine ont été payés à raison de \$2.50 la livre, et les négociants de New Bedford affirment que leur prix finira par atteindre \$4 la livre.

Toutes ces circonstances semblent indiquer que la pêche de la baleine, jadis très importante, décroît rapidement et finira par disparaître complètement.

En 1846, la flotille américaine comportait 722 bateaux jaugeant ensemble 231,406 tonnes et les captures atteignaient une valeur totale de \$21,000,000. Huit ans plus tard, la valeur du produit de cette pêche n'était plus que de \$10,776,000, pour tomber ensuite à \$2,660,000 en 1880. En 1894, les Etats-Unis ne comptaient plus que 85 bateaux armés pour la pêche de la baleine et la valeur des prises ne s'élevait qu'à \$982,000. En 1893, la flotille américaine de l'océan arctique capturait 294 baleines à tête arquée, d'une valeur de \$180,000.

Bien que les huiles minérales et les succédanés des fanons de baleine aient causé un tort considérable à cette industrie, on estime cependant que de nouvelles pêcheries seraient encore profitables, si l'on y rencontrait des baleines en assez grand nombre.

Les mers antarctiques ont été explorées dans tous les sens, sans grands résultats. L'une après l'autre, la plupart des anciennes pêcheries ont été dépeuplées, et il est plus que probable que la pêche de la baleine cessera bientôt d'être pratiquée régulièrement.

CONCURRENCE DES CHAUSSURES AMÉRICAINES.

D'après le "Times" de Londres, la "foire des chaussures et du cuir" qui a eu lieu dernièrement dans "l'Agricultural Hall," à Islington, a offert cette année un intérêt tout particulier, parce qu'elle a été plus importante que toutes celles qui l'ont précédée.

Elle comptait 250 exposants venant des principaux centres manufacturiers de chaussures d'Angleterre, du Canada, des Etats-Unis et de plusieurs pays continentaux. Mais, bien que cette exposition fût, par ce fait même, essentiellement internationale, la partie la plus intéressante était le compartiment réservé aux produits des fabriques anglaises et américaines, ces dernières étant représentées en bien plus grand nombre que les années précédentes.

La concurrence américaine dans l'industrie de la chaussure n'est pas précisément de date récente; elle existe depuis neuf ans déjà, mais ce n'est que tout dernièrement qu'elle a commencé à prendre d'aussi grandes proportions.

Pendant ces dix dernières années, l'importation des marchandises américaines en Angleterre a augmenté d'une façon lente mais continue, si bien que l'année dernière elle s'est élevée à une valeur de 300,000 livres sterling. Quoique ce chiffre paraisse, à première vue, très considérable, il faut remarquer que, somme toute, l'importation américaine de chaussures est inférieure à la moitié de l'importation totale de cet article et que, d'autre part, l'importation totale n'atteint que la moitié de l'exportation de ce même article. Mais il est certain que cette concurrence, de peu d'importance quant à présent, si on la

compare à l'ensemble des affaires, mérite d'attirer toute l'attention des fabricants. Elle se fait surtout sentir dans l'article moyen des qualités supérieures. Les chaussures américaines ont de la légèreté, de l'élégance et du fini, si bien que, à qualité égale, mises sur le marché au même prix que celles des manufactures anglaises, elles s'y vendent plus facilement.

LE PAPIER DE CANNE À SUCRE.

Dans les sucreries de la Louisiane et du Texas, on utilisait jadis comme combustible les déchets de canne ou bagasses dont on avait extrait le jus par pression. Aujourd'hui que cette extraction se fait par macération, comme pour le sucre de betterave, et qu'on ne peut brûler les résidus mouillés, on en fait du papier.

Pour cela, on laisse fermenter les déchets pendant un certain temps; puis on y ajoute un mélange de soude et de chaux, et on les cuit à la vapeur sous pression dans de grands autoclaves. Le produit qui en résulte est de la cellulose pure, qui, une fois hachée et lavée, constitue une excellente pâte à papier.

On a commencé par faire du papier brun d'emballage; on fabrique aussi maintenant des papiers blancs et fins. Ce procédé prend une grande extension; une seule fabrique dans la Louisiane produit journellement plus de 10,000 kilogrammes de papier.

RAPPORT OFFICIEL SUR LA RÉCOLTE, JANVIER 1902.

Le statisticien du Ministère de l'agriculture, dans le rapport qu'il a publié pendant le mois de janvier, estime que le rendement moyen du blé aux États-Unis, pendant l'année 1901, était de 14.8 boisseaux par acre, contre 12.3 boisseaux en 1900 et 1899, respectivement, et 13.3 boisseaux la moyenne des moyennes des dix dernières années. La nouvelle aire plantée de froment touselle est estimée provisoirement à 32,000,000 acres, soit une augmentation de 5.6 pour cent de plus que l'aire ensemencée pendant la saison de 1900. Celle plantée de seigle d'hiver est estimée provisoirement à 1,250,000 acres, soit une augmentation de 2.9 pour cent sur l'aire ensemencée pendant l'automne de 1900.

Le Ministère de l'agriculture n'a publié aucun rapport, au sujet du blé touselle, postérieur au 1^{er} décembre 1901. A cette date la condition était 86.7 pour cent de la normale, contre 97.1 pour cent à la même date de 1900.

HAÏTI.

L'INDUSTRIE DU CAFÉ.

Le Consul général belge aux Antilles a adressé récemment à son gouvernement un rapport au sujet de l'industrie du café de la République, dont voici un résumé:

Il y a actuellement à Haïti 50,000 hectares (125,500 acres) plantés

de cafiers. La plante fut introduite pour la première fois dans le pays en 1715 et sa culture a fait bientôt des progrès considérables. Il y a peu de régions connues des agriculteurs qui réunissent, au plus haut degré, les conditions nécessaires à la culture du café, qui sont la fertilité du sol, la chaleur et l'humidité. Les collines qui s'élèvent à une hauteur de 1,300 à 1,600 pieds sont, dit-on, particulièrement propre à la culture de cette plante.

Voici le nombre de livres de café exportées par la République pendant les années ci-après désignées:

	Livres.		Livres.
1894-95	75,371,865	1897-98	67,437,593
1895-96	47,643,451	1898-99	61,622,184
1896-97	73,057,397	1899-1900	72,122,781

Un droit d'exportation de \$3.86 $\frac{2}{3}$ par 100 livres est levé sur tous les cafés expédiés de la République.

DROITS DE PORT.

D'après un journal de commerce français, les différents droits établis sur la navigation sont ainsi fixés dans la République d'Haïti:

Droit de pilotage.—Varie de 2 à 20 gourdes par navire, selon le tonnage. Il n'est du reste pas le même pour tous les ports.

Droits de visite sanitaire.—De 8 à 16 gourdes pour les voiliers et 25 gourdes pour les vapeurs de tout tonnage.

Droit de phare.—A Port-au-Prince seulement 6 centimes de gourde par tonneau de jauge pour les navires étrangers, la moitié pour les bâtiments nationaux.

Droit de tonnage.—Cinquante centimes de gourde par tonneau de jauge pour les voiliers et 25 centimes par tonneau de marchandise débarquée pour les vapeurs.

Droit de fontaine.—Là où il y a de l'eau pour les navires, de 2 à 10 gourdes, suivant le tonnage.

Droit d'échelle.—Tout navire relevant d'un port à un autre pour charger les produits du pays paie un droit fixe de 25 à 50 gourdes, selon le tonnage.

Droit de sortie.—Droit fixe de 2 gourdes par navire.

MEXIQUE.

DE TAMPICO AU PACIFIQUE.

[Suite du rapport sur le Mexique par M. le Baron MONCHEUR, Ministre Plénipotentiaire de Belgique à Washington.]

TERRITOIRE DE TÉPIC.

Le versant du Pacifique, depuis Guadalajara jusque Guaymas, dans l'Etat de Sonora, est encore absolument dépourvu de chemins de fer. C'est donc en voiture et à cheval que j'ai franchi cette distance d'en-

viron 1,600 kilomètres pour visiter le Territoire de Tépïc, l'Etat de Sinaloa dans toute sa longueur et le sud de Sonora.

Le Territoire de Tépïc faisait partie autrefois de l'Etat de Jalisco. Il en a été détaché à une date récente, en 1884.

Au point de vue des voies de communication, Tépïc est complètement déshérité. Anciennement, le Territoire était traversé par une route pavée qui, partant du port de San Blas, aboutissait à Guadalajara. Ce chemin, qui faisait honneur au travail des ingénieurs espagnols, était carrossable sur toute sa distance, de sorte que les marchandises pouvaient être expédiées sans transbordement depuis San Blas jusqu'aux villes de l'intérieur du Mexique.

Cinquante ans d'incurie ont laissé la route se transformer de nos jours en un véritable ravin, servant de lit aux torrents durant la saison des pluies. Le chemin est même devenu impraticable aux voitures en toute saison sur une partie de son parcours, de sorte que le voyage de Guadalajara à Tépïc a été un des plus difficiles et des plus pénibles que j'ai effectués au Mexique.

Du temps où le fameux général LOZADA organisait le brigandage dans la Sierra, cette route a été le théâtre de scènes meurtrières dont le récit est encore dans toutes les bouches, mais depuis une quinzaine d'années la sécurité est complète.

La ville de Tépïc, qui compte environ 14,000 habitants, est en décadence. Jadis, c'était l'entrepôt des marchandises d'Europe en destination de Guadalajara et d'autres villes du plateau central. Aujourd'hui le commerce de ces localités a tout intérêt à introduire ses importations par Tampico, faisant ainsi une très grande économie de temps et d'argent, car, vu l'état des chemins, le transport à dos de mule, de San Blas à Guadalajara, coûte 35 piastres (88 francs) la tonne.

Du temps de sa prospérité d'énormes fortunes ont été faites à Tépïc par des maisons d'importation; si la ville est moins florissante actuellement, le Territoire tout entier l'est davantage.

L'agriculture s'est développée depuis la cessation du régime de guerre et de brigandage qui obligeait souvent l'hacendado à quitter précipitamment ses terres pour venir chercher un refuge dans les villes.

Le commerce de transit ayant disparu, le mouvement commercial se borne maintenant aux besoins de la même ville et des environs. Il ne reprendrait d'importance que par la création d'une ligne de chemin de fer, et cette éventualité est peu probable d'ici à bien longtemps. En effet, les difficultés naturelles sont énormes, et d'autre part, une ligne de San Blas à Tépïc-Guadalajara n'aurait que peu de trafic.

On préférera, pour le transport des marchandises, la ligne actuellement en construction de Manzanillo à Guadalajara, Manzanillo étant un port bien meilleur et plus commode que San Blas.

Le climat du Territoire de Tépïc est tempéré, sauf la zone basse rapprochée de la mer qui est très chaude.

La partie tempérée est très saine. Les maladies contagieuses, comme le typhus et la scarlatine, qui font tant de victimes à Mexico, y ont un caractère bénin. Les qualités antiseptiques de l'atmosphère sont prouvées par la rapidité avec laquelle se guérissent les blessures.

Dans la zone de terre chaude, la fièvre paludéenne est trop fréquente et la fièvre pernicieuse n'est pas rare. La fièvre jaune n'apparaît sur cette côte qu'exceptionnellement. La dernière épidémie date de 1883.

Tépic offre dans beaucoup de parties du territoire un champ favorable aux entreprises agricoles. Comme la spéculation des étrangers ne s'est portée que bien peu de ce côté, les terrains y sont encore à bon marché. Il est à présumer que, d'ici à quelques années, l'immigration américaine qui descend de plus en plus vers le sud, s'arrêtera dans cette région et fera immédiatement augmenter le prix des terrains.

Dans la zone tempérée, la principale culture est celle du maïs; on élève aussi beaucoup de bétail.

Comme il y a de nombreux cours d'eau descendant de la Cordillère, l'irrigation artificielle est possible, ce qui rend facile la culture de la canne.

On y rencontre une foule de champs de canne avec des moulins primitifs pour la fabrication du piloncillo; mais la maison espagnole AGUIRRE est la seule qui possède de grandes plantations de cannes avec des sucreries perfectionnées.

Cette puissante maison a créé ses deux plantations à Puga et la Escondida, à 10 kilomètres au nord de Tépic. Les champs sont irrigués.

D'importants travaux ont même été pratiqués dans ce but à la Escondida. Chose rare au Mexique, la terre est amendée par de l'engrais, spécialement par de la graine de coton. Les machines des deux sucreries sont du dernier système. Elles viennent de France, à l'exception des chaudières et des centrifuges qui sont de fabrication américaine. Des chutes d'eau fournissent la force motrice aux deux établissements, ce qui leur constitue une sérieuse économie.

Les deux sucreries réunies traitent environ 225 tonnes de cannes par jour. Le salaire des ouvriers est de 50 à 75 centavos (1fr. 25c à 1fr. 90c) par jour. Il a une tendance à monter, mais cette hausse du taux des salaires ne changera pas la situation de l'ouvrier. Celui-ci est absolument étranger jusqu'ici aux idées de bien-être et n'éprouve aucun désir de s'élever sur l'échelle sociale. S'il gagne davantage il travaillera moins, ou consacrera le surplus de ses gains à la boisson et non pas à améliorer le sort de sa famille.

La culture du café paraît devoir donner de bons résultats. Les échantillons envoyés à New-York ont été jugés de qualité supérieure, et à Hambourg on les a estimés à un prix dépassant non seulement celui du café du Brésil, mais aussi du Cordoba et autres cafés de la côte orientale du Mexique. Toutefois cette culture n'est pas encore du tout développée. Il n'y a que deux plantations importantes, dont

l'une appartient à une maison allemande et l'autre à des Français. Elles sont situées dans le district de Compostelles, au sud de Tépïc et non loin du Pacifique, à une altitude de 700 à 800 mètres. Les arbres sont d'une belle venue, mais l'entreprise est encore trop récente pour qu'on puisse juger de son succès définitif. Les meilleurs terrains de café s'étendent dans le district de Compostelles dans une zone parallèle à la mer et à une hauteur de 800 mètres.

La plantation allemande est établie sur une propriété de 32,000 hectares d'un seul tenant, qui part de la mer pour s'élever à une altitude de 1,000 mètres dans l'intérieur du pays. Elle comprend 430,000 pieds de café qui commencent à produire. En défrichant les terrains on a laissé de la futaie qui donne de l'ombrage aux jeunes plantes. Le prix de vente du café a été sur place, l'année dernière, de 18 piastres le quintal de 46 kilogrammes, soit 1 franc le kilogramme.

Outre le café, la compagnie cultive la canne à sucre, le tabac, le cacao et élève du bétail dans les parties montagneuses. Elle a aussi une fabrique de savon où elle utilise l'huile des noix de palme qu'on récolte en abondance le long de la côte. Les salaires sont de 50 centavos; le système désastreux des avances aux ouvriers, qui est la règle dans les Etats du Sud, n'existe pas ici.

L'hacienda est reliée aux bureaux de la direction à Tépïc par une ligne téléphonique de 80 kilomètres de longueur. Sous le rapport des communications téléphoniques, on a fait au Mexique des progrès étonnants. Certains propriétaires ont établi des lignes particulières de plus de 200 kilomètres de longueur pour correspondre avec leurs haciendas.

La plantation française possède environ 100,000 pieds de café à peu de distance de celle des Allemands.

Enfin, la maison AGUIRRE, dont j'ai déjà parlé, a planté du café à la Fortuna, entre Tépïc et San Blas. Ce cafetal, qui est irrigué artificiellement, n'a que peu d'importance.

Dans la zone de terre chaude on cultive aussi le tabac et le coton.

Le tabac, quoi qu'en disent certains prospectus, est de qualité inférieure, non pas tant d'ailleurs à cause de la nature du sol que parce qu'il n'est pas traité ni cultivé avec soin. Il vaut de 3 à 4 piastres l'arrobe (75 centimes à 1 franc le kilogramme).

On l'exporte dans l'Amérique Centrale, qui absorbe environ un million de kilogrammes de tabac provenant de la côte mexicaine du Pacifique. Cette industrie est susceptible de réaliser de grands progrès. Les plantations du Rio Chila, qui ont fait venir des ouvriers de Cuba, obtiennent déjà de meilleurs résultats.

Le coton se cultive sur différents points le long de la côte et se vend très facilement aux deux fabriques de cotonnades établies à Tépïc. Sa qualité est inférieure à celle du coton des Etats-Unis, mais suffit pour les manufactures qui ne produisent que l'article courant de calicot. Cette culture n'est pas sans danger, parce que les pluies intem-

pestives viennent parfois détruire la récolte. Comme les planteurs ne fument pas la terre, ils voient aussi le rendement diminuer rapidement. La production moyenne est de 1,150 kilogrammes par hectare.

Le caoutchouc pousse à l'état sauvage, mais jusqu'ici on n'a fait aucun essai de plantation. Les terrains le long de la côte, détrem pés par les cours d'eau qui s'y jettent, sont excellents pour les rizières qui sont d'un bon rapport.

Le riz s'expédie jusqu'à Mexico. Il se vend sur place à 16 piastres (40 francs) la première qualité et 12 piastres (30 francs) la seconde pour la carga de 138 kilogrammes.

D'après les renseignements que m'a donnés le gouverneur de Tépïc, le hennequen du Yucatan pousserait ici à l'état sauvage, mais on n'a fait aucune tentative pour l'utiliser.

Le terrain convient aussi à l'olivier. Si cet arbre est encore presque inconnu au Mexique, sauf en basse Californie, c'est que sa culture est interdite, de même que celle de la vigne, par la domination espagnole, qui entendait réserver à la mère-patrie le monopole de la vente du vin et de l'huile.

Dans cette région le maïs ne coûtait, en février dernier, qu'une piastre et demie (3 francs 75 centimes) l'hectolitre. J'ai pu constater qu'en d'autres localités du Pacifique, son prix était à la même époque de 4 piastres. Ce phénomène provient de la difficulté des moyens de transport.

Chaque ville doit absorber ce qui se produit dans un certain rayon, et les prix ne peuvent pas rendre un niveau uniforme comme dans les pays où les voies de communication abondent.

Le maïs se récolte deux fois par an dans les terres irriguées en mai et décembre. Les haciendas qui ne sont pas trop éloignées de San Blas en envoient dans ce port, d'où l'on exporte, par petites quantités d'ailleurs, en Amérique Centrale et en Basse Californie.

On élève et on engraisse beaucoup de bétail dans le district d'Acaponeta, non loin de la frontière de Sinaloa. On y trouve en abondance le "capomo," arbre spécial à la côte du Pacifique entre Sinaloa et Colima. Sa feuille et son fruit offrent un aliment excellent aux animaux durant la saison sèche, précisément quand les autres fourrages font défaut.

Le bétail se vend 30 à 50 pour cent moins cher sur le versant du Pacifique que sur celui de l'Atlantique.

En somme, Tépïc offre pour l'agriculture des ressources considérables, dont on n'a que bien peu profité jusqu'à présent. Seulement les voies de communication font défaut. Les produits doivent être exportés par mer. En outre la population ouvrière laisse à désirer en terre chaude, comme nombre et comme travail, et il est très difficile d'y amener des hommes de la terre tempérée.

Enfin, les propriétés sont trop souvent dépourvues de titres en règle. On m'a cité des cas où les frais de procédure pour faire régulariser

les titres d'une acquisition ont dépassé le montant du prix d'achat lui-même.

Les occasions d'acheter de grands biens dans des conditions relativement avantageuses se présentent encore fréquemment. Ainsi, dans le district de Compostelles, on peut acquérir l'ancienne hacienda des marquis de MIRAVALLE. La maison d'habitation porte encore sur le portail les armes de la famille. La contenance est de 31,000 hectares dont une grande partie consiste en "monte" (terrain boisé) de peu de valeur, mais il y a une magnifique plaine de 3,500 hectares irrigables et convenant à la culture de la canne et à l'engraissement du bétail. Cette hacienda est actuellement presque à l'état d'abandon et on l'obtiendrait pour un prix minime.

Dans la région de terre chaude, l'hacienda de San Lorenzo s'étend sur une distance énorme, le long du fleuve Santiago jusqu'à la mer. Sa superficie est de 105,000 hectares; le long du fleuve il y a une riche terre d'alluvion et on pourrait y faire les différentes cultures de terre chaude et de terre tempérée. Elle renferme aussi de belles forêts; j'ai vu de magnifiques pièces de bois d'ébénisterie qu'on en avait tirées. Ce bien pourrait être acheté, m'a-t-on dit, sur le pied de 4,000 piastres le sitio (environ 5 fr. 70 c. l'hectare). J'ai vu à vendre également sur la route de San Blas à Tépïc, à 34 kilomètres de cette dernière ville, une hacienda de 52,000 hectares, dépendant de la succession du Général ROMANO, ancien gouverneur du territoire. La propriété commence à Navarete et s'étend jusqu'à la mer. Elle se trouve par conséquent dans la zone de terre chaude.

Naturellement, elle contient des terres de toutes les catégories et certaines parties ont fort peu de valeur, mais la plaine du côté de San Blas est couverte d'une terre d'alluvion et est d'une fertilité admirable. Il y a là plus de 10,000 hectares irrigables, grâce aux cours d'eau qui traversent la propriété. La végétation de la forêt remplie de palmiers est d'une force extraordinaire et prouve la richesse du sol.

Une bien faible partie des terrains est mise en culture. On en loue aux Indiens qui récoltent le maïs et le frijol (lentilles). Dans la plaine on a semé quelques milliers d'hectares en zacate (fourrage), para et de guinée pour l'élevage des bestiaux. Ce fourrage pousse d'une façon véritablement exubérante; mais le bétail qu'on y élève est beaucoup trop peu nombreux et la plus grande partie de cette richesse va se perdre. Une compagnie pourrait certainement faire dans cette région une entreprise agricole au moins avec autant de succès que dans l'État de Vera Cruz ou dans l'avantage d'un climat plus sain et de salaires beaucoup plus bas.

Dans l'État de Vera-Cruz, le grand nombre de plantations et les entreprises de travaux publics dans l'isthme ont fait monter le salaire de l'ouvrier à une piastre. A Navarete il est encore de 3 réaux (37 centavos, ou 1 franc environ).

DÉVELOPPEMENT INDUSTRIEL—CONCURRENCE AMÉRICAINE

D'après une récente communication de la Légation de Belgique, à Mexico, au "Bulletin Commercial" de Bruxelles, il résulte que la concurrence américaine pour les métaux, machines, etc., se fait de plus en plus sentir au Mexique, et que les fabriques européennes éprouvent de grandes difficultés pour obtenir des commandes dans le nord de la République, par suite de la proximité des Etats-Unis. Ce n'est actuellement que dans le Sud que nos industriels ont des chances sérieuses de voir leurs offres acceptées.

Ce rapport dit que c'est vers le nord du Mexique que se dirigent maintenant la plupart des ingénieurs et des capitalistes américains, qui finiront par y accaparer l'industrie et le commerce.

Seul le manque de communications et de capitaux a empêché jusqu'ici l'Etat de Sonora de prendre le développement dont il est susceptible, car on y trouve en abondance les métaux les plus recherchés—or, argent, cuivre, fer, antimoine, et mercure. Le district de Cananea, par exemple, produit plus de cuivre que tout le reste du pays.

Une nouvelle culture, celle des orangers, prend beaucoup d'extension dans l'Etat de Sonora. Cette année la récolte du district d'Hermosillo comprendra, à elle seule, 400 wagons destinés aux Etats-Unis. Ce chiffre concerne seulement les oranges hâtives qu'on expédie, comme primeur, avant la récolte des fruits de la Californie du Nord. Les districts fourniront un chargement d'environ 200 wagons pour les Etats-Unis.

Les plantations d'orangers augmentent chaque année, et peu à peu les Mexicains adoptent les méthodes de culture américaines et soignent leurs expéditions.

La culture de la canne à sucre continue à se développer au Mexique, surtout dans les Etats de Vera Cruz, Tamaulipas et Jalisco. L'importation des machines, destinées aux établissements sucriers, augmente également. A la fin d'octobre dernier, elle avait déjà atteint une valeur de 1,200,000 piastres, et l'on compte que le résultat de l'année entière dépassera ce chiffre d'environ 100,000 piastres.

DÉVELOPPEMENT DES CHEMINS DE FER.

Un journal officiel de date récente publie les détails suivants sur le développement du réseau des chemins de fer mexicains:

Le "Mexican National Railroad," la ligne à voie étroite entre Laredo, Texas, et Mexico, vient d'être acquis par un groupe de capitalistes de New-York, et la transformation de la voie est décidée en principe. Les travaux nécessaires pour modifier la voie actuelle et en faire une voie normale réclament une dépense de \$10,000,000 or; on calcule que sur cette somme \$7,500,000 seront employés à l'achat, aux Etats-Unis, de matériel fixe et roulant.

On croit que les travaux commenceront dans quelques mois.

La même compagnie de New-York a racheté la ligne du "Mexican International Road" d'Eagle Pass à Torrén; d'importantes améliorations seront réalisées, spécialement en ce qui concerne le matériel roulant.

La construction de la ligne "Kansas City, Mexico and Orient Railway," qui doit relier cette première ville à Port-Stilwell, autrefois Port-Topolobampo, sur le golfe de Californie, continue assez lentement. La société qui dirige cette entreprise (connue sous le nom de Stilwell interests) a acquis récemment la ligne de Pachuca-Zacualtipam et Tampico.

Cette dernière ligne, dont une partie seulement est construite (de Pachuca vers Zacualpam), traverse de riches gisements de fer.

Le concessionnaire de cette voie ferrée jouit d'un fort subside alloué par le gouvernement mexicain, et les ingénieurs sont d'avis que c'est la ligne la plus accessible vers Tampico.

On compte se servir, temporairement du moins, de la ligne mexicaine de Vera Cruz, reliant Pachuca à cette ville.

Le gouvernement mexicain a conclu récemment un contrat avec un groupe financier de Chicago, qui projette de creuser un canal mettant le port de Tuxpan en communication avec Panuco et de là avec Tampico.

Tout dernièrement aussi, des financiers de New-York ont obtenu la concession d'une ligne à voie étroite d'Hidalgo à Tuxpan; mais les travaux n'ont pas encore été commencés.

Sur la ligne "Vera Cruz and Pacific," qui doit relier Cordoba (Mexican Vera Cruz Railroad) à San Juan Evangelista (Tehuantepec National Railroad), les travaux sont poussés avec activité et on espère les voir terminés dans deux ans.

Il en est de même pour la construction de la ligne de Tehuantepec et des ports de Coatzacoalcos et Salina Cruz; mais ici les avis diffèrent: les uns disent que ces ouvrages seront achevés dans deux ans, les autres affirment qu'ils ne le seront pas dans trois ans au plus tôt.

Toutefois, à mesure que les travaux du chemin de fer de l'isthme de Tehuantepec avancent, le développement commercial et industriel de cette contrée prend de l'extension.

Un groupe de financiers de Saint-Louis, Missouri, va, paraît-il, établir à Coatzacoalcos une grande fabrique de matériaux de construction et une autre de glace. On va également installer dans cette ville une maison de commission américaine, qui exportera des produits de l'isthme et importera toutes les matières premières nécessaires aux exploitations créées dans le pays. La scierie établie au kilomètre 188 de la voie ferrée enverra bientôt ses bois de construction à Mexico.

Les propriétaires les plus importants de l'isthme sont d'avis que dans cinq ans la richesse de cette contrée sera mise en valeur.

On prévoit un chiffre de recettes très élevé pour le nouveau chemin

de fer, en comptant seulement, pour assurer le trafic, sur le fret des marchandises de l'Amérique Centrale et de l'Amérique du Sud.

La prochaine extension des voies ferrées dans l'Etat de Jalisco a attiré de ce côté les ingénieurs américains. Ils ont découvert récemment une mine de fer près de Tuxpan et ont rencontré des terrains riches en fer, en plomb et en argent dans le reste du territoire de cet Etat.

Le développement pris par les chemins de fer permettra bientôt d'exporter les métaux précieux par les ports du Pacifique.

De nouveaux établissements sidérurgiques vont être construits au Mexique, à Tezintlan, à Torréon et à Hidalgo del Parral. Il est question d'en construire à Durango, à Guanaceoi (quand le Chemin de Fer central mexicain sera prolongé jusqu'à cette ville) et à Ameca (Jalisco). Toutefois, ce ne sont encore là que des projets qui ont pris naissance à la suite du rendement de plus en plus considérable des mines.

De nombreuses améliorations ont été introduites, sur la ligne du Mexican Southern Railroad, chemin de fer à voie étroite, allant de Puebla à Oaxaca (telles que réfection de la voie et travaux de drainage). Cette ligne sera bientôt prolongée d'Oaxaca à Ocotlan, centre d'un riche district minier.

Un chemin de fer électrique de Tehuacan (Mexican Southern) à Esperanza (Mexican Vera Cruz) vient d'être construit. On a mis également en exploitation, l'année dernière, une ligne électrique reliant Torréon (Mexican Central Railway) à Lerdo, et qui traverse une contrée agricole très prospère (coton, canne, etc.).

On a accordé récemment à une société mexicaine-américaine le droit de construire, autour de Mexico, un réseau électrique reliant les communes suburbaines.

D'autres financiers américains sont venus dernièrement pour étudier la construction de tramways électriques dans les villes les plus importantes de la République, mais jusqu'ici aucune concession ne leur a été accordée.

Quant à la ligne du "Mexican Central," qui vient de passer dans les mains du groupe de capitalistes qui est à la tête de la Standard Oil Company, elle est devenue la plus importante de la République. Les divers prolongements exécutés en 1900, ont atteint un développement de 69.44 milles. La longueur totale de la ligne, y compris tous les embranchements secondaires, est de 2,352 milles.

Depuis le 31 décembre dernier la construction de la ligne de Zapotlan à Tuxpan est presque achevée; celle de Parral, a avancé de 97 milles; celle de Rio Verde, de 25 milles.

LA PRODUCTION AGRICOLE DE CORDOBA.

On évalue la production agricole du canton de Cordoba, depuis le commencement de l'année, à 50,000 kilogrammes de riz, 1,200,000

kilogrammes de tabac, 40,000 de piments et 2,000,000 de café, et l'on peut assurer que cette production a dépassé de beaucoup celle de l'année dernière.

Le maïs, bien que venant en seconde ligne parmi les produits de la région, a été l'objet d'une splendide récolte: elle dépasse 225,000 hectolitres.

Les exportations de fruits aux Etats-Unis et en Amérique du Sud augmentent chaque jour. Les producteurs ont passé des contrats avec la Compagnie du chemin de fer Mexicain, aux termes desquels celle-ci s'engage à fournir sans retard aux propriétaires les fourgons dont ils auront besoin et à remettre immédiatement les fruits aux ports d'expédition. Les principaux fruits exportés de Cordoba, sont les ananas, très recherchés aux Etats-Unis, les bananes, les mameyes, les chérimoyas, les anones et les papayas.

LES RICHESSES MINIÈRES DE COAHUILA.

D'après le "Diario del Hogar," les terrains situés sur les deux rives de la rivière Sabinas, sont explorés et l'on calcule qu'ils renferment 150,000,000 de tonnes de charbon, ce qui, à 4 piastres la tonne, représente une valeur de 600,000,000 de piastres. Les mines de Villa Fuentes sont les seules en exploitation dans le district limitrophe de Rio Grande; on calcule leur existence en charbon à 100,000,000 de tonnes, soit 400,000,000 de piastres, argent mexicain, valeur positive et non imaginaire.

RICHESSE MINIÈRE DE L'ÉTAT DE SONORA.

M. NAUGLE, le Gérant Général américain du chemin de fer de Sonora, s'exprime ainsi au sujet de l'avenir minier de cette partie de la République. La Sonora, dit M. NAUGLE, est l'Etat le plus riche du Mexique en métaux qui sont actuellement l'objet de la plus forte demande. Son sous-sol regorge de soufre, d'or, d'argent, de cuivre, de fer, de charbon, d'antimoine, de mercure et de graphite. Le district de Caleana fournit à lui seul plus de cuivre que le reste du pays, et cette région deviendra certainement, un jour, le centre principal du monde, où se fourniront les industriels de toutes les nations. Cette zone minière se développe avec une rapidité inconcevable. C'est à ce point qu'en moins de trois ans, un territoire désolé et inhabité s'est transformé en un cité ouvrière de 8,000 habitants.

PÉROU.

COMMERCE DES CEMENTS.

En 1897, le Pérou recevait 1,348 tonnes de ciment, dont 1,212 tonnes étaient, disait-on, de provenance allemande, 88 tonnes d'origine anglaise et 48 tonnes venaient du Chili.

L'année suivante l'importation se chiffrait à 2,384 tonnes. L'Alle-

magne venait au premier rang avec 75 pour cent, le Chili au deuxième avec 14 pour cent, les 11 pour cent restants ayant été fournis par l'Angleterre et la Belgique.

Pendant l'année 1899 les transactions ont continué à augmenter et sont arrivées au chiffre de 3,662 tonnes.

Les pays importateurs pendant cette période ont été: l'Allemagne 2,895 tonnes, la Belgique 423, l'Angleterre 172, les Etats-Unis 165, le Chili 5, l'Italie 2 tonnes.

Si l'on en juge par les travaux de construction, de pavage et de dallage en cours à Lima, il y a tout lieu de croire que les chiffres de 1900 et de 1901, qui ne sont pas encore connus, seront supérieurs à ceux des années précédentes.

A part quelques fours à chaux de peu d'importance, le Pérou ne possède pas une seule fabrique de ciment.

L'introduction, déjà ancienne, du ciment de provenance allemande, a donné à ce pays une supériorité incontestée dans le chiffre des importations, et certains entrepreneurs et constructeurs tendraient à attribuer au ciment allemand une renommée que des personnes compétentes ont affirmé être tout au moins exagérée.

Le seul avantage dont jouit à présent l'importation allemande des ciments réside dans le mode de transport et le système de vente par consignment.

Les agents allemands savent profiter des départs des voiliers en destination des côtes chiliennes et péruviennes pour remettre aux armateurs d'importantes parties de ciment, qui sont embarquées, soit comme lest, soit à des frets très réduits, à cause du manque de marchandises lourdes ou propres à être expédiées par voiliers vers ces régions lointaines.

Cette situation permet certainement au producteur allemand de diminuer ses prétentions de vente tout en se réservant encore un bénéfice suffisant. Si les fabriques étrangères de ciment désirent se créer un débouché sérieux et permanent au Pérou, elles doivent faire des prix permettant de lutter avantageusement avec une concurrence déjà très forte.

URUGUAY.

COMMERCE EXTÉRIEUR EN 1901.

La Direction des Douanes a publié le résumé général du Commerce extérieur de l'Uruguay pour le premier semestre 1901; en comparant les chiffres publiés avec ceux du premier semestre 1900 on obtient le tableau suivant:

	Importation.	Exportation.
Premier semestre 1900.....	\$12, 741, 288	\$17, 707, 638
Premier semestre 1901.....	12, 509, 331	17, 782, 249
Différence par rapport à 1900.....	—231, 952	+74, 611

L'attention est attirée sur les moins-values importantes qui se sont produites à l'importation dans les chapitres des boissons, des tissus et confections, compensées d'ailleurs par une plus-value très forte dans le chapitre des matériaux pour l'industrie et machines, due en grande partie à l'appoint fourni par les matériaux destinés à l'achèvement des chemins de fer de l'Ouest et aux arrivages des matériaux du port.

LA CULTURE DES TABACS.

Les conditions climatiques de l'Uruguay, ainsi que les propriétés de ses terrains, se prêtent admirablement à la culture des tabacs, et si celle-ci était rendue plus rémunératrice—car les prix que les planteurs retirent de leur récolte compensent faiblement les soins assidus que nécessite cette plante—elle pourrait faire une sérieuse concurrence aux tabacs du Brésil et du Paraguay qu'on importe chaque année en quantités considérables.

Les départements de Artigas, Tacuarembó, Rivera, Cerro, Largo, Minas, Maldonado, Canelones, Colonia, San José, Florida ont déjà de nombreuses plantations de tabac. Les plus importantes se trouvent dans les départements de Tacuarembó, Artigas, Rivera, Cerro, Largo, limitrophes de l'Etat brésilien de Rio Grande, et leur production actuelle est estimée à plus d'un million de kilogrammes.

L'analyse de quelques échantillons de ces tabacs, publiée dans le bulletin de "l'Asociacion Rural de l'Uruguay," montre que leurs propriétés ne sont nullement inférieures à celles des tabacs consommés dans le pays. Ils sont très bien préparés, d'un bel aspect extérieur; leurs feuilles pour la plupart sont sans piqures et ont une odeur franche. Tout dénote que la culture a été intelligemment dirigée et qu'elle a été faite avec le plus grand soin.

VÉNÉZUÉLA.

PRODUCTION DE BALATA.

Le journal "El Guayanés," de Upata, Vénézuéla, dit que pendant les douze mois finissant avec le mois d'octobre 1901, on a expédié à Ciudad Bolivar de San Felix et de Guri, territoire de Yuruary, plus de 1,840,000 kilogrammes (4,048,000 livres) de balata. Le district est situé au sud de la rivière Orinoco et à l'est de son affluent, la Caroni, et est en outre traversé par deux autres rivières, la Yuruary et la Imataca.

Ce caoutchouc "balata" paye à l'Etat de Bolivar une taxe équivalente à environ 4 cents or par kilogramme, et au gouvernement il en paye une de 2 cents or par kilogramme. Ces taxes ont depuis été aug-

mentées d'environ 100 pour cent par kilogramme. On a perçu de plus \$772 provenant d'autres taxes, droits, etc.

Le total des revenus publics produits par le balata s'est monté, dit-on, à \$11,425.50. La valeur des exportations de balata, était en moyenne, d'après le journal en question, équivalente à 38 cents par livre, montant la valeur totale, pour les douze mois, à \$1,538.200.

LES DROITS D'ENTRÉE SUR LE CAFÉ DANS LES DIFFÉRENTS PAYS.

La France est l'un des pays du monde où le café paye les droits d'entrée les plus élevés.

Les cafés du Brésil qui s'importent en quantité si considérable acquittent à l'entrée, en France, 136 francs de frais de douane par 100 kilogrammes; ceux de provenance des colonies françaises, 58 francs seulement. L'Italie, avec ses droits de 130 à 150, et l'Espagne, 105 à 140 francs, peuvent rivaliser avec la France. Viennent ensuite le Portugal et l'Autriche, qui font payer environ 100 francs d'entrée, et la Russie, qui clôt le série des droits élevés avec 95.35 francs, toujours par 100 kilogrammes.

Dans des limites beaucoup plus modestes, on trouve ensuite l'Allemagne, 59 francs; la Norvège, 41 francs; l'Angleterre, 34.80 francs et le Danemark, 33.50 francs.

Les pays où le café paye les droits d'entrée les moins élevés sont la Suède, 16.70 francs; la Belgique, 10 francs, et enfin la Suisse, 3.50 francs seulement. Mais elle ne détient pas pour cela le record du plus faible droit, puisque le café est admis en franchise en Hollande et aux Etats-Unis.

SYSTÈME MONÉTAIRE DE L'AMÉRIQUE CENTRALE ET DE L'AMÉRIQUE DU SUD.

D'après le "Moniteur Officiel du Commerce," de Paris, la population de l'Amérique Centrale et de l'Amérique du Sud, s'élevant en chiffres ronds à 60 millions d'âmes, dispose d'un fonds, en circulation, de près de 1 milliard de dollars. Plus des trois-quarts de cette somme sont en papier-monnaie sans être couverts par une encaisse métallique; 150 millions de dollars en argent sont en circulation et ne représentent guère que leur valeur métallique. Il n'y a que 90 millions de dollars en or. Ainsi, dans ces pays il y a en moyenne et en chiffres ronds, par tête d'habitant, 1.50 dollars or, 2.50 dollars argent et 14.50 dollars

papier. Dans la République Argentine, avec la situation favorable actuelle, l'or vaut 178 pour cent de plus que le papier-monnaie, tandis qu'au Brésil le cours du papier-monnaie ne correspond qu'à un quart environ de la valeur nominale en or.

FONDS AMÉRICAINS PLACÉS EN FRANCE.

Le "Bulletin de statistique et de législation comparée" vient de publier le chiffre total des fonds étrangers timbrés en France de 1884 à 1900.

Sur un total de 16,729,607,087 francs, les valeurs américaines entrent pour les sommes suivantes: Brésil, 490,210,044; Argentine, 310,089,288; Chili, 7,909,370; Colombie, 96,586; Costa Rica, 10,000; Saint-Domingue, 7,022,858; Guatémala, 68,500; Haïti, 47,856,895; Honduras, 1,685,976; Mexique, 86,544,753; Nicaragua, 10,000; Pérou, 1,807,100; Uruguay, 48,299,847; Venezuela, 24,985,938, et Etats-Unis, 18,796,867.

Il y aurait donc près de 1,000,000,000 de francs de fonds d'états américains en France dont la moitié de fonds brésiliens, et on pense que cette estimation n'est pas exacte.

UNITED STATES CONSULATES.

Frequent application is made to the Bureau for the address of United States Consuls in the South and Central American Republics. Those desiring to correspond with any Consul can do so by addressing "The United States Consulate" at the point named. Letters thus addressed must be delivered to the proper person. It must be understood, however, that it is not the duty of Consuls to devote their time to private business, and that all such letters may properly be treated as personal, and any labor involved may be subject to charge therefor.

The following is a list of United States Consulates in the different Republics:

ARGENTINE REPUBLIC—

Buenos Ayres.
Cordoba.
Rosario.

BOLIVIA—

La Paz.

BRAZIL—

Bahia.
Para.
Pernambuco.
Rio de Janeiro.
Santos.

CHILE—

Antofagasta.
Arica.
Coquimbo.
Iquique.
Valparaiso.

COLOMBIA—

Barranquilla.
Bogotá.
Cartagena.
Colón (Aspinwall).
Medellin.
Panama.

COSTA RICA—

San José.

DOMINICAN REPUBLIC—

Puerto Plata.
Samana.
Santo Domingo.

ECUADOR—

Guayaquil.

GUATEMALA—

Guatemala.

HAITI—

Cape Haitien.
Port au Prince.

HONDURAS—

Tegucigalpa.
Utilla.

MEXICO—

Acapulco.
Chihuahua.
Ciudad Juarez.
Ciudad Porfirio Diaz.
Durango.
Ensenada.
La Paz.
Matamoros.
Mazatlan.
Mexico.
Monterey.
Nogales.
Nuevo Laredo.
Progreso.
Saltillo.
Tampico.
Tuxpan.
Vera Cruz.

NICARAGUA—

Managua.
San Juan del Norte.

PARAGUAY—

Asunción.

PERU—

Callao.

SALVADOR—

San Salvador.

URUGUAY—

Colonia.
Montevideo.
Paysandu.

VENEZUELA—

La Guayra.
Maracaibo.
Puerto Cabello.

WEIGHTS AND MEASURES.

The following table gives the chief weights and measures in commercial use in Mexico and the Republics of Central and South America, and their equivalents in the United States.

Denomination.	Where used.	United States equivalents.
Are	Metric	0.02471 acre.
Arobe	Paraguay	25 pounds.
Arroba (dry)	Argentine Republic	25.3171 pounds.
Do	Brazil	32.38 pounds.
Do	Cuba	25.3664 pounds.
Do	Venezuela	25.4024 pounds.
Arroba (liquid)	Cuba and Venezuela	4.263 gallons.
Barril	Argentine Republic and Mexico	20.0787 gallons.
Carga	Mexico and Salvador	300 pounds.
Centaro	Central America	4.2631 gallons.
Cuadra	Argentine Republic	4.2 acres.
Do	Paraguay	78.9 yards.
Do	Paraguay (square)	8.077 square feet.
Do	Uruguay	2 acres (nearly).
Cubic meter	Metric	35.3 cubic feet.
Fanega (dry)	Central America	1.5745 bushels.
Do	Chile	2.575 bushels.
Do	Cuba	1.599 bushels.
Do	Mexico	1.54728 bushels.
Do	Uruguay (double)	7.776 bushels.
Do	Uruguay (single)	3.888 bushels.
Do	Venezuela	1.599 bushels.
Frasco	Argentine Republic	2.5096 quarts.
Do	Mexico	2.5 quarts.
Gram	Metric	15.432 grains.
Hectare	do	2.471 acres.
Hectoliter (dry)	do	2.838 bushels.
Hectoliter (liquid)	do	26.417 gallons.
Kilogram (kilo)	do	2.2046 pounds.
Kilometer	do	0.621376 mile.
League (land)	Paraguay	4,633 acres.
Libra	Argentine Republic	1.0127 pounds.
Do	Central America	1.043 pounds.
Do	Chile	1.014 pounds.
Do	Cuba	1.0161 pounds.
Do	Mexico	1.01465 pounds.
Do	Peru	1.0143 pounds.
Do	Uruguay	1.0143 pounds.
Do	Venezuela	1.0161 pounds.
Liter	Metric	1.0567 quarts.
Livre	Guiana	1.0791 pounds.
Manzana	Costa Rica	1.5-6 acres.
Marc	Bolivia	0.507 pound.
Meter	Metric	39.37 inches.
Pie	Argentine Republic	0.9478 foot.
Quintal	do	101.42 pounds.
Do	Brazil	130.06 pounds.
Do	Chile, Mexico, and Peru	101.61 pounds.
Do	Paraguay	100 pounds.
Do. (metric)	Metric	220.46 pounds.
Suerte	Uruguay	2,700 cuadras (<i>see</i> Cuadra).
Vara	Argentine Republic	34.1208 inches.
Do	Central America	33.874 inches.
Do	Chile and Peru	33.367 inches.
Do	Cuba	33.384 inches.
Do	Mexico	33 inches.
Do	Paraguay	34 inches.
Do	Venezuela	33.384 inches.

METRIC WEIGHTS AND MEASURES.

METRIC WEIGHTS.

Milligram ($1/1000$ gram) equals 0.0154 grain.
Centigram ($1/100$ gram) equals 0.1543 grain.
Decigram ($1/10$ gram) equals 1.5432 grains.
Gram equals 15.432 grains.
Decagram (10 grams) equals 0.3527 ounce.
Hectogram (100 grams) equals 3.5274 ounces.
Kilogram (1,000 grams) equals 2.2046 pounds.
Myriagram (10,000 grams) equals 22.046 pounds.
Quintal (100,000 grams) equals 220.46 pounds.
Millier or tonneau—ton (1,000,000 grams) equals 2,204.6 pounds.

METRIC DRY MEASURE.

Milliliter ($1/1000$ liter) equals 0.061 cubic inch.
Centiliter ($1/100$ liter) equals 0.6102 cubic inch.
Deciliter ($1/10$ liter) equals 6.1022 cubic inches.
Liter equals 0.908 quart.
Decaliter (10 liters) equals 9.08 quarts.
Hectoliter (100 liters) equals 2.838 bushels.
Kiloliter (1,000 liters) equals 1.308 cubic yards.

METRIC LIQUID MEASURE.

Milliliter ($1/1000$ liter) equals 0.27 fluid dram.
Centiliter ($1/100$ liter) equals 0.338 fluid ounce.
Deciliter ($1/10$ liter) equals 0.845 gill.
Liter equals 1.0567 quarts.
Decaliter (10 liters) equals 2.6417 gallons.
Hectoliter (100 liters) equals 26.417 gallons.
Kiloliter (1,000 liters) equals 264.17 gallons.

METRIC MEASURES OF LENGTH.

Millimeter ($1/1000$ meter) equals 0.0394 inch.
Centimeter ($1/100$ meter) equals 0.3937 inch.
Decimeter ($1/10$ meter) equals 3.937 inches.
Meter equals 39.37 inches.
Decameter (10 meters) equals 393.7 inches.
Hectometer (100 meters) equals 328 feet 1 inch.
Kilometer (1,000 meters) equals 0.62137 mile (3,280 feet 10 inches).
Myriameter (10,000 meters) equals 6.2137 miles.

METRIC SURFACE MEASURE.

Centare (1 square meter) equals 1,550 square inches.
Are (100 square meters) equals 119.6 square yards.
Hectare (10,000 square meters) equals 2.471 acres.

The metric system has been adopted by the following-named American countries: Argentine Republic, Bolivia, Brazil, Chile, Colombia, Costa Rica, Ecuador, Honduras, Mexico, United States of America, and Venezuela.

PUBLICATIONS.

The Bureau of the American Republics was established as the representative of the International Union entered into in 1890 by the independent States of this continent, for the publication in four languages of their tariff laws and all laws and provisions which might be enacted by them relating to trade and navigation, for the collection and publication of useful statistics and information, and for the promotion by these and other proper means of greater and closer commercial relations between the countries of the Union. In pursuance of this purpose, the Bureau has published for distribution a number of Handbooks, Reports, Codes of Commercial Nomenclature, a Commercial Directory of the American Republics, including the European dependencies in Central and South America and the West Indies, and a Monthly Bulletin, which is now in its ninth year and is the official organ of the Bureau. Many of these publications, especially the Handbooks, have naturally through the course of time become obsolete, and it is therefore necessary to bring them down to date. New editions have been published of the Handbooks of Guatemala, Venezuela, Mexico, and Brazil, but the work of revising the others has not as yet been completed. In the meantime, it has been deemed prudent to withdraw from circulation all those which need revision.

Below is given a list of the publications of the Bureau available for distribution.

Payment is required to be made in cash, money orders, or by bank drafts on banks in New York City or Washington, D. C., payable to the order of the BUREAU OF THE AMERICAN REPUBLICS. Individual checks on banks outside of New York or Washington, or postage stamps, can not be accepted.

PRICE LIST OF PUBLICATIONS.

No.		PRICE.
4	Money, Weights, and Measures of the American Republics, 1891	\$0.05

The foregoing estimate by the Director of the Mint, of the values of foreign coins, I hereby proclaim to be the values of such coins in terms of the money of account of the United States, to be followed in estimating the value of all foreign merchandise exported to the United States on or after January 1, 1902, expressed in any of such metallic currencies.

L. J. GAGE, *Secretary.*

No. 23446.

DRAWBACK ON STEEL LATHS.

Drawback on herringbone expanded pressed steel laths manufactured by the International Metal Lath Company, of Niles, Ohio, wholly with the use of imported steel sheets.

TREASURY DEPARTMENT, *January 2, 1902.*

SIR: On the exportation of "herringbone expanded pressed steel laths," manufactured by the International Metal Lath Company, of Niles, Ohio, wholly with the use of imported steel sheets, by the processes of pickling, trimming, cutting, and expanding, a drawback will be allowed equal in amount to the duty paid on the imported material so used, less the legal deduction of 1 per cent.

The preliminary entry must show the marks and numbers of the shipping packages, the number, length, width, and gauge of the sheets of lath contained in each package, and the average gross and net weight per package for a given gauge. Each package must be so stenciled or marked on the covering sheets as to show the number of sheets of lath it contains, their length, width, and gauge, and the gross and net weight of the same.

In the drawback entry must be shown the total number of sheets of lath exported of each length, width, and gauge, and the net weight of the lath, stated separately for each gauge, together with the length,

width, and gauge of the imported sheets from which the exported sheet lath of the various gauges and dimensions were made.

The said entry must further show, in addition to the usual averments, that the exported merchandise was manufactured of material and in the manner set forth in the manufacturer's sworn statement, dated December 6, 1901.

In liquidation, the weights of imported steel sheets of the several gauges which may be taken as bases for allowance of drawback may equal the net weights declared in the drawback entry, after official verification of exported gauges and weights, provided that to such weights may be added 3 per cent of the same to compensate for loss incurred in the manufacturing processes.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *New York, N. Y.*

No. 23447.

DRAWBACK ON TENNIS RACKETS.

Drawback on tennis rackets manufactured by the Spalding Manufacturing Company, of Chicago, Illinois, wholly or in part with the use of imported gut.

TREASURY DEPARTMENT, *January 6, 1902.*

SIR: On the exportation of tennis rackets manufactured by the Spalding Manufacturing Company, of Chicago, Illinois, wholly or in part with the use of imported gut, a drawback will be allowed equal in amount to the duty paid on the imported material so used, less the legal deduction of 1 per cent.

The preliminary entry must show the marks and numbers of the shipping cases and the contents of each case, separately, by quality number and commercial designation, as marked on the rackets and stated in the manufacturer's illustrated catalogue. Each case must be marked to show the number of rackets contained therein of each quality number and its gross and net weight.

The drawback entry must show the number of rackets exported of each quality number and commercial designation, as stated in the manufacturer's catalogue, together with the number of feet of gut, in condition as imported, used in the manufacture of the same, stated separately for each style of racket and for the several dutiable values of gut. The said entry must further show, in addition to the usual averments, that the rackets of the several qualities and style numbers were manufactured of materials and in the manner set forth in the manufacturer's sworn statement, dated December 19, 1901, and the tables attached thereto.

In liquidation, the quantities of gut in condition as imported which may be taken as bases for allowance of drawback may equal the quantities declared in the drawback entry, after official verification of

exported quantities and style numbers, but in no case shall they exceed per racket, for each style number exported, the quantities shown for the corresponding numbers in the tables hereinbefore mentioned.

In case other styles than those named in the said tables should be manufactured for export, entries covering the same may be liquidated on supplementary sworn statements being filed, showing particulars of manufacture.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *Chicago, Ill.*

No. 23448.

FASTENINGS FOR BONDED CARS AND VESSELS.

[Circular No. 3.]

TREASURY DEPARTMENT, *January 7, 1902.*

To collectors and other officers of the customs:

In order that there may be uniformity of practice in the manner of securing cars or vessels laden with merchandise in bond, customs officers are hereby directed to notify bonded common carriers that from and after the 1st proximo lead seals may be used as the customs fastening for cars or vessels laden with merchandise entered for immediate transportation without appraisement. Bonded common carriers owning registering locks heretofore prescribed by the Department for securing such cars or vessels may continue to use the locks so long as they are serviceable.

Cars laden with appraised merchandise entered for transportation in bond must have attached thereto a red card, $3\frac{1}{2}$ by $4\frac{1}{2}$ inches, upon which card shall be printed the following inscription:

U. S. customs.

Bonded merchandise.

From ————.

(Departure.) Date: ———, 190—.

To ————.

(Arrival.) Date: ———, 190—.

NOTICE.—Seals attached to this car are to be removed by customs officers only. Unauthorized persons who willfully break, cut, or remove customs seals are liable to a fine of \$1,000 or imprisonment not exceeding five years, or both.

Cars or vessels laden with unappraised merchandise in bond are required to have attached thereto yellow cards, 6 inches square, upon which the following inscription should be printed:

U. S. customs.

Unappraised merchandise in bond.

From ————.

Forwarded ———, 190—.

To ————.

Arrived ———, 190—.

A notice similar to that required to be printed on the card attached to cars containing appraised goods should be placed upon the yellow cards herein referred to. The cards are to be furnished by the bonded carriers.

Nothing in these instructions is to be construed as modifying the decisions heretofore made concerning the transportation of packages corded and sealed, the intention being to provide suitable regulations in instances where full carloads of dutiable merchandise are entered for transportation in bond.

O. L. SPAULDING,
Assistant Secretary.

No. 23449.

DRAWBACK—CERTIFICATES OF IMPORTATION.

[Circular No. 4.]

TREASURY DEPARTMENT, *January 7, 1902.*

To officers of the customs and others concerned:

Inasmuch as the issuance of duplicate certificates of importation in cases where originals are not shown to have been destroyed is attended with possible loss to the revenue, it is deemed desirable that such original certificates of importation be transmitted by the collector issuing same direct to the collector of the port at which such certificate is to be used, and in no case should these certificates be handled by interested parties.

The regulations are therefore amended as follows:

ART. 1164. "In case the importer of material used or to be used in the manufacture of articles exported or to be exported, with benefit of drawback, from some port other than the port of importation, or the party to whom delivery of such material has been certified shall, in writing, request the collector of the port at which such material was imported to grant a certificate of importation and payment of duty, such collector shall issue and transmit to the collector of the port designated in the application at which drawback is to be claimed such certificate, which shall be in Form Cat. No. 794 and have stated plainly upon its face the port at which it is to be used.

"This certificate may be filed at the port of exportation; and should any portion of the material described in the certificate be used in the manufacture of articles exported from a port other than that at which it is filed, the collector holding the certificate shall, on written request of the party by whom it was filed, transmit an extract for use at such other port. Such extract shall be in form as follows:" Form No. 183.

O. L. SPAULDING,
Assistant Secretary.

No. 23450.

STATUARY.

Marble statuary shown by proper certificates to be the professional production of recognized sculptors in the country of production, entitled to entry under paragraph 454, act of 1897, at 20 per cent ad valorem.

TREASURY DEPARTMENT, *January 7, 1902.*

SIR: The Department is in receipt of a report of the United States attorney for the southern district of New York, stating that the appeal in the case of the United States, Appellant, *v.* Townsend & Townsend, Appellees (suit 2996), was disposed of in the United States Circuit Court of Appeals for the second circuit on the 11th ultimo adversely to the Government, the court affirming the decision of the circuit court below without opinion.

The merchandise in suit consisted of marble statues, imported for sale as cemetery statuary, and representing "Faith," "Memory," "Record," "Angel," "Grief," etc., all of which were assessed for duty as manufactures of marble, at 50 per cent ad valorem, under paragraph 115 of the act of July 24, 1897. The importers protested, claiming the merchandise to be "statuary," the professional production of a sculptor or statuary, and properly dutiable at 20 per cent ad valorem, under paragraph 454 of the same act.

The evidence introduced in the case showed that the sculptors who made the statues and whose certificates were attached to the invoices were professional sculptors of standing at Carrara and had made the statues from their own models.

On this evidence the court affirmed the decision of the circuit court below, holding the statuary to be entitled to entry at 20 per cent ad valorem, under paragraph 454 of the act of July 24, 1897, as claimed in the importers' protest.

The Attorney-General advises the Department that no further proceedings will be directed in this case. You are therefore hereby authorized to forward the usual certified statement for refund of the duties exacted in excess in settlement thereof.

Respectfully,

O. L. SPAULDING,
*Assistant Secretary.*COLLECTOR OF CUSTOMS, *New York, N. Y.*

No. 23451.

SCOURING BRICKS.

Scouring bricks prepared from ground pumice stone and sand, mixed and pressed into different sizes, dutiable at \$6 per ton under paragraph 92, act of 1897, as pumice stone wholly or partially manufactured.

TREASURY DEPARTMENT, *January 7, 1902.*

SIR: The Department is in receipt of a report of the United States attorney for the southern district of New York, in which he states

that the appeal of the United States in the case of *United States v. R. J. Waddell & Co.* (No. 3159) was recently decided in the United States Circuit Court of Appeals for the Second Circuit adversely to the Government.

The merchandise in suit consisted of scouring bricks prepared from ground pumice stone and sand, mixed and pressed into different sizes. Duty was assessed thereon at the rate of 35 per cent ad valorem under paragraph 97 of the act of July 24, 1897, as "articles composed of mineral substances, not specially provided for." The importers protested, claiming the merchandise to be dutiable at the rate of \$6 per ton, under paragraph 92 of the same act, as pumice stone wholly or partially manufactured, which claim has been sustained by the United States Circuit Court of Appeals in this case, the court affirming the decision of the United States Circuit Court below without opinion.

The Attorney-General advises the Department that no further proceedings will be directed in this case. You are therefore hereby authorized to forward the usual certified statement for refund of the duties exacted in excess in settlement thereof.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *New York, N. Y.*

No. 23452—G. A. 5057.

COTTON CLOTH (FINISHED ARTICLES).

Finished articles of cloth, such as couch covers and horse blankets, with whipped or stitched edges, made wholly of cotton, are included in the definition of "cotton cloth" in paragraph 310, act of 1897, as consisting of "all woven fabrics of cotton in the piece or *otherwise*," and are therefore dutiable as such, under the countable clauses of Schedule I of said act, and not under paragraph 322, as "manufactures of cotton, not specially provided for."—*Stern v. United States* (suit 3022, not reported) and *United States v. McBratney* (105 Fed. Rep., 767) followed.

[Before the United States General Appraisers at New York, January 3, 1902.]

In the matter of the protest, 49907 f-6498, of John Bernhard, against the decision of the collector of customs at New York, N. Y., as to the rate and amount of duties chargeable on certain merchandise, imported per *Karlsruhe*, and entered January 3, 1899.

Opinion by DE VRIES, *General Appraiser.*

The merchandise in this case consists of certain colored blankets, or couch covers, wholly of cotton, the edges of which have been whipped or, as stated in the invoice, hemmed with a red-colored cotton yarn.

The merchandise was assessed for duty at the rate of 45 per cent ad valorem under the provisions of paragraph 322 of the tariff act of July 24, 1897, which reads as follows:

“322. All manufactures of cotton not specially provided for in this act, forty-five per centum ad valorem.”

It is claimed to be dutiable at the rate of 35 per cent ad valorem under the provisions of paragraph 306 of said act as a countable cotton cloth, colored, valued at over 12½ cents per square yard, which paragraph, in so far as pertinent, reads:

“306. Cotton cloth * * * exceeding one hundred and not exceeding one hundred and fifty threads to the square inch, counting the warp and filling, * * * -if dyed, colored, stained, painted, or printed, and not exceeding four square yards to the pound, three and one-half cents per square yard: * * * *Provided*, That on all cotton cloth exceeding one hundred and not exceeding one hundred and fifty threads to the square inch, counting the warp and filling, * * * dyed, colored, stained, painted, or printed, valued at over twelve and one-half cents per square yard, there shall be levied, collected, and paid a duty of thirty-five per centum ad valorem.”

It is stated in the return of the collector that the assessment was made upon authority of G. A. 4312. This issue and the one presented in that case are entirely different. In that case the merchandise was cotton damask table covers and cotton damask doilies in the condition of finished and completed articles ready for use, assessed as manufactures of cotton under paragraph 322 and claimed to be dutiable under paragraph 321, which provides for “cotton table damask.”

This Board held the latter language included only piece goods of corresponding description and not finished articles, and pointed out that the words “in the piece or otherwise” contained in the corresponding provision in the acts of 1890 and 1894 were omitted from the paragraph as it appears in the act of 1897. The Board held that the articles were not dutiable under paragraph 321 as claimed, but nothing further.

In this case the issue is whether the articles the subject of this protest are dutiable under paragraph 322 or under one or the other of the countable clauses of the cotton schedule quoted. It is claimed by the protestant that they are dutiable under the countable clauses as “cotton cloth” per force the scope of the language of paragraph 310, as follows:

“310. The term cotton cloth, or cloth wherever used in the paragraphs of this schedule, unless otherwise specially provided for, shall be held to include all woven fabrics of cotton in the piece *or otherwise*, whether figured, fancy, or plain, the warp and filling threads of which can be counted by unraveling or other practicable means.”

The omission of the words "in the piece or otherwise" from paragraph 321 in the present tariff act and their inclusion as a part of the definition of "cotton cloth" as defined in paragraph 310 and used in the countable provisions, presents for determination a vastly different question of law from that presented in G. A. 4312, in that the paragraph under which this claim is made is incomparably more comprehensive. The issue here is essentially whether or not these articles are cotton cloth "in the piece *or otherwise*" within said paragraph 310. If so, they are dutiable as countable cotton cloth; if not, they are dutiable as manufactures of cotton under paragraph 322, as assessed. The differentiating question of fact, urged by the Government, is whether or not the goods by manipulation, addition, and other processes of manufacture have not been carried beyond the scope of the terms "in the piece or otherwise" so far that in their present condition they are properly described as "manufactures of cotton," partaking more of the nature of separate, distinct, and individual articles of merchandise of a distinct and appropriate name and so recognized and known in the trade.

The meaning and latitude of the words "in the piece or otherwise" was considered by the circuit court for the southern district of New York in the case of *Stern v. United States* (suit 3022). The full import of that decision can better be understood by advertence to the exact subject-matter thereof. That was an appeal from G. A. 5468. It recites:

"The protest * * * relates to cotton portières and cotton table covers. * * * The articles in question have been woven with a border and selvage, and have been cut to size and form of the article *as intended for sale and use.*" * * *

And concludes—

"That the articles of cotton such as table covers, portières, curtains, etc., cut to the proper size and form for use as such *and so known commercially*, whether fringed, trimmed, or hemmed, or not so treated, are no longer piece goods, but are manufactured articles and are not included in the phrase 'woven fabrics in the piece or otherwise' as used in paragraph 310; such articles are dutiable as manufactures of cotton not specially provided for, under paragraph 322, and not as cotton cloth."

On appeal, the court said:

"The decision of the Board was evidently predicated upon its conclusions reached in the case of *United States v. McBratney*, since which said decision has been reversed by the circuit court and the circuit court of appeals (105 Fed. Rep., 767). In view of the language of said paragraph 310, which is said to include all woven fabrics of cotton in the piece *or otherwise*, it is clear that these goods are cotton cloth within the meaning of said paragraph and should have been assessed accordingly."

The McBratney case alluded to held that the words fabrics and articles *as used in paragraph 346* were interchangeable in meaning. The court reached that conclusion from the peculiar arrangement, contents, and context of the particular paragraph, and did not purport to construe these words as interchangeable in other parts of the tariff act. In the Stern case quoted, the doctrine of the McBratney case is applied to and ingrafted upon paragraph 310, the logical result of which is that the word "fabric" as therein used is interpreted to include "articles." The articles the subject of the McBratney decision were "doilies" and "tray cloths."

In conformity with and in view of these decisions, acquiesced in by the Government, it appears that such articles as colored horse blankets or couch covers composed wholly of cotton, with a whipped or hemmed border, are included within the description "woven fabrics of cotton in the piece or otherwise" as used in paragraph 310 of said act, and are thereby declared to be countable cotton cloth.

We find that the merchandise the subject of the protest consists of colored countable cotton blankets, known as "Kaiser" quality in the trade, whipped or stitched around the borders with a cotton thread and ready for use in the condition imported, and contain over 100 and less than 150 threads per square inch, and are valued at over 12½ cents per square yard, and conclude that they are properly dutiable as countable cotton, and as claimed.

The protest is sustained and the decision of the collector reversed. Reliquidation will follow.

No. 23453—G. A. 5058.

LIQUIDATION—APPEAL FOR REAPPRAISEMENT.

When a case is properly pending on appeal before the Board of Reappraisement, under the provisions of section 13 of the customs administrative act, it is error for the collector to attempt to make a liquidation of the entry, and his action in so doing is void.

[Before the United States General Appraisers at New York, January 3, 1902.]

In the matter of the protest, 50079b-738, of the Abe Stein Company, against the decision of the collector of customs at Plattsburg, N. Y., as to the rate and amount of duties chargeable on certain merchandise, imported per American Express, and entered July 12, 1901.

Opinion by SOMERVILLE, *General Appraiser*.

The procedure in this case has been unusual, perhaps without precedent. The merchandise consists of feathers, imported at Malone, New York. The entry was made on July 12, 1901. The goods were invoiced in Mexican dollars, at the rate of \$27 per ounce. The local appraiser advanced the value to \$17.50 per ounce in United States gold dollars, and the importers, on July 12, 1901, called for a reappraisement by a general appraiser, pursuant to the provisions of section 13

of the act of June 10, 1890. The general appraiser sustained the valuation made by the local appraiser, and on August 8 the importers asked for a reappraisement by a Board of General Appraisers, or Board of Review, under the provisions of said section 13. On August 26, before the Board of Review had rendered any decision, the collector or deputy collector liquidated the entry, assessing duty at 50 per cent ad valorem under the latter half of paragraph 425 of the tariff act of 1897. Against this liquidation the present protest was filed, claiming that the feathers are dutiable at 15 per cent ad valorem, under the first half of said paragraph 425. On October 9 the decision of the Board of Review was rendered, by which the value of the feathers was fixed at \$15 per ounce in United States gold dollars.

Before entering upon any consideration of the proper duty accruing upon the feathers, the preliminary question arises, whether there has been any legal liquidation of the entry against which such a protest as is contemplated by section 14 of the act of June 10, 1890, could be filed. From the facts above set out, it is seen that the so-called liquidation was made while an appeal for reappraisement was pending before the Board of Review, and while the question of the proper dutiable value of the merchandise was still unsettled. Under such circumstances, we are of opinion that it was error on the part of the collector to attempt to make a liquidation, and that his action was void. This necessarily results from the provisions and general purpose of section 13. The conclusion is irresistible that the evident intention of Congress was that the various demands for reappraisement, expressly allowed by that statute, were intended to operate after the manner of a supersedeas or stay of proceedings. Such matters are usually the subject of special statutory regulations or rules of court, by which some provision is made for the suspension of the power of the lower court until the decision of the appellate tribunal can be obtained. Some such arrangement is obviously necessary to prevent the possible defeat of the jurisdiction of the higher court. (*Goddard v. Ordway*, 94 U. S., 672.) Nothing of the kind exists relative to the procedure of this Board, except so far as prescribed by the customs administrative act; but not only is it reasonable to assume that such a suspension of action was intended by the framers of that act, but it is not too much to assert that any other rule would be productive of great embarrassment and confusion.

A different question might be presented if the liquidation had been made by the collector before the notice of dissatisfaction or demand for reappraisement had been filed with him. (*Board of Commissioners v. Gorman*, 19 Wall., 661.) But as to this we express no opinion. We are entirely clear that the attempted exercise of the power of liquidation, while the subject-matter of the value of the importation

was under the jurisdiction of the Reappraisement Board, was contrary to the statute and wholly void. The paper that has been filed as a protest is not the statutory protest contemplated by section 14 of the customs administrative act, and the Board of Classification can not entertain it, nor enter upon a consideration of the proper classification of the feathers.

It is accordingly dismissed and the case is remanded to the collector for further action under the law.

No. 23454—G. A. 5059.

COTTON CLOTHS NOT COUNTABLE.

Certain cotton glove materials resembling knit goods, which are made on the Milanese machine, and of which the threads can not be counted by unraveling or other practicable means, are dutiable as manufactures of cotton, not specially provided for, under paragraph 322, tariff act of 1897, and not under the provisions (paragraphs 305 to 310) in said act for countable cotton cloths.

[Before the United States General Appraisers at New York, January 3, 1902.]

In the matter of the protests, 61747-71660 *f*, of The Clark Fabric Company and Louis A. Consmiller, against the decision of the collector of customs at New York, N. Y., as to the rate and amount of duties chargeable on certain merchandise, imported per *Majestic* and *Bovic*, and entered September 23, 1899, and March 28, 1900.

Opinion by DE VRIES, *General Appraiser*.

This merchandise consists of a cotton fabric of peculiar texture and in various colors. It was assessed for duty at the rate of 45 per cent ad valorem under the provisions of paragraph 322 of the tariff act of July 24, 1897, which reads as follows:

“322. All manufactures of cotton not specially provided for in this act, forty-five per centum ad valorem.”

The importers allege in their protests that the cloth is a “woven fabric of cotton in the piece; that it is made on a Milanese loom, which is a weaving machine, and should pay duty as provided for in paragraphs 305 to 310 of the tariff act of July 24, 1897, according to the number of threads per square inch.” As appears by the protests, it would seem that the importers were unable to determine the count of threads per square inch in the merchandise for the purposes of allegation therein.

The said merchandise consists of cotton fabrics 72 inches wide and of various lengths and colors. It resembles in general appearance knit goods, and is made wholly of cotton yarns of a very fine texture and is used for making gloves. It is made by a machine especially adapted to that purpose, known as the “Milanese machine,” and it is claimed that “the warp holds the filling all the way round, works in

a circle, and gives a circular warp." The goods can not be unraveled and will not rip. It is a peculiar and effective fabrication of cotton yarns of a very fine grade made into a cloth of strong resistance and with the other qualities stated.

We find from the record and the samples as facts that the merchandise in each case is a cloth made wholly of cotton yarns knitted or otherwise so fabricated that the warp and filling threads thereof can not be counted by unraveling or other practicable means. One of the statutory tests of cotton cloth prescribed by paragraph 310 of the tariff act of 1897 being that "the warp and filling threads * * * can be counted by unraveling or other practicable means," this merchandise does not come within that class.

The protests are overruled and the decision of the collector in each case is affirmed.

No. 23455.

**AMENDMENTS TO REGULATIONS, UNITED STATES MARINE-
HOSPITAL SERVICE.**

[Circular No. 5.]

TREASURY DEPARTMENT,
OFFICE OF SUPERVISING SURGEON-GENERAL M. H. S.,
Washington, D. C., January 8, 1902.

*To commissioned officers, acting assistant
surgeons, and others concerned:*

The following amendment to the revised regulations for the government of the United States Marine-Hospital Service, approved November 29, 1897, is hereby adopted, and is now in force, viz:

Paragraph 69 is amended to read as follows:

"Paragraph 69. On account of the character of services required and the regulations in respect to uniforms for attendants, males only shall be eligible for appointment to the position of hospital attendant, except for the detail of cook or laundress, in which cases females are eligible."

WALTER WYMAN,
Supervising Surgeon-General U. S. M. H. S.

Approved.

L. J. GAGE, *Secretary of the Treasury.*

WHITE HOUSE, *January 8, 1902.*

Appproved.

T. ROOSEVELT.

No. 23456.

STORAGE OF TEA PENDING EXAMINATION.

Under the regulations of March 21, 1901 (T. D. 22907), teas may be stored pending examination, as follows: (1) In a public bonded warehouse, class 3; (2) in a private bonded warehouse, class 2; (3) in a warehouse specially designated for the storage of tea; (4) in general order or public store, class 1; (5) in premises of importer to be designated as warehouse for storage of tea under bond; (6) in locked cars, as constructive warehouses, and (7) in premises of the chief customs officer of the port under bond, if specially designated by the Secretary of the Treasury.

TREASURY DEPARTMENT, *January 8, 1902.*

SIR: The Department is in receipt of your letter of the 4th instant, in regard to the storage of teas arriving at your port.

Under the regulations of March 21, 1901 (T. D. 22907), teas may be stored pending examination, as follows:

1. In a public bonded warehouse, class 3.
2. In a private bonded warehouse, class 2.
3. In a warehouse specially designated for the storage of tea.
4. In general order or public store, class 1.
5. In premises of importer to be designated as warehouse for storage of tea under bond.
6. In locked cars as constructive warehouses.
7. In premises of the chief customs officer of the port under bond, if specially designated by the Secretary of the Treasury.

If importers at your port have suitable premises, tea sent there in bond may be stored in such premises under Article XII of the above regulations; otherwise the merchandise may be retained in locked cars as constructive warehouses.

Teas stored under the above conditions, except in locked cars, general order or public store, or custom-house premises, may be withdrawn for consumption and payment of duty, if found on examination to be fit for use under the act of March 2, 1897, in such quantities and at such times as may suit the convenience of the importer.

You will be governed accordingly.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

SURVEYOR OF CUSTOMS, *Des Moines, Iowa.*

No. 23457.

BEAN STICK AND BEAN CAKE.

Treasury decisions 8819, 10243, and 14618 to be followed according to kind of bean stick, and Treasury decision 19095 as to bean cake.

TREASURY DEPARTMENT, *January 8, 1902.*

SIR: The Department duly received your letter of October 5 last, relative to the dutiable classification of so-called bean stick and bean cake.

You state that bean stick imported at Honolulu in May last was returned by the gauger as "a vegetable casein, or legumin, made from the juice of leguminous seeds by precipitation with acids or rennet," and was classified as a nonenumerated manufactured article under section 6 of the act of July 24, 1897.

The collector of customs at New York reports that bean stick is returned for duty at his port as a nonenumerated manufactured article at the rate of 20 per cent ad valorem, under section 6 of said act, and bean cake as prepared vegetables at the rate of 40 per cent ad valorem, under paragraph 241 of the same act.

You state that the bean stick passed on in Treasury decision 14618 of December 20, 1893 (G. A. 2376), which was followed by the collector of customs at Honolulu, was found on a chemical examination to "exhibit the deportment of an animal tissue, and to resemble physically the membranous tissues derived from fish," and, therefore, differed from the bean stick which was held in Treasury decisions 8819 of May 5, 1888, and 10243 of September 9, 1890 (G. A. 21), to be vegetables prepared.

I am of opinion that a distinction should be made between the two classes of bean stick as above indicated, and that Treasury decision 14618 should, therefore, not be construed as revoking Treasury decisions 8819 and 10243. I am further of opinion that bean cake should be classified as vegetables prepared, under paragraph 241 of the present tariff, in accordance with Treasury decision 19095 of March 11, 1898 (G. A. 4094).

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

THE AUDITOR FOR THE TREASURY DEPARTMENT.

No. 23458.

SECTIONS OF REVISED STATUTES OF THE UNITED STATES RELATING TO LICENSED OFFICERS OF STEAMBOATS.

[Circular No. 7.]

TREASURY DEPARTMENT,
STEAMBOAT-INSPECTION SERVICE,
OFFICE OF SUPERVISING INSPECTOR-GENERAL,
Washington, D. C., January 10, 1902.

To Licensed Officers of Steamboats:

The following sections of the Revised Statutes and extracts from the Revised Rules and Regulations of the Board of Supervising Inspectors are published herewith for the information of licensed officers, and their special attention is invited to the penalties to which

they render themselves liable by noncompliance with the provisions thereof:

Section 17, Rule V, Rules and Regulations: "Whenever a steamer meets with an accident involving loss of life or damage to property, it shall be the duty of the licensed officers of any such steamer to report the same in writing and in person, without delay, to the nearest local Board: *Provided*, When from distance it may be inconvenient to report in person, it may be done in writing only, and the report sworn to before an authorized magistrate."

Section 4413, Revised Statutes: "Every pilot, engineer, mate, or master of any steam vessel who neglects or willfully refuses to observe the regulations established in pursuance of the preceding section (4412) shall be liable to a penalty of fifty dollars, and for all damages sustained by any passenger, in his person or baggage, by such neglect or refusal." (For Western rivers only.)

Section 3, act of Congress approved June 7, 1897: "That every pilot, engineer, mate, or master of any steam vessel, and every master or mate of any barge or canal boat, who neglects or refuses to observe the provisions of this act, or the regulations established in pursuance of the preceding section (2), shall be liable to a penalty of fifty dollars and for all damages sustained by any passenger in his person or baggage by such neglect or refusal: *Provided*, That nothing herein shall relieve any vessel, owner, or corporation from any liability incurred by reason of such neglect or refusal." (For Atlantic and Pacific coast inland waters.)

Section 2, act of Congress approved February 8, 1895: "That a fine, not exceeding two hundred dollars, may be imposed for the violation of any of the provisions of this act. The vessel shall be liable for the said penalty, and may be seized and proceeded against, by way of libel, in the district court of the United States for any district within which such vessel may be found." (For the Great Lakes and their connecting and tributary waters as far east as Montreal.)

Section 4445, Revised Statutes: "Every master, chief mate, engineer, and pilot who receives a license shall, before entering upon his duties, make oath before one of the inspectors herein provided for, to be recorded with the certificate, that he will faithfully and honestly, according to his best skill and judgment, without concealment or reservation, perform all the duties required of him by law.

"Every applicant for license as either master, mate, pilot, or engineer under the provisions of this title shall make and subscribe to an oath or affirmation, before one of the inspectors referred to in this title, to the truth of all the statements set forth in his application for such license.

"Any person who shall make or subscribe to any oath or affirmation authorized in this title and knowing the same to be false shall be deemed guilty of perjury.

“Every licensed master, mate, pilot, or engineer who shall change, by addition, interpolation, or erasure of any kind, any certificate or license issued by any inspector or inspectors referred to in this title shall, for every such offense, upon conviction, be punished by a fine of not more than five hundred dollars or by imprisonment at hard labor for a term not exceeding three years.”

Section 4446, Revised Statutes: “Every mate, engineer, and pilot who shall receive a license shall, when employed upon any vessel, place his certificate of license, which shall be framed under glass, in some conspicuous place in such vessel, where it can be seen by passengers and others at all times; and for every neglect to comply with this provision by any such master, mate, engineer, or pilot, he shall be subject to a fine of one hundred dollars, or to the revocation of his license.

Section 4465, Revised Statutes: “It shall not be lawful to take on board of any steamer a greater number of passengers than is stated in the certificate of inspection; and for every violation of this provision the master or owner shall be liable, to any person suing for the same, to forfeit the amount of passage money and ten dollars for each passenger beyond the number allowed.”

Section 4467, Revised Statutes: “The master of every passenger steamer shall keep a correct list of all the passengers received and delivered from day to day, noting the places where received and where landed, which record shall be open to the inspection of the inspectors and officers of the customs at all times; and the aggregate number of passengers shall be furnished to inspectors as often as called for, but on routes not exceeding one hundred miles the number of passengers, if kept, shall be sufficient.”

Section 4468, Revised Statutes: “Every master of any passenger steamer who fails, through negligence or design, to keep a list of passengers, as required by the preceding section, shall be liable to a penalty of one hundred dollars.”

Section 4441, Revised Statutes: * * * “Whenever complaint is made against any engineer holding a license authorizing him to take charge of the boilers and machinery of any steamer that he has, through negligence or want of skill, permitted the boilers in his charge to burn or otherwise become in bad condition, or that he has not kept his engine and machinery in good working order, it shall be the duty of the inspectors, upon satisfactory proof of such negligence or want of skill, to revoke the license of such engineer and assign him to a lower grade or class of engineers, if they find him fitted therefor.”

Section 14, Rule IX, Rules and Regulations: “When it is known or comes to the knowledge of the local inspectors that any steam vessel is or has been carrying an excess of steam beyond that which is allowed by her certificate of inspection, the local inspectors in whose district said

steamer is being navigated, in addition to reporting the fact to the United States district attorney for prosecution, under section 4437, Revised Statutes, shall require the owner or owners of said steamer to place on the boiler of said steamer a lock-up safety valve that will prevent the carrying of an excess of steam and shall be under the control of said local inspectors.

“On the placing of a lock-up safety valve upon any boiler, it shall be the duty of the engineer in charge of same to blow or cause the said valve to blow off steam at least once in each watch of six hours or less, to determine whether the valve is in working order, and it shall be his duty to report to the local inspectors any failure of such valve to operate.

“In case no such report is made, and a safety valve is found that has been tampered with or out of order, the license of the engineer having such boiler in charge shall be revoked.

“It shall be the duty of the local inspectors to send a copy of this rule to every steamer in their district, when said copies are furnished by the Department.”

Section 4448, Revised Statutes: “All officers licensed under the provisions of this title shall assist the inspectors in their examination of any vessel to which such licensed officers belong, and shall point out all defects and imperfections known to them in the hull, equipments, boilers, or machinery of such vessel, and also shall make known to the inspectors, at the earliest opportunity, all accidents or occurrences producing serious injury to the vessel, her boilers, or machinery; and in default thereof the license of any such officer so neglecting or refusing shall be revoked.”

Section 5344, Revised Statutes: “Every captain, engineer, pilot, or other person employed on any steamboat or vessel, by whose misconduct, negligence, or inattention to his duties on such vessel the life of any person is destroyed, and every owner, inspector, or other public officer, through whose fraud, connivance, misconduct, or violation of law the life of any person is destroyed, shall be deemed guilty of manslaughter, and, upon conviction thereof before any circuit court of the United States, shall be sentenced to confinement at hard labor for a period of not more than ten years.”

The attention of masters of steam vessels is particularly directed to the following rule of the Board of Supervising Inspectors in relation to station bills:

Section 15, Rule V, Rules and Regulations: “It shall be the duty of the master of every inspected steamer of 30 net tons and over, carrying passengers on the ocean, lakes, gulf[s], or bays, when such steamer is under way, to cause to be prepared a station bill for his own department, and one, also, for the engineer’s department, in which shall be assigned a post or station of duty for every person employed

on board such steamer in case of fire or other disaster; which station bills shall be placed in the most conspicuous places on board for the observation of the crew. And it shall be the duty of such master, or of the mate or officer next in command, once at least in each week, to call all hands to quarters and exercise them in the discipline, and in the unlashing and swinging out of the lifeboats, weather permitting, and in the use of the fire pumps and all other apparatus for the safety of life on board of such vessel, and to see that all the equipments required by law are in complete working order for immediate use; and the fact of the exercise of the crew, as herein contemplated, shall be entered upon the steamer's log book, stating the day of the month and hour when so exercised, and any neglect or omission on the part of the officer in command of such steamer to strictly enforce said rule shall be deemed cause for the revocation of the license of such officer. Upon navigable rivers the captains of all passenger steamers of 30 net tons and over shall be required to maintain a strict discipline and organize the officers and permanent crew so as to act with promptness in case of fire or other disaster; and the captain shall cause to be prepared at least two station bills, assigning the officers and permanent crew to definite places. Said station bills shall be conspicuously placed, under glass, near the inspection certificate."

Licensed officers are notified that in case of the loss of their license through any cause, they can obtain a certificate of such loss (Form 2162) to take the place of the lost license, which certificate will hold good until date of expiration of the lost or destroyed license, or grade of license is raised, in which case the certificate may be surrendered and new license issued indicating the new grade.

The attention of officers named therein is particularly directed to the following resolution of the Board of Supervising Inspectors, adopted at the meeting of January and February, 1900:

"Resolved, That masters, mates, and pilots of all vessels be required to exercise due caution in the use of their searchlights so as not to throw the rays of the light into pilot houses of passing steamers."

A willful violation of the above requirement will subject the offender to a suspension or revocation of license.

Local inspectors are hereby instructed to furnish a copy of this circular (which supersedes No. 13, dated February 7, 1900) with every master's, mate's, pilot's, and engineer's license issued.

Copies will be furnished by the Department on requisition.

JAS. A. DUMONT,
Supervising Inspector-General.

Approved.

L. J. GAGE,
Secretary of the Treasury.

No. 23459.

DRAWBACK ON RAWHIDE CUT LACING.

Drawback on rawhide cut lacing manufactured by Chas. A. Schieren & Co., of New York, N. Y., wholly from imported arsenic-cured dried hides.

TREASURY DEPARTMENT, *January 11, 1902.*

SIR: On the exportation of "rawhide cut lacing," manufactured by Chas. A. Schieren & Co., of New York, N. Y., wholly from imported "arsenic-cured" dried hides, a drawback will be allowed equal in amount to the duty paid on the imported material so used, less the legal deduction of 1 per cent.

The preliminary entry must show the marks and numbers of the shipping packages and the contents of each package as shown in the export invoice. In the case of "tipped" laces the number of cartons and the number of linear feet of each commercial width of lace contained therein and in each package must be stated. In the case of "pointed" laces the total number of bundles containing 100 feet of lace each, of the several commercial widths, and the aggregate lengths of the several widths contained in each package and in the entire shipment must be stated.

The drawback entry must show the total number of lineal feet of each commercial width of lace exported and the number of square feet of lace leather represented by each width, separately, and in the aggregate. The said entry must further show, in addition to the usual averments, that the lacing was manufactured of material and in the manner set forth in the manufacturer's sworn statement, dated December 18, 1901.

In liquidation, the quantity of leather in condition as imported which may be taken as the basis for allowance of drawback may equal the quantity of lacing exported, surface measurement, as shown in the drawback entry, after official verification of declared lengths and widths; but in no case shall it exceed one side of an imported hide for every 15 square feet of the lacing exported.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *New York, N. Y.*

No. 23460.

DRAWBACK ON REFINED ASPHALT.

The instructions of this Department, dated October 26, 1899 (T. D. 23042), extended to cover exportations of refined asphalt manufactured by the Sicilian Asphalt Paving Company, of New York, N. Y.

TREASURY DEPARTMENT, *January 11, 1902.*

SIR: The instructions of this Department, dated October 26, 1899, addressed to your office, establishing a rate for allowance of draw-

back on refined asphalt manufactured by the Warren-Scharf Asphalt Paving Company, are hereby extended to cover exportations of refined asphalt manufactured by the Sicilian Asphalt Paving Company, of New York City, wholly from imported crude Trinidad Lake asphalt.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *New York, N. Y.*

No. 23461.

CHARCOAL IRON.

Bar iron, oval in shape and of various sizes, in the manufacture of which charcoal is used as fuel, not specifically enumerated in the act of 1897, is dutiable at \$12 per ton as "bars or shapes of rolled or hammered iron not specially provided for," under paragraph 124 of said act, in accordance with the principle enunciated in Treasury decision 22930.

TREASURY DEPARTMENT, *January 13, 1902.*

SIR: The Department duly received your letter of the 7th ultimo, inclosing a communication from the President of the Board of United States General Appraisers concerning the classification of certain charcoal bar iron, of various shapes and sizes, imported into your port per the German ship *Siam*, by the Spreckels Brothers Commercial Company, and entered for consumption November 2, 1901, under entry No. 119.

It appears that you were informed by the President of the Board of General Appraisers as to the classification, under Treasury decision 22930, dated April 1, 1901, of the different shapes and sizes included in the importation and enumerated in the descriptive list submitted by you, with the exception of the "oval" shapes, in respect to the classification of which the president of the Board advised you to request instructions of the Department.

In reply I have to state that if, as appears, there is no special provision in the tariff act of July 24, 1897, for the various sized oval shapes, the same would fall within the provision for "bars or shapes of rolled or hammered iron not specially provided for," * * * in paragraph 124 of said act, and, being iron in the manufacture of which charcoal was used as fuel, would therefore be dutiable at \$12 per ton, in accordance with the second and final proviso to said paragraph 124, and the principle enunciated in Department's decision dated April 1, 1901 (T. D. 22930).

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *San Diego, Cal.*

No. 23462.

CONVICT-LABOR GOODS.

Compensation under section 4, act of June 22, 1874, can not be allowed in cases involving importation of convict-labor goods.

TREASURY DEPARTMENT, *January 13, 1902.*

SIR: The Department is in receipt of your letter of the 3d instant, in which you state that a certain person at Kingston, Canada, desires to give information to this Government in relation to the illegal importation into the United States of certain convict-labor goods from Canada upon condition that he receives a reward for said information.

You request to be informed whether the Department will award the informer a moiety resulting from a seizure of goods made by convict labor, whether imported regularly or smuggled into the United States.

In reply, I have to inform you that section 31 of the tariff act of July 24, 1897, prohibits entry of goods, wares, articles, and merchandise manufactured wholly or in part in any foreign country by convict labor, and the Secretary of the Treasury is authorized and directed to prescribe such regulations as may be necessary for the enforcement of this provision. This statute is a reproduction of former statutes on the subject.

The Department in Treasury decision 11934 of October, 1891, held that whenever on sufficient evidence any importation comes within the prohibition with reference to convict-labor goods the property may, at the option of the importer, be immediately exported without payment of duty, or if this course is not adopted the goods shall be held under seizure and proceedings commenced for their condemnation and destruction according to law. This ruling is still in force, and as it appears therefrom that property of this description can not enter into consumption in the United States, it follows that duty can not be collected thereon nor can it be disposed of at public sale, and as section 4 of the antimoietty act provides for compensation to informers only in cases where duties are withheld or a fine, penalty, or forfeiture has been incurred, a claim for compensation as informer can not be favorably considered by the Department.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

Mr. LEGARE PHENIZ,
Special Agent, Treasury Department, Ogdensburg, New York.

No. 23463.

DRAWBACK—MARKING BAGS.

Department's decision of April 28, 1899 (T. D. 21067), applies to the side of the bag bearing the brand by which the contents of the bag are known to the trade.

TREASURY DEPARTMENT, *January 14, 1902.*

SIR: The Department is in receipt of your letter of the 21st ultimo, transmitting the application of Bemis Brothers Bag Company for the allowance of drawback on 4,480 bags containing cotton-seed meal covered by preliminary entry No. 1501 and exported per *Othello* November 22, 1901.

It appears that all the requirements of the regulations have been complied with except that the words "for drawback" do not appear on the same side of the bag as the shipping mark.

In reply, I have to inform you that Department's decision of April 28, 1899 (T. D. 21067), provides that "such marking must be made with indelible ink upon the side of the bag exhibiting the brand, in letters not less than 2 inches in height and of proportionate width." This instruction applies to the side of the bag bearing the brand by which the contents of the bag are known to the trade, and has no application to the shipping mark. There may be cases where the contents of the bags are not designated by any brand or trade name, and in which the only mark appearing upon the bag would be the shipping mark. In such a case the decision above referred to would be fully complied with should the words "for drawback" appear on the side of the bag upon which the shipping mark was placed.

In view of the facts set forth, you are hereby authorized to proceed to a liquidation of the entry in question and the issuance of a proper certificate for drawback.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *New Orleans, Louisiana.*

No. 23464—G. A. 5060.

APPLIQUÉ WORK NOT EMBROIDERY—SLIPPERS DUTIABLE AS SHOES.

Turkish slippers, appliquéd with metal threads, composed in chief value of leather, are dutiable under paragraph 438, tariff act of 1897, as "shoes made of leather," and not, by virtue of the proviso in paragraph 339, under paragraph 179, as articles embroidered with metal threads.

A subordinate designation of any article, not described as such in a tariff act, does not operate to withdraw it from a general class which is described in the tariff.

[Before the United States General Appraisers at New York, January 10, 1902.]

In the matter of the protest, 90504f-11908, of A. R. Souhami & Bro., against the decision of the collector of customs at New York, N. Y., as to the rate and amount of duties chargeable on certain merchandise, imported per *Philadelphia*, and entered May 18, 1901.

Opinion by SOMERVILLE, *General Appraiser*.

The merchandise consists of Turkish slippers, returned by the appraiser as "shoes made of leather, with metal thread embroidered on top of same." It was classified for duty by the collector under the provisions of paragraph 179, tariff act of 1897, by virtue of the proviso attached to paragraph 339 of said act. The protestants claim that the articles are dutiable at the rate of 25 per cent ad valorem under the provision in paragraph 438 of said act for "boots and shoes made of leather."

Said paragraph 179 levies a duty of 60 per cent ad valorem upon "laces, embroideries, braids, galloons, trimmings, or other articles, made wholly or in chief value of tinsel wire, lame or lahn bullions, or metal thread." The pertinent portions of said paragraph 339 read as follows:

"339. * * * Wearing apparel, * * * and other articles or fabrics embroidered in any manner by hand or machinery, whether with a letter, monogram, or otherwise; tamboured or appliquéed articles, fabrics, or wearing apparel; * * * all of the foregoing, composed wholly or in chief value of flax, cotton, or other vegetable fiber, and not elsewhere specially provided for in this act; * * * *Provided*, That no wearing apparel or other article or textile fabric, when embroidered by hand or machinery, shall pay duty at a less rate than that imposed in any schedule of this act upon any embroideries of the materials of which such embroidery is composed."

We find from the evidence and an inspection of the sample under consideration that the so-called spangled ornamentation on the shoe is not embroidery or done by the process of embroidering, either by hand or machinery. It is what is known as appliqué work, the ornamentation being sewn or stitched upon the shoe with a cotton or flax thread. Appliquéed articles have been uniformly held by the board not to be embroideries or embroidered articles (In re De Maesener, G. A. 1151; In re Mandel, G. A. 3943; In re Muser, G. A. 4030). While appliquéed articles, fabrics, or wearing apparel, made of flax, cotton, or other vegetable fiber, are specially enumerated in said paragraph 339, it will be observed that the proviso to said paragraph 339, under which the collector justifies his assessment of duty, applies only to articles embroidered, and thus excludes by clear implication articles of any other character, including the slippers in question.

The slippers are also excluded from said paragraph 179, for the evidence shows satisfactorily that the value of the leather in the articles

is at least three times the value of the metal ornamentation, while that paragraph covers only merchandise composed in chief value of metal threads or the other materials enumerated therein.

The phrase "shoes made of leather," contained in said paragraph 438, has uniformly been construed to mean shoes composed in chief value of leather. (In re Wise, 93 Fed. Rep., 443; In re Robitsek, G. A., 249; In re Sang Chong, G. A., 3790; In re Wing Tuck & Co., G. A., 4547. Note, also, United States v. Churchill, 106 Fed. Rep., 672, and In re Alms, G. A., 4532.) So, a slipper, as often decided by the Board, is a species of light shoe, so called because it may be slipped on with ease and worn with undress. (In re Vantine, G. A., 319, and In re Robitsek, G. A., 1373.) Accordingly, the articles, being composed in chief value of leather, fall within the descriptive terms of said paragraph 438 as "shoes made of leather." It is immaterial that the goods in question are known, or sold in trade, under the name of Turkish slippers, and not under the specific name of shoes. A subordinate designation of any article, not described as such in a tariff act, does not operate to withdraw it from a general class described in the tariff. (In re White, 53 Fed. Rep., 787; In re Claffin, ib., 121; 2 C. C. A., 647; In re Charnock, G. A., 3248.)

In view of the foregoing authorities and findings of fact, we hold that the slippers in question are specially provided for at the rate of 25 per cent ad valorem as shoes of leather, under the provisions of paragraph 438.

The protest is therefore sustained and the decision of the collector reversed, with instructions to reliquidate the entry accordingly.

ARGENTINE REPUBLIC.

TREATY OF AMITY, COMMERCE, AND NAVIGATION WITH JAPAN.

Signed at Washington, February 3, 1898.

Approved by the Argentine Congress, June 5, 1901.

Promulgated, June 28, 1901.

Published in the "Oficial Boletín" of the Argentine Republic, November 26, 1901.

His Excellency the President of the Argentine Republic and His Majesty the Emperor of Japan, being equally animated by a desire to establish upon a firm and lasting foundation relations of friendship and commerce between their respective States and citizens and subjects, have resolved to conclude a Treaty of Amity, Commerce and Navigation, and have for that purpose named their respective Plenipotentiaries, that is to say:

His Excellency the President of the Argentine Republic, Señor Don MARTÍN GARCIA MÉROU, Envoy Extraordinary and Minister Plen-

ipotentiary of the Argentine Republic near the Government of the United States of America, and His Majesty the Emperor of Japan, JUSHI TORU HOSHI, of the Third Order of the Rising Sun, His Envoy Extraordinary and Minister Plenipotentiary near the Government of the United States of America, who, having communicated to each other their respective Full Powers and found them in good and due form, have agreed upon the following Articles:

ARTICLE 1. There shall be firm and perpetual peace and amity between the Argentine Republic and the Empire of Japan, and their respective citizens and subjects.

ARTICLE 2. His Excellency the President of the Argentine Republic may, if he see fit, accredit a Diplomatic Agent to the Court of Tokio; and, in like manner, His Majesty the Emperor of Japan may, if he thinks proper, accredit a Diplomatic Agent to the Government of the Argentine Republic; and each of the High Contracting Parties shall have the right to appoint Consuls-General, Consuls, Vice-Consuls and Consular Agents, for the convenience of trade, to reside in all the ports and places within the territories of the other Contracting Party, where similar Consular Officers of other nations are permitted to reside; but before any Consul-General, Consul, Vice-Consul or Consular Agent shall act as such he shall, in the usual form, be approved and admitted by the Government to which he is sent.

The diplomatic and consular officers of each of the two High Contracting Parties shall, subject to the stipulation of this Treaty, enjoy in the territories of the other whatever rights, privileges, exemptions and immunities, are, or shall be, granted there to officers of corresponding rank of any European nation or of the United States of America.

ARTICLE 3. There shall be between the territories and possessions of the two High Contracting Parties reciprocal freedom of commerce and navigation. The citizens and subjects, respectively, of each of the High Contracting Parties shall have the right to come freely and securely with their ships and cargoes to all places, ports, rivers and straits in the territories and possessions of the other, where citizens or subjects of other nations are permitted so to come; they may remain and reside at all the places or ports where citizens or subjects of other nations are permitted to remain and reside, and they may there hire and occupy houses and warehouses, and may there trade by wholesale or retail in all kinds of products, manufactures and merchandise of lawful commerce.

ARTICLE 4. The two High Contracting Parties hereby agree that any favor, privilege or immunity whatever in matters relating to commerce, navigation, travel through or residence in their territories or possessions which either Contracting Party has actually granted, or may hereafter grant, to the citizens or subjects of any European nation, or of the United States of America, shall be extended to the citizens or

subjects of the other Contracting Party, gratuitously, if the concession in favor of that European nation or of the United States of America shall have been gratuitous, and on the same, or equivalent conditions, if the concession shall have been conditional.

ARTICLE 5. No other or higher duties shall be imposed on the importation into the Argentine Republic of any article the growth, produce or manufacture of Japan, and no other or higher duties shall be imposed on the importation into Japan of any article the growth, produce or manufacture of the Argentine Republic, whether such importation be for the purpose of consumption, warehousing, re-exportation or transit, than are or shall be payable on the importation for the same purpose of the like article being the growth, produce or manufacture of any European country or of the United States of America.

Nor shall any other or higher duties or charges be imposed in the Territories or possessions of either of the two High Contracting Parties on the exportation of any article to the territories or possessions of the other than such as are, or may be, payable on the exportation of the like article to any European country or the United States of America. No prohibition shall be imposed on the importation or transit of any article the growth, produce or manufacture of the Territories of either of the High Contracting Parties into or through the territories or possessions of the other, which shall not equally extend to the like article, being the growth, produce or manufacture of any European country or of the United States of America. Nor shall any prohibition be imposed on the exportation of any article from the territories of either of the High Contracting Parties to the territories or possessions of the other, which shall not equally extend to the exportation of the like article to the territories of all European nations or of the United States of America.

ARTICLE 6. In all that relates to transit, warehousing, bounties, facilities, drawbacks, re-exports and transit duties, the citizens, subjects, merchandise and shipping of each of the High Contracting Parties, shall in the territories and possessions of the other, be placed in all respects upon the same footing as the citizens, subjects, merchandise, and shipping of European nations or of the United States of America.

ARTICLE 7. No other or higher duties or charges on account of tonnage, light, or harbor dues, pilotage, quarantine, salvage in case of damage, or any other similar or corresponding duties or charges of whatever nature, or under whatever denomination, levied in the name or for the profit of Government, public functionaries, private individuals, corporations or establishments, shall be imposed in any of the ports, rivers or straits of the Argentine Republic, on vessel of Japan, or in any of the ports, rivers or straits of Japan on vessels of the Argen-

tine Republic, than are, or may hereafter be, payable in like cases in the same ports, rivers and straits on vessels of European nations or of the United States of America.

ARTICLE 8. The coasting trade of both the High Contracting Parties is excepted from the provisions of the present Treaty, and shall be regulated according to the laws of the Argentine Republic and Japan respectively.

ARTICLE 9. All vessels which, according to Argentine laws and regulations are to be deemed Argentine vessels, and all vessels which according to Japanese laws and ordinances are to be deemed Japanese vessels, shall, for the purpose of this Treaty, be deemed Argentine and Japanese vessels, respectively.

ARTICLE 10. Citizens of the Argentine Republic and Argentine merchant vessels resorting to Japan or to the territorial waters thereof, shall, so long as they there remain, be subject to the laws of Japan and to the jurisdiction of His Imperial Majesty's courts; and, in the same manner, His Imperial Majesty's subjects as well as Japanese merchant vessels resorting to the Argentine Republic or to the territorial waters there, shall be subject to the laws and jurisdiction of the Argentine Republic. It is understood, however, that the provisions of this article do not extend to matters relating exclusively to the internal discipline of the merchant vessels of either Contracting Party in the ports or territorial waters of the other.

ARTICLE 11. The citizens and subjects of each of the High Contracting Parties shall, in the territories and possessions of the other, reciprocally receive and enjoy the same full and perfect protection for their persons and property that is granted to native citizens or subjects, and they shall have free and open access to the courts of justice in said countries, respectively, for the prosecution and defense of their just rights; and they shall, equally with native citizens or subjects, be at liberty to employ advocates, attorneys or agents to represent them before such courts of justice.

They shall also enjoy entire liberty of conscience, and, subject to the laws for the time being in force, shall enjoy the right of private or public exercise of their worship, and also the right of burying their respective countrymen according to their religious customs, in such suitable and convenient places as may be established and maintained for the purpose, subject to the regulations in force.

ARTICLE 12. In regard to billeting; forced or compulsory military service, whether by land or sea; contributions of war; military exactions or forced loans, the citizens and subjects of each of the two High Contracting Parties, shall, in the territories and possessions of the other, enjoy the same privileges, immunities and exemptions as may now, or may hereafter, be granted to the citizens or subjects of European nations or of the United States of America.

ARTICLE 13. The present Treaty shall go into operation immediately after the exchange of ratifications, and shall continue in force until the expiration of six (6) months after either of the High Contracting Parties shall have given notice to the other of its intention to terminate the same, and no longer.

ARTICLE 14. The present Treaty shall be signed in duplicate in the Spanish, Japanese and English languages, and in case there should be found any discrepancy between the Spanish and Japanese texts, it will be decided in conformity with the English text, which is binding upon both Governments.

ARTICLE 15. The present Treaty shall be ratified by the two High Contracting Parties and the ratifications shall be exchanged at Washington as soon as possible.

In witness whereof the respective Plenipotentiaries have signed this Treaty and hereunto affixed their respective seals.

Done in sextuplicate at Washington this third day of February of the year one thousand eight hundred and ninety eight, corresponding to the third day of the second month of the thirty-first year of Meiji.

MARTÍN GARCIA MÉROU

KAGORO TAKAHIRA

USE OF ELECTRIC POWER.

The Belgian Legation in Buenos Ayres recently forwarded a report to Brussels with reference to the use of electrical appliances—dwelling more particularly upon the adoption of electricity as an illuminant—in the Argentine Republic. Incidentally, the advantages of the country as a market for electrical furnishings, etc., is pointed out. The following is a translation, in part, of the report referred to:

“The Argentine Republic has kept abreast of the older nations in the application of electricity, and this country is an important market for electrical articles in general.

“The city of Buenos Ayres is remarkable for the extent of its means of communication. It has more than 450 kilometers of street-car lines and about 2,000 cars. Animal traction is gradually disappearing and is being replaced by electrical traction, which was first introduced in the Republic in 1897 by Mr. CARLOS BRIGHT. At the present time there are more than 1,000 kilometers of electric car lines in operation, while numerous transformations are in course of execution and the establishment of new lines are being projected.

“Among the most interesting projects are to be mentioned the following:

“An English syndicate, the Buenos Ayres Metropolitan Railroad Company, Limited, has acquired the concession of an underground electric road which is to connect Victoria Place (central point of the

city) with the Western Railroad station, from whence it is then to be connected as a surface road. The length of the proposed line will reach 8 kilometers, about half the length underground. The preliminary excavation has already been begun.

“At present three companies operate the electric roads by overhead trolley systems, namely, the Buenos Ayres and Belgrano Electric Tramway Company, Limited, the Capital Tramway Company, Limited, and the Buenos Ayres Electric Tramways, all English corporations.

“The Capital Tramway Company is the only one which generates the electricity it consumes, the others obtaining it from the different power houses established in the city. The generators of this company are 900 kilowatts; it has an accumulating battery of 1,000 and another of 450 kilowatts. It supplies the new Liniers abattoirs, where electrical rolling cranes for loading meat are in operation. Without counting the electrical installations for the private use of the owners, the country has nearly forty distributing plants.

“Besides Buenos Ayres, several cities are lighted by electricity. For public and private lighting in Buenos Ayres electric lights representing over 4,000,000 candlepower are employed.

“The principal power houses of Buenos Ayres are the following: Sociedad Primitiva Gas de Buenos Ayres (distributing force of 2,500 horsepower), Cie General de Electricidad (capacity more than 4,000 horsepower), River Plate Electric Light and Traction Company (owns power houses at Buenos Ayres, Rosario, La Plata and Tucumán; total capacity, 3,200 horsepower), and Cie Alemana Transatlantica de Electricidad (capacity, 7,000 horsepower).

“The city of Córdoba also owns a remarkable plant—the Córdoba Power and Light Company, Limited—which has a force representing nearly 3,000 horsepower. Electricity is used extensively as motive power in industrial enterprises and for operating elevators, fans, and other apparatus.

“The manufacture of electric attachments has developed considerably at Buenos Ayres, several of the articles formerly all imported are now wholly or partially of domestic production.

“In 1900 the Teutonia Company (German) was formed for the purpose of establishing the manufacture of arc lights, dynamos and carbons for electric light. Notwithstanding this, in the importation of electrical goods the Argentine Republic is still an important factor in the market, and a large number of the most important United States, English, and French houses are represented in the capital by agencies. For the articles in question the United States industry occupies in the Argentine Republic a much more important situation than its European competitors. The South American Electric Supply Company, organized for selling the products of the General Electric

Company, of Schenectady, New York, does an enormous business. The only Belgian articles of any importance imported are telephone material and wire."

THE WHEAT HARVEST.

Crop reports from the American side of the Atlantic Ocean are being very closely watched in European markets and the Argentine wheat estimate is markedly an object of interest. The Government estimate of 72,000,000 bushels is not generally credited, and 19,000,000 bushels as the exportable surplus is regarded as the amount available for foreign markets. The Argentine Republic has, however, begun to increase its exports, and 520,000 bushels were shipped in the week ending January 25, as against 96,000 bushels in the week previous, and as compared with 760,000 bushels in the corresponding week of 1901.

It is generally conceded that the Argentine output might be greatly increased were more modern and improved methods of harvesting the crop employed. The wheat is thrashed as soon after harvesting as a machine can be secured, but as the thrashing machines are usually owned by a local merchant or by a combination of farmers, some delay is necessitated. On the large farms where crops are grown by tenants, the machine is owned by the land owner and more expedition is possible. All wheat is bagged at the machine and none is handled in bulk. Practically none of the growers have facilities for protecting their grain from the weather, and the bags are simply stacked up in the open field. At the stations the railroads have provided small sheds of galvanized iron, but these are never large enough to hold more than a fraction of the grain shipped. At all stations of importance there is competition in buying and large exporters have regular stations where their purchases are made. At the ports of shipment, Rosario, Buenos Ayres, Bahia Blanca, and the less important river points, there is comparatively little storage room, and when the exporter has a vessel ready to load he endeavors to put it on board directly from the cars. There are no country elevators in use, and the few at Rosario and Buenos Ayres are used simply for mixing houses and to facilitate loading in bulk when the shipper prefers that method of shipment. In December, 1900, preliminary steps were taken for the erection of grain elevators and storehouses at the various maritime stations of the Republic, a German firm being reported as having secured Government authorization for the scheme, as noted in the MONTHLY BULLETIN for May, 1901.

The present method is expensive and wasteful, but the loss from weather damage after thrashing is really much smaller than might be expected, being confined mainly to the top and bottom layer of bags. To develop the full possibilities of the Argentine wheat crop and secure commensurate returns for the labor invested would necessitate

the construction of granaries for farm storage, and also radical changes in the methods of transportation, as all the railroad cars for this purpose are of the flat-car style and provide no protection against weather.

LATEST CROP STATISTICS.

A report recently issued by the Ministry of Agriculture shows that for the crop of 1901-2 there have been sown 3,269,066 hectares for wheat and 782,880 hectares for linseed. For the previous crop, 3,379,746 hectares were devoted to wheat and 607,352 to linseed. From this it appears that there is a decrease of over 80,000 hectares in the area sown in wheat and an increase of 175,000 hectares under linseed. It is also reported that the cereal harvest of the Province of Córdoba, instead of showing an almost total loss, has recovered so remarkably as to lead to the anticipation of average returns. It is said, in addition, that the prospects of the maize crops are good and that the alfalfa yield will be greater than the average.

NEW RAILWAY CONCESSIONS.

The Review of the River Plate of December 21, 1901, states that during the previous week Congress had granted several concessions for railways in the national Territories. Among these were the following:

To SEÑOR LLAMBI CAMPBELL, concession for a 1-meter gauge line from Colonia Ocampo to connect with the Sabana and the San Cristobal-Tucumán lines, terminating between Fortin Tostado and Aveira, in the Chaco, and opening up a very rich section of that Territory.

To ALBERTO SANTA MARIA & Co., concession for a 1-meter gauge line across the Territory of Misiones. This is a very important development, as, when completed, it will form the connecting link between the Argentine Republic and Brazilian systems, and constitute a section of the grand chain of railroads which will eventually traverse North and South America. A grant of 2 leagues of land for every 5 kilometers of road is accorded the concessionaires, or a total bounty of 60 square leagues of land, for colonization purposes.

Further concessions include a 1-meter gauge line from the Bermejo River and another starting from the Pilcomayo River, through the Chaco and Formosa, to the Bolivian boundary; a branch line from San Francisco to Villa Maria, the concession being to a French company; a prolongation of 60 kilometers on the Buenos Ayres Western and a branch line of the Argentine Great Western, to extend from Rodeo del Medio to Panquehua.

In Patagonia a line of 1-meter gauge is to be constructed starting from Tilly Roads, on St. George's Gulf, and extending to Colonia San Martin. It is to be 300 kilometers in length, and a bounty of 2,500 hectares of land for every 5 kilometers constructed has been granted, so that the total concession includes 60 kilometric leagues.

The press of the Andean Provinces reports that there is much interest in the proposed railway of 1-meter gauge from San Juan to Patquia, which, it is believed, will greatly assist the commercial development of San Juan and Mendoza Provinces. Connection will be made at Patquia with the Argentine Northwestern Railway, which joins the Central Córdoba Railway at Dean Funes. The new line will permit the wine growers of San Juan to compete with those of Mendoza and, in addition, will open up a short route for the wines of both Provinces to reach places at present attainable only by circuitous ways.

DRAINAGE CANALS IN THE PROVINCE OF BUENOS AYRES.

A large portion of the fertile Province of Buenos Ayres is subject to periodical inundations, resulting from the heavy rains of the winter season and causing great damage to the farm and pasture lands. According to a communication from the Belgian Legation at Buenos Ayres, for the last ten years the government of the Province has fostered the plan of remedying this situation by building a series of canals to carry the water to the sea, utilizing, as far as possible, the existing rivers.

A commission called "Dirección de Desagues," appointed in accordance with the provisions of the provincial law of July 8, 1901, has opened a competition for the award of the contract for the drainage works, which will be of great importance. The length of the principal canals will be about 1,000 kilometers, representing in round numbers 31,000,000 cubic meters of embankment. The work is divided into three sections, each of which could be the object of separate contracts, and will be executed according to certain plans and specifications which can be consulted by those interested in the bureaus of the commission at La Plata. Bids were to have been received up to March 1, 1902, but it is quite possible that this term may be extended.

In the event of the execution of this scheme, building materials, machinery, engines, dredging apparatus, tools, rails, pumps, wagons, etc., will be required by the contractors.

THE DAIRY INDUSTRY.

A comparison of the dairy statistics of 1901 with those of 1895 shows that since the last-named period there have been established in the Argentine Republic several large butter factories, besides importing houses concerned in the introduction of butter-making machinery. In 1896 there were 201 dairies in the Republic, with a capital of \$2,728,917 (paper), and 200 cheese manufactories, with a capital of \$3,061,521 (paper). "The Review of the River Plate" for December 14, 1901, states that on the date mentioned there were 523 dairies in

the country, with a combined capital of \$12,000,000, many new cheese presses having also been started. The two most important factories in 1896 had a capacity of two tons of butter per day each. In December, 1901, one dairy alone, the "Unión Argentina," was capable of turning out 30 tons a day, and had an invested capital of \$1,000,000, representing the factory, and \$250,000 in 42 steam creameries in various parts of the Province of Buenos Ayres. Another dairy was capable of producing 5 tons of butter per day, while the combined product of seven others was a daily output of 20 tons. The exports of butter in 1894 amounted to 19½ tons, and in 1901 had increased to over 3,000 tons, nearly all of which was marketed in England.

MISCELLANEOUS NOTES.

According to a communication sent by the Belgian Minister at Buenos Ayres to the Belgian State Department, an additional duty of 5 per cent on the value of the merchandise imported in the Argentine Republic has been voted by the Chamber of Deputies, and the customs duties must henceforth be paid in gold. The law establishing the modifications in question has not yet been promulgated.

The Argentine Minister in London has been authorized to purchase 200 tons of No. 7 telegraph wire for the construction of lines from Boca del Rio Negro to Bahia San Blas and Cabo Blanco. The cost is estimated at £2,200.

Mr. AUGUSTO ROCHA has been given permission to build a landing stage on the Rio Plate near Quilmes. The length is to be 600 to 1,000 meters. It is also to have a music stand and bathing place. The cost is estimated at 126,000 *pesos*.

The Government has assigned the order for building a storehouse along the harbor of Corrientes to Mr. JUAN LAMELA. The cost is estimated at 21,761 *pesos*.

BOLIVIA.

THE HUAQUAI RAILROAD.

The President of the Republic of Bolivia has requested the National Congress to maintain the exportation taxes on alcohol, rum, and crude rubber shipped from the Department of La Paz until December 31, 1904, for the purpose of raising funds to complete the construction of the railway from Huaquai to La Paz. The Chief Executive desires that the law of October 26, 1900, remain in force and effect until the end of 1904. He bases his request on the fact that, due to the fall in the value of Bolivian money and the consequent rise in exchange, the amount in gold set aside for the construction of the railway has been

considerably decreased, and submits in verification of his views the following figures:

	<i>Bolivianos.</i>
Income from tax on alcohol and rum from September 1, 1900, to August 31, 1901.....	421,342.64
Profits on 5,000 cases of alcohol.....	40,000.00
Receipts from tax on crude rubber to August.....	66,679.00
Total	528,021.73

Estimating a like income for the three years named in the law of October 26, 1900, the total receipts would be 1,584,065.19 *bolivianos*, which, with exchange at 18d, equals £118,804 17s. 9d. The railroad is estimated to cost £170,000, which leaves a deficit of £51,195 2s. 3d. This latter amount, at 18d, equals 682,601.50 *bolivianos*. The income from the tax on alcohol and crude rubber for sixteen months amounts to 704,028.97 *bolivianos*. The small excess of 21,427.47 *bolivianos*, the difference between the value of the deficit and the amount of the tax on alcohol and crude rubber, will be applied to sundry other necessary expenses in the construction of the road.

The President has also asked Congress to authorize an issue of 10 per cent interest bearing bonds to the amount of 500,000 *bolivianos*, said bonds to be redeemed in quarterly installments, beginning January 2, 1902. The object of this measure is to secure immediately the necessary funds required for the construction of the railway referred to. The payment of these bonds will be guaranteed from that part of the tax on alcohol which corresponds to the Government, and collaterally by the portion of the road already completed, as well as by the material entering into the construction of the same.

EXPORTS OF TIN FROM ORURO.

According to recent Government statistics, the exports of bar tin from the Department of Oruro during the year 1900 amounted to 81,771.28 metric quintals, as shown by the following table:

Oruro	11,350.28
Machacamarca	36,674.94
Poopó	3,665.14
Pazña	6,153.92
Challapata	22,515.99
Sevaruayo	1,411.01
Total	81,771.28

These figures do not include 850.75 metric quintals shipped in bulk from Oruro. Calculating the value of an avoirdupois ton at £111, the 82,622.03 metric quintals, or 812.41 tons, are worth £90,177 10s. 2d.

CONCESSIONS TO CAPITALISTS AND COLONISTS IN ACRE RIVER TERRITORY.

In answer to inquiries of the Consul of the United States at Pará, Brazil, Señor FLORIAN ZAMBRANO, High Commissioner and Financial

Agent of Bolivia at Pará, has furnished some pertinent information with regard to trade, production, navigation, and concessions to capitalists and colonists in the territories belonging to Bolivia on the Rio Acre. In substance, it is asserted that the Government of Bolivia grants large tracts of uncultivated land to capitalists who intend to colonize its territories; admits free of duty and other taxes all machinery, factories, tools, agricultural implements, etc., and protects and guarantees the personal safety, work, and property of all foreigners.

In the high region, or rather the plateau of the Andes Mountains (La Paz, Oruru, Potosi), there are rich mineral deposits, such as silver, lead, copper, and gold. In the middle region—that is, in the valleys (Cochibamba, Sucra, Itarija)—wheat, Indian corn, potatoes, grapes, etc., are cultivated. On the great eastern and northwestern plains (Santa Cruz and Beni), coffee, cocoa, sugar cane, and many other tropical products are produced, and rubber, vanilla, copaiba, etc., are extracted. There are also many gold mines and placers of incalculable richness which have been worked for centuries. On the plains of the Departments of Beni and Santa Cruz there are large numbers of cattle, the maximum cost of which is \$4.87 (£1) per head.

The rivers which the treaty recently made with Brazil incorporates into Bolivia are the Acre and Yacu and their affluents, the Upper Purus and Upper Jurua and their affluents, the Enviri, Tarabauca, Mua, Gregorio, etc.

Bolivia's occupation of this territory has been confined to the Acre and its affluents, where the custom-house of Puerto Alonso is established. The rubber exported from the Acre and its affluents alone reaches 3,500 tons per annum. The total export of rubber from the other rivers named amounts to another 5,000 tons per annum, and is increasing yearly. This rubber is of the first quality and is sold in European markets at the same price as and under the name of fine Pará rubber. Many rubber planters in the Acre territory, it is said, wish to sell their plantations.

Up to December, 1901, fifteen steamers, with an average capacity of 200 tons each, left Pará and Mañaos for the Acre, to return in February, 1902, laden with rubber. It is estimated that as many steamers are also plying up the Purus and Jurua rivers.

The Government of Bolivia has decided to establish and subsidize a line of foreign steamers to ply between European ports and Pará. On arrival at that port the cargoes are to be transferred and sent to the Acre territory in smaller steamers of the same company. As yet there is no contract for this project, and the Bolivian Government is disposed to accept the best proposal which may be presented. Señor ZAMBRANO (at Pará, Brazil), in his capacity as Financial Agent, has authority to receive and examine such proposals and forward them to his Government with such recommendation as may be deemed wise.

In the opinion of Señor ZAMBRANO, the Bolivian Government is prepared to execute without delay a contract with some large syndicate for transportation, colonization, and the construction of railroads, custom-houses, and other public improvements, both to increase the commercial and industrial development of that exceedingly rich region and to join the Acre territory to the interior settlements of Bolivia. For the latter purpose, the most important work is the construction of a railroad from the Acre to the Beni or the Madre de Dios River, the plans for which are already made and the cost estimated.

PREPONDERANCE OF GERMAN TRADE.

A recent issue of the "Handels Museum" contains an article with reference to the trade of Germany with Bolivia, of which the following is, in part, a translation:

"Owing to the great development of the imports into Bolivia from Germany, it is not risking too much to state that Germany now holds first rank among those countries which are in commercial relationship with Bolivia. German merchants express the opinion that their trade, which in 1898 represented one-fifth of foreign imports, is to-day five-eighths, as against one-fourth from England and one-eighth from France and other countries. Even if it is admitted that these figures are excessive, it is none the less true that Germany does almost as much business with Bolivia as all other countries together. The cause of this success must be ascribed to the regular service of the two shipping lines between Hamburg and the Pacific, as well as to the activity of numerous energetic Germans in Bolivia, where the chambers of commerce, which are open to all nationalities, have many Germans among their members."

CONCESSION FOR A RAILROAD.

The Argentine press reports that the Bolivian Congress has approved the proposal of the Company L'Africaine for the construction of a railroad from Bahia Negra to Santa Cruz. This company has deposited a guarantee of 40,000 *francs* with the Bolivian Government.

BRAZIL.

BUDGET FOR 1902.

The "Diario Official" of December 27, 1901, contains the budget of Brazil for the year 1902, and estimates the ordinary and extraordinary revenues at 42,876,666\$637 gold, and 257,461,000\$000 paper. The estimates for 1901 were 58,870,641\$000 gold, and 286,092,200\$000 paper.

The various sources from which receipts are estimated and their comparative amounts, in *milreis*, in 1901 are as follows:

Sources.	1902.		1901.	
	Gold.	Paper.	Gold.	Paper.
Revenues from imports	33,430,000	130,580,000	36,460,000	123,654,000
Inland revenues	1,000,000	72,744,000	705,000	79,820,200
Excise taxes	34,970,000	39,508,000
Sundry extraordinary revenues	90,000	7,645,000	8,665,000
Issue of funding bonds	12,678,974
Paper money redemption fund	25,829,000
Paper money guarantee fund	8,356,667	2,920,000	9,026,667
Amortization of internal debt	6,000,000	6,000,000
Port improvement fund	2,530,000	2,530,000
Lifeboat and salvage fund	72,000	86,000
Total	42,876,667	257,461,000	58,870,641	286,092,200

By Article II the Executive is authorized to effect the following operations:

I. To emit 25,000 *contos* in treasury bills to be redeemed before the close of the fiscal year

II. To adopt a differential tariff up to 50 per cent in favor of one or more imported articles in compensation for concessions to Brazilian produce on "most favored nation" treatment and vice versa.

III. To grant anyone undertaking the execution of the port works of Manãos and Pará the same concessions enjoyed by the Santos Dock Company contained in clauses of the *anexos* (additions) to decree No. 966 of November 7, 1890, except the extension of the concession aforesaid.

IV. To adopt a special postage stamp for official correspondence.

V. To recover from shipping a duty of from one to five *reis* per kilogram of merchandise loaded or discharged, the same to be expended in improvements at the port where collected.

The proceeds of this duty, which shall be proportionate to the requirements of the service, shall constitute a special fund for each port destined exclusively for the respective improvements.

Goods transhipped from one vessel to another, owing to the greater draft of the first than the one admitted within the zone comprised in the improvement, shall be exempt from this duty.

To accelerate the execution of the port works, the Government is authorized to accept donations or chargeable pecuniary assistance from the States, municipalities, or associations, which may be benefited by said improvements, provided these charges are not in excess of the proceeds of the duty aforesaid.

VI. To modify the sole paragraphs of Articles 10 and 11 of the regulation of the Consumption Tax when they refer to the registry as follows:

"Sole paragraph. Manufacturers, wholesale or retail merchants, or peddlers of vinegar, candles, matches, preserves, playing cards, salts

perfumery, boots and shoes, walking sticks, hats, and pharmaceutical preparations who are already matriculated for the manufactory or commerce of an article subject to consumption tax and who shall have paid the maximum tax, shall receive their registration certificates gratuitously. Certificates shall also be granted gratuitously to all existing stocks situated within the fiscal zone of the factories."

"ART. 11. The following charges shall be made for the issue of certificates of registry:

"(a) Factories, 200\$000; (b) depots, factories, or wholesale merchants, 100\$000; (c) first-class retail merchants, dealing exclusively in taxed articles, 50\$000; (d) other merchants, dealing in such articles only, 30\$000; (e) retail houses, dealing in more than one of the taxed articles, for each certificate up to three, 20\$000; (f) peddlers, 20\$000; (g) manufacturers on a small scale, with a number of operatives not exceeding six, 20\$000; (h) manufacturers on a small scale, seven to twelve operatives, 50\$000. Small factories not subject to the professions and industry tax shall be exempt from registry."

VII. To modify the internal tariff in force at the national telegraph offices as follows:

(a) Granting a rebate of from 30 to 50 per cent on the ordinary tariff to private telegrams bearing the word *preterido* to be transmitted after telegrams paying full rates. For newspapers the rebate shall be increased to 75 per cent.

(b) Reducing the tariff to the required proportions in zones where competition exists.

(c) To come to an agreement with the Western Telegraph Company with regard to the payment, in specie, of the contribution treated of in clause 3 of the contract of July 30, 1893, eliminating clause 4 of the same contract.

(d) The balance of account of mutual contract with foreign administrations shall be settled in *francs*.

The rate for each word of foreign telegrams, to or from Brazil, shall be fixed at 1.25 *francs*, the average of 1 and 1.50 *francs* charged at present for telegrams passing through one or two zones. The transit and terminal taxes should be maintained with the neighboring Republics as stipulated in articles 525, 528, and 529.

VII. To exempt from duties all materials imported by the States or municipalities for the supplying of water, the metallic material for drainage, road locomotives, and corresponding rolling stock, instruments and apparatus for professional and technical instruction, imported by the State institutions and by the professional schools maintained by the Federal Government.

All vessels and craft exclusively employed in fishing, and all apparatus, instruments and articles imported for the same service and for the preservation of fish, shall be free from all taxes.

IX. To modify the regulations of the Consumption Tax, permitting the fiscal agents of the Union to furnish a *guia* to national cigars destined for export, independent of the payment of the Federal tax, provided the interests of the Union are safeguarded.

ART. 4. From the date of the present law samples of all beverages and food stuffs imported must be submitted to the Laboratory of Analysis in the order of their arrival.

(1) The bulletin of the analysis shall be exclusively for the importer's use.

(2) In the event of wine having been shipped in barrels of different sizes the samples submitted to the Laboratory of Analysis shall be in proportion.

(3) After the payment of the respective tax by the importer the Laboratory will begin the analysis within the following periods:

For the analysis of the quality of wines, beer, cider, vinegar, bitters, vermouths, effervescent lemonades, mineral waters, olive oil, liquors, and simple sirups, six working days, maximum; for the analysis of flours, alimentary pastes, tea, chocolate, curd, preserved meats, fish, milk, vegetables, and fruits, oil for lubrication and other industrial purposes, soaps, tissues, natural and artificial essences, and alloys of metals, fifteen working days, maximum; for the analysis of butter, lard, tallow, and all greasy products of a composite nature, cognac, rum, whisky, alcohol, and other strongly alcoholic liquors, and all unenumerated products, thirty working days, maximum.

(4) The Laboratory shall be obliged to furnish a certificate of the receipt of payment, fix the day and hour for the presentation of the receipt, and return the respective amount in case the analysis has not been commenced within the stipulated time.

(5) If, after the stipulated term (of days), the Laboratory should not have commenced or finished the analysis, the party shall be permitted to dispatch the goods, presenting the certificate mentioned in (4) to the custom-house, which shall advise the Minister of Finance of the fact on the same day.

(6) The term for quantitative analysis shall be fixed by the Directory of the Laboratory, with a view to the maximum urgency.

(7) Quantitative analysis of products suspected to contain noxious substances shall not be comprised in the terms mentioned, as it may be necessary to repeat the analysis on a fresh sample.

ART. 5. The following table shall come into force from January 1, 1902:

TABLE A.—*Tariff for analysis according to the regulations of Decree No. 1257, of February 3, 1893.*

Search for salicylic acid in alimentary substances, colorings of aniline, metal salts, mineral acids, mineral acids in oils and fats for lubrication, glucose and albumen in urine, fat and blood pigments.....	15\$000
---	---------

Analysis of artificial essences, perfumery, mineral salts in medicines, alkaloids, silk, woolen, and cotton tissues, etc., of the density of milk extract at 95° and adulterations, foreign substances in cheese, bread, flours, tomato sauce, quantity of salicylic acid in alimentary substances, copper, lead, and zinc.....	25\$000
Search for salts in alimentary substances, lead in tinned vessels, metal each in minerals, sulphuric acid in oils and fats, chlorhydric, glucose and its density, and albumen, urea, uric acid, fat, phosphoric acid, chlorides and sulphates in urine.....	25\$000
Search for toxin or noxious matter in all alimentary substances, artificial mineral waters, toys, wall paper, tapestry, perfumery, etc., for foreign matter in pharmaceutical products, alcohol (search for mixtures), water, sugar, glucose, molasses, honey, sirups, liqueurs, jams, bitters, cognac, vermuth, etc., coffee adulterations, eggs (matter employed for their preservation), confectionery, dried fruit, chocolate, cocoa, tea, maté, etc., quantity of nitrogen in samples of blood, analysis of the quality of metallic alloys, and coarse salt	40\$000
Extracts of meat, preserved fish, meat and milk, table and other oils, vinegar, milk and cream, wine, beer, cider, bread, flours, fats, butter, cheese, quantitative analysis of tissues and coal tar, and analysis of any product of an earthy appearance	50\$000
Quantitative analysis of soap.....	60\$000
Analysis of plants, quantitative analysis of drinking or mineral waters, loam and kaolin, quantity of boric acid in curds, nutritive value of forage, complete analysis of turf, complete analysis of any cognac, and quantitative analysis of any oil	200\$000

The tariff for the analysis of any substance not mentioned in the above provisions shall be fixed by the Director of the Laboratory, subject to the approval of the Minister of Finance.

TABLE B.—*Tariff for analysis of imported products according to the regulations of Decree No. 1257, of February 3, 1893.*

Search for noxious substances in foodstuffs, alcoholic beverages and other liquids, analysis of table oils, lubricating oils, and other substances; analysis of pharmaceutical products; quantity of any salt or metal in foodstuffs and other products; examination of silk, woolen, and cotton tissues, and unenumerated products.....	20\$000
Analysis of alkaloids, alkaloid salts, and other chemical-organic components, analysis of any simple vegetable or animal drug, and of chemical mineral products.....	10\$000

The tariff for the analysis of substances not mentioned in the above provisions shall be fixed by the Director of the Laboratory, subject to the approval of the Minister of Finance.

ART. 6. All agricultural implements and machinery imported direct by the planter shall be free from duty, as also all apparatus for the dairy industry. The detailed dispatch of these articles shall be submitted direct to the Minister of Finance.

ART. 7. All vessels calling at Brazilian ports exclusively for orders shall be subject to a single fixed duty of £2 (\$9.73), irrespective of the tonnage of such vessels, and they shall be permitted to remain 10 days at said ports under supervision of the customs authorities, and shall be

allowed to receive provisions, coal, water, etc. The 10 days' grace may be extended by the Customs Inspector for 5 days only, except in case of *force majeure*, after which the vessels will be subject to the ordinary regulations. In this duty shall be included customs and other dues of every kind to which shipping is subject.

ART. 8. The 25 per cent of the duties in gold recovered on imported merchandise, of which 5 per cent will continue to be reserved for the currency guarantee fund, shall be collected as heretofore according to Law No. 741, of December 26, 1900.

ART. 9. The stamps for documents shall continue to be applied according to the regulations in force, with the following modifications:

(1) In case of omission, up to 30 days from the date of said omission, revalidation shall be permitted—(a) By paying ten times the value of the stamp; (b) Up to 60 days from the said date by paying twenty-five times the value of the stamp; (c) Beyond 60 days from said date by paying fifty times the value of the stamp.

Paragraph 2 of article 10 of Law No. 559 of December 21, 1898, and corresponding dispositions, are hereby revoked.

ART. 10. The authorization for the lease of the Central Railway (belonging to the State) is canceled.

ART. 11. Transfers of internal bonds are subject to proportionate stamp duties exclusively as stipulated.

ART. 12. During the fiscal year 1902 the stamp taxes on alcoholic beverages shall be double those of the fiscal year 1901.

ART. 13. All documents concerning civil marriages shall be free from the stamp tax.

ART. 14. Articles 24 and 25 of decree No. 4228, of November 6, 1901, authorizing the organization of the Rio de Janeiro Dock Company, are hereby extended to the Companhia Internacional de Docas e Melhoramentos no Brazil (International Docks and Improvement Company of Brazil).

ART. 15. Law No. 641 of November 14, 1899, is hereby modified in the following particular: Art. 3, paragraph 18, "cigars not exceeding 30\$ per thousand, each, 5 *reis*."

ART. 16. All national (Federal) properties, which under past régimés were destined for services now in charge of the several States, and those which were used for services in charge of the then Provinces and still continue so, shall be of the exclusive dominion of the respective States.

ART. 17. All contrary dispositions are hereby revoked.

MEASURES FOR INCREASING THE SALE OF COFFEE IN EUROPE.

The Belgian Legation at Rio de Janeiro writes that in view of the continued fall in the price of Brazilian coffee the Federal Government is taking steps to remedy this situation.

A credit of 70 *contos* has been opened by a presidential decree at the Ministry of Industry to organize the propaganda of Brazilian coffee abroad, with the double object of increasing the consumption of the principal national product and protecting it in foreign markets from the point of view of quality, quantity, price, and origin. This service will be principally carried on by means of permanent expositions of different samples of Brazilian coffee.

These expositions are to be organized preferably in the Brazilian consulates at Lisbon, Hâvre, Marseille, Paris, Genoa, Trieste, London, Hamburg, Antwerp, Brussels, Vienna, and St. Petersburg.

The collection of samples will be made so as to unite in each exposition all the elements of comparison between the Brazilian products and those of other countries.

Special instructions from the Minister of Foreign Relations will regulate the relations of the Consuls with the director of this service, who must report every six months as to results.

COTTON MILLS AT SÃO PAULO.

Within the State of São Paulo there are not less than 14 cotton mills, 3 of which are in Sorocaba, 1 in Tuhy, 1 in Salto y Tú, 1 in Piracicaba, 1 in Jundiáhy, 1 in Villa Americana, 1 in Itapetininga, and 5 in the city and district of São Paulo. All of these mills, except one, do their own spinning as well as weaving, and manufacture oxfords, zephyrs, and plain calicoes. Some of them have over 200 looms and employ from 300 to 400 men. The average output may be stated at 8,000 meters per day. All the mills work overtime and are under the control of practical men from Lancashire towns, England. The goods manufactured are of a very fair quality and are as durable, but not so well finished, as the imported articles. The greater part of the cotton employed is obtained from the plantations of the State. The machinery is mainly of English manufacture.

COMMERCE IN CODFISH AT RIO DE JANEIRO.

Rio de Janeiro, writes the French Consul at that port, offers a large market for imports of codfish (*bacalhao*). It is estimated that from 5,000,000 to 6,000,000 kilograms are yearly imported, either for immediate consumption or to be shipped to inland points in Brazil. The population of Portuguese origin is especially fond of this article of food, which is consumed in large quantities.

The codfish imported at Rio de Janeiro comes especially from Canada, via Halifax, or New York, in casks or barrels, weighing from 54 to 58 kilograms each, and from Norway, via Hamburg, in oblong boxes of about the same weight.

The imports of codfish during the years 1899-1900 were as follows:

Sources.	1899.	1900.
	<i>Kilos.</i>	<i>Kilos.</i>
American (Canadian)	2,818,000	3,902,000
Norwegian	1,884,000	1,768,000
French (from Newfoundland)	5,510	1,768,000
Spanish and Portuguese	1,755	29,072

From these figures it can be seen that the imports of the American fish have a tendency to increase and those of Norwegian origin to decrease, although the latter are preferred, as they are thicker, fresher, and more savory, though the price is somewhat higher. The American fish, smaller and dryer, packed in casks and more easily handled, are sent especially to the inland markets.

RESOURCES OF THE STATE OF SÃO PAULO.

According to the latest published statistics the State of São Paulo produced the following:

Articles.	Quantity.	Value.
		<i>Milreis.</i>
Brandy	80,295 barrels..	9,604,647\$000
Cotton	370,503 kilos..	1,803,490\$500
Rice	22,031,400 liters..	2,761,214\$000
Sugar	701,597 arrobas..	6,915,525\$000
Coffee	762,628,755 kilos..	116,356,826\$200
Beans	70,430,307 beans..	5,884,645\$000
Corn	233,726 liters..	32,462,567\$000
Tobacco	32,046,315 kilos..	1,910,360\$000
Wine	838 hogsheads..	359,550\$000
Total		178,058,824\$700

To this must be added 6,745,978\$000, representing the value of the wood and stone supplies.

In all, 12,081 persons are engaged in stock raising, an industry which is represented by the following statistics:

Live stock, etc.	Number.	Value.
		<i>Milreis.</i>
Horses and mules	112,375	8,688,130\$000
Sheep	53,841	421,160\$000
Swine	989,844	13,992,546\$000
Cattle	197,385	9,573,750\$000
Honey		273,553\$000
Wax		35,115\$566
Total		32,984,254\$566

The general revenues of the State amount to 217,815,697\$066. The total annual receipts from the railroads were 66,989,252\$364.

There are 14 public libraries, containing in all 74,188 volumes. The press is represented by 187 newspapers. The treasury contained a balance of 4,393,253\$073.

MINERAL EXPORTS OF THE STATE OF MINAS GERAES.

“Minas Geraes” (newspaper) reports that the measures adopted by the Federal Congress and the State Legislature to protect the mining industries are beginning to produce the satisfactory results which were expected.

During the first seven months of 1901, 2,435,866 grams of gold, valued at 5,689 *contos*, and 37,915 tons of manganese, representing 1,022 *contos*, were exported from Minas Geraes. Almost the entire quantity of gold, or 2,331,590 grams, were exported to England, which also imported 13,000 tons of manganese. During this same period the exports of precious stones reached nearly 464 *contos*.

The financial situation of Minas Geraes has been such as to already allow the Government to remit to Europe 315,297 *francs* for the payment of the coupons of its foreign loan which falls due July 15.

EXPORTS OF RUBBER, DECEMBER, 1901.

Through the courtesy of Mr. A. BEZERRA, Honorary Corresponding Member of the Bureau of the American Republics at Pará, the following data concerning the exports of rubber through the several ports named during the month of December, 1901, have been received, the quantities being in kilograms.

Exports from—	Destination.						Total.
	Liverpool.	Havre.	Hamburg.	Genoa.	Antwerp.	America.	
Manáos	714, 612	75, 550	29, 512	11, 650	1, 041, 671	1, 872, 995
Pará	726, 152	163, 838	16, 203	607	804, 884	1, 711, 684
Iquitos	98, 728	97, 985	196, 713
Cabelle Cocho.....	24, 036	24, 036
Total	1, 563, 528	337, 373	45, 715	11, 650	607	1, 846, 555	3, 805, 428

SILK CULTURE IN MINAS GERAES.

According to the “Diario da Bahia” silk culture has been introduced with great success at Barbacena, State of Minas Geraes. In 1901 the colonists of the Rodrigo Silva colony at this place produced 500 kilograms of cocoons, and it is anticipated that 10,000 kilograms will be the result of silk culture in 1902. The colony named is composed of Brazilians, Italians, and Austrians, and is under the direction of Mr. AMILCAR SAVASSI. The legislature of the State of Minas Geraes has authorized the purchase of extensive machinery for the manufacture of silk.

THE MATCH INDUSTRY.

The British Consul-General in Rio de Janeiro reports that over 18,000 *contos* have been invested in the manufacture of matches in Brazil. For the greater part, the factories have been furnished with complete plants of machinery for performing all classes of the manufacturing process, thus creating a real native industry. A few, how-

ever, have not the means for carrying such elaborate installations and are unprovided with the machinery necessary for making sticks and boxes. The import duties on these accessories have been so modified that they can be imported ready-made at less cost than would be incurred in making them in the country, the duty on boxes completely finished and labeled being only 400 *reis* per kilogram, while the duties on woods and other items used in their manufacture average 1,600 *reis* per kilogram, the rate on wood and labels being 2 *milreis* per kilogram. It is clear, therefore, that those who carry on the business with ready-made material, merely tipping the sticks with phosphorous after their receipt, work with a great advantage over those factories fully equipped for the industry.

CINNABAR AT OURO PRETO.

The "Côte Libre," of Brussels, Belgium, states that explorations at Ouro Preto, Brazil, have revealed the existence in that district of round particles of cinnabar, of which certain fragments weighing as much as 300 grams have given, on analysis, from 0.88 to 4.73 per cent of metallic mercury. These deposits are found in a vein with an incline of 30°, which fact renders exploitation comparatively easy.

NEW FROZEN-MEAT ESTABLISHMENTS.

A recent issue of the "O Paiz" contains a notice of the organization in São Paulo of a company to engage in the frozen-meat industry. The company expected to be in operation by February 15, 1902. A slaughterhouse will be established at Uberaba, and from this point the meat will be conveyed in refrigerator cars to the principal distributing centers of the State. It is proposed to supply the cities of Uberaba, Ribeirão Preto, Santos, and São Paulo with meat. It is also reported that frozen-meat plants are shortly to be established at Juiz de Fôra, in the State of Minas Geraes.

RAILWAY CONCESSION.

By a decree dated December 16, 1901, JOAQUIM HUET BACELLAR obtained a concession from the Brazilian Government for the construction of a railway to extend from Manãos to the mouth of the Malin River. The concessionaire must submit the definite plans for the approval of the Government within two years from the date of the concession, and the work must be begun within two years from the date of approval. The concession is for a term of fifty years, after which the line will revert to the Government.

MISCELLANEOUS NOTES.

The report of the board of directors of the Minas and Rio Railway for 1901 shows an increase of £8,501 18s. 11d. in the earnings and a decrease of £2,831 6s. 8d. in expenses compared with the preceding

year. A 5 per cent dividend was declared. Although there was a decrease in the number of passengers and in the freight transported, the returns from the traffic compare favorably with those of 1900, owing principally to the greater shipments of coffee and cattle and to reduced operating expenses.

The National Treasury has deposited in the Banco Nacional the funds required for the purchase of exchange to the amount of 780,166.86 *francs*, the amount needed for the interest and amortization of the foreign debt. Exchange was at the rate of $11\frac{1}{2}$ *pence* (23.41 cents) per *milreis*.

The Booth Line steamship *Benedict* arrived in New York on January 16, 1901, from the Amazon ports, with over 3,000 cases of rubber. The ship also brought a considerable quantity of balsam copaiba, tonka beans, feathers, and deerskins.

The "Diario da Bahia" states that gold exists in abundance in the vicinity of Pitanguy, Rio Grande do Sul, and that this city will in a short time be one of the principal gold-mining centers of the Republic.

The State of Bahia has entered into a contract with JAMES WEBSTER for a freight transport service between Sitio Novo and Orobo Grande, in which road locomotives will be used.

The Government of Bahia has contracted a loan with the British Bank for the sum of 300,000 *milreis* to run for six months, and bear an interest of 9 per cent.

A concession was recently obtained by Messrs. CHARLES BOLLE and THEODORE REINECKEN for the construction of a railway between Pelotas and Porto Alegre, in the State of Rio Grande do Sul.

On February 4, 1902, a patent (No. 692,611) was granted in the United States to JOHN BURGUM, of Rio de Janeiro, for a "flushing apparatus."

The number of immigrants arriving in the State of São Paulo during October, 1901, was 22,797.

The Minister of Finance has ordered from Europe 1,000,000 bank notes in the denominations of 500, 1,000, and 2,000 *reis*.

CHILE.

THE NEW CONVERSION ACT.

The "Chilian Times" of January 4, 1902, published the following translation of the new act of conversion which was promulgated on December 31, 1901:

"ARTICLE 1. The date appointed in law No. 1054, of July 31, 1898, for the initiation of metallic conversion, is postponed to January 1, 1905.

“The Conversion Fund in gold will continue to be deposited in the Casa de Moneda, and reserved exclusively for the payment of the fiscal notes. This fund shall be increased yearly with a sum of 5,000,000 of gold 18 *pence* dollars (36.65 cents United States currency) taken in bills on London out of the export duties on nitrate and iodine.

“ART. 2. The funds in fiscal notes now applied to conversion, which are substituted by the sums referred to in the last section of the preceding article, shall be paid into general revenue.

“ART. 3. The hypothecary bonds at present forming part of the conversion fund shall be devoted from January 1, 1905, to the payment of the charges of the *consos* redeemed in the national exchequer. The sums received for interest and amortization of these bonds shall be paid into general revenue during the three years of postponement.

“ART. 4. The President of the Republic is empowered for the term of two years to coin, in conformity with law 277, of February 11, 1895, up to four millions of dollars (*pesos*) in silver pieces of 50 and 100 cents, with a *ley* (standard) of $\frac{700}{1000}$ fine, and of a weight of 10 and 20 grams, respectively.

“The 50-cent coins shall be 28 millimeters in diameter and shall bear the same emblems and mottoes as the other silver coins created by the said law; the remedy (allowance) in fineness shall be $\frac{40}{1000}$, and in weight 4 per thousand. The remedy (allowance) in weight in each piece shall be 40 milligrams.

“For the object expressed in this article the President of the Republic may purchase by public tender the necessary silver bullion.

“ART. 5. The President of the Republic is authorized to withdraw from circulation the one-dollar notes and to replace them with notes of a higher value in proportion as they are exchanged for the silver money referred to in the preceding article.

“ART. 6. Within the term of one year, the one, two, five, ten, and twenty dollar notes in circulation shall be replaced by new fiscal notes.

“ART. 7. While there remain in circulation one-dollar notes, those worn-out shall be incinerated in conformity with existing regulations.

“ART. 8. The law No. 1054, of July 31, 1898, in the parts contrary to the present law, is hereby repealed.”

NITRATE PRODUCTION IN 1901.

In a report issued by Messrs. W. MONTGOMERY & Co. (London) under date of December 31, 1901, it is stated that the first year of the century was marked by development in consumption of nitrate of soda throughout the world as well as by a noteworthy advance in price. The restriction of the output, in accordance with definite commercial agreements, is the cause ascribed to the latter condition, and extended markets and the application of scientific principles to the use of nitrate as a fertilizer has produced a steady increase of consumption. Owing

to the partial failure of the European crops, there will be the more pressing need for increased cereal production in the next season, which will undoubtedly be a strong factor in the demand for nitrate.

The visible supply on December 31, 1901, as compared with the same date of 1900, showed a deficiency of 150,000 tons, but it was estimated that the steamer shipments from Chile between January and March, 1902, would aggregate 135,000 tons as against shipments aggregating only 67,000 tons in the corresponding months of 1901, so that the end of the first quarter of 1902 would find a stock on hand of 777,000 tons, as compared with 861,000 tons for the corresponding period of 1901. The consumption from January 1 to May 15, 1901, was 770,000 tons, so that but small margin is left for the unforeseen contingencies which may arise in the nitrate trade. As, however, consumption in 1901 established a fresh record, it is hardly probable that the figures for that year will be exceeded in 1902.

The total consumption of the world for the past three years has been as follows:

Consumption.	1899.	1900.	1901.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Continent of Europe	1,017,000	991,000	1,036,000
United Kingdom.....	123,000	135,000	118,000
United States	160,000	175,000	18,000
Other countries	30,000	23,000
Total	1,330,000	1,324,000	1,364,000
Shipments from Chile.....	1,373,000	1,429,000	1,263,000

EXTENSION OF THE LIFE OF PATENTS.

The Department of Industry and Public Works of the Republic of Chile has promulgated the following decree, signed by the President:

“No. 3326.

SANTIAGO, *November 21, 1901.*

“In view of the foregoing communication and bearing in mind that numerous applications for the extension of the time of patents of invention are made without the observance of any formalities whatever, and that it is necessary in order to determine the justice or advisability of granting them, to prescribe the form in which they shall be filed, I, therefore, decree that the applications for the extension of patents of invention, which may hereafter be presented to the Department of Industry and Public Works, shall be accompanied with:

“1. A copy of the decree granting the patent for which an extension of time is requested;

“2. A copy of the power of attorney or order authorizing the applicant to solicit said extension when the request is made in the name of another person; and

“3. A detailed statement of the reasons that have prevented the working of the invention within the time allowed by law, enumerat-

ing the steps taken to do so, and stating whether any capital has been invested in the country in connection therewith."

ARRIVALS AND DEPARTURES OF SHIPPING AT VALPARAISO.

During 1901 there arrived at the port of Valparaiso 911 steamers with an aggregate tonnage of 1,680,030 tons, and 286 sailing vessels having capacities aggregating 258,130 tons burden. The grand total for the year was 1,197 ships and 1,545,072 tons. During the same period 916 steamers and 281 sailing vessels (1,197 ships in all), representing 1,168,189 and 374,749 tons, respectively, departed from the port. In 1900 the arrivals were, steamers 866, of 1,103,210 tons capacity; and sailing vessels 210, representing 246,418 tons. The departures included 865 steamers (1,124,190 tons), and 212 sailing vessels (258,130 tons), a total of 1,077 ships with an aggregate tonnage of 1,382,320 tons.

During 1901 the number of passengers arriving numbered 19,972, of whom 10,765 were brought by foreign steamers. The departing passengers numbered 16,353, of whom 8,048 left on foreign vessels. The arrivals in 1900 numbered 18,784 and the departures 17,496.

MISCELLANEOUS NOTES.

The Chilean Government intends to lay a cable connecting Punta Arenas with Puerto Montt. Proposals will be received at the Chilean Legations in London, Paris, Berlin, and Rome, where information can be obtained relative to the conditions of the enterprise.

Permission has been granted to HERRERA DEL RÍO & Co. to construct a narrow-gauge railroad from Punta de Lobos to Salar Grande de Tarapacá.

By act of Congress, November 1, 1901, the customs tariff in effect during the year 1901 was made effective for the calendar year 1902.

COSTA RICA.

MINING DEVELOPMENT.

Reports from the various mining districts of the Republic of Costa Rica indicate renewed activity in developing the mineral resources of the country. New companies are being formed and new methods are being applied to mines already in exploitation. The Abengares Gold Fields Company, Limited, operates on the Pacific side of the Republic, and is opening its mines at lower levels than heretofore. The production, with a 10-stamp mill, averages from \$8,000 to \$10,000 per month, and arrangements have been perfected to increase the number of stamps

to 40. Extraction is made by amalgamation and cyanide, and averages 90 per cent.

A reorganization of the company working the gold mines lying in the Aguacate Mountains is being effected, the company being capitalized at \$5,000,000. The mines in question have been idle for twelve years and are estimated to have produced \$7,000,000 up to the time extraction ceased. Tunnel driving has begun at two points, and extensive development at the lowest possible tunnel level is being arranged. The new company includes leading business men of San José. The mines known as "La Union," near Miramar, on the Pacific side, have been idle for a year past, but are now working again through new and lower tunnels. A 20-stamp mill, with chlorination annex, is used. The ore is reported as low grade, but occurring in large bodies. El Porvenir mine, situated on the Machuca River, 12 or 15 miles from the Pacific coast, is being worked by a new company composed mostly of citizens of the United States, known as the Rio Grande Gold Mining Company. From \$40 to \$60 per ton represents the average value of the ore. The Thayer Mining and Milling Company has purchased the mines and mills of the Bella Vista Mining and Milling Company, and is operating two 20-stamp mills at present, but purpose to employ a more extensive plant in the near future.

NEW ANTWERP-CUBA STEAMSHIP SERVICE.

The United States Consul-General at Antwerp reports, December 21, 1901, that a new direct line of steamers from Antwerp to Cuban ports has been established by the North German Lloyd Steamship Company. This service, the Consul-General adds, will be carried out by the steamers *Coblenz*, *Roland*, *Stolberg*, *Trier*, and *Mainz*; the

Coblentz leaving Antwerp January 20, 1902, and the others following at intervals of two weeks.

ECUADOR.

BUDGET FOR 1902.

In accordance with a law enacted by Congress and published at Quito on November 9, 1901, in the "Registro Oficial," 13,418,504.25 *sucres* were set aside for the expenses of the Government during the fiscal year 1902, and it was further provided that said sum should be collected and disbursed as follows:

RECEIPTS.		Sucres.
Customs	9,640,700.00	
Receipts from industries controlled by the Government.....	450,000.00	
Sundry taxes	2,868,804.25	
Public lands, etc	423,000.00	
Leases.....	36,000.00	
Total.....	13,418,504.25	

The customs revenues are derived from the following sources:

	Sucres.
Duties on imports	3,200,000
100 per cent surtax on same.....	3,200,000
2 per cent additional tax on liquors, not including wines.....	5,000
Additional duty on liquors.....	300,000
Duty on lumber.....	35,000
Additional duty on lumber	60,000
Duties on exports	1,200,000
Surtax on same	600,000
82 per cent on the exports of cacao	348,500
Storage duties or fees (<i>derechos de piso</i>)	100,000
Surtax of 100 per cent on same.....	100,000
One-half per cent on exportations from Guayaquil, Manta, Bahía, Puerto Bolívar, Esmeraldas, Loja, and Tulcán	152,000
Other duties and charges	340,200
Total.....	9,640,700

The articles under the control of the Government are powder and salt, the first producing 120,000 and the second 330,000 *sucres* annually.

The disbursements are tabulated as follows:

DISBURSEMENTS.		Sucres.
Congress.....	111,780.00	
The President of the Republic.....	43,623.00	
The Vice-President.....	9,600.00	
Council of State	1,560.00	
Department of Interior, Police, and Public Works.....	3,603,168.00	

Department of Foreign Relations, Public Instruction, Justice, and Worship.....	Sucres. 2, 168, 034. 00
Department of Finance	2, 821, 694. 32

Department of Public Works.....	1, 068, 802. 80
Total	13, 319, 764. 30
Total receipts	13, 418, 504. 25
Total disbursements	13, 319, 764. 30
Surplus.....	98, 739. 95

CHANGES IN THE CUSTOMS TARIFF LAW.

The Congress of the Republic of Ecuador, in a decree promulgated on October 14, 1901, and which went into effect on January 1, 1902, made the following changes in the wording of certain sections of the customs tariff law:

“ARTICLE 1. The second part of article 11 shall read: ‘The chief appraiser and the storekeeper shall be appointed by the customs inspector.’

“ART. 2. Article 12 shall read: ‘The offices of the Treasury Department of the Provinces bordering on the neighboring Republics shall collect the customs duties.’

“ART. 3. Article 13 shall read: ‘Are powers and obligations of the customs inspector.’

“ART. 4. In item No. 2, article 13, insert the words ‘should make’ instead of ‘should designate.’

“ART. 5. In item No. 8 of the same article, change the words ‘to know’ to read ‘to examine.’

“ART. 6. In item No. 1 of article 15, omit the words ‘or private.’

“ART. 7. In article 16 omit the second part of item No. 1.

“ART. 8. In place of the second part of item No. 3 of article 16, substitute the following: ‘Any delay in excess of one month, after proper notice of dispatch has been given, shall be punished with a fine equal to 10 per cent of the value of the corresponding duties.’

“ART. 9. Add to item No. 10 of the same article: ‘Negligence in the fulfillment of this duty shall render the administrator liable for any damages that the public revenues may suffer thereby.’

“ART. 10. Omit items Nos. 15 and 16 of article 16.

“ART. 11. Add to item 21 of article 16 ‘and all claims which the importer makes regarding appraisement and settlement of merchandise dispatched.’

“ART. 12. Omit item No. 24 of article 16.

“ART. 13. Add to item No. 23 of article 17 ‘and the claims made for appraisements, dispatch, and payment of duties.’

“ART. 14. In item No. 1 of article 19 omit the words ‘except the official correspondence, etc.’

“ART. 15. In item No. 1 of article 24 omit the words ‘public robbery.’

“ART. 16. In item No. 6 of said article insert ‘within at least six days from the approval by the inspector of an order of removal issued by the administrator, the merchandise requested, on hand in the customs warehouses, being responsible, etc.’

“ART. 17. Omit article 25.

“ART. 18. Paragraph 2 of article 26 should follow item No. 6 of article 24.

“ART. 19. To article 27 of the corresponding section add ‘and knowledge of the administrator.’

“ART. 20. Item No. 6 of article 39, in place of the words ‘will be furnished’ insert the words ‘will be.’

“ART. 21. In paragraph 2 of article 45 change No. 94 to 93.

“ART. 22. At the end of part 1 of article 51 add ‘who shall have no authority.’

“ART. 23. Change No. 10 of article 56 to read: ‘powder and salt.’

“ART. 24. The second part of No. 12 should read ‘with exception of Nos. 1, 3, 6, 7, 8, and 9.’

“ART. 25. In No. 1 of article 57 omit the word ‘plows,’ substituting this word in No. 7 of the same article, and to this same number add ‘spades, bars, crowbars, shovels, and plowshares.’

“ART. 26. The following changes should be made in the No. 7 referred to:

“Add to the words ‘empty bottles,’ ‘ordinary bottles for liquors.’

“Omit the words ‘fat, hogs,’ ‘gasoline,’ ‘ore dust.’

“ART. 27. In article 27 after the word ‘wire’ insert ‘with barbs.’

“Add ‘asbestos,’ ‘columns and beams of iron for construction,’ ‘ornamented iron plates for construction.’

“Omit the word ‘dynamite,’ and the rest of the words following ‘vanilla of the carob tree.’

“ART. 28. In article 61:

“Omit ‘tin’ and ‘effervescent glue.’

“Add ‘sugar,’ ‘leaf tallow,’ ‘machetes for clearing.’

“Omit ‘Wooden boards for manufacturing boxes.’

ART. 29. In article 63, after ‘gaseous waters,’ add ‘except crystal or glass,’ ‘Carbonic acid.’

“Immediately after the word ‘bronze’ insert ‘copper,’ ‘tin.’

“Omit ‘dried prunes.’

“After ‘chica in general’ insert ‘with exception of those of grape.’

“To the word ‘toilets’ add ‘and urinals.’

“Add ‘vermicelli,’ ‘gasoline,’ ‘effervescent glue,’ ‘lard or tallow,’ and ‘cut boards for manufacturing boxes.’

“Omit ‘machetes for clearing,’ ‘machines weighing less than 50 kilograms for tanners and carpenters,’ and ‘glass tiles and their frames.’

“Insert in the proper place, ‘uncooked hams.’

“After ‘tacks’ insert ‘and nails less than half an inch.’

“ART. 30. In article 64 omit ‘steam stills, etc.,’ ‘sugar,’ ‘vermicelli,’ ‘hand axes,’ and ‘machetes that are not for clearing,’ and add ‘cloth goods.’

“In place of ‘empty barrels’ insert ‘empty trunks,’ and in place of ‘lard of hogs or cattle’ insert ‘lard, except that of hogs or cattle.’

“Add ‘dried prunes,’ ‘preserved fruits,’ and ‘iron or steel vessels.’

“ART. 31. In article 65 add ‘hand axes,’ ‘machetes not for clearing,’ ‘hemp cloth,’ and ‘Florida water, Kananga, Divina of the ordinary kind, and Bay rum.’ in ‘tags’ omit the words ‘intended for factories now in the country.’

“ART. 32. In article 66 omit ‘white tags for bottles;’ and the words ‘for children,’ after ‘playthings;’ ‘for different uses’ after ‘caneva paper perforated;’ ‘cloth,’ and ‘Florida water, Kananga, etc.’

“ART. 33. In article 67 add ‘concertinas’ after ‘accordions.’

“After the word ‘alcohols’ add ‘of more than 25° Cartier.’ In place of ‘rails’ insert ‘leather purses for letter carriers.’

“After the words ‘cotton dresses sewn’ let the remaining words follow, omitting “or of linen.”

“ART. 34. In article 68: After the words ‘laces, whether of cotton’ add ‘linen or wool;’ in ‘gloves’ except those of leather or silk.

“Add to ‘sewn linen dresses, shirts, chemises, collars, cuffs, etc.,’ those of net work which pay 50 cents a kilogram, and those lined with silk that are appraised at 2 *sucre*s per kilogram, are excepted.’

“Omit ‘ready-made trimmings, etc.’

“ART. 35. Add to article 69 ‘ready-made trimmings, not of silk, for dresses, footwear, etc.,’ and ‘forms for hats.’

“ART. 36. In article 70 add after the words ‘silk gloves’ ‘and of kid, etc.’

“ART. 37. To article 71 add: ‘silk trimmings for dresses’ and ‘silverware.’

“ART. 38. In article 72 omit the word ‘hundred.’

“ART. 39. Omit articles 76 and 77.

“ART. 40. Article 78 should read: ‘If a package should contain different kinds of goods, or merchandise not ordered and of a higher classification, and if the manifest should not clearly indicate its different contents, all shall be appraised as those of the highest class.’

“ART. 41. In article 81, after the words ‘Every package of merchandise robbed,’ add ‘or which should not be delivered to the custom-house by the ship.’

“ART. 42. In article 85 omit the last paragraph.

“ART. 43. Change article 86, paragraph 2, to read: ‘There shall be collected, as consular fees on manifests, 10 per cent of the amounts that have been paid for the acknowledgment of the consular invoice.’

“ART. 44. At the end of paragraph 3 of article 86 add: ‘that shall form a part of the national receipts.’

“ART. 45. In article 87 omit the last paragraph.

“ART. 46. In paragraph 4 of article 95 omit the words: ‘as, for example, that which would result if vermicelli were appraised at 15 cents a kilogram instead of 10 cents.’

“ART. 47. In article 111 insert ‘twenty’ in place of ‘five.’

“ART. 48. Omit article 118.

“ART. 49. Article 159 should read: ‘On all goods brought into the Republic, except those of an inflammable nature (which latter shall pay one-half), there shall be collected at the custom-house a duty of 2 cents per cubic foot.’

“‘For each 50 kilograms of lead, iron, and other metals, 5 cents.’

“‘Wharfage or storage shall be charged for by the month or fraction of a month, a fraction of a month being considered as an entire month.’

“ART. 50. In article 167 the references to article 55 should refer to article 57, and article 5 should be omitted.

“ART. 51. To the last paragraph of article 170 add ‘and their surcharges.’

“ART. 52. Omit article 181.

“ART. 53. Add the following article: ‘The Secretary of the Treasury shall codify the customs law, embodying in same the present modifications, and shall carefully correct the references that have been erroneously given.’”

The following is the list of the alterations made in the tariff of import duties:

Articles.	Rates of duty per kilogram.	
	New.	Old.
Sugar	<i>Sucres.</i> 0.02	<i>Sucres.</i> 0.10
Tin, unmanufactured05	.02
Machetes for clearing undergrowths02	.05
Machetes (including small axes) for other purposes15	.10
Sparkling kola water05	.02
Copper, unwrought, and in unperforated sheets05	.10
Alimentary pastes (vermicelli, etc.)05	.10
Gasoline05	Free.
Prepared grease (<i>mantea</i>):		
Lard of hogs or (tallow of) cattle05	.10
Other kinds10	(^a)
Iron nails, less than one-half inch long05	.02

Precious stones, mounted or not	50.00	150.00
Hoes, crowbars, and shovels	Free.	.01
Iron beams and columns for buildings01	.05
Sheet iron with ornamentation for buildings01	.05
Empty barrels05	.10
Laces of linen	1.00	(^a)
Hat shapes	1.50	(^a)

^a Unenumerated.

^b Various rates.

CONSULAR FEES FOR MANIFESTS.

By virtue of a recent enactment which went into force on January 1, 1902, the consular fee for the manifest of a vessel which was formerly 2 *centavos* per ton register has been changed to a fee of 10 per cent of the total amount (fees) paid for the certification of the consular invoices of goods consigned by that vessel. The storage (warehousing) dues have also been readjusted and are now fixed at the following amounts, leviable per month, each part of a month being counted as if it were a complete month:

	<i>Sucres.</i>
Lead, iron, and other material.....	per 50 kilograms.. 0. 05
Inflammable goods	per cubic foot.. .01
All other articles	per cubic foot.. .02

THE MANUFACTURE OF MANAVI HAMMOCKS.

The Consul-General of the United States at Guayaquil has made a report to the Department of State at Washington with reference to a hammock of domestic manufacture in Ecuador, which "commends itself because of its durability, artistic workmanship, comfort, and general superiority." It is also described as an indispensable household adjunct in the homes of Ecuador, being used as a hammock by day and as a bed by night.

This hammock is known as "manavi," and is manufactured from material derived from the leaves and shoots of a palm which is found in some of the coast Provinces of Ecuador. This palm, which attains a height of from 18 to 24 feet, is known as the "mocora" (*Bactris*), is very thorny, maturing in eight or ten years, and living for an indefinite period, provided its shoots are properly cut. The strength, delicacy, and elasticity of its fibers are unrivaled.

So far as known, the manavi hammock was first manufactured in the district of Pajan, Manavi, spreading thence to the other parts of the Republic. In the process of manufacture the fiber is made into stout cords, intertwined every half inch with spiral cross strands; 12 to 14 manila cords are strung into the ends and bound together with the suspending ropes. The weight of the hammock ranges from 10 to 20 pounds, and the favorite coloring is that of wheat straw with narrow red stripes.

HONDURAS.**MESSAGE OF THE PRESIDENT.**

On January 1, 1902, the President of the Republic of Honduras, General **TERENCIO SIERRA**, delivered an important message to the National Congress assembled at Tegucigalpa, capital of the Republic. The appended facts are deduced from this document.

The President states that during the preceding year absolute peace and tranquillity reigned throughout the Republic. The year had been a prosperous one for the nation in every sense of the word; the rights of individuals had been respected and observed; population had steadily increased; property had risen in value; sanitary conditions had improved; commerce and industry had prospered; the field of education had widened; means of communication had been rendered less difficult, and that the most complete conditions of prosperity and happiness had existed throughout the land.

During the year 1901 the cost of policing Tegucigalpa was \$35,543. Improvements were made in the jails of that city, and particular attention was given to the betterment of the sanitary condition of the same. The penitentiary, the only well-organized penal establishment existing in the capital of the Republic, was maintained during the year referred to at a cost of \$9,398.75. On September 15, 1900, a new addition was added to the general hospital at Tegucigalpa. This institution is supplied with all modern improvements, as well as a complete assortment of the latest and most approved surgical instruments. Seven hundred and twenty-three patients were treated at this institution in 1901, of which number all but about 5 per cent recovered. The expenses of the hospital during the year amounted to \$24,356.78. During the same period the hospital at Amapala treated 241 cases, the fatalities being only 14. This hospital is maintained from a small tax on merchandise entering the port of Amapala.

The Bureau of Statistics is now occupied in taking a census of the Republic.

The number of public schools increased during the year from 768 to 784, and were attended by 28,026 pupils of both sexes. The number of teachers employed at these schools was 916, of whom 321 were women. The high school for girls and the Normal School, both located at Tegucigalpa, continue to give excellent results. There are 6 national colleges and 7 other educational institutions that receive subventions from the Government, while there are several private educational establishments that receive no Government aid. These colleges employ 159 teachers and have 662 matriculates.

The industrial school of the nation received the special attention and fostering care of the Government. The shops of this institution were improved, and a shoe factory and tannery added, and the building is now being enlarged for the purpose of making room for a carriage factory and saddlery shop.

Referring to the financial condition of the country in 1901, the net receipts from all sources are stated to have been \$3,017,273.40 and the expenditures \$2,840,397.21, leaving an excess of receipts over expenditures of \$176,876.19. Payments on the public debt amounted, during the year, to \$805,144.73, leaving the total indebtedness of the

Republic \$1,285,207.75 at the commencement of 1902. The general balance of the nation is made up as follows:

Assets, consisting of money and other values	\$2, 600, 011. 85
Liabilities	1, 332, 400. 40
Excess.....	1, 267, 611. 45

The imports of Honduras, given in the currency of that country, amounted in 1900 to \$4,168,599.51, and the exports to \$6,183,023.37, or an excess of exports over imports of \$2,014,423.86. Exchange on United States gold fluctuated during the year from 115 to 130 per cent.

Agriculture, in general, was in a flourishing condition, and there was a notable increase in the cultivation of tobacco during the year. The exportation of cattle in 1901 was somewhat less than that of 1900.

Notwithstanding the fact that the mining industry in Honduras developed considerably during the year, it is as yet in its infancy. The exports of ores amounted to \$2,279,115.50, as compared with \$1,808,822 in 1900.

A number of new industries were established, consisting principally of cigar and cigarette factories, cotton mills, soap and candle factories, and sundry other manufacturing industries.

The post-office service continued in good condition, while the quantity of mail handled was greater than that of the previous year. The telegraph service was excellent during the year, and 120 miles of additional wires were added to the system, making the total length of the telegraph lines 3,166 miles. During 1901, 543,599 messages were transmitted, or 31,045 more than were dispatched in 1900.

During the year 2,999 ships, of a total registered capacity of 491,199 tons, entered Hondurian ports. These vessels brought into the country 5,168 passengers, and carried away on their outward voyages 3,928 passengers, 1,240 remaining in the country.

Considerable work was done on the public highways, and the road from Tegucigalpa to Sabanagrande was opened to the public.

The coinage of 1901 exceeded that of 1900 by \$3,948.52.

In January, 1901, Guatemala declared free of import duties merchandise from Honduras and the other Central American States.

Referring to the boundary question with Nicaragua, the President states that the respective commissions established without difficulty the boundary line from the Pacific Ocean to Portillo de Teotecacinte, but that on endeavoring to extend the line to the Atlantic an agreement could not be reached.

On April 10, 1900, an extradition treaty was celebrated with Belgium, and the same was duly ratified in February, 1901.

By decree of August 23, 1901, the French Government extended until December 31, of said year, the application of the minimum tariff on goods coming from Honduras, and at the present time the holding of a customs convention and the negotiating of a postal treaty with said nation are under consideration.

MEXICO.

BUDGET FOR 1902-3.

The budget submitted by the Secretary of the Treasury for the fiscal year 1902-3 provides for the following expenditures, as compared with like expenditures for the previous fiscal year:

	1902-3.	1901-2.	Increase.	Decrease.
Legislative Department	\$1, 145, 984. 80	\$1, 130, 983. 30	\$15, 001. 50
Executive Department	308, 273. 06	183, 986. 84	124, 286. 22
Judicial Department.....	426, 908. 35	537, 368. 20	\$110, 459. 85
Department of Foreign Relations.....	688, 934. 70	755, 127. 25	66, 192. 55

Amount of budget, 1902-3..... 64, 738, 815. 83

PERMANENT EXHIBIT OF MANUFACTURED PRODUCTS.

The Mexican Permanent Exhibition Company, Limited, of the City of Mexico, has been incorporated with a capital of \$300,000, Mexican silver. This company, the president of which is Mr. JOSE LANDERO Y Cos, has been granted a concession by the Department of Fomento. The company will begin construction in the City of Mexico of such buildings as may be necessary for the establishment of an exhibit of the principal products, domestic and foreign, consumed in the country at the present time. According to the terms of the concession, these buildings must be completed and made ready for the formal opening of the exhibition within a period of two years. The exhibits will consist of as complete a collection as it is possible to obtain of the industrial, mining, and agricultural products of the Republic, as well as similar products of foreign countries and of manufactured articles of all kinds.

The company has the right to charge the exhibitors for the space allotted them, but a sufficient space is to be reserved for any display the Government may wish to make and for which no charge will be permitted.

It is also required by the Government that all the articles placed on exhibition shall be marked with the name of the maker or grower, the name of his agent in Mexico, if he be a foreigner, the price of the article,

the object for which it is intended, and with such other particulars as may be needed for the full information of visitors. The exhibition company is also obliged to publish a catalogue of all articles displayed, and this descriptive list is to be in Spanish, English, French, German, and Italian.

The Government allows the company to import, without the payment of duties, such materials as may be needed for the construction of the buildings, and all imported articles for exhibit can be brought into the country under bond for one year. If they are not reexported by that time they will be required to pay the regular duty. The company is to be furnished by the Government with information regarding the industrial condition of the country and the resources of the different States which it may be desirous of publishing in its catalogue.

The exhibitors, in return for the rent paid for floor space, will be allowed to sell any goods they have on display, or to use the same as samples. They will not be required to pay duties on the goods unsold, unless the same have been in the country more than one year.

POSTAL SERVICE WITH ENGLAND.

A contract has been signed between the Mexican Government and an English navigation company, the Harrison Line, known under the name of Charente Steamships, Limited, to establish maritime postal service between England and Mexico. The steamers are to sail twice a month from Liverpool, making bimonthly stops at Tampico and Vera Cruz. The steamers of this line must also stop, either going or coming, at the other Mexican ports of Tuxpan, Coatzacoalcas, Frontera, Laguna, Campeche, and Progreso.

The steamers will land at Barbadoes, St. Thomas, Trinidad, La Guaira, Puerto Cabello, Curaçao, Santa Marta, Savanilla, Cartagena, Port au Prince, Kingston, Colon, and New Orleans. The company agrees to carry free of charge for the Mexican Government 10 metric tons of merchandise. The ton is calculated at 2,204 English pounds (1,000 kilograms) in weight, or 40 cubic feet in volume.

In compensation for this obligation the company's vessels will enjoy a reduction of 40 per cent on the tonnage dues established by the decree of July 1, 1898.

A similar contract has been concluded with the German Steam Navigation Company, Hamburg-Amerika Line.

THE PEÑALES SILVER MINES.

The Belgian Legation at Mexico City has furnished the "Bulletin Commercial," of Brussels, the following information relative to the Peñales silver mines at Mapimi, which have the reputation of being the most productive in the Mexican Republic.

The capital of the developing company is very large, and judging from its profits and the distribution of dividends, it heads the list of

Mexican exploitations. In its mines and shops more than 5,000 workmen are employed. Recently six new furnaces were built and an electrical plant put in so that the company can now crush 1,500 tons of ore per day. The shops and mines are connected by an electrical railway. The installation of machinery, etc., in these mines represents a total cost of from 500,000 to 600,000 *pesos*.

The mines are very extensive, and are situated in the Buffa Mountains, near the city of Mapimi. The oldest mine, known under the name of Opuela, has been exploited for more than two centuries. The present company discovered and developed veins at a depth of from 1,500 to 2,000 feet; the former concessionaries stopped work at a depth of 1,200 feet, thinking they had exhausted the veins. Every precaution is taken for assuring the most economical extraction of the ore, and the success of the enterprise is due in great part to the intelligence and energy of the director-general. The deposits found at a greater depth (2,000 to 2,800 feet) contain the richest ores, and they guarantee profitable exploitation for a great many years.

Many other mining companies have been established in the same district, which, according to the opinion of the chief geologist of the Government, is destined to become the most important region for the production of silver in the limits of the Republic. It also contains deposits of copper, and several mines of this ore are to be developed. The Descubridora mine, 38½ kilometers northwest of Mapimi, furnishes 500 tons of ore per day. The construction of a railroad connecting this property with the main line of the Mexican Central is projected and it will probably be built during 1902.

The city of Mapimi is connected with the Mexican Central Railway by a narrow-gauge line at Dermejillo, from whence it also has connection, via San Pedro, with the Mexican International Railway.

IMMENSE IRRIGATION SCHEME.

The "Mexican Herald" states that a combination of interests in the lake district about Zapotlan and Sapula, west of Guadalajara, has resulted in an immense irrigation project which is about to be realized. It consists of a series of canals, tunnels, dams, etc., and the acquisition of a force equal to 10,000 horsepower. Lake Zapotlan is to be the base of operations and the source of water supply which the engineers estimate to be 100,000,000 cubic meters.

There are to be two main tunnels; the first from the lake to a point named Huescalapa, 8 kilometers in length, and the second is to have an extent of 4½ kilometers. On the margin of the lake a fall for the production of motive power will be made. Another fall of 5 meters will be made near the Central Railway at the town of Zapotlan, while a third fall will be provided for at the outlet of the Huescalapa tunnel. In connection with the second tunnel at Barranca de la Muerte there will be

three other falls provided for before the water is distributed through the canals to irrigate the valleys of Sagula, Usamajac, and Amatitlan. To complete this great system of works two main canals, 30 meters wide by 3 meters deep, are to be built in the lagoon, one passing through the center and the other in various transversal courses from which water will be carried in minor canals for irrigation. In the hills of the Sierra del Tigre and San Andres several large dams, or reservoirs, are to be constructed to save the rain water which falls in great abundance during the wet seasons. The water from these dams will be let into Lake Zapotlan.

PROSPECTS FOR INCREASED PRODUCTION OF SUGAR.

According to the press of Mexico, the year 1902 promises to be a great period for the production of sugar in the Republic. Both native and foreign capitalists are investing heavily in the improvement and enlargement of existing plantations and in the creation of new ones. In Jalisco, Michoacan, Morelos, Sinaloa, Sonora, Tamaulipas, and Veracruz, United States capital, mainly from the States of New York, Michigan, and Illinois, and French capital, mainly from Paris, is being invested in new and extensive plantations with the latest improved equipments for producing sugar. Domestic capital is being freely used to increase the capacity and the production of older plantations by adding new fields for cane and improved machinery for grinding and refining.

The "Mexican Herald" reports that machinery to the value of \$350,000 has been ordered for various plantations, to be delivered in May, 1902. Sugar producers well posted in the prospects anticipate for the year a yield from 25 to 30 per cent in excess of that of 1901. During 1901 six very extensive and important plantations were started and fully equipped for production in 1902. The San Cristoba and the Panuco plantations, both in the State of Veracruz, and the Alvarado property in the State of Sinaloa, exploited with large capital and furnished with new equipments, will alone give an increased product equal to the maximum per cent of increase claimed. To this must be added the gain from the three other new plantations as well as the increase resulting from improved methods on older and smaller estates. If the sugar production of the Republic continues to increase during the next two or three years in the same ratio as during the past half decade, Mexico will become an exporter of the product.

PRICES OF GOVERNMENT LANDS.

The "Diario Oficial" of January 14, 1902, publishes the prices at which Government lands may be purchased during the fiscal year

1902-03. The following table gives the price, in Mexican silver, per hectare (2.471 acres):

States and Territories.	Price.	States and Territories.	Price.
Aguas Calientes.....	\$2.20	Oaxaca.....	\$1.20
Campeche.....	1.95	Puebla.....	3.30
Chiapas.....	3.00	Queretaro.....	2.20
Chihuahua.....	1.10	San Luis Potosi.....	2.50
Coahuila.....	1.10	Sinaloa.....	1.20
Colima.....	1.10	Sonora.....	1.10
Durango.....	1.10	Tabasco.....	3.60
Guanajuato.....	2.20	Tamaulipas.....	1.20
Guerrero.....	1.20	Tlaxcala.....	2.20
Hidalgo.....	2.50	Veracruz.....	2.75
Jalisco.....	2.20	Yucatan.....	2.20
Mexico.....	2.75	Zacatecas.....	2.20
Michoacan.....	3.00	Federal District.....	6.10
Morelos.....	4.40	Territory of Tepic.....	2.50
Nuevo Leon.....	1.10	Territory of Lower California.....	.55

NEW STREET-RAILWAY* CONCESSION.

The Department of Promotion and Public Works has granted a railway concession to Mr. PABLO MARTINEZ DEL RIO, of the City of Mexico, or the company that he may organize, to construct a railroad in the State of Tlaxcala. The duration of the concession is ninety-nine years. Construction on the proposed line will commence at a point near kilometer 385 on the Interoceanic Railway, and will extend to the San Nicolas branch of the same railroad at a point in the neighborhood of kilometer 105. The main office of the company will be in the City of Mexico. The concessionaire agrees to construct not less than 30 kilometers of track annually, and obligates himself to complete the entire construction within a period of three years. The weight of the rails, the grades and curves, are to be fixed by the Department of Communication and Public Works. The width of the right of way shall not exceed 70 meters. The concessionaire has a right to import, free of duty, for a period of five years, the railway materials specified in article 74 of the railway law.

EXPORTS FROM THE CITY OF MEXICO DURING THREE MONTHS.

The declared exports to the United States from the consular district of the City of Mexico for the quarter ending December 31, 1901, exceeded in value those of any preceding three months, being represented by \$919,153.07, gold. This was an increase of more than \$100,000 over the previous quarter, when the export valuation of the district was \$806,657.40; the increase over the corresponding period of 1900 being \$170,000, when the total valuation was \$748,451.32.

During the last quarter of 1901 gold bullion formed, as usual, the largest item in the declared exports, representing a total of \$571,927.94. Arms and ammunition purchased by Salvador from Mexico in transit,

in bond through the United States, represented a valuation of \$140,500. Among the other items were silver bullion and ore, \$83,874.26; gold ore, \$2,996.05; hides, \$32,760.41; goatskins, \$18,160; broom root, \$12,695.22; pecan nuts, \$12,030.93, and palm leaf and straw hats, \$2,191.39.

PAVING IN THE CITY OF MEXICO.

During the year 1901 the two United States companies which have contracts for resurfacing the streets of the city of Mexico laid the following areas of asphalt pavement:

The Barber Company paved 55 streets, measuring 95,567 square meters, for which it received \$538,399.17 on account; the Neufchatel Company paved 33 streets, measuring 45,200 square meters, receiving in cash \$219,189.13.

In addition, local Mexican contractors laid sidewalks of Portland cement along 205 streets, the area covered being 118,258 square meters. Other sidewalks constructed included 854 square meters of asphalt, 58,765 square meters of loose stones (on 106 streets), and 192,792 square meters of stone slabs (on 119 streets). The paving of the streets and the laying of sidewalks will be continued throughout 1902.

ESTABLISHMENT OF A SMOKELESS-POWDER FACTORY.

The Minister of War recently signed a contract for the establishment of a smokeless-powder factory to be erected in the suburbs of Santa Fé on the lands specified in the contract. The factory, which is to be constructed immediately, is also to engage in the manufacture of dynamite and other explosives, the price of the products to be determined in conjunction with Government authorities. According to the terms of the agreement the building must be finished and the company ready to commence work before July, 1903. The concession includes the manufacture of caps, tapers, and quick matches, the capacity of smokeless-powder production being stipulated as ranging from 176 to 220 pounds per day.

When the products of the company shall be on the market, an internal-revenue tax of 21 *centavos* per kilogram on all explosives imported into or manufactured in the Republic is to be imposed, and the Government further agrees not to reduce the customs duties now governing such articles. Common black powder may be exempted from the internal tax, provided its components are sulphur, carbon, and nitrates of potash and soda, and not nitroglycerin, chlorate of potash, or similar substances.

THE TOBACCO INDUSTRY.

The local press of the Republic, especially in the State of Veracruz, reports that owing to the remarkable development of tobacco growing and manufacture, it has become difficult to secure sufficient

laborers for the industry. The last tobacco crop, now in course of preparation for the market, far exceeds the preceding one, the quality being in every respect up to the standard requirements. Trade relations with the Central and South American Republics originated in experimental shipments of this article of commerce, and now Mexican tobacco enjoys a steady demand from all parts of the continent to the south of the Republic.

It is stated that a number of capitalists from the United States have acquired tobacco lands in the State of Veracruz, and that the cultivation of this product is extending to the region between the Papaloapan and Coatzacoalcos Rivers.

The statistics of tobacco exports from Mexico for the fiscal year ending June 30, 1901, amounted to 2,019,355 kilograms, or 4,451,870 pounds, at a total declared valuation of \$2,214,713 (silver). This represents a value of nearly 50 cents (silver) per pound.

DISCOVERY OF CINNABAR MINES.

During a recent trip through the State of Guerrero, an explorer from the United States, Mr. C. W. PUEBETT, discovered several abandoned cinnabar mines. Two of these were found near Pastoria, north of Guerrero. These bear evidence of having been worked many years ago. The discoverer, with an Indian guide, penetrated into one of these mines, descending to a depth of more than 100 meters. Cinnabar is found in these galleries in large deposits near the edge of the soil. Stone wheels, flint machetes, and hatchets have been found in abundance in these galleries, which leads Mr. PUEBETT to believe that their development dates back to before the Spanish conquest.

REGULATION OF THE TRAFFIC IN HENEQUEN.

The "Mexican Herald" of January 3, 1902, stated that the henequen growers and exporters of Yucatan propose to enter into an agreement not to sell or ship any of this fiber below a price which they will determine. If the price in foreign markets (mainly New York, which consumes 90 per cent of the Yucatan exports) goes below a certain minimum, the idea is to hold the henequen until the demand causes a rise in the price. The traders in henequen are all capitalists, and therefore can afford to hold their article until it suits them to sell.

RAILWAY NOTES.

The Mexican National, though a narrow-gauge railroad and one of the oldest lines in the Republic, has long enjoyed the reputation of being one of the best equipped roads in the country. Its termini are at Corpus Christi, Texas (where it connects with one of the important systems of the United States), and the City of Mexico. It passes through a very rich section of the Republic and reaches many

of the important cities. The company is principally controlled by United States stockholders, who, according to a recent report of the United States Consul-General at Monterey, have decided to make the road of standard gauge, work in that direction having already commenced. Over \$13,000,000 gold have been provided for the widening of the gauge and for making other improvements.

On January 27, 1902, the Mexican Eastern Railway Company of Mexico was incorporated in the city of Dover, Delaware, with a capital of \$5,000,000, the purpose of the company being the construction of a line to operate between Merida, State of Yucatan, and Vera Cruz, Mexico. It is also designed to construct and operate telegraph, telephone, and express lines over the same route.

A new railway line, 40 kilometers in length, is projected from the Escandon Station on the Monterey and Gulf Railroad to the heart of the Frio Valley. This road is to be of standard gauge and will be constructed by the Frio Valley Land Company.

The Morelia and Tacambaro Railway, Timber and Land Company was incorporated at Trenton, New Jersey, on December 30, 1901. The object of this company is the construction and operation of a railroad from the city of Morelia to the city of Tacambaro, Mexico. The capital of the company is stated to be \$6,000,000.

On December 17, 1901, the President of Guatemala drove the first spike in that section of the Guatemala Central Railroad which is to extend toward Mexico. This represents the Guatemala section of the proposed Intercontinental Railway. The concessionaires are New York capitalists.

CERAMICS FOR THE NATIONAL MUSEUM AT WASHINGTON.

The National Museum at Washington has been the recipient of some very valuable ceramics, representing ancient Mexican and Central American pottery working, and which, according to Professor HOLMES, are examples of the finest and rarest ware made by the Miztecs and Zapotecs. Part of the collection consists of five vases unearthed from the ruined cities of Mitla, in southern Mexico, and Copan, in Honduras, and on which the workmanship is typical of the highest degree of skill attained by the aboriginal races. Two are made to imitate copper or metal by means of a peculiar glaze given to the surfaces and by a series of indentations resembling hammered or repoussé metal work. The imitation is so perfect that it is a very difficult matter to be quite sure that they are of clay.

GAS PLANT FOR MONTEREY.

The Consul-General of the United States at Monterey has reported that a citizen of the United States has obtained a concession for lighting and heating that city and would shortly establish a modern gas

plant. The cost of the establishment when completed will be about \$250,000 silver (nearly \$125,000 gold), the equipments to be modern in every respect.

EXPORTS OF COPPER.

Customs statistics show that during the fiscal year 1901 Mexico exported to England 6,583 tons of copper, while to the United States and Continental Europe combined the exports in the same year exceeded 23,000 tons, thus showing a grand aggregate of 30,000 tons during the twelve months. In view of the fact that new mines have been opened since the publication of the official statistics, it is believed that the exports for the current year will materially exceed those of 1901.

MISCELLANEOUS NOTES.

The stamp tax for the six months from January to June, 1902, levied by the Federal Government upon the 124 cotton factories in active operation in the Republic, amounted to \$747,144. This tax is payable during the first fortnight of January of each year.

The Government has appointed a commissioner of engineers to make surveys and maps of Port Morelos, Yucatan. It is proposed to dredge the harbor and to construct wharves, customs buildings, etc., at this point.

A company has been formed in Monterey to build and operate a street railway system in Torreon. The enterprise is capitalized at \$300,000, to be increased to \$500,000 when active operations are begun.

NICARAGUA.

INAUGURATION OF PRESIDENT ZELAYA.

At Managua, on February 2, 1902, Señor Don JOSÉ SANTOS ZELAYA was inaugurated President of Nicaragua for the third successive term, in the presence of the National Congress and a large assemblage of citizens. Judge MATOS, of the Supreme Court of the Republic, administered the oath of office to the President, who in his address briefly reviewed his previous administration and referred hopefully to the prospects for the building of an isthmian canal and to the benefits Nicaragua would derive from its construction.

THE COMMERCIAL SITUATION.

The United States Consul at Managua reports that during the last six months there has been a large decrease in the importation of flour, wine, and machinery from the United States. There has also been a decided decrease in the exportation of coffee—the principal export

crop—owing to the bad crop of last year. This, rather than the competition of any other country, is the cause of the diminished importations of the articles named. There has been no perceptible change in the importations or exportations of other articles, with the exception of sugar. Exchange on the United States, which has averaged during this period about 300 per cent premium, and the hard times caused by short crops, have made it necessary to economize; and as most of the machinery imported into the country is for cleaning and improving coffee, the planters have stopped importing until they get a good crop.

During the year 1901, Nicaragua exported over 4,000,000 pounds of raw sugar, of which three-fourths was sent to the United States. Four years ago the production of sugar was less than half of the home consumption, the output having since increased more than 300 per cent. These facts indicate that Nicaragua should be a valuable market for the sale of sugar-plantation machinery and supplies.

INSTALLATION OF ELECTRIC PLANTS.

It has been reported by Mr. CHESTER DONALDSON, United States Consul at Managua, that the Government of Nicaragua has granted to Mr. T. M. SOLOMON, a citizen of the United States, and to Mr. J. SANTOS RAMIREZ, a native of Nicaragua, a concession for the installation of electric-lighting systems at Managua, Masaya, Granada, and Leon. The capital city will be the first consideration, the motive power for the plant to be furnished by steam. The concessionnaires will also construct a dam for the utilization of the water power of Tipitapa Falls, where a plant sufficient for the needs of Managua, Masaya, and Granada will be erected.

The Nicaraguan Government has also granted Messrs. SOLOMON and RAMIREZ exemption from import duties on materials to be used in the enterprise, as well as free entry for provisions and clothing required for their employees.

The contract provides the following rates for each light installed:

	Rate.	
	<i>Pesos.</i>	
One 16-candlepower	6.50	^a \$1.85
One button and switch	3.00	.85
One hundred feet of wire	18.50	5.28
Monthly charge	3.00	.85

^a Value in United States gold at present rate of exchange.

The plant is to be in working order within six months from December 28, 1901, and machinery has already been ordered from the United States.

IMPORT DUTIES ON ESSENCES AND ESSENTIAL OILS.

A decree published in the "Diario Oficial" on April, 1901, and republished in the month of November following, contains the following provisions:

"ARTICLE 1. Essences for the preparation of liqueurs may only be imported by such manufacturers as hold written authority from the director-general of the ministry concerned, and subject to payment of the duties provided in the tariff.

"ART. 2. Essential oils can not be imported except by pharmaceutical chemists or physicians, and must be for exclusive use in the compounding of medicines or medical prescriptions."

"In the applications to be made by them to the Ministry of Finance for an entry permit, the interested persons are required to specify in detail the essences proposed to be imported, so that the authority of the Ministry shall only apply to those capable of being used for apothecaries' purposes."

.

PARAGUAY.**PROFITS IN MEAT PACKING.**

A law was enacted by the Paraguayan Congress in September, 1901, respecting the establishment of "saladeros" or meat-packing and salting-houses. The chief points of interest in the law in question are, that until December 31, 1910, machinery, materials required for packing, common salt, and chemicals may be imported into the Paraguayan Republic free of duty. The persons to whom concessions for the establishment of packing houses have been granted are required to pay the Government a small tax of 10 to 15 cents gold per hide of each animal slaughtered. The rarity of epidemic diseases among the cattle of Paraguay is an important factor in the development of this branch of industry.

A "saladero" established on the river near Asunción slaughtered during 1901 over 2,500 cattle. Each steer cost delivered about \$9.78, representing a total valuation of \$24,450. The average weight of the hides was 85 pounds, which were sold in Montevideo at an average price of £2 (\$9.78) per hundredweight, or a total of \$20,781,140. From each animal was obtained 180 pounds of salted meat and 39 pounds of tallow. These products were sold at such prices as to bring the profits, per animal slaughtered, up to about \$2.43, or a total profit for the year of over \$6,000.

PRINCIPAL NATIVE WOODS.

Of the sixty varieties of wood native to the Republic of Paraguay about twenty are exported. Of these the following are the principal: (1) *Curupai*, a hard redwood, very durable, used for railroad ties. (2) Cedar, exported to the Argentine Republic and Germany, there being a considerable demand for it in Bremen, where it is employed in the manufacture of cigar boxes. (3) Black laurel, used for railroad sleepers, is not so durable as *Curupai*, burning more readily. (4) Rosewood (*palo de rosa*), similar to the English variety, when properly polished is suitable for light furniture. It also contains medicinal properties. (5) *Ibiri-ro*, a hard, flexible wood used in ship and carriage building, English importers express satisfaction with the samples purchased, and state that it may replace teak to a great extent. (6) Black and yellow *lapacho*, which finds a market in Buenos Ayres, being used in the manufacture of rough carts and in the construction of bridges. (7) Black *peteriby*, used in the manufacture of furniture, being easily worked and capable of taking a high polish. Small quantities are exported to Europe. (8) *Quebracho colorado* (red quebracho), the most important of the woods of Paraguay. Considerable quantities of quebracho are exported to Germany, principally to Hamburg. German capital finds a remunerative investment in this wood, and a line of steamers is employed in its transport. The principal application of the wood is for tanning purposes, but it is also used for railroad ties and for other purposes in which a hard, lasting wood is required. According to a recent analysis, quebracho logs yield an average of 25 per cent and a maximum of 29 per cent tanning matter, it being claimed that Paraguayan quebracho is superior and has a finer color than any other variety of this wood. The greatest volume of quebracho exported from Paraguay was in 1897, when 185,000 tons were sent abroad. In 1900 there was a scarcity of this timber in Germany and a consequent increase in price. (9) *Urundi-mi*, one of the best hard woods of the country, possessing many of the qualities of the *Curupai*. (10) *Tatané*, a beautiful golden-colored wood resembling satinwood; it takes a high polish, and boxes made of it secure the contents from insect depredations. Locally, it is employed in making stems and sterns for ships. (11) *Lignum-vitæ* (*palo santo*), is found in limited quantities and exported to France, being used locally in place of "bronzes" for bearings in engines and screw shafts, and pulley and block wheels.

An increase is reported in the exports of native timber for railroad ties, and it is also thought that the soft woods suitable for the manufacture of paper will soon be in demand.

TARIFF ON BICYCLES.

In virtue of a law of August 31, 1901, bicycles in general and their parts are admitted free of duty in the Republic of Paraguay for one year from that date.

PERU.**THE FORMATION OF MINING SYNDICATES.**

It is reported from Lima that an American syndicate, with headquarters at New York City, has been formed for the exploitation of copper and other mines in the Cerro de Pasco district. Mr. NEILL, secretary of the United States Legation at that point, is authority for the statement that the amount of silver coined, smelted, and exported from Peru from 1786 to 1850 was 285,613,796 ounces, of which 161,451,731 ounces were from the Cerro de Pasco mines. Copper exports from that district in 1900 amounted to 11,944.2 metric tons, copper bars to the amount of 5,138 tons also forming part of the output. The coal mines, situated at a distance of 22 to 31 miles from Cerro de Pasco, provide fuel at the rate of \$3.88 per ton, and a narrow-gauge railway is to be constructed so as to render the supply available, instead of paying, as at present, \$24.85 per ton. The construction of a railroad from Oroya to Cerro de Pasco would be a most remunerative investment, as the proposed freight of 24 *soles* (\$11.66) per ton instead of 70 to 80 *soles* (\$34 to \$39), now paid for the same amount on the back of llamas, would allow a quantity of ore to be exported far beyond the present limit.

Another syndicate for the purchase of the rich copper mines in the Yauli district is also being formed. These mines are in the immediate vicinity of one of the stations on the Trans-Andine Railroad, about 120 miles from the port of Callao, at 13,400 feet above sea level.

PROPOSED STEAMSHIP CONNECTIONS WITH JAPAN.

The Japanese contemplate engaging in maritime trade with the countries of the western coast of South America. Recently the Oriental Steamship Company (Toyo Kisen Kaisha) sent a representative to Iquique to investigate the feasibility of starting a direct steamship line from Japan to Peru, touching at intermediate points and taking cargoes of nitrate on the return voyage should no other freight be offered.

SALVADOR.

TARIFF CHANGES IN 1901.

According to the "Diario Oficial," the law of May 21, 1901, exempted indigo from all duties and imposts. It is further provided by ministerial ordinances dated October 14 and 18, 1901, that the importation of empty bags in which indigo is to be exported shall follow the régime of tariff No. 22 (duty 50 *centavos* per kilogram), and that the amount of duties paid on empty bags imported for the shipment of ores out of the country shall be refunded in cash to the exporters of the same at the time of exportation. According to the law of May 17, 1901, bags containing coffee intended for export shall be free of all import duties.

The law of May 22, 1901, reestablished import duties on colored yarn imports at the rate of 5 *centavos* per kilogram.

The ministerial ordinance of August 17, 1901, provides that unbleached cotton tissue called *mantadril*, woven with a single colored stripe not exceeding 1 centimeter in width, is dutiable under tariff No. 5 at the rate of 20 *centavos* per kilogram, and is not taxable according to tariff No. 10, which applies to the same tissue when colored.

A ministerial ordinance, dated October 7, 1901, directs that sheet cotton wadding, for padding the lining (interior) of clothing (unenumerated in the tariff law), shall be classed in tariff No. 3, and pay duty at the rate of 2 *centavos* per kilogram.

NEW ISSUE OF BONDS.

According to the "Diario del Salvador" of December 11, 1901, the President of the Republic has authorized the Treasury Department, in conformity with a legislative decree of April 21, 1899, to issue Government bonds to the amount of \$364,244. These bonds will be issued in payment of certain obligations of indebtedness acknowledged by the Congress of Salvador in the decree of May 15, 1901, and will be of the following series and denominations:

Series 3: 10 books of 100 bonds each, of the \$100 denomination.....	100,000
Series 4: 40 books of 100 bonds each, of the \$25 denomination.....	100,000
Series 5: 100 books of 100 bonds each, of the \$10 denomination.....	100,000
Series 6: 100 books of 100 bonds each, of the \$5 denomination.....	50,000
Series 7: 142 books of 100 bonds each, and one book of 44 bonds, of the \$1 denomination	14,244

The form, wording, and coloring of these bonds will be exactly the same as those of the previous issue. The new bonds will draw interest at the rate of 5 per cent from January 1, 1902, to June 30 of the same year, after which time they will draw interest at the rate of 6 per cent per annum.

UNITED STATES.

TRADE WITH LATIN AMERICA.

STATEMENT OF IMPORTS AND EXPORTS.

The following is the latest statement, from figures compiled by the Bureau of Statistics, United States Treasury Department, showing the value of the trade between the United States and Latin-American countries. The report is for the month of December, 1901, with a comparative statement for the corresponding month of the previous year; also for the calendar year ending December, 1901, as compared with the preceding period of twelve months. It should be explained that the figures from the various custom-houses, showing imports and exports for any one month, are not received at the Treasury Department until about the 20th of the following month, and some time is necessarily consumed in compilation and printing, so that the returns for the month of December, for example, are not published in full until some time in February.

FOREIGN COMMERCE IN THE CALENDAR YEAR 1901.

The advance sheets of the Summary of Foreign Commerce issued by the Treasury Department show that the total value of the articles imported by the United States during the calendar year 1901 exceeded the calendar year 1900 by \$51,271,342, while the total value of the exports was \$14,926,122 less in 1901 than in 1900. The total volume of trade increased by \$38,706,148, or from \$2,307,095,827 in 1900 to \$2,345,801,975 in 1901. Neither the imports from nor the exports to Porto Rico and Hawaii are taken into account in the summary of 1901 in connection with the foreign trade of the country, though they are

included in the total for 1900, the two, taken together, having sent products to the United States to the value of \$11,697,551, and having received from the United States merchandise valued at \$10,288,782 in that year. While in 1901 their commerce with the United States proper increased largely, both were considered as forming part of the United States. The export totals for 1901 include the values of foreign goods reexported, worth \$27,296,929 and \$24,936,001 in 1901 and 1900, respectively.

A study of the import statistics shows that the greater part of the increase in 1901 was made up of articles entering into processes of manufacture (increase, \$26,000,000) and articles of voluntary use, luxuries, etc. (increase, \$18,000,000). Manufactured articles ready for consumption represent a comparatively small portion of the increase (\$6,300,000), and articles of food and animals show an increase of but a little over one-fourth of 1 per cent (\$600,000). The percentage of free imports in 1901 was 43.33, as compared with 41.28 in 1900. The duties collected from customs amounted to \$243,329,967 in 1901, against \$240,304,737 in 1900.

The reduction in the value of manufactured articles exported was due in great part to the decrease in the grand total of exports of copper and manufactures thereof, including ingots, bars, and old (junk). The value of such exports was only \$33,534,899 in 1901, as compared with \$57,542,610 in 1900.

The five principal articles which showed a decrease in exports in 1901, as compared with 1900, were corn, iron and steel manufactures, copper, cotton, and mineral oils. Of these, cotton and mineral oil both show an actual increase in quantity, though a decrease in value. In iron and steel there was a reduction of \$27,000,000, which was partly due to reduced prices. The reduction in exports of corn was due solely to the great deficiency in the crop of this grain in the United States.

CLASSIFICATION OF IMPORTS AND EXPORTS.

The following statement contains the classifications of the imports and exports and the official valuation of each class, as well as the total worth of both imports and exports:

Comparison of imports.

Classification.	1901.	1900.	Increase.
Articles of food and animals	\$219,934,786	\$219,338,443	\$596,343
Articles in a crude condition entering into processes of domestic industry.....	304,031,545	280,380,796	23,650,749

* Decrease.

TRADE WITH LATIN AMERICA.

The total value of the imports by the United States from all of Latin America in 1901 was \$214,317,110, or 24.34 per cent of the grand aggregate value of foreign commodities purchased. This was an increase of \$44,065,763 over the previous year, when the products received from the same countries were worth \$170,251,347 and only represented 20.53 per cent of the total value of the imports. The value of the exports from the United States to the whole of Latin America in 1901 was \$117,961,744, or but about 8.05 per cent of the

aggregate value of all the exports from the country. In 1900 the exports to Latin America were worth \$118,865,364, or \$1,503,590 in excess of the year 1901. Besides the trade statistics of the Latin-American countries embraced in the International Union of American Republics, the figures used in this article include statements representing commercial transactions with Cuba, the French West Indies, Miquelon, Langley, etc., British Honduras, and French Guiana, as regards the imports, and the same islands and colonies, with the addition of the Falkland Islands, as regards the exports.

Considering the Latin American Republics belonging to the International Union separately, and as a whole, the statistics for the calendar year 1901 show that the imports by the United States from those countries and of the exports from the United States to each and all of them had the following valuations, the figures for the preceding year being also furnished by way of comparison:

IMPORTS.

Countries.	1901.	1900.	Increase.
Argentine Republic	\$9,455,634	\$8,098,343	\$1,357,291

Total	86,912,198	88,842,130	1,929,932

^a Increase.

The value of the imports received from the above 18 Republics by the United States represent 19 per cent of the aggregate value of all the imports received by the latter country in 1901 and of 16.67 per cent of the grand total for 1900. The value of the exports by the United States to these Republics represented but about 5.93 per cent of its total exports in 1901 and but 6.02 per cent of the total in 1900. The balance of trade in favor of those countries, therefore, was \$80,368,026 in 1901 as against a balance of \$49,338,924 in 1900.

ECONOMIC CONDITIONS FROM A BRITISH STANDPOINT.

The standing of the United States among its commercial competitors, and especially with those of Europe, is illustrated by some statements made by the London Daily Mail Year Book for 1902. In the various chapters of this work the features of conditions in the United States are analyzed and discussed. Under the head of wealth the United States is placed first on the list of great nations, the figures for the various countries considered being: United States, £16,350,000,000; United Kingdom, £11,806,000,000; France, £9,690,000,000; Germany, £8,052,000,000; and Russia, £6,425,000,000. While the United States heads the list for wealth, it is shown that it has the smallest national indebtedness, the figures being:

United States	£221, 000, 000
Germany	651, 000, 000
United Kingdom.....	706, 000, 000
Russia.....	711, 000, 000
France	1, 239, 000, 000

The percentage of debt to wealth is given as:

	Per cent.
United States	1. 4
United Kingdom.....	6. 0
Germany	8. 1
Russia.....	11. 1
France	12. 8

Under the head of commercial competition the Year Book says that the first year of the twentieth century opened badly for two of the four leading industrial nations. The trade of the United States was good and showed no decline from the booming period of 1899 and 1900, but rather, in most industries, a continuance of the boom of which the United States has had so disproportionately large a share; and France, which had responded less expansively to the boom, remained unaffected by the decline and progress elsewhere. In England and Germany, however, the decline was felt acutely.

Under the head of the world's wheat crop the United States is shown to be far in advance of any other country in the production of

this cereal, the estimate of the world's crop for 1901 being as follows, in English quarters (8 bushels):

United States	90,000,000	Spain	13,000,000
Russia	42,000,000	Roumania and Bulgaria	12,000,000
France	38,000,000	Germany	11,000,000
India	30,000,000	United Kingdom	7,000,000
Italy	17,000,000	Australia	7,000,000
Hungary	16,000,000		

The wheat product of the Argentine Republic is not included in this estimate by the "Daily Mail."

Under the caption "Fight for the Iron Trade," the Year Book calls attention to the fact that the United States is now the world's largest producer of pig iron and steel, and says:

"It will be noted that the United Kingdom has lost ground, producing 396,749 tons less in 1900 than in 1899, the total for Great Britain being nearly 5,000,000 tons less than in America. An unsatisfactory feature in the British iron and steel trade is that in 1900 we imported more iron and steel than in any previous year and exported less, while the United States exported more than ever."

The tables accompanying this statement show the pig-iron production of 1900 to have been as follows:

	Tons.
United State	13,789,242
United Kingdom	8,908,570
Germany	8,494,852
France	2,699,494
Russia	2,821,000

The steel production was as follows:

	Tons.
United States	10,087,312
Great Britian	4,901,054
Germany	4,799,000
France	1,624,046
Russia	1,494,000

MINERAL PRODUCTION IN 1901.

Estimates of the mineral production of the United States during the year 1901, according to figures furnished the Treasury Bureau of Statistics in January, 1902, indicate that in gold, silver, iron, steel, coal, and mineral oil the maximum of output was reached. These estimates put the gold product of 1901 at \$80,218,800, against \$79,171,000 in 1900, which was the highest record in gold production attained previously by the United States. The silver output is placed at 59,653,788 ounces in 1901, as compared with 57,647,000 ounces in the previous year. The pig-iron production is estimated at 15,800,000 long tons, against 13,789,242 in 1900, the latter year having previously held the

record of production. The coal production is estimated at 267,850,000 long tons, against 240,965,917 long tons in 1900, the year of the highest output heretofore. In the petroleum estimate the entire production is placed at 2,772,000,000 gallons, against 2,661,233,568 gallons in 1900, when the figures had exceeded all previous records. The only item in the list showing a slight decrease in 1901 as compared with 1900 is copper, which fell off about 5,000 tons, the estimated production for the latter period being 265,625 long tons. Not only do these figures show an excess of production over any previous United States record, but they exceed, in nearly every item, that of every other country.

In 1900 the Russian figures of the petroleum output slightly exceeded those of the United States, but it is probable that the enormous total given for 1901 will again place the latter country in the lead. In regard to the competition in coal production, "The London Daily Mail Year Book" reports that the "United States has for the last two years outstripped us as a coal producing country." The total output of the United States in 1900 exceeded that of any other country, and as its previous record is exceeded in 1901 by 27,000,000 tons, it is evident that the United States is in the lead in the world's coal production.

GOLD AND SILVER PRODUCTION.

The preliminary estimate of the Director of the Mint on the production of gold and silver in the United States during the calendar year 1901 indicates only a slight gain over the production of the preceding year. The yield of Alaska fell off by about \$1,000,000, while the State of Colorado made a slight gain in gold, and the other producing districts were nearly stationary. The yield of silver exceeded that of the previous year by about 2,000,000 fine ounces.

The total number of ounces of fine gold produced is shown to have been 3,880,578, with a value of \$80,218,800. The number of fine ounces of silver produced was 59,653,788, having a commercial value of \$35,792,200. The coinage value of the silver is approximately \$77,000,000. Gold was produced in greater or less quantities in 23 States and Territories and silver in 22. Colorado is the greatest ore-producing State, the value of its gold product in 1901 being estimated at \$29,000,000 and its silver product at \$20,833,333. California's gold product was valued at \$15,730,700, while \$1,118,333 represented its silver output. Other large producers were: Montana, \$5,023,000 gold and \$14,500,000 silver; Utah, \$3,824,300 gold and \$10,250,000 silver; Alaska, \$6,904,400 gold and \$55,000 silver; Arizona, \$4,193,400 gold and \$2,995,500 silver.

IMPORTS OF COFFEE IN 1901.

The imports of coffee by the United States during the calendar year 1901 amounted to 1,072,009,182 pounds, and were valued at \$70,156,044.

These figures represent the largest importations of this commodity ever made by the United States. They exceeded those of the calendar year 1900 by 286,090,648 pounds, those of 1899 by 193,810,648 pounds, and those of 1898 by 267,745,247 pounds. The net supply in 1901 was also the greatest ever reported, being 1,027,926,869 pounds, and the coffee reexported during the twelve-month period was 44,082,313 pounds. For the other years under consideration the gross supplies, quantities reexported, and the net supply were as follows:

Year.	Imports.	Exports.	Net supply.
	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>
1898.....	804,263,935	23,244,566	781,019,369
1899.....	878,198,534	26,552,552	851,645,972
1900.....	785,918,534	44,625,914	741,292,620

Of the imports of 1901 almost 80 per cent (in weight) came from Brazil, about 8.80 per cent from other South American countries, a little over 6 per cent from Central America, and slightly more than 2 per cent from Mexico, leaving only about 3 per cent to represent the purchases from the rest of the world.

From Latin America the imports were credited to the following countries, the statistics for 1901 being compared with those of 1900:

Countries.	1901.		1900.	
	Pounds.	Value.	Pounds.	Value.
Brazil.....	857,104,258	\$50,942,481	608,429,596	\$41,945,564
Other South America.....	94,333,994	6,804,717	56,052,222	4,993,145
Central America.....	65,684,172	6,748,306	43,961,550	4,246,571
Mexico.....	22,897,373	2,200,143	30,010,567	2,859,690
West Indies.....	7,971,330	628,989	9,148,580	739,700
Total.....	1,047,991,127	67,324,636	747,602,515	54,784,670

Other countries from which imports of coffee were received during the two years under comparison were:

Countries.	1901.		1900.	
	Pounds.	Value.	Pounds.	Value.
East Indies.....	11,168,965	\$1,279,654	22,224,166	\$2,928,761
Other Asia.....	4,078,007	590,062	3,562,864	537,896
United Kingdom.....	4,750,201	526,946	2,128,942	263,289
The Netherlands.....	1,934,059	224,057	1,967,483	251,728
Germany.....	1,750,612	173,017	4,416,834	331,131
France.....	150,001	17,549	2,159,374	222,257
Other Europe.....	78,045	5,372	1,721,330	176,420
Africa.....	37,445	3,161	49,813	5,505
All other countries.....	70,720	11,590	85,213	9,114
Total.....	24,018,055	2,831,408	38,316,019	4,726,101

TOTAL POPULATION IN 1900.

The Census Bureau has issued a report which shows that the entire population of the United States, including all outlying possessions, was 84,233,069 on June 1, 1900. The number of inhabitants was

divided as follows: Continental United States, 75,994,575; Philippine Islands, 6,961,339; Porto Rico, 953,243; Hawaii, 154,001; Alaska, 63,592; Guam, 9,000; American Samoa, 6,100; persons in the military and naval service of the country outside of the territory of the United States proper, 91,219. The figures for the Philippine population are those given in the estimate of the statistician of the Philippine Commission.

The report announces that the Twelfth Census only extended to Alaska and Hawaii outside of "Continental United States," but that the figures for the rest of the United States domain are taken from the best available sources. It is stated in the report that at the close of the eighteenth century the population was about 5,333,000, and, taking these figures in connection with those for 1900, it is shown that the inhabitants of the United States increased nearly sixteen-fold in one hundred years.

TEXTILE MILL CONSTRUCTION IN 1901.

The fact that textile mill construction is represented by 255 plants in 1901 as against 400 in the preceding year is not, as might appear at first glance, an altogether unfavorable indication concerning the textile industry. The rapidity with which cotton mills were erected in the United States in 1899 and 1900 was a source of danger, as construction was carried on at a greater pace than was warranted by the sale of cotton goods. A natural reaction from the excessive development of the preceding year was therefore to be anticipated and was also desirable.

The decrease of 145 mills is distributed among all the branches of the industry, with the exception of woolen mills, where an increase of five is noted. The "Textile World," in its annual report on mill construction, gives the following figures, as showing the development of the textile industry in the past six years, as evidenced by new plants put in operation:

Plants.	1901.	1900.	1899.	1898.	1897.	1896.
Cotton	59	171	91	34	49	66
Woolen	53	48	49	25	53	31
Knitting	93	109	57	46	71	85
Silk	29	43	32	19	43	17
Miscellaneous	21	29	16	10	14	8
Total	255	400	245	134	230	207

It must be understood that the figures given do not take account of the new equipments installed in existing plants, which through improved processes have been enabled to exceed in productive capacity the machinery in wholly new mills. It is reported that the list of improvements and enlargements is the largest on record, due to existing prosperous conditions in the textile industries.

IMPORTS OF SUGAR.

In 1901 the United States imported sugar to the amount of 3,712,-210,968 pounds, with a valuation of \$79,619,806, as compared with 3,757,029,255 pounds in 1900, valued at \$91,742,493. The totals for 1900, however, included 222,496,938 pounds of Hawaiian sugar worth \$9,159,432, and as such sugar is now considered among the domestic products the statistics of the receipts from that source were not included in the totals for 1901. The actual receipts were therefore in excess of 1900, though the total valuation was not nearly so large. The sugar imported, classified in the tariff as "not above No. 16 Dutch standard," had a total weight of 3,588,734,000 pounds, and was valued at \$76,503,947 in 1901, and, including Hawaiian, 3,701,447,303 pounds, worth \$90,101,689, in 1900. The sugar imports graded above No. 16 Dutch standard in 1901 weighed 123,476,908 pounds, and was valued at \$3,115,859, as compared with imports in 1900 aggregating 55,581,952 pounds, worth \$1,640,804.

The imports of sugar from Latin America in both years under comparison were of a grade below No. 16 Dutch standard and were distributed as follows:

Countries.	1901.		1900.	
	Pounds.	Value.	Pounds.	Value.
Central America.....	8,954,556	\$220,491	2,542,007	\$56,295
Cuba.....	1,302,860,514	29,969,244	652,290,972	852,261
Mexico.....	1,313,984	34,386	566,151	14,520
Brazil.....	368,266,987	6,442,317	123,522,066	2,320,508
Other South America.....	277,358,035	5,994,414	288,873,991	7,064,251
Total.....	1,958,754,076	42,660,852	1,067,795,187	26,307,835

The sugar from Latin American sources entering the United States markets in 1901 represented more than half the total quantity and more than half the value of the sugar imports of the country from the whole world, whereas in 1900 such sugar represented only a little more than one-fourth both of the total weight and the aggregate valuation of the sugar received at United States ports.

IMPORTANT INCREASE IN COCOA IMPORTS.

The imports of cocoa (or cacao) by the United States, and its use throughout the country, are constantly increasing. During the twelve months which ended December 31, 1901, the quantity received aggregated 51,341,847 pounds, at a valuation of \$6,994,214. Of this amount, all but 908,285 pounds, valued at \$273,400, was crude material, including shells and leaves. In 1899 the cocoa imports had an aggregate weight of 39,418,490 pounds and were valued at \$5,587,478, the manufactured products being represented in those figures by 1,043,344 pounds and \$337,607. In 1900 the totals had increased to 46,300,417 pounds and \$6,750,001, the imports of the manufactured product being 995,401 pounds, worth \$295,883. Comparing these figures with the

statistics of 1901, the fact is established that the imports of the manufactured product are decreasing about as rapidly as the imports of the crude material are increasing. But a few years ago the greater part of the comparatively small quantity of cocoa used in the United States was in preparations ready for immediate consumption.

Of the imports of crude cocoa in the last two years, the Latin-American countries furnished the following amounts:

West Indies, other than British, 3,433,918 pounds, valued at \$485,480 in 1900, and 5,459,566 pounds, worth \$700,254, in 1901; Brazil, 7,522,524 pounds, worth \$1,017,452, in 1900, and 9,405,202 pounds, with a valuation of \$1,152,107, in 1901; other South America 12,686,906 pounds, with a valuation of \$1,818,148, in 1900, and 16,502,366 pounds, worth \$2,171,138, in 1901, the totals being 23,643,348 pounds (over one-half the actual supply), and \$3,321,080 in 1900 and 31,367,134 pounds (over three-fifths of the supply) and \$4,023,499 in 1901.

INDIA RUBBER IMPORTS IN 1901.

The average price per pound of the crude rubber imported by the United States in 1901 was 51 cents, as compared with 57.92 cents in 1900; thus, though the imports in 1901 exceeded those of the previous year by 5,815,627 pounds, the aggregate valuation in the latter year decreased by \$457,571. The number of pounds imported in 1901 was 55,152,180, the total value being \$28,120,218, and the totals for 1900 were 49,337,183 pounds and \$28,577,789. These imports, in both years, represent receipts from all parts of the world, the greater portion, however, coming from Brazil. The Latin American countries furnished the following amounts in 1901 as compared with 1900:

Countries.	1901.		1900.	
	Pounds.	Value.	Pounds.	Value.
Central America	1,247,517	\$644,917	1,363,131	\$747,570
Mexico.....	267,565	113,440	362,960	178,344
West Indies.....	42,844	16,152	35,125	13,152
Brazil.....	33,719,709	17,124,146	30,571,680	16,918,485
Other South America	1,336,131	567,229	1,161,897	603,356
Total.....	36,613,766	18,465,884	33,494,793	18,460,907

The invoice prices of the rubber from the various sections of the country vary, as can be observed from the average price per pound of the rubber received from Latin-American countries during both years under comparison, as follows:

Countries.	1901.	1900.
	<i>Cents.</i>	<i>Cents.</i>
Central America	51.70	54.84
Mexico.....	42.32	49.17
West Indies.....	37.70	37.16
Brazil.....	50.78	55.31
Other South America	42.45	51.89

RAILWAY BUILDING IN 1901.

Railway construction in the United States throughout the year 1901 exceeded that of any previous year since 1890. The total length of line built was 5,057 miles, which, added to 194,321 miles, the estimated extent of trackage for 1900, brings the grand total up to 199,378 miles.

In the distribution of this railroad extension by States, Texas heads the list with 583 miles; Oklahoma follows with 428 miles; New Mexico, 275; Georgia, 303; Wisconsin, 196; Missouri, 189; Indiana, 174; Minnesota, 171; Illinois, 164; Michigan, 164; Louisiana, 160; Indian Territory, 157; Arkansas, 156, and Pennsylvania, 153 miles. No other States have increased their mileage within the year to the extent of 150 miles.

While the length of railways and the amount of freight tonnage have steadily increased with the expansion of the commercial interests of the country, the cost of freight transport has greatly decreased. According to figures given by the Bureau of Statistics, 1.24 cents per ton was charged in 1882 for transportation of freight; 1.03 cents in 1887; 0.93 cents in 1890; 0.84 cents in 1895; 0.80 cents in 1897, and 0.75 cents in 1900.

VALUE OF BANANA IMPORTS.

During the calendar year 1901 the United States imported bananas to the value of \$6,846,867, which represents an increase of \$1,198,652 over the year previous, when the imports of this fruit were valued at \$5,648,215. The countries from which bananas were received in both years were the following:

Source of supply.	1901.	1900.	Increase.
British North America	\$101,550	\$49,449	\$52,101
Central America	2,795,265	2,385,891	409,374
British West Indies.....	2,735,310	1,956,765	778,545
Cuba	471,132	288,528	182,604
South America	552,506	819,873	* 237,367
Other countries.....	161,104	147,709	13,395

* Decrease.

IMPORTS OF HIDES AND SKINS FROM LATIN AMERICA.

The number of pounds and the value of the hides and skins, other than the skins used for fur, imported by the United States in the twelve months of the year 1901 was 310,539,594 pounds, worth \$55,565,388. This was an increase both in weight and valuation as compared with the previous year, when the weight and valuation were 307,315,840 pounds and \$51,587,993, respectively. The imports from Latin America in both years were as follows:

Source of supply.	1901.		1900.	
	Pounds.	Value.	Pounds.	Value.
Central America	3,075,666	\$484,505	3,896,668	\$599,725
Mexico	18,198,218	3,157,885	13,137,851	2,393,478
West Indies.....	1,934,181	377,507	1,487,704	341,610
South America.....	63,907,566	11,504,135	57,141,912	10,626,802
Total.....	87,115,631	15,524,030	75,664,135	13,961,615

PRODUCTION OF PRECIOUS STONES IN 1901.

Statistics demonstrate that not only were there more precious stones and pearls imported into the United States throughout the year 1901, but also that the native production far exceeded that of any year in the history of the country. The leading features of this branch of industry may be summed up as follows: (1) The continued output of fine blue sapphires in Montana, in Fergus County, and of fancy-colored ones in Granite County; (2) the systematic working of the beryl locality in Mitchell County, N. C.; (3) an increased production of turquoise from Nevada and from the New Mexican mines in Grant and Santa Fe counties; (4) the large sale of the ornamental stone known as "turquoise matrix," wherein the gem and the gangue rock are cut together from all these turquoise mines; (5) a similar cutting of rock and gem from the emerald locality in western North Carolina under the name of "emerald matrix;" (6) the mining of the beautiful purple-pink garnets, now known as rhodolite, in Macon County, N. C.; and (7) the discovery of remarkable colored tourmalines at a new locality in San Diego County, Cal.

NEW STEAMSHIP LINE TO THE WEST INDIES.

A new line of steamers from Boston to the West Indies, South America, and Central America (The United Steamship Company) is being formed, and already the arrangements for building two of the steamers are announced. The company will have ten steamers built, and the present intention is to name the boats after Presidents of the United States.

The Bath (Maine) Iron Works will build two of the steamers, at an approximate cost of \$1,000,000.

URUGUAY.**GENERAL TRADE CONDITIONS.**

The outlook in Uruguay of the general trade and economic conditions of the Republic for the coming year is very favorable, as the reports from the various centers of production indicate augmented values in almost every branch of national industry. It is estimated that the wool clip will be considerably in excess of 1901, a profit of about \$12,000,000 being figured on. Consul SWALM reports from Montevideo that both the planting and growing seasons for the wheat crop of the country have been excellent, a greatly extended area having been sown, and the best American agricultural implements having been employed. The produce of this crop is valued, by computations on data from all the Departments, at \$10,000,000. The live stock ready for slaughter is about 700,000 head, and conservative estimates of the export values of these three important items of

commerce, coupled with other native products, reach a total of \$40,000,000.

The custom-house receipts of the first ten months of the year 1901 are given as follows by the "South American Journal" of January 11, 1902:

Months.	Imports.	Exports.	Total.
January	\$672, 824	\$198, 606	\$871, 430
February	603, 053	156, 831	759, 884
March	932, 642	180, 598	1, 113, 240
April	788, 622	202, 277	990, 899
May	640, 146	164, 869	805, 015
June	532, 074	107, 331	639, 405
July	595, 341	68, 972	664, 313
August	726, 643	56, 160	782, 803
September	738, 264	45, 410	783, 674
October	762, 550	48, 300	810, 850
Total	6, 992, 159	1, 229, 754	8, 221, 513

Returns from the same sources in the corresponding periods of the preceding seven years give the following results:

1894	\$8, 849, 727	1898	\$8, 436, 263
1895	8, 957, 424	1899	8, 362, 565
1896	8, 898, 012	1900	8, 167, 146
1897	7, 104, 661		

Exports of frozen beef from Uruguay to English markets from January 1, 1901, to October 31 amounted to 347,924 quarters as against 143,859 for the same period of 1900. During the same nine months of the year 1,930,642 frozen sheep were shipped from Uruguay to various European markets. The cattle used for the trade cost on an average \$23 to \$30 gold, per head, at the slaughterhouse. The best sheep for freezing bring an average price of \$3 per head.

PROPOSED NORTH AMERICAN EXPOSITION AT MONTEVIDEO.

Messrs. SOZA and PONS, Calle Piedras 173, Montevideo, are reported to have issued a prospectus for a proposed exposition of the products of the United States in the Uruguayan capital, which is to be known as the "First North American Exhibition in the River Plate." As stated in the prospectus, the purpose of this exposition is to stimulate, in the River Plate country, interest in merchandise of United States manufacture.

The projectors of the enterprise are reported to have the indorsement of Mr. ALBERT W. SWALM, United States Consul at Montevideo, and present other references as to their commercial standing. They propose not only to conduct the exposition, but also to represent exhibitors and United States manufacturers as agents.

EXPORTS DURING THE FIRST TEN MONTHS OF 1901.

In the ten months from January to October, 1901, 931 steamships and 50 sailing vessels cleared from the port of Montevideo, bound for various ports, carrying the following articles:

Of the items enumerated the exports to the United States were: Dry

oxhides, 461,128; salt oxhides, 2,000; hair, 372 bales; wool, 635 bales; salted beef, 8,224 bales; maize, 500 sacks; wheat, 48 sacks; bones and bone ash, 1,939 tons; tongues, 500 boxes; intestines, 12 barrels; horns, 288,098 pieces and 1,690 sacks; claws, 476 bales; tannery refuse, 94 bales; conserved meat, 39 boxes; ostrich feathers, 6 boxes; gum, 27 packages.

To Great Britain the exports were as follows: Dry oxhides, 5,246; hair, 12 bales; wool, 10,185 bales; sheepskins, 184 bales; salted beef, 14,453 bales; maize, 129,711 sacks; linseed, 2,397 sacks; tongues, 9,088 boxes; horns, 26,000 pieces and 32 sacks; hoofs, 1,719 bales; horses, 7; mules, 525; ipecacuanha, 481 sacks; fruits, 220 packages; ostrich feathers, 16 boxes; gum, 839 packages; hay, 1,870 bales.

To Germany: Dry oxhides, 17,771; salted oxhides, 128,237; various kinds of hides, 1 bale; hair, 52 bales; wool, 14,904 bales; sheepskins, 248 bales; salted beef, 320 bales; bran, 595 sacks; maize, 460 sacks; bones and bone ash, 101 sacks and 1,946 tons; meat broth, 189 boxes; tongues, 100 boxes; intestines, 758 barrels, 6 bales, and 79 sacks; horns, 4 sacks, and 66,100 pieces; hoofs, 505 sacks; fat, 7 tubs; horses, 4; meat extract, 32 boxes; ipecacuanha, 58 sacks; greaves (skinny refuse from lard), 10 bales; ostrich feathers, 2 boxes; gum, 200 packages; garlic, 62 packages; intestines and bladders, 1 bale.

To France: Dry oxhides, 11,940; salted oxhides, 155,293; various hides, 43 boxes; hair, 571 bales; wool, 23,177 bales; sheepskins, 8,774 bales; salted beef, 2,684 bales; tallow, 86 casks and 30 tubs; bran, 3,033 sacks; maize, 12,226 sacks and 214 tons; linseed, 3,661 sacks and 31 tons; bones and bone ash, 9,671 sacks and 590 tons; meat broth, 276 boxes; tongues, 480 boxes; intestines, 39 barrels; horns, 738 sacks and 452,188 pieces; claws, 35 bales; hoofs, 32 sacks; feathers, 15 boxes, tannery refuse, 14 bales; meat extract, 138 boxes; conserved meat, 201 boxes; ipecacuanha, 230 sacks; greaves, 57 tons and 831 cakes; fruits, 287 packages; dry blood, 3,014 sacks and 141 tons; ostrich feathers, 62 boxes; glycerine, 250 packages; garlic, 100 packages.

To Belgium: Dry oxhides, 9,860; salted oxhides, 148,897; hair, 130 bales; wool, 15,422 bales; sheepskins, 9 bales; tallow, 100 casks; maize, 1,633 sacks; bones and bone ash, 31 tons and 2,826 sacks; meat broth, 804 boxes; tongues, 5,169 boxes; intestines, 263 barrels and 149 other packages; horns, 63,204 pieces and 157 sacks; claws, 630 bales; tallow, 100 boxes; meat extract, 2,101 boxes; conserved meat, 3,106 boxes; ipecacuanha, 5 sacks; gum, 580 packages.

To Italy: Dry oxhides, 48,060; various hides, 8 bales; hair, 57 bales; wool, 579 bales; sheepskins, 625 bales; tallow, 3,219 casks and 179 tubs; maize, 6,730 sacks and 520 tons; wheat, 1,200 sacks; bones and bone ash, 882 tons; intestines, 63 bales and 24 barrels; horns, 1,687 sacks; claws, 4 sacks; hoofs, 1,711 sacks; tallow, 150 boxes; sheep, 200; tannery refuse, 5 bales; straw for brooms, 60 bales;

ostrich feathers, 1 box; gum, 2 packages; garlic, 234 packages; cedar-wood, 50 logs.

To Brazil: Wool, 122 bales; sheepskins, 1,984 bales; salted beef, 329,983 bales; tallow, 1,648 casks and 2,219 tubs; birdseed, 291 sacks; flour, 12,265 sacks; bran, 4,258 sacks; maize, 37,799 sacks; linseed, 18 sacks; meat broth, 12 boxes; tongues, 35 boxes; claws, 12 sacks; tallow, 70 boxes; cattle, 1,850; sheep, 8,086; horses, 2; oxen, 5; mules, 119; conserved meat, 19 boxes; fruits, 2,267 packages; straw for brooms, 1,243 bales; ostrich feathers, 14 boxes; garlic and onions, 858 packages and 10,000 strings; intestines and bladders, 3 bales; hay, 7,846 bales.

To Spain: Dry oxhides, 77,232; various hides, 1 bale; hair, 1 bale; sheepskins, 11 bales; salted beef, 4,086 bales; tallow, 4,650 casks and 496 tubs; maize, 726 sacks; wheat, 41 sacks; bones and bone ash, 1,367 sacks; meat broth, 161 boxes; tongues, 27 boxes; intestines, 176 bales; horns, 124 sacks; claws, 6 sacks; feathers, 2 boxes; ostrich feathers, 9 boxes.

To Portugal: Dry oxhides, 77,882; wool, 15 bales; sheepskins, 6 bales; salted beef, 4,943 bales; tallow, 730 casks; conserved meat, 150 boxes; fruits, 8 packages.

To Chile: Tallow, 2,286 casks and 3,080 tubs; birdseed, 883 sacks; flour, 10,018 sacks; bran, 676 sacks; maize, 5,701 sacks; wheat, 3,100 sacks; linseed, 100 sacks; tongues, 505 boxes; tallow, 634 barrels, 1,830 boxes, and 3,569 other packages; sheep, 32; oxen, 2; fruits, 502 packages.

To other countries: Dry oxhides, 3,453; salted oxhides, 74,798 bales and 2,685 tons; flour, 341 sacks; bran, 70 sacks; fine bran, 22 sacks; maize, 180 sacks; wheat, 39 sacks; fruits, 18 packages; garlic, 22 packages; tallow, 1,840 casks and 287 tubs.

The remainder necessary to make up the total of the exports of each commodity was on "orders," the final destinations not having been ascertained.

VENEZUELA.

TARIFF CLASSIFICATION OF PATENT MEDICINES.

On December 6, 1901, President CASTRO issued a decree with regard to the surtax on drugs and patent medicines, and on December 24, of the same year, the following supplementary decree was promulgated:

"The patent medicines referred to in article 1 of the said decree are the pharmaceutical products which constitute the specialties of foreign manufacturers and which come ready prepared, such as pills, pearls, pastels, pilules, globules, tablets, sirups, emulsions, solutions, ointments, plasters, vermifuges, medicinal soaps, medicated wines, dyes for the hair, etc.

"The prime materials which serve for the elaboration of pharmaceutical preparations, such as salts, alkaloids, essences, extracts, tinctures, etc., shall continue to pay the duties laid down in the tariff.

"For facilitating the dispatch of goods at the customs these articles shall come in separate packages.

"When on the importation manifests, among other goods, there are packages containing drugs, medicines, and chemical products which belong to the sixth class, the customs authorities, on settling the list of duties, shall place a note at the foot of the manifest stating that 50 per cent of the duties derived from that package shall be set apart for public instruction; and finally,

"The customs department shall draw up a separate report of these deliveries to the agents of the Bank of Venezuela, and shall send a copy thereof to the Minister of Public Instruction and another to this ministry and the other audit offices, as provided by the code of finance."

STATEMENT OF THE BANK OF CARACAS.

A recent number of the "Official Gazette" of Venezuela contains an interesting statement showing the condition of the Bank of Venezuela on November 30, 1901. The following is a detailed statement of the balance sheet which this important financial institution presented to the Venezuela Government on the date mentioned:

Accounts.	Credit.	Accounts.	Debit.
	<i>Bolivars.</i>		<i>Bolivars.</i>
Capital.....	6,000,000.00	Vault:	
Reserve fund	442,461.80	Cash, <i>bolivars</i>	124,841.65

NEGOTIATIONS FOR VALUABLE MINERAL PROPERTY.

Negotiations are reported as pending between the property owners and Sir CHRISTOPHER FURNESS, a British ironmaster, with a view to the sale of vast iron-ore lands controlled principally by New York parties at Inataca, on the Orinoco River, Venezuela. Should the deal be consummated, extensive arrangements will be made for the shipping of the ore to ports in both the United States and Great Britain. The property, which is reported to be the largest and most valuable of the known workable deposits on this continent, contains, it is claimed, 67

per cent of metallic ore, while the average percentage shown by United States lake ores is said to be some 60 per cent. The British parties propose to import the ore with a view to its taking the place of Spanish iron, which is at present the principal foreign ore utilized by English mills. The production of Bilbao ores is said to be rapidly diminishing, the metallic average of the ore being but 50 per cent.

SHIPMENTS OF BALATA FROM CIUDAD BOLIVAR IN 1901.

The shipments of balata from the ports of Ciudad Bolivar during 1901 had an aggregate weight of 1,196,414 kilograms. This amount is only slightly less than the total shipments for 1900.

IMPORTS FROM NEW YORK DURING THE LAST SIX MONTHS OF 1901.

In the six months from July 1 to December 31, 1901, 59 steamships and 3 sailing vessels cleared from the port of New York bound for Venezuelan ports, carrying 433,253 bundles of merchandise, weighing 19,336,597.34 kilograms, valued at \$1,449,849.89. During this period the Consul-General of Venezuela at New York certified 1,755 consular invoices, covering the articles of merchandise shown in the following table:

Articles.	Packages.	Kilos.	Valug.
Axes and agricultural instruments	837	22,769.56	\$7,572.59
Barbed wire.....	12,122	487,689	26,169.40
Beer and hops.....	205	16,730	1,547.60
Blankets	832	103,277.50	69,743.82

THE PEARL FISHERIES.

The "Venezuelan Herald" of December 31, 1901, states that the National Executive has ordered a suspension of pearl fishing in the waters of the Republic, on and after January 1, 1902. In due season the President will designate when pearl fishing may be resumed on the different oyster beds referred to.

EXPLORATION OF UNKNOWN REGIONS IN SOUTH AMERICA.

Owing to the importance of the subject, to which some reference was made in the MONTHLY BULLETIN of July, 1901, under the head of "Rivers of South America," the address is published here which the Colombian delegate, Gen. Don RAFAEL REYES, delivered at the meeting of the International Conference of American States held in the City of Mexico on December 30, 1901, describing the explorations made by himself and his two brothers, Don NESTOR and Don HENRY REYES, in the interior of South America, and in support of the resolutions introduced by him at the same meeting in relation to the Amazon territory.

The speech, as officially given in the Spanish as well as in the English language, appears in the minutes of the proceedings of the Conference on the aforesaid date, which was the 23d day of its session. The English translation is as follows:

"Mr. PRESIDENT: I have the honor to present to the Conference the charts of the explorations, from the Pacific to the Atlantic, in the immense territories which are watered by the Amazon and its tributaries, the Parana, and the latter's tributaries, which I made with my brothers, HENRY and NESTOR, during several years in South America.

"I confess that, although I have been urged to publish this work by members of the Geographical Societies of London and of Paris, and by various other persons interested in geography, I have not done so because the disastrous death of my two brothers during these explorations, the elder, HENRY, a victim of fever, and the younger, NESTOR, devoured by the cannibals of Putumayo, caused me to look with a certain horror upon everything connected with that enterprise, and the plans and notes have reposed during a long time among my papers untouched, through the egotism of my affliction. * * *

"To-day, when I have the unmerited honor of belonging to this Conference, in which are represented by their most distinguished sons, all the countries of the three Americas, I believe it becomes an unavoidable duty to give publicity to this work, which interests all the nations herein represented.

"If the territories to which I refer presented a few years ago but a local and relative importance, such is not the case to-day. The development of navigation and of commerce, and the growing necessities of humanity, demand that they should not remain ignored and unproductive. In the extended forests in which the cannibal savages were wandering when we made these explorations there exists to-day an important commerce of some tens of millions of dollars, and towns of thousands of inhabitants have been established.

"Furthermore, the proposed Inter-Continental Railway, a work of great civilizing tendency in which this Conference manifests so much interest, will give a very great importance to these territories, the ownership of which lies in almost all the countries herein represented, excepting, however, North and Central America and Chile.

"When I had the honor to visit President ROOSEVELT, while passing through Washington, he stated to me that he knew of the explorations which I had made with my brothers in South America, and about which the 'New York Herald' had written in the month of March, 1901. President ROOSEVELT encouraged me to give to this Conference an account of the same, and with the clear vision of a great statesman he told me: 'That region is a new world, destined for the progress and the welfare of humanity.' He offered to recommend to the North American delegation to interest itself in this matter, and I know that he kept his offer. In the opinion of this well-informed statesman, the explorations made by my brothers and myself are intimately connected with the project of the International Railway.

"If that part of South America with which I am dealing be compared with that part of Africa which was explored by the great LIVINGSTON and by STANLEY, the superiority in mineral and vegetable wealth, in agricultural lands, and above all, in navigable rivers, is in favor of the former. Scarcely a quarter of a century has elapsed since the explorations of these two apostles of progress came to an end, and to-day railroads traverse those territories which they had to cross afoot, opening routes through the dark forests; flourishing and new settlements spring up as if by magic, and a commerce of very great importance is carried on. Why should not the same take place in South America?

"We hold to the conviction that, as the construction of the Inter-Continental Railway advances, which is in reality but the connecting link of the railroads already in operation in the different countries, that region will develop with greater force and importance than those explored by LIVINGSTON and STANLEY. Humanity is looking for new territories for its progress and welfare; the great masses which overflow from North America and Europe will invade South America by means of railroads and steamships. It therefore behooves the Republics which form that part of the continent to prepare themselves

for their reception, and to preserve their integrity, and cause it to be respected through peace, liberty, and justice.

“FIRST EXPLORATION FROM PASTO TO THE AMAZON RIVER.

“At the risk of abusing the kindness of my distinguished colleagues, I shall give a short sketch of the first exploration which I made in company with my brothers.

“We started from the city of Pasto, situated on the summit of the Andes, under the equinoctial line. The immense region which extends from that city for more than 4,000 miles to the Atlantic was then completely unknown. We traversed afoot the great mass of the cordillera of the Andes, which rises more than 12,000 feet above the level of the sea, up to the region of perpetual snow. Where this ceases there are immense plains, called *paramos*, upon which there grow neither trees nor flowers and where animal life completely disappears. We wandered for a whole month on those cold solitudes, guided only by the compass. In winter they are covered with a fog as dense as that of the high latitudes of the north. There were days in which we had to remain in the same spot in semidarkness without being able to advance a single step, the thermometer falling to 10° below zero, an unbearable temperature, as we lacked proper shelter and shoes. We had to use a kind of shoe called *alpargatas*, made out of *henequen* (hemp), which only covered half of the foot; leather shoes can not be used, as those plains are covered with a thick layer of mud in which the traveler, while walking, sinks to the knees.

“After marching for a month through that desert, in which perished, due to the intense cold, two men of the expedition of the ten who carried provisions on their backs, we reached the limit of those solitary pampas, which appeared like the product of a newly forming nature. We were at the eastern watershed of the Andes. An ocean of light and verdure extended before our eyes, in marked contrast to the shadows and solitudes which we had just traversed. We had before us the abrupt declivity of the cordillera, which descended in some parts almost vertically, then in slightly inclined slopes, and beyond in perfect levels for miles and miles down to the ocean. Over the granite walls of the Andes the waters precipitate themselves in majestic cataracts, rushing afterwards in torrents through the valleys of the cordillera, and upon reaching the plain they convert themselves into broad and beautiful rivers and, like great ribbons of silver on an emerald field, they are lost in the distant horizon. In the forests the luxuriant tropical flora exhibits itself in all its beauty. The trees appear clothed with all kinds of varied colors. It was, in a word, life which we had before us and chaos which we left behind.

“We penetrated these unknown forests, opening roads with the *machete* through brambles and briars and creepers which obstructed

our passage. Arriving at the vertical declivities of the cordillera, in places which were impassable, we had to descend by the aid of ropes. For fifteen days we continued our march through these virgin forests, in which snakes and wild beasts abound, but which fortunately did not cause us any damage. We crossed the torrents over bridges of trees which we threw across them, or forded them afoot. In crossing one of these mountain torrents we lost two of the carriers, and the expedition was reduced to only six men. After great fatigue, and already exposed to a temperature of 30° C., we arrived at a river navigable by canoes, on the shores of which lives the tribe of the Mocoas, which Indians, although savages, are hospitable and not cannibals. We remained with this tribe one month, during which we procured from them a canoe to continue our expedition to the Amazon River, and six Indians, who were to accompany us on our trip. They were familiar with only 600 miles of downstream, and they informed us that from there they had never gone farther because those who had dared before to proceed beyond, had been devoured by the cannibal tribes which inhabit the other half of the river up to the Amazon.

"We launched our canoe, following the course of this unknown river, to which we gave the name by which it was known by the savages, 'Putumayo' (meaning 'clear water' in the Siona dialect). After two days of navigation we arrived at a point which we baptized with the name of 'La Sofía,' that of my wife, where the river is 6 feet deep at all times, and which is the terminus of steamboat navigation.

"In venturing upon that expedition, so full of perils of all imaginable kinds, I desired (please pardon this digression of a purely personal character) to consecrate with the name so very dear to my affections that point of a new departure toward the great mystery of American nature. I chose this name as a precious talisman for our struggle with an unknown and savage world. The pure sentiments of the soul have always been the best armor for man in the battles of life.

"It took us a month from La Sofía to reach the last point known by the savages of Mocoa. Through all this territory the river is navigable for steamers of 5-foot draft without encountering any obstacle. Its shores are covered with dense forests, in which there abound the caucho, or *Jeve*, cocoa, sarsaparilla, vegetable ivory, or *tagua*, ipecacuanha, many other medicinal plants, and a variety of fine woods. We visited the nomadic tribes, which treated us with benevolence, and even generosity, making us presents of smoked provisions, the products of hunting and fishing, which constitute their principal occupation.

"These tribes are the Cosacuntis, Montepas, Tohalla, and the Inquisilla, all finely built and in constant migration in the search of game and fish. They have but few huts of straw, and cultivate small plantations of bananas and yucca in the clearings made in the woods, felling

the trees with stone axes and then burning them up. They go almost naked, and each tribe preserves the most absolute autonomy with respect to the others. The dialect which they speak is a mixture of Siona and Quipchua. They have no religion other than the worship of the evil spirits, with which their priests, or *payes*, pretend to be in communication, for which purpose they intoxicate themselves with the juice of a narcotic plant which they call 'yoco.' It is always necessary to be on good terms with the *payes*, or priests, who sway influence over their companions. The number of individuals of which the said tribes are composed, according to the information we gathered, is about 20,000

"We entered now upon the region inhabited by cannibal Indians. The first tribe which we encountered were the powerful and warlike Mirañas. Our companions, the Indians of Mocoa, notified us categorically that, from that place on, they would not go any farther, and that we had to procure a canoe and oars and men to row from that tribe, because they were going to return. We did so. We landed and, with an interpreter, we went to the first settlement. We found in it its powerful chief, 'CHUA' (or 'tiger'), a handsome young man of fine and athletic figure, some 30 years of age; he received us as friends and gave us his hand, which is an unequivocal sign of friendship among these savages, and invited us to enter his hut. I was the first white man whom those savages had seen, and for that reason was the object of their childlike curiosity. They were celebrating a feast of the full moon, and offered us their dishes of human flesh of Indians, called Huitotes, the enemies of the Mirañas, who had been made prisoners.

"Through the interpreter we asked CHUA—who, from that date on, was our friend and always remained faithful, carrying his affection so far as to take my name, calling himself thence forward RAFAEL CHUA—to give us canoes, provisions, and some Indians to continue our trip toward the Amazon River. The generous Indian promised to give us all that we might need. We took leave of our companions, the Mocoas, and remained as the guests of the Mirañas.

"We remained among them fifteen days, during which time we accompanied them on their hunting and fishing expeditions. After this, CHUA gave us a large canoe and ten robust young men as a crew, to continue our trip to the Amazon.

"On a beautiful morning we bade good-bye to our friend CHUA and put out in our canoe on the waters of the Putumayo, which, in those parts, has a width of more than 900 yards and is 10 feet deep. There were yet 600 miles before reaching the Amazon River. All this distance the river is navigable at all times for steamers of a draft of 9 feet. The forests which cover its shore abound with the same vegetation as those we had previously traversed. We visited and made friends with the cannibal tribes of the Huitotes, Benecios, Orejones, Carijones, Cara-

parana, and Campulla. All these received us and treated us with kindness and generosity. We must acknowledge that, during ten years, in which we made explorations on the Putumayo, on the Amazon River and its other tributaries, we were never threatened nor attacked by the savages, which unfortunately was afterwards not the case with our younger brother, NESTOR, who was devoured by the cannibals of Putumayo and thus paid with his life, in the bloom of youth, his love for work, for knowledge, and for the progress of America.

“We spent two months in descending the lower part of the river, because we delayed making explorations ashore and remained some days visiting the different tribes. These speak the Siona language, and the number of individuals of which they are composed, according to the information we received, is over 60,000. These tribes live in a continual warfare with one another, so as to take prisoners for their festivals, and also to sell them to the merchants ascending the Putumayo, some 200 miles from the Amazon, and who, in exchange, give them alcohol, tobacco, strings of glass beads, mirrors, and other trifles. During the time in which I visited that region with my brothers we destroyed this barbarous trade, putting those traders in human flesh in prison, and delivering them afterwards to the Brazilian authorities, which always dealt out to them a merited punishment.

“The most troublesome part of this our first exploration was not the heat of 45° C., which we had to stand without any shade, as the canoe was an open one and under a burning sun, nor the fatigue of rowing all day as much as the Indians, nor the poor and scant food, nor the dangers which we incurred in the midst of those cannibals. It consisted in the nights which we had to pass on the immense river banks, on burning sands, parched by the sun during the daytime, in which we had to dig a sort of a grave in which to bury ourselves, leaving only the nose uncovered, as the Indians were in the habit of doing, in order to protect ourselves against the bites of the mosquitoes, which exist in such an abundance that it may be said that the atmosphere is thick with them, and to such an extent do they fill and obscure it that on clapping the hands together there remains between them a solid mass of mosquitoes. With the first dawn of the morning the mosquitoes disappeared and we emerged from our graves, which had served as improvised dormitories, and in which we had lain naked, covered with only a mixture of sand and sweat which became hardened on our skins with the cold of the mornings, and jumped into the river to free us through its waters of this heavy and disgusting covering, and put on the scant and tattered clothes which yet remained to us. We sailed during all the hours of daylight, and only stopped for the purpose of hunting and fishing to supply our food necessities, and at night we prepared that which we had procured during the day.

“Such was our life during the two months which we spent on the

Putumayo, and which seemed to us an eternity. We suffered the same fatigues as our savage companions, not only in the management of our little and fragile canoe, but also in hunting, fishing, and in the expeditions which we made afoot, and it is our conviction that it was this circumstance which gained us the affection and the respect of the savages, who recognize no other superiority than that of strength.

"At last, after great fatigues, after traversing the cordillera and going either on foot or in the canoe over the 1,400 miles of the Putumayo River, we arrived at the Amazon River. Our efforts had been crowned with complete success, having pursued the object which induced us to undertake this expedition, which was nothing less than to discover a river navigable for steamers which would form a communication between Colombia and the Amazon River.

"Similar explorations of the same laborious character as that which we have just described we subsequently made during several years, with our brothers HENRY and NESTOR, on the rivers Caqueta, Napo, Ucayali, Yabari, Yurua, etc., and others, which are marked on the map, which I hand you, herewith.

"My brother HENRY died of malignant fever while exploring the Yabari River, and the Peruvians erected him a sumptuous mausoleum in the cemetery of Iquitos.

"NESTOR, my younger brother, was lost while exploring the forests of Putumayo, where, as stated before, he was devoured by the savages. We could only recover his bones, which I was able to unite with the remains of my brother HENRY, and we carried them to Bogotá, the capital city of Colombia, where they now rest, deposited in the cathedral.

"May it be permitted to me, Mr. President, to convert myself for a moment into a herald of historic justice, and, leaving aside the considerations of the ties of consanguinity, to consecrate here before you a remembrance of admiration to those two heroes of labor and of the civilization of the American Continent.

"FROM THE MOUTH OF THE PUTUMAYO RIVER TO RIO DE JANEIRO.

"The point where the Putumayo, or Ica, as the Brazilians call it, unites with the Amazon River is called San Antonio, and is some 1,800 miles distant from the mouth of the latter at the ocean.

"We had now arrived at a place which might be called civilized in comparison with the regions which we had just traversed. A small steamer arrives there monthly, plying between Pará and Iquitos, and in which we took passage for the former city, where we arrived six months after our departure from Pasto, in Colombia.

"We published a short account of our trip, which produced a great impression and was reproduced in all the daily papers of Brazil. It was the first time that a traveler had traversed the American Conti-

nent from the Pacific coast of Colombia in order to reach Pará. In this city, as hospitable as all those of Brazil, we were the object of many manifestations of affection and esteem on the part of the authorities and of persons of the select circles of society, such as Messrs. Dr. F. A. RAÍOL, MANUEL PINHEIRO, JULIO LAROQUE, MANUEL ANTONIO PIMENTA BUENO, and others.

“From Pará we went to Rio de Janeiro, touching on our way the cities of San Luis de Maranhao, Ceara, Rio Grande del Norte, Pernambuco, and Bahia. The voice of the press had preceded us, giving information on our expedition, and in all these cities, as well as in Rio de Janeiro, we were received and feasted with enthusiasm.

“On the very day of our arrival at Rio de Janeiro we received a note from the Governor of the Palace, in which he welcomed us in the name of the Emperor, DOM PEDRO II, and informed us that the Emperor would receive us the following day, which was a gala day of the court, at 4 o'clock in the afternoon, in his palace of San Cristobal.

“We went there at the appointed hour. The burning sun, rain, hunger, and all the fatigue which we had suffered during six months while crossing the continent, had converted my body into a skeleton and enveloped it in a species of parchment; for this reason it was that when I presented myself in the hall of receptions, before the entrance of the Emperor, and in which were all the grandees of the Empire in their gala uniforms, I noticed that I was looked upon as an intruder; nobody knew who I was and I remained isolated from all. A few moments afterwards the master of ceremonies called my name and conducting me through the assemblage, which then saluted me with deference; he showed me into the working cabinet of the Emperor, by whom I was received not only with politeness, but also with affection.

“DOM PEDRO II was of majestic and commanding stature, of frank and honest countenance, and blonde like a German. In his great blue eyes could be discerned the kindness and nobility of his soul; he was possessed of a highly cultivated intellect, and was a savant in the most perfect sense of the word. He spoke several languages correctly, and we carried on our conversation in French; he had a passion for geography and for the exploration of the immense territories of his Empire. For an hour we discussed the map which I had formed of my expedition, and in which he showed great interest. He accompanied me to the Hall of Receptions, where he presented me and recommended me to all who were present.

“I remained two months in Rio de Janeiro, during which I received all kinds of polite manifestations from that society, whose hospitable character is proverbial. Permit me to mention the names of the gentlemen who took great pains in offering me their support in future explorations: Baron of RIO BRANCO, Chief of the Cabinet; Marquis SAN VICENTE and Baron COTEJIPE, Admiral WANDERCOCK,

the Republican QUINTINO BOCAYUBA, actual President of the Senate, Baron of RIO BRANCO, Jr., then editor of "La Tarde," and at present Minister of Brazil in Germany.

"I comply with a duty in mentioning here also the name of the illustrious explorer and botanist, RAIMUNDI, to whom I am indebted for words of encouragement for the continuance of my explorations; and must also mention the name of Mr. ALFRED SIMPSON, an English gentleman, who accompanied me on the first trip, in steamboat, on the Putumayo.

"The Government of Brazil generously offered to supply us with ships and money to enable us to continue our explorations, which, however, I did not accept, as I neither had asked nor accepted them from my own country, as we had made all our explorations with funds belonging to my brothers and myself.

"From Rio de Janeiro we returned to Pará, where we bought the steamer *Tundama*, named after our native province in Colombia, and which we manned and provisioned for the purpose of making the voyage of the Putumayo to La Sofía.

"FROM PARA TO LA SOFÍA.

"In our steamer we ascended the Amazon River without obstacle to San Antonio. There we entered upon the waters of the Putumayo. We can say that it was one of the happiest days of our lives when we saw, for the first time, the flag of Colombia float from the stern of the vessel waving in the breeze. This vessel was to realize the conquest of civilization and of progress for our country and to improve the horrible condition of thousands of savages who at the mere contact with civilized man felt as if stricken by the electric spark of that same civilization, as they had not only treated us hospitably but very generously.

"We spent two months navigating the 1,200 miles of this river to Sofia and there we had to procure fuel for the steamer. With the assistance of the Portuguese captain, FRANCISCO ANTONIO BISAO, we drew the geographical map of the Putumayo River, the only one of our explorations which has been published.

"While passing through the territory of the savage tribes, who months before had seen us deprived of all resources and had assisted us to continue the expedition, we were then able to reward them generously, permitting them to admire the objects and curiosities of civilization until then unknown to them, of which objects we carried a supply in our steamer. To our friend Chua, the chief of the powerful tribe of the Mirañas, we made a present of arms—which, however, he never used against ourselves—of implements of agriculture, of seeds, and of garments for his numerous wives. We finished our voyage at La Sofia, where the mighty current of the river prevents a fur-

ther advance of steamers. From that port, a hundred miles distant, the immense cordillera of the Andes rises majestically, appearing in the horizon like a gigantic wall of bronze crowned with snow, above which, toward the south, is Ecuador, the volcanoes of Pichincha, Coto-paxi, Chimborazo, and others, throwing forth fire and smoke. Beyond those elevated summits lay our home, calling us back with all those impulses of affection which are irresistible to the soul. In order to arrive there, after our repeated expeditions, we had again to traverse afoot the dense woods and icy plains through which we had plowed our first route. Later we united the Putumayo River with the city of Pasco by a bridge road, over which is carried on to-day an important trade.

“What we said of the river Putumayo is also applicable to all the other rivers and forests explored by the brothers REYES. The Indians are now partly civilized and their condition of life has improved, and with their assistance an export commerce of some tens of millions of dollars is maintained in caucho, cocoa, medicinal plants, etc., and this trade fills with its products the holds of hundreds of river steamers.

“CLIMATE AND AGRICULTURAL PRODUCTS.

“On the slopes of the cordillera of the Andes the temperature varies from zero to 20 degrees C., according to the altitude. The climate is healthy and fit for the inhabitants of the temperate zone. The lands are extraordinarily fertile, and produce with facility and abundance the following: Wheat, barley, potatoes, corn, and all the products of the cold climates. Where the temperature varies from 18 to 22 degrees coffee of a superior quality is produced. There are numerous waterfalls for the development of electric force. The extent of this zone, which forms the limit of the basin of the Amazon, is several hundred thousand square miles. From the foot of the cordillera of the Andes to the ocean, the climate is hot and miasmatic fevers prevail, as they do in all regions similar to this one. The soil is extremely fertile and suitable for the cultivation of sugar cane, cocoa, tobacco, cotton, etc.

“As may be seen from the map, there are on the rivers Ucayali, in Peru, and the Negro, Orinoco, Meta, and Vichada, in Venezuela and Colombia, immense plains covered with natural pastures, similar to those of the River Plate, and on which millions of head of cattle might be raised.

MINERAL WEALTH.

“On the map which we present, the region of the cordillera of the Andes is indicated, which contains an abundance of mines of gold, silver, iron, copper, coal, mercury, and many other kinds of minerals, and besides, the famous emerald mines of Muzo and Coscuez, which are located in Colombia and are the only ones in the world. In Brazil,

in the State of Minas Geraes, are located the famous diamond mines.

“At the foot of the cordilleras, and in the beds of the rivers which descend from it, there are to be found an abundance of alluvial and placer gold mines as rich as those of California. The Indians extract from them important quantities of gold.

“It is very difficult to calculate, even approximately, the number of savages which inhabit this immense region. We believe that they number some hundreds of thousands, and may be easily attracted to civilization, because their characters are generally kind and hospitable. They can assist greatly in the exploitation of the enterprises that may be established there.

“THE GOLD MINES IN COLOMBIA.

“Before the Conquest the territory now forming the Republic of Colombia was acknowledged by the aborigines as the richest in gold. When Columbus arrived at the Antilles the natives informed him that the gold, which they possessed in large quantities, was obtained from the Indians who inhabited the coast of that territory.

“The immense gold treasures found in Peru by the PIZARROS and ALMAGROS came mostly from the mines of Barbacoas on the Pacific coast, between Tumaco and Pasto, and from those of Nobita, on the Chaco, whose natives bought with gold the salt, which is not found in that region, but which was abundant in Peru. At present that commerce still exists on a large scale and many vessels are engaged in the trade.

“The abundance of gold in Barbacoa is so great that even the agricultural implements used by the Indians, such as axes, machetes, knives, etc., and household utensils, as plates, cups, etc., were made of gold, as proved by those found in Indian graveyards, because it is known that the habit was to bury the dead together with such articles of gold as they possessed during their lifetime.

“The Quimbayas Indians, who lived in the Andes, between Bogotá and Popayán, possessed gold in such large quantities that there was found a few years ago in the tomb of one of their chiefs a treasure of various objects, weighing many pounds, and which was presented to the Queen of Spain by Colombia. These can be seen in Madrid. In the Indian cemeteries there are frequently found treasures amounting in value to several thousands of dollars, being the jewels with which they used to be buried.

“The El Dorado fiction, in search of which HERNAN PÉREZ DE QUESADA, brother of GONZALO DE JIMINEZ DE QUESADA, the conqueror of the country which to-day is called Colombia, made his famous expedition from Bogotá to Pasto, on the eastern slopes of the Andes, traversing more than 200 leagues over the rough mountains, has its origin in the tradition that at the approach of the conquerors

the Indians hid an immense treasure, which up to the present time has not been found.

“During the colonial epoch the Spaniards worked the mines of Antioquía, of Choco Alto, of Quildo, of Nóbita, and the famous mine ‘El Medio,’ that of Timpiquí, of Barbacoas, and of the interior of the Cauca, employing in them the Indians and the negroes which they brought from Africa, and with such great success that they made themselves millionaires. In some cities like that of Popayán, the capital of the Department of Cauca, in which they erected palaces for their private residences, there were very rich people, like a certain VALENCIA, the founder of the house of the Counts of Casa-Valencia, who established a mint with his private means, which he presented to the Government, and who constructed an aqueduct for the city.

“It is stated in the archives of the Indies, and in all official documents, that the greater quantity of gold which Spain derived during all the colonial period was produced in the New Kingdom of Granada—to-day Colombia.

“When Baron HUMBOLDT visited that country, at the beginning of the past century, he investigated the auriferous lands of Chaco, Antioquia and Cauca, and it was his opinion, as may be seen in his work, that these districts are the richest in gold in the world.

“After this country achieved its independence from Spain, the liberty of the slaves was decreed by the Government, and the gold mines were thenceforth not worked with regularity, and by the lack of means of communication modern machinery could not be introduced, by the use of which even relatively poor mines, like those of the Transvaal, may give immense results. It is said that the gold mines of Colombia may be worked with such machinery, and that will be the case when the railroad can transport it. It will be seen that the opinion of Baron HUMBOLDT is correct, and that neither the Klondike nor the Transvaal are richer in gold than Colombia. Not many years ago, from the mine of Cargazón, in Barbacoas, a mass of pure gold was extracted weighing 500 kilograms (1,102.3 pounds), without the necessity of reduction. In the streets of that city, in the yards of the houses, and on all sides, gold is found in abundance. At the present time the mines of Cana, in Panama; of Zancudo, in Antioquia; the famous one of Echandia, and of Timbiquí, in Cauca, are worked with excellent results. In Chacó, in Nóbita, and Quibdo, platinum, which is almost as highly valued as gold, is found in abundance.

“The Inter-Continental Railway, which will traverse the whole auriferous region of Colombia, will open this wealth, now abandoned and almost unknown, to commerce and industry.

“THE EMERALD MINE OF MUZO AND COSCUEZ.

“We have stated that this is the only mine of its class in the world, because, although it is a fact that emeralds are found in the Balkans,

in Russia, and in India, these are pale and almost without value in the market; the emeralds of Muzo, in Colombia, are the only really fine and valuable ones. This mine is located 50 miles from Bogotá and very near to the route of the Inter-Continental Railway. It was first worked by the Indians, and the conquerors took a great quantity of emeralds out of it. It belongs at present to the Government of Colombia, which farms it out, and the parties working it have become millionaires. Owing to the lack of means of communication, it has not been possible to introduce proper machinery, and it is worked in a primitive way. It is easy to appreciate that this mine represents immense wealth, and as soon as it may be worked by modern methods and machinery, it will give immense results.

“What we have said of the gold mines of Colombia may be applied equally to Venezuela, Ecuador, Peru, Bolivia, Brazil, etc.; that is to say, to all of South America. In the chart accompanying this report the mineral districts are indicated.

“THE CORDILLERA OF THE ANDES.

“The gigantic cordillera of the Andes starts from Patagonia and traverses Chile, where it reaches the altitude of the highest peaks of the Himalayas. It divides that country from the Argentine, extends through Brazil, Peru, Ecuador, and, at Pasto, in Colombia, it divides into three branches which cross that country and Venezuela; the western branch extends through the Isthmus of Panama and Central America and, on reaching Mexico, it takes the name of the Sierra Madre, and that of the Rocky Mountains in North America.

“If this cordillera has been a great obstacle for railway development, its bowels contain, in exchange, all the minerals that man employs in industry and commerce; it has all the healthy and varied climates for the inhabitants of the temperate zone; there are localities like Bogotá, Quito, and some other places in Peru, which, owing to their situation near the equinoctial line, to their altitude above sea level, and to the rarity of the air, have the property of radically curing tuberculosis, that terrible scourge of the temperate zone. We believe that this fact ought to be universally known.

“Between the ranges of the Andes there are extensive and fertile valleys, some of which are elevated and cold like that of Mexico, and as large as the latter; these are the savannas of Bogotá and Tuquerrero, in Colombia, and those of Otavalo and Quito, in Ecuador, in which, in addition to the fertility of the soil, there is found throughout the year a healthy and agreeable climate of from 12° to 15° C., being, in fact, like a perpetual spring, or else valleys where the temperature ranges from 20° to 26° C., like that of the Cauca, in Colombia, on the Pacific slope, which is 120 miles long by 30 miles wide, and is watered by the river of the same name, which traverses it from north to south and is navi-

gable for steamers. HUMBOLDT called this valley 'the Paradise of America,' and it is truly a paradise not only on account of the fertility of the soil and the mildness of its climate, but because of the beauty of nature and of the hospitality of its inhabitants. There are to be found in this valley a wealth of mineral and natural products in greater abundance than in any other part of South America. The two chains of mountains which form its eastern and western limits enable their inhabitants to select within their own farms the climate which they may wish to have, from 26° down to 5° C. on the high mountains. Another of the great advantages possessed by the Andes Mountains is the abundance of waterfalls, genuine cataracts, such as the famous Tequendama, in Colombia, which can develop motive power for electricity. We, who were born upon these mountains, are abundantly justified in our love for them, as therein are our homes.

"COMMUNICATION BETWEEN THE INTER-CONTINENTAL RAILROAD AND
WATERWAYS.

"I must call the attention of the Conference to the very important fact that the Inter-Continental Railway line which will cross South America could easily, by means of some branches, be connected with the immense system of river communication formed by the Amazon and its tributaries, on which trans-Atlantic steamships can navigate for 3,000 miles, and river boats, like those of the Mississippi, for 13,000 miles, which makes a river navigation of 16,000 miles, through a territory of virgin soil, and in which all kinds of mineral and agricultural resources are abundant. These rivers run through the territory of all the South American countries, with the exception of Chile, in such a manner that they are or can be communicated with each other by means of river navigation.

"During several years I explored, in company with my brothers HENRY and NESTOR, who perished in that work, the Amazon River and the greater part of its affluents. We discovered some unknown rivers, we established steam navigation with others; we communicated, by means of overland routes, the river navigation with the towns on the Andes (from the River Putumayo to Pasto). In many of the rivers, which at that time were unknown, to-day there are hundreds of steamers, which carry industries and civilization to the virgin forests, wherein the savage cannibal formerly wandered. The exportation which is to-day made by those rivers, only of rubber (caucho), which grows wild in the forests, is worth more than \$20,000,000 in gold. In those forests there grows in abundance the wild cocoa, which is now exported in considerable quantity, and all classes of fine woods, while medicinal plants are also abundant. Game of all kinds is found; in its waters Professor AGASSIZ classified more than 500 species of fish, which form a very important trade.

“The extension of the territory that these rivers irrigate is more than 4,000,000 square miles, which are still to-day virgin soil and which are offered to commerce and to human industry.

“The names and navigable extension of the principal of these rivers are as follows:

“*The Guianas.*—The river Trombetas is navigable by steamers 200 miles.

“*Venezuela.*—The river Negro is navigable from the city of Manãos, the population of which is 50,000 inhabitants, to a point from which communication can be obtained, by the river Caciquiare, with the Orinoco, which flows into the sea opposite the island of La Trinidad. The navigation of the river Negro and of the Orinoco and its affluents, the Nata, the Arauca, and the Vichada, which belong to Colombia, combined is more than 1,000 miles.

“*Colombia.*—The river Putumayo, discovered and explored by us, which rises in the neighborhood of the city of Pasto, through which the Intercontinental Railroad would pass, has a course from its source until it flows into the Amazon of 1,400 miles, of which 200 run at the foot of the Andes, through fertile and healthy lands that are rich in all classes of minerals, and through woods in which abound rubber, wild cocoa, etc., from La Sofía as far as San Antonio on the Amazon, affording free navigation for steamers during the whole year, 1,200 miles.

“The River Caquetá or Yapura has its source in the Lake of El Buey, which is also the source of the River Magdalena. The latter stream flows toward the west and empties into the Atlantic at Sabanilla. The Caquetá flows toward the east and has a course of 1,600 miles, of which 1,300 are navigable for steamers.

“*Ecuador.*—The River Napo rises to the east of the city of Quito; around it all classes of minerals are found in abundance; it has a course of 1,000 miles, of which 800 are navigable for steamers.

“The Pastaza has a course of 900 miles, of which 500 are navigable for steamers.

“The Tigre has a course of 600 miles, of which 300 are navigable for steamers.

“*Peru.*—The Morona, navigable for 200 miles by river steamers.

“The Amazon or Marañon, which commences at Lake Lauricocha, has a course of more than 4,100 miles, until it empties itself into the ocean; of these, 3,000 miles are navigable for trans-Atlantic steamers, from Pará to the town of Iquitos (which has 30,000 inhabitants—there are two direct lines of steamers running from Liverpool to Iquitos), and for river steamers for 400 miles, a total of 3,400 miles.

“The width of the Amazon at its mouth from Punta Tijoca to Cabo Norte is 180 miles, and the impetuosity with which it enters the sea

is such that the waters do not soon mix and are drinkable at a distance of more than 180 miles from the coast.

“The Amazon contains islands like Marajo or Joanes of more than 10 kilometers in length by 40 in width. The difference in the height of the waters of the Amazon between the dry and the rainy season is 10 meters:

“The Huallaga is navigable for river steamers 300 miles, the Ucayali for 600 miles, the Yurúa for 700 miles, and the Yavarí for 900 miles.

“*Bolivia*.—The Purús has a length of 1,800 miles, of which 1,500 miles are navigable for steamers.

“The Madera, which can easily be connected with the Beni and Madre de Dios, has a course of 1,200 miles, of which 1,000 miles are navigable for steamers.

“*Brazil*.—Besides the river Amazon, or Solimoens, as it is called there, which flows through the Pará and Amazon States, Brazil also has the river Xingú, with a course of 1,000 miles, of which 600 are navigable for steamers.

“The Tocantins has a course of 900 miles, passes at the port of the Sierra Esclavona, which divides it at a distance of not many miles from the river Alto de la Plata, or Parana, with which it could be connected by means of a railway or by a canal, and thus navigation in the basin of the Rio de la Plata could be united with that over the immense volume of water in the Amazon. This river is navigable for steamers for 500 miles; making a total of 15,000 miles.

“I present herewith a map whereon can be followed the course of these rivers, the explorations made with my brothers, and the other important data marked in the explanation of the same map.

“It is proper to take into account that if to these 15,000 miles of river navigation the 10,223 miles of Inter-Continental Railway are added, there is a total of 25,223 miles, from which it is easy to calculate the immense industrial and commercial development which they would effect for the ample repayment of the capital required for the construction of the Inter-Continental Railway.

“As an example of the great facilities of these communications, let us suppose the Inter-Continental Railway to be accomplished, and that a traveler were to start from New York; he would traverse the United States, Mexico, Guatemala, Salvador, Honduras, Nicaragua, Costa Rica, Colombia, Ecuador, Peru, Bolivia, and would finally arrive in the Argentine Republic. At Buenos Ayres he could embark on the Rio de la Plata, or Paraná, ascending the same, after traversing Paraguay, in order to seek communication with the Tocantins River, across the Sierra de la Esclavona. He could embark on the Tocantins, descend by it to the Amazon, take the Trombetas River, and by it visit the Guianas; he could go to the Madera and Purus rivers, and

by them he would visit Bolivia; he could go to the Yavarí and Yurúa, the Huallaga and the Morona, and by them he could visit Peru. By the Tigre, the Pastaza, and Napo rivers he could visit Ecuador; by the Caquetá and the Putumayo he could visit Colombia and Venezuela; by the Rio Negro, and ascending the latter until meeting the Caciquiare, which communicates with the Orinoco, he could pass to the latter to seek its affluent the Meta; he could ascend the latter by steamboat to Gabuyero, at a distance of 60 miles from Bogotá, the capital of Colombia; and returning to the Amazon by the same route, he would arrive at the city of Iquitos and there take the trans-Atlantic steamer which, without transhipment, would take him to Liverpool.

“It is not an exaggeration to call the Amazon River the ‘American Mediterranean Sea,’ for on its waters navigate, as stated before, trans-Atlantic steamers for 3,000 miles and river steamboats for 12,000 miles.

“MEASURES WHICH SHOULD BE TAKEN FOR THE DEVELOPMENT OF THIS RICH REGION AND TO FACILITATE THE CONSTRUCTION OF THE INTER-CONTINENTAL RAILWAY.

“All the countries represented at this Conference being interested in the construction of the Inter-Continental Railway, and a number of them being joint owners of the 4,000,000 square miles which the Amazon region contains, and which, it may be said, is in its entirety uncultivated and uninhabited, and consequently merely vacant land, and as the rivers which water it in all directions belong to them, we think that, for the benefit of each country in particular, and for the benefit of the continent and of humanity in general, it would be proper to ask the different Governments:

“1. That they declare the navigation of said rivers free for all the flags of the world, subject to the provisions of the custom-house regulations of each country; and

“2. That they assist the enterprise of the Inter-Continental Railway with liberal grants of the vacant lands and mines of the region referred to, which in their larger part are entirely unknown at the present time, and consequently are without any value.

“This, Mr. President, is the work which, in the name of the Delegation of Colombia, I respectfully offer to this Conference which is engaged in the consideration of the destinies of America. It has no other merit than that of the constancy with which it was realized, of the personal disinterestedness, and the ardent desire to further the welfare and progress of our continent.”

WORK OF THE ISTHMIAN CANAL ENGINEERS.

The "Scientific American" for February 1, 1901, publishes a very interesting paper by FREDERICK MOORE, summarizing the reports of the various surveyors, hydrographers, geographers, geologists, topographers, and other assistants engaged in the engineering work of the proposed Isthmian Canal. The printed material covering the work of the Isthmian Canal Commission is very voluminous, and with maps, diagrams, etc., its value is proportionate to its abundance. A résumé of the work accomplished is as follows:

A chief engineer was appointed for the report on each of the canal routes to which the Commission was directed to give especial attention. He was directed to make his headquarters in his respective territory, and to take general control of the field operations therein. Considering the results of the numerous surveys made in the past, it was decided by the Commission to limit the explorations in search for "other possible routes," as Congress directed, to that part of Colombia known as the Darien country, lying between Panama and the Atrato River, and a third engineer was appointed to direct the field work there.

Competent assistants, whose education and experience had fitted them for the special work to be done, were assigned to service under the three chief engineers; and laborers, boatmen, and other workmen were hired wherever their services were required. Twenty working parties were organized in Nicaragua, including 159 engineers and assistants, and 455 laborers. Five parties were organized in Panama, with 20 engineers and assistants and 41 laborers. Six parties were sent to the Darien, numbering 54 engineers and 112 laborers.

The chief engineers were directed to examine, with the aid of these working parties, the geography, hydrology, topography, and other physical features of the different countries. The schemes already planned were thoroughly tested, and further surveys were made in order to vary the line and select better locations wherever the conditions were found to be unsatisfactory. Accordingly, a complete project was prepared for each route, and the center line of each canal was marked where that had not already been done.

The study involved examinations of the terminal harbors and approaches, the locations selected for dams, locks, embankments, and other auxiliary works. Borings to determine the nature of the sub-surface at the sites of the locks and along the canal lines, and observations of rainfall, stream flow, sedimental deposits, and lake and ocean fluctuations, were, in the main, the work to be done. Attention was also given to the supplies of rock, timber, and other materials on the canal lines, available for construction and maintenance.

The results of these examinations and observations, and the mate-

rial and data obtained, were sent from time to time to the headquarters of the Commission at Washington, where they were arranged and entered upon plates and profiles under the direction of the committees of the Commission in charge of the respective canal surveys. How the engineers did the work is interesting, and their life in the Isthmus indeed an experience.

Each of the parties was allotted a certain territory. They would establish a camp along the approximate routes, living in tents, huts of palm leaves, or, if near a village, in some "hotel" therein. From these they would work from 3 to 5 miles in each direction and then move on to a new camp, and so on until they met the next party or the next party's work.

The largest force was placed on the Nicaraguan line because it was the longest, because the many reports on the line were at variance, and because the data obtainable from the Maritime Canal Company were found to be of little value, owing to inaccuracies, age, and the fact that the company's designs were for a canal which, for its shallowness, would be useless to-day. The number of authentic surveys that have been made on the Panama line (especially that of the International Commission of Engineers), and the full and sufficient data the Panama Company holds, made a large force there unnecessary.

The method of observing the regimen and discharge of the streams was simple. A stout line was stretched from bank to bank, or from trees on the banks. Below was placed a windlass to haul out the trolley car in which the gaugers rode. Of course, a point was selected as near as possible to the location at which knowledge was desired, having reference to the conditions of the stream itself, the aim being to secure high and permanent banks on both sides, as straight a channel with as uniform a depth and velocity as could be found, and avoiding any location which was a short distance above any tributary of importance which might create backwater. A gauge, graduated to feet and tenths, was placed in the stream near one bank and so situated as to be read conveniently from the shore. It was usually possible to fasten such a gauge in a vertical position in deep water to the trunk of an overhanging tree (for they grow over the banks and even in the streams in Central America). The height was recorded twice a day, and the mean of the two gauges taken as the river's height for that day.

At various intervals, depending on the change of the gauge, measurements of discharge were made from the trolley cars with current meters. Soundings were taken at a known distance from an assumed initial point and the velocity measured by submerging an electric current meter at six-tenths of the measured depth and holding it in that position for a length of time—usually one hundred seconds or more—sufficient to make a good determination of the velocity at that

point. The operation was repeated at short intervals for the width of the stream, and from them the discharge of cubic feet per second was computed for each section by multiplying the depth, width, and measured velocity together. The discharge of the several sections added together gives the result for the stream. At the beginning and end of staging a careful note was made of the gauge and the mean depth of water taken.

Every other detail of the work was done in the same simple and thorough manner. Lake Nicaragua's every tributary was gauged and its supply accurately determined; for the control of the waters of the lake is vital to the practical operation of the canal, and has an important bearing on the cost and plans of the project. It fluctuates now some 12 feet, which would materially hamper lock workings; hence the careful observations of the fluctuations, the maximum and minimum inflow and outflow, and evaporation. Because of violent breakers on the lake, the gauges had to be protected behind old vessels or whatever was found along the coast. At Las Lagas the boiler of a wrecked vessel was used to incase the gauges and evaporating pans.

Observations of rainfall were made with a funnel and a bottle, the relations of the diameter of the funnel mouth to that of the bottle being accurately known. The rainfall is a remarkable characteristic of Central America, and particularly Nicaragua. There is a radical and striking difference between the falls on the eastern and western coasts. There is a definite dry season on one, but rain may be expected the year round on the other. At Brito there is practically no rainfall from January to the middle of May, but during the rainy season the downpour often reaches 5.6 inches per day.

The evaporation test did not work, usually, as well as the others. Galvanized sheet iron pans, 3 feet square and 2 feet deep, were anchored in some protected body of water alongside a rain gauge, giving the water in them the same freedom, as far as practicable, as the outside water had. But the waves would wash over and fill them, the natives would steal them or haul them ashore and make washtubs out of them, and animals would overturn them.

The same windlass that trolleyed the cars across the rivers was used to tow out the sediment gauge cars. These too were galvanized pans 1 meter square and 8 inches deep. The upstream side was on a hinge. The pan was lowered into the streams and anchored. When the time came to haul it up, the gate was closed by a copper wire and the windlass put to work. First it was hoisted gently out of the water, then trolleyed to shore. The silt deposit is an all-important test, and has much influence on the location of the locks. Samples were also taken of the waters and allowed to settle ashore, each day the clear water behind drained off and more muddy water poured on.

The measurements were made with 100-foot steel chains, they being

checked each fortnight by comparison with steel tapes. All angles were measured carefully with a transit, deduced bearings being carried through as a check to the reading of the angles. The density of the forests and the incessant heavy rains or cloudiness materially inconvenienced the reading of the instruments. Special care was taken in chaining, plumb bobs being used on all broken ground. Elevations of surface were taken with a wye level and target rod at intervals of 100 feet, and at such intermediate points as were necessary in order to produce close and accurate profiles.

These are but a few of the innumerable tests that were made, but they serve to demonstrate that dependence may be placed upon the Commission's report.

BRITISH TRADE WITH LATIN AMERICA IN 1901.

According to statistics obtained from the preliminary "Accounts Relating to Trade and Navigation of the United Kingdom" for the calendar year 1901, the commerce of Great Britain with Latin America declined throughout the year, as compared with 1900. The statistics of this publication do not, however, include all the commercial transactions of Great Britain with the countries of Latin America, though the quantities and valuations of all the principal items of import and export are mentioned. More complete information will not be published for some months to come. So far as can be ascertained from the preliminary accounts, the imports from Latin America in the calendar year 1901 amounted to £15,853,076 (\$74,715,744.35), as compared with imports valued at £16,734,360 (\$81,437,762.94) in 1900. The exports to those countries, so far as can be ascertained from the incomplete returns, were valued at £11,857,915 (\$57,706,543.35) in 1901, and £13,505,818 (\$65,726,063.30) in 1900.

The facts with reference to the commerce of Great Britain with Latin America, gathered from these British accounts, are included in the following summary, the figures for each country, so far as this can be done, being considered separately:

ARGENTINE REPUBLIC.

Imports.	1901.	1900.	Increase or decrease.
Cattle for food.....		£667,500	— £667,500
Sheep and lambs for food.....		289,000	— 289,000
Wheat.....	£2,670,355	6,088,923	— 3,418,568
Maize.....	2,616,524	1,514,313	+1,102,211
Fresh mutton.....	1,950,599	1,689,078	+ 261,521
Raw sugar.....	307,825	107,564	+ 200,261
Tallow and stearine.....	273,068	239,288	+ 33,780
Hides.....	74,300	18,629	+ 55,671
Flax or linseed.....	1,516,736	682,122	+ 834,614
Total.....	9,409,407	11,296,417	—1,887,010

The above table does not include, for either year, the imports of fresh beef, butter, cheese, quebracho, and one or two other items of importance.

In 1900 the number of live cattle imported from the Argentine Republic by Great Britain was 38,562, and of sheep and lambs, 178,969, against none in 1901. The number of pounds of wheat imported in 1901 was 808,040,000, or 13,467,333 bushels (allowing 60 pounds to the bushel), against imports aggregating 1,852,400,000 pounds (30,873,333 bushels) in 1900. The number of pounds of maize was 1,044,360,000, or 18,649,286 bushels (allowing 56 pounds to the bushel), against 652,620,000 (11,653,929 bushels) in 1900. Other items were: Linseed, 664,528 quarters in 1901, compared with 310,664 quarters in 1900; fresh mutton, 127,165,400 pounds in 1901, as against 111,479,500 pounds in 1900; tallow and stearine, 20,440,400 pounds in 1901, as against 17,826,900 pounds in 1900; sugar, 67,422,300 pounds in 1901, as against 21,756,900 pounds in 1900; hides, 3,263,100 pounds in 1901, as against 757,500 pounds in 1900.

British exports to the Argentine Republic in 1901, as compared with like exports in 1900, were as follows:

Articles.	1901.	1900.	Increase or decrease.
Cotton piece goods	£1,174,882	£1,561,838	— £386,956
Jute piece goods.....	326,451	321,072	+ 5,379
Linen piece goods.....	49,190	46,340	+ 2,850
Woolen tissues	116,987	192,884	— 75,897
Worsted tissues.....	164,769	361,763	— 196,994
Carpets	26,692	45,867	— 18,175
Hardware and cutlery	46,335	56,897	— 10,562
Railroad iron.....	587,543	322,539	+ 265,004
Galvanized iron.....	321,364	321,676	— 312
All other manufactured iron.....	394,382	433,673	— 39,291
Tin plate	50,491	73,734	— 23,243
Cement.....	31,955	32,549	— 594
Earthen and china ware	41,642	57,645	— 16,003
Total	3,332,683	3,818,477	— 485,794

BRAZIL.

The principal imports from Brazil in 1901, as compared with 1900, were as follows:

Articles.	1901.	1900.	Increase or decrease.
Coffee	£228,001	£90,805	+ £137,196
Raw sugar.....	155,393	55,413	+ 99,980
Raw cotton.....	170,041	669,595	— 399,554
Wet hides	27,485	31,200	— 3,715
Total	680,920	847,013	+ 166,093

No separate returns are made with reference to the imports of rubber in the preliminary accounts.

In 1901 the imports of coffee weighed 13,262,400 pounds, and in

1900, 4,385,300 pounds. The sugar imports had an aggregate weight of 34,373,800 pounds in 1901 and of 10,658,000 pounds in 1900; the weight of the hides imported in 1901 was 1,156,900 pounds and in 1900, 1,283,500 pounds.

The principal exports to Brazil in 1901, as compared with like exports from Great Britain in 1900, were as follows:

Articles.	1901.	1900.	Increase or decrease.
Coal and other fuel.....	£803,837	£722,526	-- £81,311
Cotton piece goods.....	1,196,298	800,000	-- 396,298
Jute piece goods.....	15,236	30,816	-- 15,580
Jute yarn.....	262,380	336,768	+ 74,388
Linen piece goods.....	67,061	41,142	-- 25,919
Woolen tissues.....	71,080	52,508	-- 18,572
Worsted tissues.....	122,293	83,917	-- 38,376
Hardware and cutlery.....	63,631	48,093	-- 15,538
Railroad iron.....	94,948	71,933	-- 23,015
All other manufactured iron.....	320,417	186,894	-- 133,523
Tin plate.....	74,187	45,945	-- 28,242
Cement.....	21,453	10,492	-- 10,961
Earthen and china ware.....	64,417	57,446	-- 6,971
Leather.....	39,767	31,856	-- 8,411
Seed oil.....	54,183	52,016	-- 2,167
Manufactures of copper.....	63,136	35,893	-- 27,243
Total.....	3,334,324	2,607,745	-- 726,519

The aggregate quantity of coal, coke, and patent fuel exported from Great Britain to Brazil in 1901 was 813,473 tons, as against 793,560 tons in the year 1900.

CHILE.

So far as enumerated in the preliminary returns, the returns from Chile during the calendar year 1901 consisted of unmanufactured copper in various forms to the value of £1,455,435, as compared with similar imports worth £1,417,137 in 1900. If all the nitrate of soda imported by Great Britain came from Chile (which is probable), the import value of that article in its relation to the Chilean trade was increased by £910,047 in 1901, as compared with an increase of £1,155,462 in 1900, making aggregate values of £2,365,482 in 1901 and £2,573,467 in 1900. In 1901 there were no imports of Chilean wheat, while in 1900, the value of the wheat received from Chile was £868.

The exports to Chile included the following items in the years under comparison:

Articles.	1901.	1900.	Increase or decrease.
Cotton piece goods.....	£744,384	£998,277	-- £253,893
Woolen tissues.....	112,590	144,046	-- 31,456
Worsted tissues.....	148,751	212,858	-- 64,107
Carpets.....	31,478	45,105	-- 13,627
Hardware and cutlery.....	35,159	32,680	+ 2,479
Railroad iron.....	86,683	25,199	+ 61,489
Galvanized iron.....	115,536	144,459	-- 28,923
Other manufactured iron.....	151,230	190,211	-- 38,981
Total.....	1,425,816	1,792,835	-- 367,019

PERU.

The imports from the Republic of Peru included the following items in the years under comparison:

Articles.	1901.	1900.	Increase or decrease.
Sugar.....	£41,761	£129,353	— £87,592
Copper.....	285,152	111,717	+ 173,435
Alpaca, vicuña, and llama wool.....	226,649	205,839	+ 20,810
Total.....	553,562	446,909	+ 106,653

The number of pounds of sugar imported from Peru in 1901 was 9,573,700, as compared with 24,010,700 in 1900. The quantities of alpaca, vicuña, and llama wool imported were respectively 4,641,248 and 4,236,566 pounds in 1901 and 1900.

The principal exports to Peru, from Great Britain, in the two years, were the following:

Articles.	1901.	1900.	Increase or decrease.
Cotton piece goods.....	£358,069	£301,588	+ £56,481
Woolen tissues.....	85,707	81,627	4,080
Worsted tissues.....	44,162	37,788	+ 6,374
Railroad iron.....	16,744	27,952	— 11,208
Other manufactured iron.....	31,575	29,830	+ 1,745
Total.....	536,257	478,785	57,472

All other imports enumerated as having been received from Latin America were the following:

From Central America, 23,837,900 pounds of coffee, valued at £739,006 in 1901, as compared with 17,789,700 pounds, worth £611,882, in 1900.

From South America, 63,118,476 pounds of wool, valued at £1,604,699, as against 30,205,932 pounds, worth £957,804, in 1900.

The imports from other Latin American countries are not specified, but the exports thither were as follows:

Countries.	1901.	1900.	Increase or decrease.
WEST INDIES.			
Linen piece goods.....	£155,830	£252,129	— £96,299
Manufactures of iron.....	56,669	72,813	— 15,144
Sacks.....	11,375	18,409	— 7,034
Total.....	224,874	343,351	— 118,477
CUBA AND PORTO RICO.			
Railroad iron.....	14,184	20,243	— 6,059
Rice, rice meal, and flour.....	458,917	422,018	+ 36,899
Total.....	473,101	442,261	+ 30,840

Articles.	1901.	1900.	Increase or decrease.
MEXICO.			
Cotton piece goods	252,901	401,288	-- 148,387
Linen piece goods	23,783	39,641	-- 12,858
Galvanized iron	63,976	79,900	-- 15,924
Total	343,660	520,829	-- 177,169
CENTRAL AMERICA.			
Cotton piece goods	385,943	485,131	-- 99,188

Agricultural machinery	82,981	107,568	-- 24,587
Mining machinery	36,604	34,985	+ 1,619
Textile machinery	108,735	130,122	-- 21,387
Other machinery	356,799	410,918	-- 53,119
Sewing machines	38,190	56,368	-- 18,178
Total	1,091,794	1,145,236	-- 53,442

* Including South America.

One of the principal items of export from Great Britain to Latin America for years past has been cotton piece goods. This trade appears, for some reason, to be on the decline, as the figures for the past two years show. The number of yards exported and the value of the same for 1901, compared with similar statistics for 1900, are included in the following table:

Countries.	1901.		1900.	
	Yards.	Value.	Yards.	Value.
West Indies (other than British)	81,069,400	£752,167	84,084,300	£761,628
Mexico	21,552,300	252,901	38,346,100	401,288
Central America	43,931,700	385,943	58,888,100	485,131
Colombia	73,441,400	592,348	25,252,600	177,176
Venezuela	32,306,900	295,957	42,595,800	350,858
Peru	33,669,600	358,069	27,627,100	301,588
Chile	69,243,100	744,384	98,025,800	998,277
Brazil	70,162,100	800,000	104,937,600	1,196,298
Uruguay	28,784,500	311,976	30,602,200	344,092
Argentine Republic	104,246,100	1,174,882	131,286,300	1,561,838
Total	558,407,100	5,668,627	641,609,400	6,578,174

MINERAL PRODUCTION IN LATIN AMERICA DURING 1901.

An extended review of the mining and metallurgical industries of the United States for the year 1901 is published in the "Engineering and Mining Journal" of January 4, 1902, there being also incorporated in the article a summary of the output of the various other mineral-producing countries of the world. From that publication the following data concerning the mineral production of Latin America in 1901 are obtained:

In Mexico there was a moderate increase in gold production noted for 1901. The same may also be said of Central America, where in Salvador especially some important new mines have been opened by United States capital. None of the South American countries have as yet made complete returns of their output, but it is known that both Peru and Chile are increasing their mining operations with favorable results.

The world's output of silver in 1901 undoubtedly showed some decrease. Mexico, the second producing country on the globe of the white metal, fell off in production. The conditions causing this decrease were mainly of a temporary character, and are likely to pass away before long, being in some cases due to suspensions of output pending new developments, and in others to the finding of lower grade ores. In Bolivia the great Huanchaca mine has not kept up to the work of former years, though this deficiency in the South American product is partly made up by the increased output in Peru and Chile. The famous Cerro de Pasco mines, for so many years worked for silver alone, are gradually developing into copper mines with increasing depth, though the proportion of silver continues large. In Colombia, mining was seriously interrupted by reason of the unsettled state of the country.

The copper-producing countries of the world, ranked according to their output in 1900, are: The United States, Spain, Japan, Chile, Australia, Mexico, and Germany. The production in most of these countries was as great, and in some of them larger, in 1901 than in 1900. In the former period Chile's output was 26,111 tons and that of Mexico 22,403 tons. The Chilean mines greatly increased their shipments in 1901, and it is evident that the largest increase in this metal to be expected in the near future will come from Mexico, where many of the important copper deposits are being operated by United States capital. The opening of the Nasosari mines is making progress and the output of the Boleo continues large. In South America a good deal of development work was carried on in Peru during 1901,

while the project for completing the railroads in Cerro de Pasco and for draining the mines by tunneling is taking shape.

The Mexican output of lead in 1901 showed some decline, owing to the same causes that operated in the mining of silver throughout the year. In the production of tin throughout the world in 1901, Bolivia maintains its position among the six producing sections, the estimated output in both years being fixed at 6,000 long tons. Small quantities are also produced in Mexico, which are used locally. The production of nitrate of soda in Chile has been regulated by the quantity exported, and prices, owing to the industrial combinations formed, have been very satisfactory.

TRADE OPPORTUNITIES IN LATIN AMERICA.

The Consul-General of the United States at Guayaquil states that the failure of two of the largest export houses in Ecuador will necessitate the sale of a number of cacao estates in full bearing and yielding very handsome returns. The profits of cacao culture are good, and parties with capital can doubtless secure valuable properties in the Republic at reasonable figures.

Tenders are invited for the construction of a pier, freight house, etc., at Matanzas, Cuba, to cost about \$200,000. Particulars of the United States Engineer at that point. Contract closes March 8, 1902.

Advices from Brazil state that the tannery of Dr. ANTONIO PRADO at São Paulo, better known as Cortuna d'Agua Branca, has recently been acquired by German capitalists. Also that the establishment will be completely reequipped with the latest improved machinery from the United States.

On December 2, 1901, a special train of 65 cars loaded with agricultural machinery left Buenos Ayres for Tres Arroyas. This machinery was all manufactured in the United States. Tres Arroyas is about 350 miles south of Buenos Ayres. This market is especially good for agricultural machinery.

The "Compañía de Obras Públicas del Rio de la Plata, Limited," has been registered under the British limited liability act with a capital of \$1,000,000, for the purpose of carrying on the business of contractors for railways, tramways, and other public works, mechanical engineers and manufacturers, and dealers in all kinds of plant machinery, apparatus, and appliances for use in connection with the above, in the Argentine Republic and elsewhere in South America, or otherwise. Baron EMILE B. D'ERLANGER, the London banker, is interested in the enterprise.

Mr. PERRY M. DE LEON, representing the United States at Guayaquil, Ecuador, says he regards the present as an opportune time for any United States house interested in South American trade, or for capitalists seeking investment, to establish a bank of issue and discount in Guayaquil. The profits are tempting, and business can be done on a safe basis, as the records of the Bank of Ecuador show. Established in 1868, it has paid dividends of from 15 to 33 per cent, per annum has a handsome reserve, and its stock sells at 180 to 190. The current bank rate of discount is 19 per cent per annum, and the difference between buying and selling rate of exchange is $2\frac{1}{2}$ per cent on Europe and the United States. The commerce of Guayaquil, which is large for South America, requires at least two strong banks.

Although the United States supplies more than half of Mexico's imports, there are many lines in which its manufacturers and exporters are doing materially less than might be expected, while European countries are securing the bulk of the trade. According to "Modern Mexico" Spain still supplies the grocery trade with more than half of the canned meats imported, as well as furnishing more than half of the fish purchased abroad. Holland supplies twice as much cheese to Mexico as does the United States; the same is true of candles. Germany sells nearly as large a quantity of leather goods in Mexico as the United States does, and practically controls the importation of bottles, china and porcelain, and crude drugs. France enjoys the largest trade in fine silks, woolen goods and corsets, wines and liquors, and perfumery, and sends large quantities of patent medicines. France and Germany supply more jewelry to Mexico than the United States does, and European countries send three times as much cement to that market as comes from the United States. Great Britain leads in Mexican imports of thread, cotton goods, linen goods, and carpets. More Swiss watches are imported into Mexico than those from all other countries combined.

Tenders are invited by the commissioners for the drainage works of the Province of Buenos Ayres, Argentine Republic, for the construction of the necessary works in connection with over 620 miles of main drainage canals, branch trenches, and accessory works in certain regions subject to inundations. Contractors experienced in such work and desirous of tendering may obtain further information by applying in writing to the Secretary, Argentine Legation, 16 Kensington Palace Gardens, London, W. No date for placing contract announced.

The Berlin "South American Outlook," December 1, 1901, says: "Exporters of wares to Chile should pay very close attention to the customs requirements of that country. These regulations require

that every package of wares imported into Chile shall have clearly marked thereon its weight (a statement in writing is not sufficient), and the weight thus given must under no circumstances be more than 10 per cent less than that ascertained by weighing at the time of entry. If the weight is found to have been correctly given, the wares are passed through the custom-house with great promptness, otherwise there is apt to be much delay and inconvenience. If the weight is found to have been incorrectly stated, or if the contents of the package differ from the statements made in the customs declaration, the wares are subject to confiscation. The importer's declaration is based upon the invoice and the bill of lading. If the statements in these papers are incorrect, the customs declaration must also be incorrect; consequently, exporters can not be too careful in preparing such documents."

An excellent market is offered for American photographic supplies at Bahia, Brazil, according to the United States Consul there, not only for cameras and plates, but for papers, studio fittings, mounts, and developers. The papers in use are gelatine printing-out paper, both plain and matte, and a quick-printing developing paper. These papers come from England and France, are packed in bundles of one and two dozen sheets of cut sizes, the sensitive paper being first wrapped in several sheets of oiled and other paper impervious to moisture, and finally placed in nonactinic envelopes and sealed. There is considerable albumen paper employed, but its use is confined to the professionals. What is needed is good gelatine and collodion papers, which will keep fresh for a few months, and do not need complicated formulas for toning and fixing. Paper and plate makers entering this market would do well to have their formulas printed in Portuguese, or, in lieu of that, Spanish or French; directions in English can be read by very few. There seems to be an entire lack of knowledge in Brazil as to superior backgrounds and studio furniture and fittings, manufactured in the United States and with proper effort something could be done along those lines. There should be a good opening for modern mounts for professional use and various kinds of slip-in mounts and albums for amateurs, while United States special platino mounts should be used for all pictures of that class instead of the ordinary mount, as is now the case. In chemicals, as hypo, the various forms of potash and soda, gold, platinum, sugar of lead, etc., United States firms should be able to compete with those of England and France, who now enjoy the trade, particularly since the largest dealer in Bahia has expressed a desire to buy all of his supplies, as well as his cameras, from the United States.

TRADE WITH SPANISH AMERICA.

The Consul of Chile, at Baltimore, Maryland, advises that the exports from that city to the Republic of Chile during the year 1901 consisted of 36,502 tons of merchandise, valued at \$209,120. During the year mentioned nine ships cleared from the port of Baltimore, carrying cargoes of coal, coke, rails, and sundry merchandise, consigned to Chilean ports. The shipments in detail were as follows:

Articles.	Tons.	Value.
Coal.....	28,475	\$69,765
Coke.....	1,706	6,233
Rails, etc.....	6,321	133,322
Total	36,502	209,320

The Consul of Ecuador at San Francisco states that the exports from that port to the ports of Esmeralda, Bahía, Guayaquil, and Puerto Bolívar during December, 1901, consisted of 34,544 packages of merchandise, weighing 519,330 kilograms, valued at \$15,642.31. The destination, as well as the number, weight, and value of these packages, is shown in the following table:

Ports.	Number of packages.	Weight.	Value.
Bahía	400	<i>Kilos.</i> 17,920	\$600.00

During the month referred to twelve ships, carrying 130,781 packages, cleared from the port of New York, and thirteen ships, bringing 105,027 packages from Mexico, entered that port.

According to statistics furnished by the Mexican Consul at Nogales, Arizona, merchandise to the value of \$72,768.41 was shipped into the Mexican Republic at that port of entry during the month of November, 1901. These products consisted of the following:

Animal substances	\$10, 471. 22	Machinery and apparatus ...	\$2, 814. 17
Vegetable products	13, 931. 48	Vehicles	1, 966. 32
Mineral products	12, 066. 63	Arms and explosives	937. 80
Textile products	21, 059. 15	Sundry articles	4, 573. 76
Chemical products	1, 275. 90		
Spirituos beverages	1, 384. 64	Total	72, 768. 41
Paper and paper products...	2, 287. 34		

These products originated in the following countries:

United States	\$54,291.50
Germany	7,117.00
England	7,102.00
France	3,578.00
Japan	510.00
Austria	167.00
Spain	2.91
Total	72,768.41

The duties collected on these goods by the Mexican Government amounted to \$62,098.69 Mexican silver.

The exports from Mexico to the United States through the port of Nogales during the month of November, 1901, amounted to \$1,448,075 Mexican silver, and consisted of the following products:

Articles.	Quantity.	Value of Mexican silver.
Cattle.....head..	4,567	\$52,840

The Vice-Consul of Mexico at Pascagoula, Mississippi, reports that the shipments from Pascagoula to the Mexican ports of Vera Cruz and Progreso, during the month of December, 1901, consisted of 867,900 superficial feet of lumber, valued at \$9,182.

The Mexican Consul at San Francisco, California, advises that during the month of November, 1901, the total shipments of American products from San Francisco to Mexican ports were valued at \$182,378. Goods of foreign origin reexported during the same period amounted to \$8,184. The imports during the month referred to consisted of mineral products to the value of \$427,275, and sundry other products amounting to \$34,550.

Two hundred and fifty-five thousand and fifty Mexican dollars were shipped to Hongkong during the month.

During the month of December, 1901, the shipments of American products from San Francisco to the Republic of Mexico, amounted to \$136,412. In addition to this amount, foreign goods were reexported from San Francisco to Mexican ports to the value of \$5,584, and 839,189 Mexican dollars were shipped to Hongkong.

The imports from Mexico, through the port of San Francisco dur-

ing the same month, were valued at \$533,567 Mexican silver, and consisted of mineral products invoiced at \$494,131 Mexican silver, and sundry other products valued at \$39,436 Mexican silver. The following table shows the importations in detail:

Products.	Value (Mexican silver).
Gold coin.....	\$2,000
Gold bullion.....	35,192
Mexican dollars.....	42,297
Silver bullion.....	259,505
Silver ores.....	155,137
Sundry Mexican products.....	39,436
Total.....	533,567

The Consul of Nicaragua at Boston, Massachusetts, reports that during the month of December, 1901, there were exported from that port to the ports of Nicaragua, \$1,724 worth of wire rope, \$172 worth of shafting, and miscellaneous articles to the value of \$275, or a total for the month of \$2,673.

The Consul-General of Nicaragua at San Francisco, California, states that the exports from San Francisco to the ports of Nicaragua during the month of December, 1901, were as follows:

Ports.	Number of pack- ages.	Weight in kilos.	Value.
Corinto.....	5,321	370,490	\$27,429.07
San Juan del Sur.....	205	13,139	1,220.36
Total.....	5,526	383,629	28,649.36

The following table shows in detail the different articles exported, together with their destination, number of packages, weight, and value of each:

BOOK NOTES.

Books and pamphlets sent to the Bureau of the American Republics, and containing subject-matter bearing upon the countries of the International Union of American Republics, will be treated under this caption in the Monthly Bulletin.

An advanced copy of the "Classification Book" for the Louisiana Purchase Exposition at St. Louis, in 1903, has been received at the Bureau of the American Republics. Fifty-three pages are required

simply for an enumeration of the groups and classes of exhibits. These are divided into 15 departments as follows: Education, 8; art, 6; liberal arts, 13; manufactures, 34; machinery, 5; electricity, 5; transportation, 6; agriculture, 27; horticulture, 7; forestry, 3; mining and metallurgy, 5; fish and game, 5; anthropology, 4; social economy, 13; and physical culture, 3. The total shows 144 groups and 807 classes, and under each classification is the possibility for a number of exhibits.

Nothing reflects more clearly, in so small a space, the variety of human occupations or more comprehensively the broad scope of the Exposition which is in preparation for the year 1903, and in which all the nations of the world have been invited to participate. Many countries have already signified their acceptance of the invitation, and the work of construction is progressing rapidly. The buildings will have an average floor space of 200 acres, and the grounds a total area of 1,000 acres. The money now available aggregates \$15,000,000, not including \$1,000,000 appropriated by the State of Missouri and various liberal sums voted by other States for buildings and exhibits. The "Classification Book" and the "Rules and Regulations of the Exposition" will be mailed free, on application to the Director of Exhibits, World's Fair, St. Louis, Missouri.

A somewhat extended study of colonization and its problems has been made by POULTNEY BIGELOW, M. A., F. R. G. S., who has had published by the press of McClure, Phillips & Co., of New York (1901), an 8mo. volume of 365 pages bearing the suggestive title, "The Children of the Nations." In this book the author has attempted to explain as briefly as possible the influence which the mother country exerts upon colonies and the reflex action, for good or evil, of the latter. An effort is also made to show why one country has failed and another been successful in colonization schemes. As the United States now has colonial possessions, Mr. BIGELOW expresses the hope that Congress will be induced to establish a national university for the study of subjects in which a colonial official should be efficient. One of the chapters of this work is devoted to the development of South America, and treats of the early settlements of the Spaniards in that part of the New World. Another chapter describes the colonization of Brazil by Portugal, while no less than five sections of the work are devoted to the various phases of West Indian history. One of the latter is of especial interest to the people of the United States at the present time, as it deals with the Danish Islands. This book is largely the result of the author's personal observations in parts of the world controlled by the great colonizing powers of the globe.

Professor KIRCHHOFF, in a review of KRUÜGER's "Das Zuckerrohr und seine Kultur" (The Cultivation of Sugar Cane), Magdeburg, 1900,

published in "Geographische Zeitschrift," states that the cultivation of sugar cane probably began in the Ganges Delta, and at a much later period spread to China. Through the Arabs it passed to North Africa and Southern Europe, and was carried by COLUMBUS to America in 1493. Sugar cane needs phosphoric acid, and, above all, silicic acid and potash in the soil, and therefore needs manuring and irrigation in cultivation. It is a dry-soil plant which requires heat and plenty of watering, but which can not endure stagnant water. The vegetation period is usually from eighteen to twenty-four months, but this is shortened in North America to ten months. Owing to low temperatures the limit of cultivation of sugar cane in the southeast of the United States and in China is 34° north, in Brazil 30° , and in Spain 29° . Sugar cane is not cultivated in Java at a height above 550 meters; in Nepaul the extreme is 1,327; on the Nilgri Hills, 1,524; and in Mexico, Colombia, and Peru, 1,800 meters. In 1896-97 at least 1,317,000,000 kilograms (probably 4,000,000,000 kilograms) of sugar were obtained from cane and 4,747,000,000 from beet roots. Germany, which now produces more sugar than any other country, makes a greater quantity from the beet than the whole of America does from the cane.

Volume 1, No. 1 (January, 1902), of the "Journal of Geography," an illustrated monthly magazine devoted to the advancement of geographic education, has been received at the Library of the Bureau of the American Republics. RICHARD E. DODGE, Professor of Geography, Teachers' College, Columbia University, New York; J. PAUL GOODE, Instructor in Geography, University of Pennsylvania, Philadelphia, and EDWARD M. LEHNERTS, Professor of Geography, State Normal School, Winona, Minn., are the editors of this periodical. Among the subjects treated in the January issue are "Useful Products of the Century Plant," a lesson on Mexico, by WILLIAM B. MARSHALL, and the first installment of the "Trade and Industries of Western South America," by EMORY R. JOHNSON.

In the Annual Report of the Weather Bureau of the United States, Prof. WILLIS L. MOORE, Chief, speaks of improvements made in the service during 1901. Extensive experiments in wireless telegraphy have been carried particularly along the coasts of Virginia and North Carolina; meteorological reports are received and published daily from Great Britain, the Continent of Europe, and the Azore Islands; forecasts for the first three days of their outward-bound voyages are published for steamers sailing to the east. During the crop season 14,000 persons reported weekly of the effect of the weather on the crops in their respective localities, while the rural free-delivery service carried the daily weather predictions of the Bureau to nearly 42,000 families.

The "Revista Maritima Brasileira" (Brazilian Maritime Review), beginning with its issue for October, 1901, added a section to be

devoted hereafter to the publication of information relative to companies, both national and foreign, which are engaged in coastwise and river navigation in Brazil. In addition, shipyards, arsenals, and dry docks, etc., will be treated, and other information touching the maritime trade of the Republic will be published in full. In another section of the Review a glossary of maritime terms in Portuguese, French, and English is published and has been found to be of great service and value.

“Do Rio a Buenos Aires” (From Rio to Buenos Ayres) is a neatly printed volume of 316 pages, with numerous illustrations, whose author is ARTHUR DIAS, one of a group of journalists who accompanied President CAMPOS SALLES on his recent visit to the Argentine Republic. The episodes of the trip are described in a very entertaining manner, and personal impressions of Buenos Ayres and the Argentine Republic are detailed.

ADDITIONS TO THE LIBRARY DURING JANUARY.

No. 23446.

Por esta decisión, expedida el 2 de enero de 1902, se dispone que se haga una devolución de derechos, en el caso de ciertos artículos de acero fabricados por una Compañía, llamada "International Metal Lath Company," establecida en Niles, Ohio.

No. 23447.

Por esta decisión, expedida el día 6 del mismo mes, se manda hacer una devolución análoga en el caso de ciertas "raquetas," para el juego llamado de "lawn tennis," fabricadas por la compañía de Chicago, conocida con el nombre de "Spalding Manufacturing Company."

Nº. 23448.

Por esta decisión, expedida el 7 del mismo mes, en la forma de una circular á los administradores y demás empleados de las Aduanas de los Estados Unidos, con el objeto de evitar que se cometan fraudes en el transporte de las mercaderías introducidas en calidad de depósito, *in*

bond, se manda que se emplee el sistema de emplomar los fardos, cajones y carros en que aquellas se conduzcan, y sellar en debida forma los alambres ó precintas que se les pongan.

Dispone esta circular cual ha de ser la forma y color de las papeletas que se fijen sobre las envolturas, ó se peguen en los carros, y lo que en ellas debe expresarse, junto con la noticia de que cualquiera que quebrante los sellos queda incurso en una multa de 1,000 pesos, y puede ser además encarcelado por un período de tiempo que no exceda de cinco años.

No. 23449.

DEVOLUCIÓN DE DERECHOS—CERTIFICADOS DE IMPORTACIONES.

DEPARTAMENTO DEL TESORO, *enero 7 de 1902.*

A los oficiales de Aduana y demás á quienes concierna:

Por cuanto la expedición de copias de certificados de importaciones, en los casos en que no se muestra que los originales se han destruido, suele causar pérdidas á la renta, se juzga conveniente que el Adminis-
trador de la aduana que expida dichos certificados originales de importación los remita directamente al Administrador de la del puerto en que se han de usar, y que en ningún caso se entreguen á las partes interesadas.

Por tanto, el Reglamento de aduanas queda modificado como sigue:

ART. 1164. “En caso de que el importador del material que se ha usado ó que se ha de usar en la fabricación de artículos exportados ó que se han de exportar, con el beneficio de la devolución de derechos, de cualquier puerto que no sea el puerto de importación, ó que la persona á quien se le haya hecho formal entrega de dicho material, pida por escrito al administrador de la aduana del puerto del cual se importó el expresado material, que conceda un certificado de importación y del pago de derechos, dicho administrador de aduana expedirá y transmitirá dicho certificado al administrador de aduana del puerto designado en la solicitud, en el cual se ha de reclamar la devolución de derechos, y dicho certificado deberá expedirse según la fórmula núm. 794, y en él deberá expresarse claramente el puerto en el cual se ha de usar.

“Este certificado puede presentarse en el puerto de exportación, y si cualquiera parte del material descrito en el certificado se usase en la fabricación de artículos exportados de otro puerto que no sea aquel en que se ha presentado, el administrador de aduana que tenga en su poder el certificado, al pedírselo por escrito la persona que lo presentó, deberá transmitir una copia del mismo para usarse en el otro puerto. Dicha copia deberá hacerse según la fórmula núm. 183.”

O. L. SPAULDING,

Subsecretario.

No. 23450.

ESTATUAS.

Las estatuas de mármol que mediante los debidos certificados se demuestre ser obras profesionales de escultores reconocidos en el país donde se produjeron, tienen derecho á ser introducidas, con arreglo al párrafo 454, ley de 1897, con un derecho de un 20 por ciento *ad valorem*.

DEPARTAMENTO DEL TESORIO,

Enero 7 de 1902.

SEÑOR: Este Departamento ha recibido un informe del fiscal federal de los Estados Unidos, del distrito sur de Nueva York, manifestando que la apelación en el caso de los Estados Unidos, demandante, contra Townsend & Townsend, demandado, (pleito núm. 2996) se falló en contra del Gobierno en el tribunal de circuito federal de apelación de los Estados Unidos del segundo circuito, el día 11 del mes próximo pasado, habiendo el tribunal confirmado la decisión del tribunal de circuito inferior, sin exponer razones.

Las mercancías objeto del pleito consistían de estatuas de mármol, importadas para venderse como estatuas para cementerios, y representaban "La Fe," "La Memoria," "La Historia," "El Ángel," "El Pesar," etc., todas las cuales se aforaron para imponerles un derecho, como manufacturas de mármol, de un 50 por ciento *ad valorem*, en conformidad con el párrafo 115 de la ley del 24 de julio de 1897. Los importadores protestaron, alegando que las mercancías eran estatuas, es decir, obras profesionales de un escultor ó estatuario, y que adeudaban solamente un 20 por ciento *ad valorem* con arreglo al párrafo 454 de la misma ley.

Las pruebas presentadas en este caso demostraron que los escultores que hicieron las estatuas, y cuyos certificados se agregaron á las facturas, eran artistas de reputación en Carrara y habían hecho las estatuas por modelos que ellos mismos habían diseñado.

Basado en estas pruebas, el tribunal confirmó la decisión del tribunal de circuito inferior, exponiendo que las estatuas tenían derecho á ser introducidas, pagando un derecho de 20 por ciento *ad valorem*, con arreglo al párrafo 454 de la ley del 24 de julio de 1897, como se exponía en la protesta de los importadores.

El Procurador General ha manifestado á este Departamento, que no se harán más gestiones en este caso. Por tanto, por la presente se le autoriza á usted para que remita la relación certificada usual para efectuar el reembolso de la demasía de los derechos exigidos para el arreglo de los mismos.

Soy de Usted, respetuosamente,

O. L. SPAULDING,
Subsecretario.

AL ADMINISTRADOR DE LA ADUANA,
Nueva York, N. Y.

No. 23451.

LADRILLOS PARA LIMPIAR CUBIERTOS.

Los ladrillos para limpiar cubiertos que se preparan con piedra pómez y arena, y que se mezclan y prensan hasta formar ladrillos de diferentes tamaños, adeudan á razón de \$6 por tonelada, con arreglo al párrafo 92, ley de 1897, como piedra pómez manufacturada entera ó parcialmente.

DEPARTAMENTO DEL TESORO, *enero 7 de 1902.*

SEÑOR: Este Departamento ha recibido un informe del fiscal federal de los Estados Unidos del distrito sur de Nueva York, en el cual expresa que la apelación de los Estados Unidos en el caso de los Estados Unidos contra R. J. Waddell & Co. (núm. 3159) se falló recientemente en contra del Gobierno en el tribunal de circuito de apelación de los Estados Unidos del segundo circuito.

Las mercancías objeto del pleito consistían en ladrillos para limpiar cubiertos preparados con piedra pómez y arena molidas, mezcladas y prensadas hasta formar ladrillos de diferentes tamaños. Se les impuso un derecho á razón de un 35 por ciento *ad valorem*, con arreglo al párrafo 97 de la ley del 24 de julio de 1897, como "artículos compuestos de sustancias minerales de los cuales no se ha hecho ninguna mención especial." Los importadores protestaron, alegando que las mercancías adeudaban á razón de \$6 por tonelada, con arreglo al párrafo 92 de la misma ley, como piedra pómez manufacturada entera ó parcialmente, la cual reclamación ha sido apoyada por el tribunal de circuito de apelación de los Estados Unidos, confirmando el tribunal la decisión del tribunal de circuito inferior de los Estados Unidos, sin exponer razones.

El Procurador General ha manifestado á este Departamento que no se harán más gestiones en este asunto. Por tanto, por la presente se le autoriza á Usted para que remita la relación certificada usual para efectuar el reembolso de la demasía de los derechos exigidos para el arreglo de los mismos.

Soy de Usted respetuosamente,

O. L. SPAULDING,
Subsecretario.

AL ADMINISTRADOR DE LA ADUANA,
Nueva York, N. Y.

No. 23452.

Por esta decisión que es la dada el 3 de enero de 1902, por la Junta General de Aforadores (United States Board of General Appraisers) en la ciudad de Nueva York, se declara que los artículos de algodón enteramente concluidos, como los cobertores de cama, ó las mantas para los caballos, que no tengan mezcla de otra substancia, y cuyas orillas

ó bordes estan cosidos, ó ribeteados, se deben entender incluidos en la definición de "géneros de algodón" (cotton cloth) dada en el párrafo 310 del Acta de 1897, como "tejidos de algodón de todas clases, en piezas, ó *de otra manera*, y que por consiguiente deben pagar derechos con arreglo á lo dispuesto en el cuadro I de dicha Acta, y no con arreglo á lo que dice el párrafo 332 de la misma, relativo á "manufacturas de algodón sobre las que no se ha hecho provisión especial."

No. 23453.

Esta decisión, que es la adoptada par la Junta General de Aforadores, enero 3 de 1902, con el No. 5058, dispone que en los casos que se encuentren pendientes, por virtud de apelación establecida en debida forma ante la Junta de Retasación ó Reaforo, conforme al artículo 13 del "Acta administrativa aduanera," el Administrador de la Aduana carece de autoridad para hacer una liquidación; y la que hiciere, será nula y sin ningún valor.

No. 23454.

En esta decisión se dispone que los materiales para hacer guantes de algodón, que se asemejan á los artículos de punto de media, hechos en la máquina milanese, y cuyos hilos no pueden contarse mediante el deshilado ó por otro medio práctico, deben pagar derechos como manufacturas de algodón no especificados, con arreglo al párrafo 322 (ley arancelaria de 1897), pero no con arreglo á las prescripciones (párrafos 305 hasta 310 inclusive) de dicha ley relativa á los tejidos de algodón cuyos hilos pueden contarse.

Nos. 23455, 23456 y 23457.

Por la primera de estas tres decisiones se modifican algunos artículos del Reglamento para el Servicio de los Hospitales de Marina de los Estados Unidos.

Por la segunda se provee lo conveniente para el almacenaje del té en las aduanas de los Estados Unidos, mientras dure la inspección ó examen de aquella mercancía.

Por la tercera se dispone como deben aforarse las mercancías conocidas con el nombre inglés de *bean stick* y *bean cake*, cuando se importen en los Estados Unidos ó sus posesiones.

No se ha creído de utilidad traducirlas al castellano.

No. 23458.

Por esta decisión se mandan publicar de nuevo para conocimiento general varios artículos del Código titulado "Estatutos Revisados de los Estados Unidos" y del Reglamento de la Junta de Inspectores (Board of Supervising Inspectors), relativos todos al buen servicio de los buques de vapor en los Estados Unidos y á los deberes de sus oficiales.

Tampoco se ha estimado necesaria su traducción.

No. 23459.

DEVOLUCIÓN DE DERECHOS SOBRE PASADORES Ó PRECINTAS DE CUERO.

Devolución de derechos sobre precintas de cuero crudo hechas con cueros secos arsenicados por Charles A. Schieren y Cía., New York, N. Y.

DEPARTAMENTO DEL TESORO, *enero 11 de 1902.*

SEÑOR: En la exportación de las precintas de cuero crudo, fabricadas por Charles A. Schieren y Cía., de New York, N. Y., usando sólo cueros secos arsenicados, se concederá una devolución igual á la cantidad de derechos abonados sobre el material importado que ha sido empleado, menos la deducción legal del 1 por ciento.

La guía preliminar deberá especificar las marcas y números de los bultos y el contenido de cada paquete, como lo indica la factura de exportación. Cuando las precintas tienen "punteras de metal," deberá declararse el número de cartones y el número de pies lineales de cada ancho comercial de las que vengan contenidas en ellos y en cada paquete. En el caso de que sean simplemente en "punta," deberá declararse el número total de atados que contienen 100 pies de precintas de los diferentes anchos comerciales, cada uno, y el largo total de los diversos anchos contenidos en cada bulto y en el embarque íntegro.

El pedido de devolución de derechos debe contener el número total de pies lineales, de cada ancho comercial de las precintas exportadas, y el número de pies cuadrados de precintas de cuero representado por cada ancho separadamente y en conjunto. El citado pedido debe, además, contener en adición á las declaraciones de estilo, que las precintas han sido manufacturadas del material y de la manera establecida en la declaración jurada por los fabricantes en diciembre 18 de 1901.

En la liquidación, para la devolución de derechos, se tomará por base la cantidad de cuero que fué importado y que pueda igualar la cantidad de precintas exportadas (medida superficial), como se indica en el pedido de devolución de derechos, después de comprobarse oficialmente las dimensiones declaradas; pero en ningún caso, se estimará en mas de 15 pies cuadrados de precintas exportadas cada cuero de res importado.

Respetuosamente,

O. L. SPAULDING, *Subsecretario.*

No. 23460.

DEVOLUCIÓN DE DERECHOS SOBRE ASFALTO REFINADO.

Se extienden las disposiciones de este Departamento de octubre 26, 1899 (Decisión No. 23042), á las exportaciones de asfalto refinado, manufacturado por la Sicilian Asphalt Paving Company de New York, N. Y.

DEPARTAMENTO DEL TESORO, *enero 11 de 1902.*

SEÑOR: Las instrucciones de este Departamento de octubre 26 de 1899 dirigidas á esa Aduana estableciendo un tipo para conceder la devolución de derechos sobre asfalto refinado manufacturado por la Warren-Scharf Asphalt Paving Company, se extienden por la presente á las exportaciones de asfalto refinado, manufacturado con el asfalto crudo importado del Lago de Trinidad, por la Sicilian Asphalt Paving Company de New York.

Respetuosamente,

O. L. SPAULDING,
Subsecretario.

SR. ADMINISTRADOR DE LA ADUANA,
New York.

No. 23461.

Por esta decisión, fechada el 13 de enero de 1902, se manda que "las barras de hierro, de forma oval, y de cualquiera grueso, para cuya fabricación se usó como combustible el carbón de madera, y que no estén enumeradas específicamente en la ley de 1897, deben pagar derechos á razón de \$12 por tonelada, como hierro en barras, ó batido ó martillado en forma de rollos, sobre el que no haya disposición especial," como dice el párrafo 124 de la misma ley.

No. 23462.

TRABAJO DE PRESIDARIOS.

La compensación concedida por el artículo 4 de la ley de junio 22, 1874 no puede satisfacerse en casos que envuelven la importación de artículos manufacturados por presidiarios.

DEPARTAMENTO DEL TESORO, *enero 13, 1902.*

SEÑOR: Este Departamento ha recibido su carta del 3 del presente, en el cual manifiesta Vd. que cierta persona en Kingston, Canadá, desea dar informes á este Gobierno sobre la importación ilegal en los Estados Unidos de ciertos artículos manufacturados en el Canadá por presidiarios, con la condición de recibir en cambio una recompensa.

Pide Vd., al mismo tiempo, que se le informe si el Departamento concedería ó no, al denunciador, la mitad de la cantidad resultante del

comiso de los artículos hechos por presidiarios, importados en los Estados Unidos ilegal ó clandestinamente.

En contestación diré á Vd., que la sección 31 de la ley arancelaria del 24 de julio de 1897, prohíbe la introducción de efectos, géneros, artículos y mercaderías manufacturadas en todo ó en parte en país extranjero, por presidiarios; y el Secretario del Tesoro está autorizado para dictar las medidas que sean necesarias, para el mejor cumplimiento de esta disposición. Esta ley es una reproducción de otras anteriores sobre la materia.

La resolución 11934, de octubre de 1891, de este Departamento, dice que cuando se obtenga suficiente prueba de que se ha efectuado contra la ley la importación de mercaderías de este género, estas podrán, á opción del importador, ser exportadas inmediatamente sin abonar derechos, ó quedar sujetas á comiso, iniciándose el juicio respectivo para su condenación y destrucción de acuerdo con la ley. Esta disposición rige aún, y de ella se desprende que, como los artículos de que se trata no pueden entrar al consumo en los Estados Unidos, no es posible cobrar derechos, ni disponer de ellos, por medio de remate público, y como la sec. 4^a de la ley sobre denuncias, provee compensación para los denunciadores, solamente en casos en que los derechos estén retenidos ó se haya incurrido en una multa, pena ó confiscación, la solicitud de recompensa como denunciador en el presente caso, no puede admitirse favorablemente por este Departamento.

Respetuosamente,

O. L. SPAULDING,

Secretario Asistente.

Sr. LEGARE PHENIZ,

Agente Especial del Dept. del Tesoro,

Ogdensburg, N. Y.

No. 23463.

DEVOLUCIÓN DE DERECHOS—MARCAS DE SACOS.

La resolución de este Departamento de abril 28 de 1899 (Decisión No. 21067), se aplica al caso de sacos que llevan marca por la cual se conoce su contenido en el comercio.

DEPARTAMENTO DEL TESORO, *enero 14 de 1902.*

SEÑOR: Este Departamento ha recibido su oficio del 21 del próximo pasado, en que transmite la reclamación de la Bemis Brothers Bag Company, pidiendo que se le conceda devolución de derechos sobre 4,480 sacos de harina de semilla de algodón, por estar estos comprendidos en guía anterior, No. 1501 y haber sido exportados por el vapor *Othelo* en noviembre 22, 1901.

Según aparece, se ha cumplido con todos los requisitos de regla-

mento, exceptuándose que las palabras “para devolución” no aparecen en el mismo lado del saco en que se encuentran las marcas de embarque.

En contestación, diré á Vd. que la resolución de abril 28 1899 de este Departamento (No. 21067) provee que “tales marcas deben ser hechas con tinta indeleble, en el lado del saco que exhibe las marcas, y en letras no menores de 2 pulgadas de largo con un ancho proporcional.” Esta disposición se refiere al lado del saco que lleva la marca por la cual el contenido de él es conocido en el comercio, y no tiene aplicación alguna á la marca de embarque. Puede haber casos en que el contenido de los sacos no esté designado por ninguna marca ó nombre comercial, y en que sólo aparezca la marca de embarque; en tal caso, la resolución arriba mencionada será aplicada, si es que las palabras “para devolución” aparecen en el lado del saco en donde se encuentran las marcas de embarque.

En vista de los hechos expuestos, queda Vd. debidamente autorizado para proceder á la liquidación de la póliza en cuestión, y dar un certificado para la devolución de los derechos.

Respetuosamente,

O. L. SPAULDING,
Subsecretario.

SR. DIRECTOR DE ADUANAS.

No. 23464.

LA OBRA LLAMADA DE “APLICACIÓN” NO ES “BORDADO” LAS PANTUFLAS Ó ZAPATILLAS DEBEN SER AFORADAS COMO ZAPATOS.

Las zapatillas ó pantuflas turcas adornadas con hilos metálicos, hechas en su mayor parte de cuero, se hallan comprendidas en el párrafo 438 del Arancel de 1897, como “zapatos hechos de cuero,” y no como artículos bordados con hilos metálicos, en virtud de lo proveído en los párrafos 339 y 179.

La designación caprichosa de cualquier artículo, no descrito como tal en una ley arancelaria, no es motivo para retirarlo de la clase genérica descrita en el Arancel.

La mercadería en cuestión consiste en zapatillas turcas, clasificadas por el Vista como: “Zapatos hechos de cuero con bordados de hilos metálicos en la parte superior” y aforadas con arreglo á lo provisto en el párrafo 179, Arancel de 1897, y en virtud de la condición inserta en el párrafo 339 del mismo Arancel. Los protestantes reclaman que los artículos citados sean aforados con el 25 por ciento *ad valorem*, según el párrafo 438 del Arancel como “botines y zapatos hechos de cuero.”

Los derechos, de acuerdo con el párrafo 179, son 60 por ciento *ad valorem* sobre “encajes, bordados, trencillas, galones, adornos ú otros artículos hechos enteramente ó en su mayor parte de alambre de oropel, ó de alambre estirado á martillo y flecos ó hilos de metal.” Las partes pertinentes del citado párrafo 339, dicen lo que sigue:

“339. * * * Vestuario. * * * y otros artículos ó telas bordadas, de cualquier manera á la mano ó por máquina, ya sea que lleven una inicial, monograma ú otra cosa; tejidos ó vestidos, bordados á tambor ó con artículos aplicados; * * * todo lo cual, hecho por completo ó en su mayor parte de lino, algodón ú otra fibra vegetal y no estando especialmente comprendido en otra sección de este Arancel; * * * entendiéndose, que ninguna clase de vestuario ú otro artículo ó tela, si es bordado á la mano ó á la máquina, pagará un derecho menor que el impuesto en cualquiera sección de este Arancel, sobre cualquier bordado de los materiales de que dicho bordado se compone.”

De las pruebas y del examen practicado con la muestra del artículo sometido á nuestra consideración, resulta que el dicho adorno relumbrante del zapato no es bordado ó hecho según la manipulación de bordados á mano ó maquinaria. Esta obra se conoce por trabajo de aplicación, pues el adorno ha sido cosido ó hilvanado sobre el zapato con hilo de algodón ó lino. La junta ha sostenido uniformemente que los artículos de aplicación no son bordados ó artículos bordados (Véanse los casos: De Maesener, G. A., 1151; Mandel, G. A., 2943; Muser, G. A., 4030). Si bien es verdad que los artículos de aplicación, telas ó vestuarios hechos de lino, algodón, ú otras fibras vegetales, se hallan especialmente mencionadas en dicho párrafo 339, se notará que la aclaratoria del citado párrafo 339, bajo el cual justifica el Vista su clasificación, se refiere únicamente á artículos bordados, excluyendo así, de una manera terminante, los artículos de otra naturaleza, incluidas las zapatillas en cuestión.

Tampoco las zapatillas se hallan comprendidas en el párrafo 179, puesto que las pruebas demuestran satisfactoriamente que el valor del cuero empleado en dichos artículos es, por lo menos, tres veces mayor que el valor de los adornos metálicos y, además, el párrafo se refiere tan sólo á mercaderías compuestas en su mayor parte de hilos metálicos, ó de los otros materiales mencionados en él.

La frase “zapatos hechos de cuero,” inserta en el párrafo 438, ha sido uniformemente interpretada en el sentido de significar zapatos compuestos en su mayor parte de cuero (casos: Wise, 93 Fed. Rep., 443; Robitsek, G. A., 249; Sang Chong, G. A., 3790; Wing Tuck & Co., G. A., 4547. Véase también: Estados Unidos contra Churchil, 106 Fed. Rep., 672; y Alms, G. A., 4532). Una zapatilla, según muchas veces lo ha resuelto la junta, es una especie de zapato ligero, así llamado debido porque se puede poner con facilidad y usarse con traje de casa (casos: Vantine, G. A., 319; y Robitsek, G. A., 1373). Por consecuencia, estando los artículos compuestos en su mayor parte de cuero, corresponden, según los términos descriptivos del párrafo 436, “zapatos hechos de cuero,” al citado párrafo. No importa que los artículos en cuestión sean conocidos ó vendidos en el comercio, bajo el nombre de zapatillas turcas y no bajo el nombre específico de zapatos. La desig-

nación caprichosa de cualquier artículo, no descrito como tal en una ley arancelaria, no es un motivo para retirarlo de la clase genérica descrita en el Arancel (Véanse los casos: White, 53 Fed. Rep., 787; Chaffin, ib., 121; 2 C. C. A., 647; Chamock, G. A., 3248).

En vista de lo erpuestu y de los fallos precedentes, sostenemos que las zapatillas de que tratamos están especialmente comprendidas en el párrafo 438 y deben ser aforadas con el 25 por ciento *ad valorem* como zapatos de cuero.

La protesta es, por consiguiente, admisible y la resolución del vista revocada; ordenándose que de conformidad, á esto se vuelva á liquidar la póliza.

SEGUNDA CONFERENCIA PAN-AMERICANA.

AMÉRICA DEL SUD—EXPLORACIÓN DE REGIONES DESCONOCIDAS.

Por la importancia del asunto, á que se hizo referencia, con los datos que había en aquella fecha y con el título de “Los Ríos de la América del Sud,” en el número del BOLETÍN correspondiente al mes de julio del año pasado de 1901, se inserta á continuación el discurso pronunciado el 30 de diciembre último en la Segunda Conferencia Internacional Americana en México, por el General Don RAFAEL REYES, Delegado por Colombia, dando cuenta de las exploraciones hechas por él y sus hermanos las Señores Don NÉSTOR y Don ENRIQUE del mismo apellido, y proponiendo ciertas medidas para la exploración y aprovechamiento del territorio amazónico.

El discurso tal como se encuentra en el Acta no. 23 de la Conferencia citada, fué el que sigue:

“EXCELENTÍSIMO SEÑOR PRESIDENTE: Tengo el honor de presentar á la Conferencia el mapa de las exploraciones que, con mis hermanos ENRIQUE y NÉSTOR, hice durante varios años en la América del Sur, desde el Pacífico al Atlántico, en los inmensos territorios que riegan el Amazonas y sus afluentes, y el Paraná y los suyos.

“Confieso que, á pesar de haber sido excitado á publicar estos trabajos, por miembros de las sociedades geográficas de Londres y de París y por otras varias personas interesadas en la geografía, no lo había hecho, porque la desastrosa muerte de mis dos hermanos, durante las exploraciones, víctima ENRIQUE, el mayor, de la fiebre, y devorado NÉSTOR, el menor, por los antropófagos del Putumayo, me hacía mirar con cierto horror todo cuanto se rozara con aquella empresa, y los planos y las apuntes de ella han reposado durante largo tiempo entre mis papeles, en donde los guardaba el egoísmo del dolor. * * *

“Hoy, cuando tengo el honor inmerecido de pertenecer á esta Conferencia, en la cual están representados todos los países de las tres Américas por hijos suyos de los más distinguidos, he creído un deber

ineludible dar publicidad á este trabajo, que interesa á todas las naciones aquí representadas.

“Si hace algunos años los territorios á que me refiero no tenían sino local y relativa importancia, no sucede hoy lo mismo, porque el desarrollo de la navegación y del comercio y las necesidades crecientes de la humanidad, exigen que no permanezcan ignorados é improductivos. En las extensas selvas en que vagaban los salvajes antropófagos cuando hicimos esas exploraciones, se sostiene hoy un importante comercio por varias decenas de millones de pesos, y se levantan poblaciones de millares de habitantes. Además, el proyectado Ferrocarril Intercontinental, obra civilizadora en que con tanto interés se ocupa esta Conferencia, da grandísima importancia á los referidos territorios, de los cuales son dueños todos los países aquí representados, exceptuando Norte y Centro América y Chile.

“A mi paso por Wáshington, cuando tuve el honor de visitar al Señor Presidente ROOSEVELT, me manifestó éste que conocía las exploraciones que con mis hermanos yo había hecho en Sur América, y de las que se ocupó el “New York Herald” del mes de marzo del presente año; me excitó el Presidente ROOSEVELT á dar cuenta de ellas á esta Conferencia y, con clara visión de hombre superior, me dijo: ‘Esa comarca es un nuevo mundo que se ofrece al progreso y al bienestar de la humanidad.’ Me ofreció recomendar á la Delegación Norte-americana que se ocupara con interés de este asunto, y sé que cumplió con lo ofrecido. En concepto de este muy avisado estadista, las exploraciones realizadas por mis hermanos y por mí, se relacionan íntimamente con el proyecto del Ferrocarril Intercontinental.

“Comparada la parte de la América del Sur, de que vengo ocupándome, con aquella parte del Africa explorada por el gran LIVINGSTON y por STANLEY, la superioridad en riquezas minerales y vegetales en terrenos para la agricultura, y sobre todo, en vías fluviales, está en favor de la primera. Apenas hace un cuarto de siglo que las exploraciones de aquellos dos apóstoles del progreso se terminaron, y hoy el ferrocarril recorre ya los territorios que ellos tuvieron que atravesar á pie y abriendo una ruta al través de las selvas tenebrosas; florecientes y nuevas poblaciones surgen allí, como por encanto, y se hace en la actualidad un comercio de grandísima importancia. ¿Por qué no había de suceder lo mismo en la América del Sur?

“Tenemos la convicción de que, á medida que avance la construcción del Ferrocarril Intercontinental, el que no es otra cosa que la conexión de los ferrocarriles ya existentes en los diversos países, aquella región se desarrollará con mayor fuerza é importancia que las exploradas por LIVINGSTON y STANLEY. La humanidad busca nuevos territorios para su progreso y bienestar; ya está la gran masa humana que se desborda en la América del Norte y en Europa, y, por medio de los ferrocarriles y de los vapores, invadirá la del Sur; necesario es que las repúblicas

que forman aquella parte del continente se preparen para recibirla y para conservar y hacer su integridad respetable, por medio de la paz, de la libertad y de la justicia.

“ PRIMERA EXPLORACIÓN DE PASTO AL AMAZONAS.

“A riesgo de abusar de la benevolencia de mis distinguidos colegas, haré una breve reseña de las primeras exploraciones que realicé en compañía de mis hermanos.

“Partimos de la ciudad de Pasto, situada en la cima de los Andes, bajo la línea Equinoccial. La inmensa región que se extiende desde esta ciudad, por más de 4,000 millas, hasta el Atlántico, era entonces completamente desconocida. Atravesamos á pie la gran masa de la Cordillera de los Andes, que se eleva á más de 12,000 pies sobre el nivel del mar, hasta la región de las nieves perpetuas. Al terminar ésta se encuentran inmensas sabanas, llamadas páramos, en donde no nace un arbusto, ni se mira una flor, y en donde desaparece por completo la vida animal. Durante un mes vagamos por aquellas frías soledades, guiados por la brújula; reina en ellas una neblina tan espesa como en las altas latitudes del norte, en el invierno; hubo días en que tuvimos que permanecer en un mismo sitio, en media obscuridad sin poder avanzar un solo paso. El termómetro llegó á bajar á 10 bajo cero, lo que se hacía insoportable, por la falta de abrigo y de calzado; teníamos que usar una especie de zapato, llamado alpargatas, hecho de henequén, que sólo cubre la mitad del pie, porque el calzado de cuero no puede usarse, debido á que esas sabanas están cubiertas de una espesa capa de lodo, en la que el viajero, al caminar, se hunde hasta la rodilla.

“Después de un mes de marcha por aquel desierto, en el cual perecieron, á causa del frío, dos hombres de la expedición, de los diez que á sus espaldas cargaban las provisiones, llegamos al límite de aquellas pampas solitarias que parecen el producto de una naturaleza en formación. Estábamos en las vertientes orientales de los Andes. A nuestra vista se extendía un océano de luz y de verdura, que hacía contraste con las sombras y con las soledades que acabábamos de recorrer; teníamos adelante las abruptas faldas de la Cordillera, que descendiendo en algunas partes verticalmente, continuaban en planos ligeramente inclinados y seguían luego en planos perfectos por millas de millas hasta el océano. Por las murallas graníticas de los Andes se precipitaban las aguas en elevadísimas cataratas, después seguían en torrentes por las quiebras de la Cordillera, y por último, al llegar al plano, se convertían en anchos y hermosos ríos, semejantes á grandes cintas de plata sobre un campo de esmeralda, que se perdían en el lejano horizonte. En los bosques se exhibía la lujuriosa flora tropical con todas sus bellezas. Los árboles veíanse poblados de toda clase de aves de variados colores; era, en fin, la vida la que teníamos delante, y el caos lo que dejábamos atrás.

“Penetramos en esas selvas desconocidas, abriéndonos camino con el machete, á través de la maleza y de las lianas que nos impedían el paso. Al llegar á los descensos verticales de la Cordillera, en los puntos en que eran infranqueables, teníamos que bajarlos con la ayuda de cuerdas ó maromas.

“Por quince días continuamos nuestra marcha á través de esas selvas vírgenes en que abundan las vívoras y las fieras, que afortunadamente nunca nos hicieron mal. Los torrentes los pasábamos por puentes de árboles que arrojábamos sobre ellos, ó vadeándolos á pie; al pasar así uno de esos torrentes, perdimos dos de los cargueros, y la expedición quedó reducida á sólo seis hombres. Después de grandes fatigas y soportando ya una temperatura de 30° centígrado, llegamos á una vía navegable por canoa, en cuyas orillas habita la tribu de los Mocoas, indios que, aunque salvajes, practican la hospitalidad y no son antropófagos. En medio de esa tribu permanecemos un mes, durante el cual conseguimos de los indios una canoa para seguir nuestra expedición al Amazonas, y seis indios que nos acompañaran en el viaje. Estos no conocían sino hasta seiscientas millas aguas abajo, y nos informaban que, de allí para adelante, nunca habían pasado, porque los que antes se atrevieron á hacerlo, fueron devorados por las tribus antropófagas que habitan la otra mitad del río hasta el Amazonas.

“Lanzamos nuestra canoa á merced de la corriente de ese río desconocido, al cual dejamos el nombre que le daban los salvajes, ‘Putumayo’ (aguas claras, en el idioma siona). Después de dos días de navegación, llegamos á un punto que bautizamos con el nombre de ‘La Sofía,’ el de mi esposa, en donde el río tiene seis pies de profundidad en todo tiempo y que es el término de la navegación á vapor.

“Al aventurarnos en aquella expedición tan llena de peligros de todas las clases imaginables, yo quise, y perdonad esta digresión de carácter puramente personal, consagrar con un nombre muy caro en mis afectos, aquel punto de una nueva partida hacia el gran misterio de la naturaleza americana. Tomaba ese nombre como precioso talisman para la lucha con lo desconocido y lo salvaje. Siempre fueron los puros sentimientos del alma la mejor coraza del hombre en las batallas de la vida.

“Gastamos un mes desde ‘La Sofía’ hasta el punto conocido por los salvajes de Mocoa, ó sea una extensión de seiscientas millas. En todo este trayecto el río es navegable por vapores de cinco pies de calado, sin inconveniente alguno; sus márgenes están cubiertas por espesas selvas en donde abunda el caucho ó jeve, cacao, zarzaparrilla, marfil vegetal ó tagua, hipecacuana, otras plantas medicinales y variedad de maderas finas. Visitamos las tribus nómades, que nos trataron con benevolencia y hasta con generosidad, obsequiándonos con provisiones ahumadas, productos de la caza y de la pesca, que constituyen su principal ocupación.

“Esas tribus son: los Cosacuntis, los Montepas, los Tohallá y los

Inquisilla, todas bien formadas y constantes migradoras en busca de la caza y de la pesca. Apenas tienen habitaciones de ranchos de paja y cultivan pequeñas plantaciones de plátano y yuca, que se extienden en los claros de las selvas, las cuales derriban con hachas de piedra y consumen con el fuego. Viven casi desnudos y conservan la más absoluta autonomía cada una tribu respecto de las otras. El idioma que hablan es una mezcla de Siona y de Quipchua. No tienen otra religión que la adoración de los espíritus malos, con los cuales sus sacerdotes ó payés dicen que se ponen en comunicación, para cuyo efecto se embriagan con el jugo de una planta narcótica que llaman yoco. Es preciso estar siempre en buenos términos con los payés ó sacerdotes, quienes tienen gran dominio sobre sus compañeros. El número de individuos que componen las tribus nombradas, según los informes que recogimos, es de unos 20,000.

“Entrábamos á la región habitada por indios antropófagos. La primera tribu con quien teníamos que entendernos era la poderosa y guerrera de los Mirañas. Nuestros compañeros, los indios de Mocoa, nos notificaron categóricamente que de allí para adelante no seguirían y que debíamos buscar canoa y bogas ó tripulantes en aquella tribu, porque ellos se volvían. Así lo hicimos, saltamos á tierra y con un intérprete nos dirigimos á la primera ranchería. En ella encontramos á su poderoso jefe ‘Chua,’ ó tigre, hermoso joven, de esbelta y atlética figura, de edad de unos treinta años; nos recibió como amigos, nos tendió la mano, signo inequívoco de amistad entre aquellos salvajes, y nos invitó á entrar en su cabaña. Era yo el primer hombre blanco que veían aquellos salvajes, y por lo mismo, fuí el objeto de su curiosidad infantil. Celebraban una fiesta á la luna llena y nos ofrecieron de sus manjares de carne humana, de indios Huitotes enemigos de los Mirañas, que habían hecho prisioneros.

“Por medio del intérprete pedimos á Chua—quien desde aquel día se hizo nuestro amigo y siempre nos fué fiel, llevando su cariño hasta tomar mi nombre, pues se llamó en adelante Rafael Chua—que nos diera canoas, provisiones é indios para continuar nuestra marcha hasta el Amazonas. El indio generoso nos prometió darnos todo lo que necesitáramos.

“Despedimos á nuestros compañeros los Mocoas y nos quedamos de huéspedes de los Mirañas.

“Permanecimos entre ellos por quince días, durante los cuales los acompañamos en sus expediciones de caza y pesca.

“Pasado este tiempo, Chua nos dió una canoa grande y diez robustos y jóvenes tripulantes para continuar nuestro viaje al Amazonas.

“En una hermosa mañana, dijimos adiós á nuestro amigo Chua y lanzamos nuestra embarcación sobre las aguas del Putumayo, que en aquella parte tiene más de 900 yardas de ancho y 10 pies de profundidad. Nos faltaban 600 millas para llegar al Amazonas. En toda esta

extensión el río es navegable en todo tiempo por vapores hasta de 9 pies de calado. Las selvas que cubren sus márgenes abundan en los mismos vegetales que las que acabábamos de recorrer. Visitamos ó hicimos amistad con las tribus antropófagas de los Huitotes, Beneció, Orejones, Carijones, Garaparaná y Campulla. Todas éstas nos recibieron y trataron con benevolencia y generosidad. Debemos reconocer que durante diez años que hicimos exploraciones en el Putumayo, en el Amazonas y en sus otros afluentes, nunca fuimos amenazados ni atacados por los salvajes, lo que por desgracia no aconteció con nuestro hermano menor, Néstor, quien fué devorado por los antropófagos del Putumayo, y pagó así con la vida, en plena juventud, su amor al trabajo y al conocimiento y progreso de la América.

“Gastamos dos meses en recorrer la parte baja del río, porque nos detuvimos para hacer exploraciones en sus márgenes y permanecimos algunos días visitando las diferentes tribus. Estas hablan la lengua Siona, y el número de individuos que la componen, según los informes que tomamos, es de más de . . . 60,000. Esas tribus viven en continua guerra unas con otras, con el fin de hacer prisioneros para sus festines y también para venderlos á los comerciantes que del Amazonas suben por el Putumayo unas 200 millas y que, en cambio de ellos, les daban alcohol, tabaco, cuentas de vidrio, espejos y otras baratijas. Durante el tiempo que con mis hermanos estuve en aquella región, destruimos este bárbaro comercio, aprisionando á los tratantes de carne humana, los que entregábamos á las autoridades brasileras, quienes siempre les infligieron el merecido castigo.

“Lo más penoso de aquella nuestra primera exploración, no era el calor de 45 centígrados, soportado sin sombra alguna, puesto que la canoa iba descubierta, bajo un sol abrasador, ni la fatiga de ir remando á la par de los indios durante todo el día, ni tampoco la mala y escasa alimentación, ni los peligros que se corrían en medio de aquellos antropófagos. Lo era, sí, las noches pasadas en las inmensas playas del río, sobre arenas quemantes, calcinadas por el sol, en las cuales teníamos que cavar una especie de sepultura y cubrirnos con ellas, dejando sólo descubiertas las narices, como lo hacían los salvajes, para libertarnos de las picaduras de los zancudos, los que hay en tal abundancia, que puede decirse que la atmósfera se compone de ellos, tal la llenan y obscurecen; al cerrar las dos manos, quedaba entre ellas una masa sólida de mosquitos. Con las primeras luces de la aurora, que hacen huir á los zancudos, salíamos de esas fosas, improvisados dormitorios, en los cuales reposábamos desnudos, cubiertos por una argamasa formada por la arena y por el sudor, que se había endurecido sobre nuestra piel con el frío de la mañana, y nos lanzábamos al río para que el agua nos libertara de su pesadumbre y de su asco, y luego nos poníamos los escasos y desgarrados vestidos que aun nos quedaban. Navegábamos durante todas las horas de luz, y solamente nos deteníamos

con el fin de hacer la caza y la pesca de lo que necesitábamos para nuestra alimentación. De noche preparábamos los alimentos que habíamos conseguido durante el día.

“Esa fué nuestra vida durante los meses eternos que gastamos en nuestro primer viaje del Putumayo; soportábamos las mismas fatigas que los salvajes, tanto en la conducción de nuestra pequeña y frágil nave, como en la caza, en la pesca y en las expediciones á pie, y tenemos el convencimiento de que esto fué lo que nos captó el cariño y el respeto de los salvajes, quienes no reconocen otra superioridad que la de la fuerza.

“Al fin, después de grandes fatigas, atravesando la Cordillera y recorriendo ya á pie, ya en canoa, las 1,400 millas del río Putumayo, llegamos al Amazonas. Nuestros esfuerzos habían sido coronados con éxito feliz. Habíamos conseguido el propósito que perseguíamos al emprender la expedición, propósito que era el de descubrir un río navegable á vapor, que comunicara á Colombia con el Amazonas.

“Exploraciones tan penosas como las que acabamos de describir, hicimos después, durante varios años, con nuestros hermanos ENRIQUE y NÉSTOR, en los ríos Caquetá, Napo, Ucayali, Yabará, Yuruá, etc., y los otros que se señalan en el mapa que os acompaño.

“Mi hermano ENRIQUE pereció de fiebre maligna, explorando el río Yabará. Los Peruanos le levantaron un suntuoso mausoleo en el cementerio de Iquitos.

“NÉSTOR, mi hermano menor, se perdió explorando las selvas del Putumayo, en donde, como antes queda dicho, fué devorado por los salvajes. Solamente logramos recuperar sus huesos, los que pude unir á los restos de mi hermano ENRIQUE y conducirlos á Bogotá, capital de Colombia, donde yacen depositados en la iglesia Catedral.

“Séame permitido, Excmo. Sr. Presidente, haciendo abstracción de los lazos de la sangre, y convirtiéndome en vocero de la justicia histórica, consagrar aquí, ante vosotros, un recuerdo de admiración y de respeto á esos dos héroes del trabajo y de la civilización del Continente Americano.

“DE LA DESEMBOCADURA DEL PUTUMAYO Á RÍO DE JANEIRO.

“El punto en que el Putumayo, ó Iça, como lo llaman los Brasileños, desemboca en el Amazonas, se llama San Antonio y está á 1,800 millas de la desembocadura del último en el Océano.

“Habíamos llegado á un lugar que podría decirse civilizado, en relación con las regiones que acabábamos de atravesar; por allí pasaba mensualmente un pequeño vapor, que hacía la carrera entre Pará é Iquitos y en el cual tomamos pasaje para la primera ciudad, á donde llegamos seis meses después de nuestra partida de Pasto, en Colombia.

“Publicamos un ligero relato de nuestros viajes, que causó grande impresión y fué reproducido en todos los diarios del Brasil. Era la

primera vez que de las costas colombianas del Pacífico, había atravesado la América un viajero, para llegar al Pará. En esa ciudad, hospitalaria como todas las brasileras, fuimos el objeto de manifestaciones de cariño y de aprecio, de parte de las autoridades y de personas de lo primero de aquella sociedad, como los Sres. Dr. F. A. RAÍOL, D. MANUEL PINHEIRO, D. JULIO LAROQUE, D. MANUEL ANTONIO PIMENTA BUENO, etc., etc.

“Del Pará nos dirigimos á Río de Janeiro, tocando en las ciudades de San Luis de Maranhao, Ceará, Río Grande del Norte, Pernambuco y Bahía. Las voces de la prensa nos habían ya precedido, dando á conocer nuestra expedición, y en todas esas ciudades, así como en la de Río de Janeiro, fuimos recibidos y festejados con entusiasmo.

“El mismo día de nuestra llegada á Río de Janeiro recibimos una nota del Gobernador de Palacio, en la que nos daba la bienvenida en nombre del Emperador Don PEDRO II, y nos avisaba que éste nos esperaba el día siguiente, que era de gala en la Corte, á las 4 de la tarde, en su Palacio de San Cristóbal.

“A esa hora estuvimos allá. El sol abrasador, las lluvias, el hambre y toda clase de fatigas que habíamos padecido durante seis meses atravesando el Continente, habían convertido mi cuerpo en un esqueleto forrado en una especie de pergamino; así es que, al presentarme en el salón de recepciones, al cual aún no había salido el Emperador y en el que ya estaban en uniforme de gala los grandes del imperio, ví que se me miró como á un intruso; nadie sabía quién era, y permanecí aislado de todos. Pocos momentos después el maestro de ceremonias preguntó por mi nombre, y, á través de los asistentes, quienes entonces me saludaron con deferencia, me introdujo al Gabinete de trabajo del Emperador, por quien fuí acogido no sólo con deferencia, sino también con cariño.

“Era Don PEDRO II de majestuosa y elevada estatura, de fisonomía franca y leal, y rubio como un germano. A través de sus grandes ojos azules se leían la bondad y la nobleza de su alma; de espíritu grandemente cultivado, era un sabio en el más completo sentido de la palabra. Hablaba correctamente varios idiomas, y sostuvimos nuestra conversación en francés. Tenía pasión por la geografía y por las exploraciones en los inmensos territorios del Imperio. Durante una hora recorrimos el mapa que yo había trazado de mi expedición, por la cual manifesté grande interés. Salió conmigo al salón de recepciones, en donde me presentó y recomendó á los que allí estaban presentes.

“Permanecí dos meses en Río de Janeiro, durante los cuales recibí toda clase de manifestaciones de aquella sociedad, cuyo carácter hospitalario es proverbial. Permítaseme mencionar los nombres de los caballeros que más se esmeraron en ofrecirme su apoyo para las futuras exploraciones: el Barón de Río BLANCO, Jefe del Gabinete; el Marqués de SAN VICENTE y el Barón de COTEJIPE; el Almirante Wan

den COLK; el republicano QUINTINO BOCAYUBA, actual Presidente del Senado; el Barón de Río BLANCO, hijo, redactor de “La Tarde” y actual Ministro del Brasil en Alemania.

“Cumpló con el deber de mencionar aquí también el nombre del insigne explorador y botánico RAIMUNDI, á quien debí voces de aliento para continuar las exploraciones, y el del caballero inglés ALFREDO SIMPSON, quien me acompañó en el primer viaje de vapor en el Putumayo.

“El Gobierno del Brasil nos ofreció generosamente embarcaciones y dinero para continuar nuestras exploraciones, que no acepté, como no las había pedido ni aceptado de mi país, pues todas ellas las hicimos con fondos de mis hermanos y míos.

“De Río de Janeiro regresamos al Pará, en donde compramos el vapor *Tundama* nombre de nuestra provincia natal en Colombia, y lo tripulamos y aprovisionamos para hacer el viaje por el Putumayo hasta La Sofía.

“DEL PARÁ Á LA SOFÍA.

“Subimos el Amazonas en nuestro vapor sin ningún inconveniente, hasta San Antonio. De allí penetramos en las aguas del Putumayo; podemos decir que uno de los días más felices de nuestra vida, fué aquel en que vimos flotar por primera vez la bandera de Colombia en la popa del buque, agitada por las brisas. Ese buque iba á realizar las conquistas de la civilización y del progreso para nuestra patria y á mejorar el horroroso estado de millares de salvajes, quienes al solo contacto con el hombre civilizado se sintieron como heridos por el rayo de esa misma civilización, puesto que nos habían tratado no sólo de manera hospitalaria, sino también muy generosamente.

“Gastamos dos meses navegando las 1,200 millas de este río hasta La Sofía. Teníamos que preparar allí el combustible para el vapor.

“Ayudados por el capitán portugués FRANCISCO ANTONIO BISAO, levantamos la carta geográfica del río Putumayo, la única que se ha publicado de nuestras exploraciones.

“A nuestro paso por el territorio de las tribus salvajes, las que meses antes nos vieron desprovistos de recursos y nos ayudaron para continuar la expedición, pudimos obsequiarlas con largueza y hacerles admirar los objetos y las curiosidades de una civilización desconocida para ellos, que llevábamos en el vapor. A nuestro amigo CHUA, el cacique de la poderosa tribu de los Mirañas, le obsequiamos con armas que nunca usó contra nosotros, con herramientas de agricultura, con semillas y con vestidos para sus numerosas mujeres.

“Terminamos ese viaje en La Sofía, en donde la poderosa corriente del río impide á los vapores ir más adelante. Desde este puerto, á distancia de 100 millas, se levanta majestuosa la inmensa Cordillera de los Andes, que en el horizonte se ve como gigantesca muralla de

bronce, coronada de nieve, sobre la cual, hacia el Sur, en el Ecuador, arrojan fuego y humo los volcanes del Pichincha, Cotopaxi, Chimborazo y otros. Más allá de esas elevadas cumbres estaba nuestro hogar llamándonos con esas incitaciones del cariño, que son irresistibles para el alma. Para llegar á él, después de nuestras repetidas expediciones, teníamos que atravesar á pie las fragosas selvas y los helados páramos por entre los cuales habíamos trazado nuestra primera ruta. Más tarde unimos por un camino de herradura, el río Putumayo á la ciudad de Pasto. Hoy se hace por él un importante comercio.

“Lo que hemos descrito del río Putumayo es también aplicable á los otros ríos y selvas explorados por los hermanos REYES.

“Los indios se han civilizado en parte, su condición de vida ha mejorado, y con la ayuda que prestan, se mantiene un comercio de exportación por varias decenas de millones de pesos, en caucho, cacao, plantas medicinales, etc., y ese comercio llena con sus productos las bodegas de centenares de vapores de río.

“CLIMA Y PRODUCTOS AGRÍCOLAS.

“En la falda de la Cordillera de los Andes la temperatura varía de 0° hasta 20° centigrado, según la altura. El clima es sano y propio para los habitantes de la zona templada. Los terrenos son extraordinariamente fértiles y producen con facilidad y abundancia trigo, cebada, papas, maíz y todos los productos de la tierra fría. Desde los 18 hasta los 22 grados, se produce café de superior calidad.

“Abundan caídas de agua para el desarrollo de la fuerza eléctrica. La extensión de esta zona, que limita la hoya amazónica, es de varios centenares de millas cuadradas.

“Desde el pie de la Cordillera de los Andes hasta el Océano, el clima es ardiente y hay fiebres palúdicas, como en todas las regiones similares de éstas. El terreno es sumamente fértil y propio para los cultivos de la caña de azúcar, del cacao, del tabaco, del algodón, etc.

“Como puede verse en el mapa, en los ríos Ucayali, en el Perú; Negro, Orinoco, Meta y Vichada, en Venezuela y Colombia, hay inmensas praderías de pastos naturales, semejantes á las del Río de la Plata, en donde se pueden mantener millones de cabezas de ganado.

“MINERALES.

“En el mapa que presentamos está marcada la región de la Cordillera de los Andes que contiene abundantes minas de oro, de plata, de hierro, de cobre, de hulla, mercurio y toda clase de minerales, y también las famosas minas de esmeraldas de Muzo y Coscuez, las únicas del mundo, que existen en Colombia. En el Brasil, en el Estado de Minas Geraes, existen las famosas minas de diamantes.

“Al pie de la Cordillera, y en el lecho de los ríos que bajan de ella,

se encuentran en abundancia el oro de aluvión, y *placeres* tan ricos como los de California. Los salvajes extraen de allí importantes cantidades de oro.

“INDIOS SALVAJES.

“Es muy difícil calcular, aun aproximadamente, el número de salvajes que pueblan esta inmensa región. Creemos que pueden contarse por centenas de millares, que pueden ser atraídos fácilmente á la civilización, porque su carácter, en lo general, es benévolo y hospitalario. Ellos pueden servir en mucho para la explotación de las empresas que allí se establezcan.

“LAS MINAS DE ORO EN COLOMBIA.

“Desde antes de la conquista era reconocido por los aborígenes, el terreno que hoy forma la República de Colombia, como el más rico en oro. Cuando Colón llegó á las Antillas, los naturales le informaron que el oro que poseían en abundancia lo obtenían de los indios que habitaban las costas firmes de aquel territorio.

“Los inmensos tesoros en oro que los Pizarros y Almagro encontraron en el Perú, provenían, en su mayor parte, de las minas de Barbacoas, en la costa del Pacífico, entre Tumaco y Pasto, y de las de Nóbita, en el Chacó, cuyos naturales compraban con oro la sal de que carece esa región y abunda mucho en el Perú; actualmente existe todavía ese comercio en grande escala y se emplean en él muchos buques.

“La abundancia de oro en Barbacoas es tal, que los instrumentos de agricultura de los indios, como hachas, machetes, cuchillos, etc., y los de casa, como platos, tazas, etc., eran de oro, como lo prueban los que se encuentran en sus sepulturas, porque sabido es que era costumbre enterrar los cadáveres con los objetos de oro que poseían en vida.

“Los indios Quimbayas, que habitan sobre la Cordillera de los Andes, entre Bogotá y Popayán, poseían oro en tan grande cantidad, que hace pocos años se encontró en la tumba de uno de sus caciques un tesoro de objetos muy bien trabajados, de muchas libras de peso, con que Colombia obsequió á la Reina de España; puede verse en Madrid. Constantemente se encuentran en los cementerios de estos indios tesoros por valor de varios miles de pesos, que son las alhajas con que los enterraban.

“La historia de El Dorado, en busca del cual hizo HERNÁN PÉREZ DE QUESADA, hermano de GONZÁLO JIMÉNEZ DE QUESADA, el conquistador del país que hoy se llama Colombia, su famosa expedición de Bogotá á Pasto, por las faldas orientales de los Andes, atravesando más de 200 leguas, por montañas fragosas, tiene su origen en la tradición de que, al acercarse los conquistadores, los indios ocultaron un inmenso tesoro de oro y esmeraldas en aquellas montañas, el que todavía no se ha hallado.

“Durante la época colonial, los españoles trabajaron con los indios y con los negros que llevaron de África las minas de Antioquía, del Chocó Alto, del Quildó, de Nóbita y la famosa de El Medio; las de Timbiquí, de Barbacoas y del interior del Cauca, con tan gran éxito, que los explotadores se hicieron millonarios. En algunas ciudades, como en la de Popayán, capital del Departamento de Cauca, en donde edificaron palacios para habitaciones particulares, hubo algunos como un Sr. VALENCIA, el fundador de la Casa de los Condes de Casa Valencia, que estableció con sus propios recursos una Casa de Moneda que regaló al Gobierno y construyó un acueducto para la ciudad.

“Consta en el Archivo de Indias y en todos los documentos oficiales, que era del Nuevo Reino de Granada (hoy Colombia), de donde España sacaba la mayor cantidad de oro durante todo el tiempo colonial.

“Cuando el Barón de HUMBOLDT visitó, á principios del siglo pasado, ese país, estudió los terrenos auríferos del Chacó, Antioquía y Cauca, y fué su opinión, como puede verse en su obra, que son los terrenos más ricos en oro del mundo.

“Después de la Independencia de España se decretó la libertad de esclavos, y las minas de oro dejaron de trabajarse con regularidad, y por la falta de vías de comunicación no se ha podido introducir la maquinaria moderna, que hace que aún terrenos relativamente pobres como los del Transvaal, den enormes rendimientos. El día que las minas de oro de Colombia se trabajen con esas maquinarias, lo que sucederá cuando el ferrocarril pueda transportarlas, se verá que la opinión del Barón de HUMBOLDT es exacta, y que ni el Klondike, ni el Transvaal son más ricos en oro que Colombia. No hace muchos años que en Barbacoas, en la mina de Cargazón, se recogió, en oro puro, que no hubo necesidad de labrar, 500 kilos. En las calles de aquella ciudad, en los patios de las casas y en todas partes se encuentra el oro en abundancia.

“Actualmente se explotan con grandes resultados las minas de Cana, en Panamá; la del Zancudo, en Antioquía; la famosa de Encandía y la de Timbiquí, en el Cauca.

“El Ferrocarril Intercontinental que atravesaría toda la región aurífera colombiana, abriría la explotación de esta riqueza abandonada y casi desconocida al comercio y á la industria.

“En el Chacó, en Nóbita y Quibdó se encuentra el platino en abundancia, que es tan estimado como el oro.

“LA MINA DE ESMERALDAS DE MUZO Y COSCUEZ.

“Hemos dicho que esta es la única mina del mundo, porque si bien es cierto que se encuentran esmeraldas en los Balkans, en Rusia y en la India, son pálidas y casi sin valor en el mercado; las esmeraldas de Muzó, en Colombia, son las únicas finas y puras.

“Esta mina está situada á 50 millas de Bogotá y muy cerca del trazado del Ferrocarril Intercontinental.

“Fué explotada por los indios, y los conquistadores tomaron de ella una gran cantidad de esmeraldas. Pertenece al Gobierno de Colombia, que la da en arrendamiento; los empresarios se han hecho millonarios. Debido á la falta de vías de comunicación, no se ha podido introducir maquinaria apropiada, y la explotación se hace por medios primitivos.

“Bien puede comprenderse que esta mina es una inmensa riqueza, y que el día que se explote por los métodos y maquinaria modernos, dará grandes resultados.

“Lo que dejamos dicho de las minas de oro de Colombia es aplicable á Venezuela, Ecuador, Perú, Bolivia, Brasil, etc., ó sea á toda la América del Sur. En el mapa que acompañamos están señalados los yacimientos minerales.

“LA CORDILLERA DE LOS ANDES.

“La gigantesca Cordillera Andina arranca de la Patagonia y atraviesa á Chile, en donde llega á la altura de los más altos picos del Himalaya. Separa aquel país de la Argentina, pasa por Bolivia, Perú y Ecuador, y al llegar á Pasto, en Colombia, se divide en tres ramales que atraviesan este país y Venezuela. El ramal occidental penetra por el Istmo de Panamá y Centro América, y al llegar á México toma el nombre de Sierra Madre, y el de Montañas Rocallosas en la América del Norte.

“Si esta Cordillera ha sido un gran inconveniente para el desarrollo ferrocarrilero, en cambio contiene en sus entrañas todos los minerales que el hombre emplea en la industria y en el comercio; tiene todos los climas sanos y variados para los habitantes de la zona templada, y localidades hay, como Bogotá, Quito y algunas del Perú, que por su situación cerca de la línea equinocial, por su altura sobre el nivel del mar y por la fuerza del aire, tienen la propiedad de curar radicalmente la tuberculosis, este terrible azote de la zona templada. Creemos que este hecho debe ser conocido universalmente.

“Entre los ramales de los Andes hay extensos y fértiles valles, ya elevados y fríos como el de México y tan grandes como éste, que son las sabanas de Bogotá y la de Túquerres, en Colombia, y la de Otavalo y Quito, en el Ecuador, en los cuales á la fertilidad del terreno se une un clima sano y agradable de 12° á 16° C. todo el año, y que por lo mismo reina una perpetua primavera, ó ya valles de temperatura elevada de 20° á 26° C., como el de Cauca en Colombia, sobre el Pacífico, que tiene 120 millas de largo por 30 de ancho; regado por el río del mismo nombre, navegable á vapor, que lo atraviesa de Sur á Norte. HUMBOLDT calificó este valle de ‘Paraíso de la América,’ y á la verdad que lo es no solamente por la fertilidad del suelo y la benignidad del clima, sino por la belleza de la naturaleza y la hospitalidad de sus habitantes. En ese hermoso valle se encuentran todas las riquezas del reino mineral

y vegetal, en mayor abundancia que en ninguna otra parte de la América del Sur; las dos Cordilleras que lo limitan al Oriente y al Occidente, permiten á sus moradores escoger, dentro de sus mismas haciendas, el clima que quieran, desde 26° hasta 5° C. en las altas montañas.

“Otras de las grandes ventajas de la Cordillera de los Andes es la abundancia de caídas de aguas, verdaderas cataratas como la famosa de Tequendama en Colombia, las cuales pueden producir fuerza para aplicarla á la electricidad.

“Razón tenemos los que nacimos en esas montañas, en donde están nuestros hogares, para amarlas.

“COMUNICACIÓN ENTRE EL FERROCARRIL INTERCONTINENTAL Y LAS VÍAS FLUVIALES.

“Llamo la atención de la Conferencia al hecho muy importante de que la línea del Ferrocarril Intercontinental, que atravesará todos los países de la América del Sur, puede fácilmente, por medio de ramales, ponerse en comunicación con la inmensa red de ríos navegables que forman el Amazonas y sus afluentes, y que pueden surcar los grandes vapores transatlánticos por 3,000 millas, y vapores de río, como los del Mississipi, por 12,000 millas; lo que da una navegación fluvial de 15,000 millas, en un territorio virgen y que abunda en toda clase de riqueza mineral y vegetal.

“Estos ríos recorren los territorios de todos los países de la América del Sur, con excepción de Chile, de tal manera que se comunican ó pueden comunicarse por navegación fluvial unos con otros.

“Durante varios años exploré con mis hermanos ENRIQUE y NESTOR el río Amazonas y la mayor parte de sus afluentes, descubrimos algunos ríos desconocidos, establecimos navegación á vapor en otros, comunicamos por medio de vías terrestres la navegación fluvial con las poblaciones andinas (del río Putumayo á Pasto). En muchos de los ríos que entonces eran desconocidos, hoy navegan multitud de vapores que llevan la industria y la civilización á las selvas vírgenes en donde vagaba el salvaje antropófago. La exportación que se hace hoy por dichos ríos solamente en caucho, que crece espontáneamente en los bosques, vale más de \$20,000,000 en oro. En esas selvas crece en abundancia el cacao silvestre que ya se exporta en considerable cantidad, así como abunda toda clase de maderas finas y plantas medicinales. Se encuentra toda clase de caza, y en sus aguas, el Profesor AGASSIZ clasificó más de quinientas especies de pescados, de los cuales se hace un comercio muy importante.

“La extensión del territorio que riegan estos ríos es de más de 4,000,000 millas cuadradas, que está hoy virgen y que se ofrece al comercio y á la industria de la humanidad.

“Los nombres y extensión navegable de los principales ríos, son los siguientes:

“Las Guayanas.—El río Trombetas navegable por vapor, 200 millas.

Venezuela.—El río Negro navegable en vapor desde la ciudad de Manaos, cuya población es de 50,000 habitantes, hasta un punto por el cual se comunica por el río Casiquiare, con el Orinoco, que desemboca en el mar frente á la isla de la Trinidad. La navegación del río Negro y del Orinoco y de sus afluentes, el Meta, el Arauca y el Vichada, que son de Colombia, combinados, es de más de 1,000 millas.

“Colombia.—El río Putumayo, descubierto y explorado por nosotros, que nace en las cercanías de la ciudad de Pasto, por la cual pasará el Ferrocarril Intercontinental, tiene un curso desde su nacimiento hasta su desembocadura en el Amazonas, de 1,400 millas, de las cuales 200 recorre por la falda de la Cordillera de los Andes, por terrenos fértiles, sanos y abundantes en toda clase de minerales, y por selvas que abundan en caucho, cacao silvestre, etc., desde “La Sofía” hasta San Antonio, en el Amazonas, franca navegación en vapores durante todo el año, 1,200 millas.

“Río Caquetá ó Yapura, nace en la laguna del Bucy, de donde nace también el río Magdalena. Éste se dirige al Occidente y va á desembocar en el Atlántico en Sabanilla, y el Caquetá se dirige hacia el Oriente y tiene un curso de 1,600 millas, de las cuales son navegables por vapor, 1,300 millas.

“Ecuador.—El río Napo nace al Oriente de la ciudad de Quito, en sus cabeceras abundan toda clase de minerales tiene un curso de 1,000 millas, de las cuales son navegables por vapor, 800 millas.

“El Pastaza tiene un curso de 800 millas, de las cuales son navegables por vapor, 500 millas.

“El Tigre tiene un curso de 600 millas, de las cuales son navegables por vapor, 300 millas.

“El Perú.—El Morona, navegable por vapor de río, 200 millas.

“El Amazonas ó Marañón, que nace en el lago Lauricocha, tiene un curso de más de 4,100 millas, hasta su desembocadura en el Océano; de éstas son navegables 3,000 en vapores transatlánticos, desde el Pará hasta la ciudad de Iquitos, que tiene 30,000 habitantes (hay dos líneas directas de vapores establecidas de Liverpool á Iquitos) y en vapores de río de 400 millas, 3,400 millas.

“El ancho del Amazonas en su desembocaduras de Punta Tijoca á Cabo Norte es de 180 millas, y es tal su ímpetu al entrar en el mar, que rechaza á éste, y sus aguas son potables á más de 120 millas de la costa.

“El Amazonas tiene islas como las de Marajó ó Joanes, de más de 60 millas de largo por 24 de ancho. La diferencia de altura de las aguas del Amazonas entre la estación seca y la lluviosa es de 30 pies.

“El Huallaga, navegable por vapor de río, 300 millas.

“El Ucayalí, navegable por vapor de río, 600 millas.

“El Yuruá, navegable por vapor de río, 700 millas.

“El Yavarí, navegable por vapor de río, 900 millas.

“*Bolivia*.—El Purus que tiene una extensión de 1,800 millas; de éstas navegables á vapor, 1,500 millas.

“El Madera que fácilmente puede comunicarse con el Bení y el Madre de Dios, tiene un curso de 1,200 millas; de éstas navegables á vapor, 1,000 millas.

“*El Brasil*.—Fuera del río Amazonas ó Solimoens, como allí se llama, que recorre los Estados del Pará y Amazonas, tiene dos ríos El Uamads Xingú de un curso de 1,000 millas; de éstas navegables á vapor, 600 millas.

“El Teocantins de un curso de 900 millas, y pasa por el pie de la Sierra Esclavona que lo separa por una extensión de no muchas millas del Alto Río de la Plata ó Paraná, con el cual podría comunicarse por medio de un ferrocarril ó de un canal, y así la navegación de la hoya de río de la Plata se uniría con la inmensa del Amazonas. Este río es navegable por vapor, 500 millas.

“Total de millas, 15,000.

“Acompaño un mapa en el cual puede seguirse el curso de estos ríos, verse las exploraciones hechas con mis hermanos, y los demás datos importantes anotados en la explicación del mismo mapa.

“Es conveniente tener en cuenta que si á estas 15,000 millas de navegación fluvial se agregan las 10,223 millas de Ferrocarril Intercontinental, resultaría un total de 25,223 millas, y es fácil calcular el inmenso desarrollo industrial y comercial que produciría para pagarampliamente al capital que acometiera la obra del Intercontinental.

“Como ejemplo de las grandes facilidades de estas comunicaciones, supongamos ya terminado el Ferrocarril Intercontinental, y que un viajero que sale de Nueva York, atraviesa los Estados Unidos, México, Guatemala, el Salvador, Honduras, Nicaragua, Costa Rica, Colombia, Ecuador, Perú, Bolivia y llega á la Argentina. En Buenos Aires se embarca en el río de la Plata ó Paraná y sube éste después de atravesar el Paraguay par buscar la comunicación con el río Tecantins á través de la Serranía de la Esclavona, se embarca en el Tecantins, baja por éste al Amazonas; busca el río Trombetas, por él visita las Guayanas; busca los ríos Madera y Perús, por ellos visita Bolivia; busca el Javará, el Yuruá, el Huallaga y el Morona, y por ellos visita el Perú. Por el Tigre, el Pastaza y el río Napo visita el Ecuador; por el Caquetá y el Putumayo, á Colombia; y á Venezuela por el río Negro, y subiendo éste hasta encontrar el Casiquiare que lo comunica con el Orinoco, pasa á éste, busca su afluente, el Meta, lo sube en vapor hasta Gabuyero, á 60 millas de Bogotá, capital de Colombia, y volviendo al Amazonas por la misma ruta, llega á la ciudad de Iquitos y toma allí el vapor transatlántico que, sin transborde, lo llevará al puerto de Liverpool.

“No es una hipérbole llamar al Amazonas el Mediterráneo americano, pues que en sus aguas navegan, como queda dicho, vapores transatlánticos por tres mil millas y vapores de ríos por doce mil.

“MEDIDAS QUE DEBE TOMAR LA CONFERENCIA INTERNACIONAL, PARA EL DESARROLLO DE AQUELLA RICA REGIÓN Y PARA FACILITAR LA EJECUCIÓN DE LA OBRA DEL FERROCARRIL INTERCONTINENTAL.

“Estando todos los países representados en esta Conferencia interesados en la obra del Ferrocarril Intercontinental, siendo la mayoría de ellos propietarios de los cuatro millones de millas cuadradas que contiene la región amazónica, que puede decirse que en su totalidad está inculta y despoblada, y es, por consiguiente, de tierras baldías, y perteneciendo á ellos los ríos que la riegan en todas direcciones, consideramos que para el bien de cada país en particular, y el del Continente y la humanidad en general, sería conveniente pedir á los diversos Gobiernos:

“1°. Que se declare libre, previa la aplicación de lo que disponen los reglamentos aduaneros de cada país, y para todas las banderas del mundo, la navegación de dichos ríos; y

“2°. Que se auxilie á la empresa del Ferrocarril Intercontinental con liberales concesiones de terrenos baldíos y de minas de aquella región, que hoy están ignorados en su mayor parte y, por consiguiente, sin ningún valor.

“Este es, Exemo. Señor Presidente, el trabajo que en nombre de la Delegación de Colombia presento respetuosamente á la Conferencia que se ocupa de los destinos de la América; él no tiene otro mérito que el de la constancia con que fué realizado, el del desinterés personal y el del ardiente deseo por el bienestar y progreso de nuestro Continente.

“RAFAEL REYES.

“MÉXICO, 30 de diciembre de 1901.”

REPÚBLICA ARGENTINA.

TRATADO DE AMISTAD, COMERCIO Y NAVEGACIÓN CON EL IMPERIO DEL JAPÓN.

Firmado en Wáshington, Febrero 3 de 1898.

Aprobado por el Congreso Argentino, Junio 5 de 1901.

Promulgado, Junio 28 de 1901.

Publicado en el Boletín Oficial de la República Argentina, Noviembre 26 de 1901.

Su Excelencia el Presidente de la República Argentina, y Su Majestad el Emperador del Japón, igualmente animados del deseo de establecer sobre base firme y duradera relaciones de amistad y comercio entre sus respectivos Estados, ciudadanos y súbditos, han resuelto ajustar un Tratado de Amistad, Comercio y Navegación, y al efecto han nombrado sus Plenipotenciarios, á saber:

Su Excelencia el Presidente de la República Argentina el Señor Don MARTÍN GARCÍA MÉROU, Enviado Extraordinario y Ministro Plenipo-

tenciario de la República Argentina ante el Gobierno de los Estados Unidos de América, y Su Majestad el Emperador del Japón al JUNSHI TORU HOSHI, de la orden del Sol Naciente de tercera clase, su Enviado Extraordinario y Ministro Plenipotenciario ante el Gobierno de los Estados Unidos de América, quienes, habiéndose comunicado sus respectivos Plenos Poderes y hallándolos en buena y debida forma, han convenido en los artículos siguientes:

ARTÍCULO I. Habrá sólida y perpetua paz y amistad entre la República Argentina y el Imperio del Japón, y sus respectivos ciudadanos y súbditos.

ART. II. Su Excelencia el Presidente de la República Argentina puede acreditar, si así lo estimare conveniente, un Agente Diplomático ante la Corte de Tokio, y, de igual manera, Su Majestad el Emperador del Japón puede acreditar, si así lo estimare oportuno, un Agente Diplomático ante el Gobierno de la República Argentina; y cada una de las Altas Partes Contratantes tendrá el derecho de nombrar, en interés del comercio, Cónsules Generales, Cónsules, Vice-Cónsules y Agentes Consulares para que residan en todos los puertos y plazas de los territorios de la otra Parte Contratante en que sea permitida la residencia de iguales funcionarios consulares de otras naciones; pero antes de que cualquier Cónsul General, Cónsul, Vicecónsul ó Agente Consular pueda obrar como tal, deberá ser aceptado y admitido en la forma acostumbrada por el Gobierno ante el cual fuere constituido.

Los Funcionarios Diplomáticos y Consulares de cada una de las dos Altas Partas Contratantes gozarán en los territorios de la otra, con sujeción á las estipulaciones de ese Tratado, de los derechos, privilegios, exenciones é inmunidades que se conceden ó concedieren á funcionarios de igual categoría de cualquiera nación europea ó de los Estados Unidos de América.

ART. III. Habrá recíproca libertad de comercio y navegación entre los territorios y posesiones de las dos Altas Partas Contratantes. Los ciudadanos y súbditos de cada una de las Altas Partes Contratantes, respectivamente, tendrán el derecho de entrar con seguridad y libremente con sus buques y cargamentos en todos los lugares, puertos, ríos y estrechos de los territorios y posesiones de la otra, en que la entrada fuere permitida á ciudadanos ó súbditos de otras naciones; pueden permanecer y residir en todos los lugares y puertos en que se consienta residir y permanecer á ciudadanos y súbditos de otras naciones, y pueden allí arrendar y ocupar casas y almacenes, y traficar por mayor y menor en todo género de productos, manufacturas y mercaderías de lícito comercio.

ART. IV. Las dos Altas Partes Contratantes convienen en que todo favor, privilegio ó inmunidad referente al comercio, navegación, tránsito ó residencia en sus territorios ó posesiones que cualquiera Parte Contratante concediera actualmente ó más tarde á súbditos ó ciudadanos de alguna nación europea ó de los Estados Unidos de

América, se hará extensivo á la otra Parte Contratante; gratuitamente, si la concesión en favor de la nación europea ó de los Estados Unidos de América hubiere sido gratuita, y en las mismas ó equivalentes condiciones, si la concesión hubiera sido condicional.

ART. V. No se impondrán otros ó más altos derechos á la importación en la República Argentina de cualquier artículo natural, producción ó manufactura del Japón, y no se impondrán otros ó más altos derechos á la importación en el Japón de cualquier artículo natural, producción ó manufactura de la República Argentina, sea que tal importación esté destinada al consumo, almacenaje, reexportación ó tránsito, que los que se pagan ó pagaren por la importación para idénticos fines de artículos naturales, producción ó manufactura de cualquier país europeo ó de los Estados Unidos de América.

No se impondrán otros ó más altos derechos ó gravámenes en los territorios ó posesiones de cualquiera de las dos Partes Contratantes, á la exportación de cualquier artículo para los territorios ó posesiones de la otra, que los que se pagan ó pagaren por la exportación del mismo artículo para cualquier país europeo ó de los Estados Unidos de América. No se prohibirá la importación ó tránsito de cualquier artículo natural, producción ó manufactura de los territorios de cada una de las Partes Contratantes, en ó á través de los territorios ó posesiones de la otra, si tal prohibición no se extendiera igualmente á los mismos artículos naturales, producción ó manufactura de cualquier país europeo ó de los Estado Unidos de América. Ni se prohibirá en modo alguno la exportación de cualquier artículo de los territorios de cada una de las Altas Partes Contratantes para los territorios ó posesiones de la otra, si tal prohibición no se extendiera igualmente á la exportación del mismo artículo para los territorios de las naciones europeas ó de los Estados Unidos de América.

ART. VI. En todo lo concerniente al derecho de tránsito, almacenaje, primas, facilidades, devoluciones y reexportaciones, los ciudadanos, súbditos, mercaderías y embarcaciones de cada una de las Altas Partes Contratantes, serán, bajo todos respectos, colocados en los territorios y posesiones de la otra en el mismo pie que los ciudadanos, súbditos, mercaderías y embarcaciones de naciones europeas ó de los Estados Unidos de América.

ART. VII. No se impondrán en los puertos, ríos ó estrechos de la República Argentina, á los buques del Japón, ni en los puertos, ríos ó estrechos del Japón, á los buques de la República Argentina, otros ó más altos derechos ó gravámenes, por razón de tonelaje, faros, puertos, pilotaje, cuarentena, salvamento en caso de avería, ú otros derechos ó gravámenes semejantes ó correspondientes, de cualquiera naturaleza ó denominación, sea que se demanden á nombre ó en beneficio del Gobierno ó de funcionarios públicos, individuos privados, corporaciones ó establecimientos, que los que pagan ó pagaren en lo sucesivo

en iguales casos los buques de naciones europeas ó de los Estados Unidos de América en los mismos puertos, ríos y estrechos.

ART. VII. Se exceptúa de las disposiciones del presente Tratado el comercio de cabotaje de las dos Altas Partes Contratantes, el cual será reglado de conformidad con las leyes de la República Argentina y Japón respectivamente.

ART. IX. Todos los buques que de acuerdo con las leyes y reglamentos de la Argentina deben considerarse buques argentinos, y todos los buques que de acuerdo con las leyes y reglamentos del Japón deben considerarse buques japoneses, se reputarán, para los fines de este Tratado, buques argentinos y japoneses respectivamente.

ART. X. Los ciudadanos y naves mercantes de la República Argentina que se trasladen al Japón ó permanezcan en sus aguas territoriales, estarán sometidos, mientras queden allí, á las leyes del Japón y á la jurisdicción de sus tribunales de justicia; y de la misma manera los súbditos y naves mercantes de Su Majestad Imperial que se trasladen á la Argentina ó permanezcan en sus aguas territoriales, estarán sometidos, mientras queden allí, á las leyes y jurisdicción de la Argentina. Queda, sin embargo, entendido que la estipulación de este artículo no se extiende á materias relacionadas exclusivamente con la disciplina interna de las naves de cualquiera de las Partes Contratantes en los puertos ó aguas territoriales de la otra.

ART. XI. Los ciudadanos ó súbditos de cada una de las Altas Partes Contratantes en los territorios ó posesiones de la otra, recibirán y disfrutarán recíprocamente en sus personas y propiedades la misma amplia y perfecta protección que se dispensa á los ciudadanos y súbditos naturales; tendrán libre y abierto acceso á los tribunales de justicia para la prosecución y defensa de sus derechos, y podrán, de la misma manera que los ciudadanos ó súbditos naturales, emplear abogados, procuradores ó agentes que los representen ante dichos tribunales de justicia.

Gozarán también entera libertad de conciencia y gozarán, en cuanto lo permitan las leyes que estuvieren en vigor, el derecho de ejercer privada ó públicamente su culto, como asimismo el derecho de enterrar á sus respectivos compatriotas, de acuerdo con los reglamentos en vigencia, en lugares adecuados y convenientes que con tal objeto se establezcan y sostengan.

ART. XII. Respecto del alojamiento militar, servicio militar obligatorio, sea en tierra ó mar, contribuciones de guerra, requisiciones ó empréstitos forzosos, los ciudadanos y súbditos de las dos Altas Partes Contratantes gozarán en los territorios y posesiones de la otra, los mismos privilegios, inmunidades y exenciones que se conceden ó concedieren á los súbditos ó ciudadanos de naciones europeas ó de los Estados Unidos de América.

ART. XIII. El presente Tratado principiará á regir inmediatamente

después del canje de las ratificaciones y continuará en vigor hasta seis meses después que una de las Altas Partes Contratantes haya notificado á la otra su intención de ponerle término.

ART. XIV. El presente Tratado será firmado por duplicado y en los idiomas español, japonés é inglés, y en caso de que llegara á encontrarse alguna discrepancia entre los textos español y japonés, será decidida de conformidad con el texto inglés que es obligatorio para los dos Gobiernos.

ART. XV. El presente Tratado será ratificado por las dos Altas Partes Contratantes y las ratificaciones serán canjeadas en Wáshington á la brevedad posible.

En fe de lo cual, los respectivos Plenipotenciarios firman este Tratado y ponen sus respectivos sellos.

Hecho por sextuplicado en Wáshington, el tercer día de febrero del año de mil ochocientos noventa y ocho, correspondiente al tercer día del segundo mes del trigésimo primer año de Meiji.

MARTIN GARCÍA MÉRON.

KAGORO TAKAHIRA.

LA COSECHA DE TRIGO EN LA REPÚBLICA.

Los informes sobre las cosechas del trigo argentino son objeto de gran interés. Generalmente se cree que hay un excedente de 19,000,000 de bushels que puede exportarse. Recientemente la República Argentina ha empezado á aumentar sus exportaciones, y la semana que terminó el 25 de enero se embarcaron 520,000 bushels, contra 96,000 bushels que se embarcaron en la semana anterior y 760,000 bushels durante la semana correspondiente del año pasado.

Se cree generalmente que la producción argentina podría aumentarse considerablemente si se empleasen métodos más modernos y mejorados. Después de recoger el trigo, lo trillan con una máquina trilladora, pero como por lo regular estas trilladoras pertenecen á un comerciante ó á una asociación de agricultores de la localidad, por necesidad se sufre alguna demora. En las grandes fincas de labranza, el dueño de la finca posee la trilladora, y el trigo se trilla con más prontitud. Todo el trigo se ensaca en la máquina y no se maneja ninguno á granel. En realidad ninguno de los cultivadores tiene medios para resguardar sus granos de la inclemencia del tiempo, y los sacos se apilan simplemente en el campo libre. Las compañías de ferrocarriles han suministrado techados pequeños de hierro galvanizado en las estaciones, pero estos nunca pueden guarecer más de una parte de los granos que se embarcan.

En todas las estaciones importantes hay quien haga competencia en las compras, y los exportadores en gran escala tienen estaciones regu-

lares donde hacen sus compras. En los puertos de embarque como Rosario, Buenos Aires, Bahía Blanca y los puntos de menor importancia de los ríos, hay relativamente muy poco espacio para almacenaje, y cuando el exportador tiene un buque ya listo para cargar, procura trasladar directamente la carga de los carros al buque. No se usan elevadores de granos en el campo, y los pocos que hay en Rosario y Buenos Aires, se usan simplemente para facilitar la carga á granel, cuando el exportador prefiere ese método de embarque. En diciembre de 1900 se tomaron medidas preliminares para la construcción de elevadores de granos y de almacenes, en varios puertos de la República, y se dice que una casa alemana ha obtenido la debida autorización del Gobierno para realizar este proyecto, según se consignó en el BOLETÍN MENSUAL correspondiente al mes de mayo de 1901.

El presente método es dispendioso y ocasionado á pérdidas excesivas, pero la pérdida resultante del daño que causa el tiempo después de la trilladura del trigo, es realmente mucho menor de lo que pudiera esperarse, siendo así que se limita á las capas superior y del fondo de los sacos. Para desarrollar hasta un grado máximo la cosecha de trigo argentino y obtener una compensación que guarde relación con el trabajo y el capital invertidos, sería necesario construir graneros y almacenes en las fincas y efectuar cambios radicales en los sistemas de transporte, puesto que todos los carros de ferrocarril que se usan con este fin son de plataforma, y no proporcionan ningún resguardo de la inclemencia del tiempo.

BOLIVIA.

FERROCARRIL DE HUAQUI.

El Poder Ejecutivo ha solicitado del Congreso una ley que declare afectas las rentas de alcoholes y aguardientes y la de exportación de goma del Departamento de La Paz hasta el 31 de diciembre de 1904, á los gastos que demande la construcción del ferrocarril de Huaqui á La Paz; es decir, pide se prorroguen hasta esa fecha los efectos de la ley de 26 de octubre de 1900.

Apoya su demanda en la baja del cambio que ha reducido considerablemente los recursos destinados á esa obra. Sue cálculos al respecto son los siguientes:

	Bolivianos.
Productos de la renta de alcoholes y aguardientes del 1° de setiembre de 1900 al 31 de agosto de 1901.....	421, 342. 64
Utilidades sobre 5,000 cajas de alcohol	40, 000. 00
Impuesto sobre gomas hasta agosto	66, 679. 09
Total	528, 021. 73

Suponiendo igual producto en los tres años que comprende la autorización de 26 de octubre de 1900, se tendrían bolivianos 1,584,065.19, que al cambio de 18 peniques equivalen á £118,804 7s. 9d.; el presupuesto de costo del ferrocarril es £170,000; resulta una diferencia de £51,195 2s. 3d., ó sean, á 18 peniques, bolivianos 682,601.50.

Del rendimiento de alcoholes y gomas en 16 meses se obtendría bolivianos 704,028.97. La diferencia, relativamente pequeña, de bolivianos 21,427.47 se aplicaría á otros gastos importantes relacionados con la misma obra.

También ha pedido el Poder Ejecutivo autorización para emitir bonos al portador por la suma de bolivianos 500,000, que ganarían un interés de 5 por ciento semestral, y cuya amortización se haría trimestralmente por sorteos á partir del 1° de enero de 1902. Esa operación tendría por objeto obtener los fondos necesarios para continuar la obra del mismo ferrocarril.

Los bonos serían garantizados con el futuro rendimiento correspondiente al Gobierno en el ramo de alcoholes y subsidiariamente con el material del ferrocarril y las obras ejecutadas y en construcción.

EL ESTAÑO EN ORURO.

Según datos oficiales, el estaño en barra y barrilla exportado del departamento de Oruro en el año de 1900 alcanzó á 81,771.28 quintales métricos en esta forma:

Oruro	11, 350. 28
Machacamarca	36, 674. 94
Poopó	3, 665. 14
Pazña	6, 153. 92
Challapata	22, 515. 99
Sevaruayo	1, 411. 01
Total	81, 771. 28

Esto, fuera de 850.75 quintales métricos de minerales á granel, procedentes solo del mismo Oruro.

Calculando á £111 la tonelada avoirdupois, esos 82,622.03 quintales métricos, ó sean 812.41 toneladas, tienen un valor de £90,177 10s. 2d.

BRASIL.

EXPORTACIÓN DE CAUCHO EN DICIEMBRE DE 1901.

Mediante la cortesía del Sr A. BEZERRA, miembro honorario correspondiente de la Oficina de las Repúblicas Americanas en Pará, se han

recibido los siguientes datos concernientes á la exportación de cacho durante el mes de diciembre de 1901, siendo las cantidades en kilogramos:

Exportados por—	Destino.						
	Liverpool.	Havre.	Hamburgo.	Genova.	Amberes.	América.	Total.
Manaos.....	714, 612	75, 550	29, 512	11, 650	1, 041, 671	1, 872, 995
Pará.....	726, 152	163, 838	16, 203	607	804, 884	1, 711, 684
Iquitos.....	98, 728	97, 985	196, 713
Caballo Cocha.....	24, 036	24, 036
Total.....	1, 563, 528	337, 373	45, 715	11, 650	607	1, 846, 555	3, 805, 428

CULTIVO DE LA SEDA EN MINAS GERAES.

Según el “Diario da Bahia,” el cultivo de la seda ha sido iniciado con gran éxito en Barbacena, Estado de Minas Geraes. Los colonos de la colonia Rodrigo Silva, en este lugar produjeron en 1901, 500 kilogramos de capullos de gusano de seda, y se anuncia que en 1902 el resultado del cultivo será de 10,000 kilogramos. La colonia de que se trata está compuesta de brasileros, italianos, y austriacos, y están bajo la dirección del Sr. AMILCAR SAVASSI. La legislatura del Estado de Minas Geraes ha autorizado la compra de grandes maquinarias para la manufactura de tejidos de seda.

FÁBRICAS DE TEJIDOS DE ALGODÓN EN SÃO PAULO.

En el Estado de São Paulo existen no menos de 14 fábricas de tejidos de algodón, de las cuales 3 están an Sorocaba, 1 en Tuby; 1 en Salto Y Tú, 1 en Piracicaba, 1 en Jundiáhy, 1 en Villa Americana, 1 en Itapetininga y 5 en la ciudad y distrito de São Paulo. Todas estas fábricas, con excepción de una, preparan sus hilos y manufacturan telas de varias clases, así como indianas corrientes. Algunas de ellas tienen más de 200 tejedoras y emplean de 300 á 400 hombres. Se puede decir que la producción media es de 8,000 metros diarios. Todas las fábricas trabajan más de las horas de ordenanza y están manejadas por personas prácticas de Lancashire, Inglaterra. Los artículos manufacturados son de muy regular calidad y bastante durables, pero no son tan perfectos como los artículos importados. La mayor parte del algodón empleado es cosechado en el Estado de São Paulo, y la maquinaria es, en su mayor parte, de manufactura inglesa.

EL CINABRIO EN OURO PRETO.

El “Côte Libre,” de Bruselas, Bélgica, dice que las exploraciones hechas en Ouro Preto, Brasil, han revelado la existencia, en aquel distrito, de particulas redondas de cinabrio, algunos de cuyos fragmentos, que pesan hasta 300 gramos, han dado al analizarse de 0.88 á 4.73 por ciento de mercurio metálico. Estos depósitos se encuentran en

una veta que tiene una inclinación de 30°, lo cual hace que la explotación resulte relativamente fácil.

NOTAS MISCELÁNEAS.

El Tesoro Nacional ha depositado en el Banco Nacional los fondos necesarios para la compra de letras por la suma de 780,166.86 francos, cantidad que se necesita para abonar los intereses y la amortización de la deuda externa. El cambio se mantenía á 11½ peniques por milreis.

El “Diario da Bahia” anuncia que el oro existe en abundancia en la vecindad de Pitanguy, Rio Grande do Sul, y que esta ciudad dentro de poco tiempo será uno de los principales centros auríferos de la República.

Los Señores CHARLES BOLLO y THEODORE REINECKEN, han obtenido recientemente una concesión para la construcción de un ferrocarril entre Pelotas y Porto Alegre, en el Estado de Rio Grande do Sul.

El Estado de Bahia ha hecho un contrato con JAMES WEBSTER para el servicio de transporte entre Sitio Novo y Orobo Grande, en el cual se usarán locomotoras.

El gobierno de Bahia ha contratado un empréstito con el British Bank por la suma de 300,000 milreis, por seis meses, con el interés del 9 por ciento.

El Ministro de Hacienda ha pedido á Europa, 1,000,000 de billetes de banco de las denominaciones de 500, 1,000 y 2,000 reis.

El número de emigrantes que llegaron al Estado de São Paulo, durante el mes de octubre de 1901, fué de 22,797.

COSTA RICA.

INFORME SOBRE MINAS.

Los informes recibidos de diferentes distritos abundantes demuestran una creciente actividad en la explotación de los recursos mineros del país. Se están formando nuevas compañías, y se van aplicando nuevos métodos á las minas que se están explotando. La “Abengares Gold Fields Company” (limitada) opera en el lado del Pacífico de la República y está abriendo sus minas á un nivel más bajo que antes. Con un molino de 10 trituradores, el promedio de la producción es de \$8,000 á \$10,000 mensuales, y ya se han hecho los arreglos debidos para aumentar hasta 40 el número de trituradores. La separación se hace por medio de la amalgama y el tratamiento al cianuro, y el promedio de rendimiento es 90 por ciento. Se está efectuando la reorganización de la compañía que explota las minas de oro situadas en las Montañas de Aguacate, la cual cuenta con un capital de \$5,000,000.

Estas minas han estado doce años sin explotarse, y se calcula que

hasta la fecha en que dejaron de explotarse habían producido \$7,000,000. Ya se ha comenzado la excavación de túneles en dos puntos, y se están haciendo los preparativos necesarios para obtener un gran resultado al nivel de túnel más bajo posible. Varios hombres de negocios prominentes de San José son accionistas de la nueva compañía. Las minas conocidas por “La Unión,” situadas cerca de Miramar, en el lado del Pacífico, hacía un año que no se explotaban, pero en la actualidad se están trabajando otra vez por medio de túneles nuevos y más bajos. Empléase un molino de 20 trituradores, y el tratamiento al cloro, y se dice que el mineral que se obtiene es de baja ley, pero que se encuentra en grandes cantidades. La mina denominada “El Porvenir,” situada en el río Machuca, á unas 12 ó 15 millas de la costa del Pacífico, la está explotando una nueva compañía, compuesta principalmente de americanos y llamada “The Rio Grande Gold Mining Company.” El promedio del valor del mineral es de \$40 á \$60 por tonelada. “The Thayer Mining and Milling Company” ha comprado las minas y molinos de la compañía denominada “The Bella Vista Mining and Milling Company,” y en la actualidad está operando dos molinos de 20 trituradores cada uno, pero muy pronto se propone emplear una planta mayor.

CUBA.

PRODUCCIÓN DE AZÚCAR.

La producción de azúcar de 1892 á la fecha ha sido como sigue:

	Toneladas.		Toneladas.
1892-93.....	815, 894	1897-98.....	305, 543
1893-94.....	1, 054, 214	1898-99.....	335, 668
1894-95.....	1, 004, 262	1899-1900.....	300, 073

CHILE.

LEY RELATIVA A LA NEGOCIACIÓN METÁLICA.

ARTÍCULO 1°. Se aplaza hasta el 1° de enero de 1905, la fecha señalada por la ley número 1,054, de 31 de julio de 1898, para iniciar la conversión metálica.

El fondo de conversión en oro continuará depositado en la Casa de Moneda, afecto exclusivamente al pago de los billetes fiscales.

Se acrecentará anualmente este fondo con la suma de cinco millones de pesos en oro de dieziocho peniques, tomados en letras sobre Londres del producto de los derechos de exportación del salitre y yodo.

ART. 2°. Se destinan á rentas generales los fondos en billetes fiscales actualmente aplicados á la conversión, los cuales quedan sustituidos por las sumas á que se refiere el último inciso del artículo anterior.

ART. 3°. Las letras hipotecarias que actualmente forman parte del fondo de conversión se destinarán, desde el 1° de enero de 1905, al pago de los cánones de los censos redimidos en arcas fiscales.

Las sumas que se perciban por intereses y amortización de estas letras se harán ingresar á fondos generales, durante los tres años de prórroga de la conversión.

ART. 4°. Autorízase al presidente de la República, por el término de dos años, para que con arreglo á la ley número 277, de 11 de febrero de 1895, haga acuñar hasta cuatro millones de pesos en moneda de plata de cincuenta y cien centavos de valor, con ley de setecientos milésimos de fino y peso de diez y veinte gramos, respectivamente.

La moneda de cincuenta centavos tendrá veintiocho milímetros de diámetro y los mismos emblemas y leyendas de las demas monedas de plata creadas por la ley citada; su tolerancia en feble y fuerte será de cuarenta milésimos en la ley y de cuatro por mil en el peso.

La tolerancia en el peso de cada pieza será de cuarenta miligramos.

Para el objeto espresado en este artículo, podrá el Presidente de la República adquirir, en licitacion pública, las pastas necesarias.

ART. 5°. Queda autorizado el Presidente de la República para retirar los billetes de corte de un peso y reemplazardos por billetes de corte mayor, á medida que se efectúe el canje por la moneda de plata á que se refiere el artículo precedente.

ART. 6°. Dentro del plazo de un año, se procederá á reemplazar por billetes fiscales nuevos los billetes en actual circulación de los tipos de uno, dos, cinco, diez y veinte pesos.

ART. 7°. Miéntras los billetes de corte de un peso no fueren retirados de la circulación, se incinerarán los billetes de dicho tipo que estuvieren deteriorados por el uso, con arreglo á las disposiciones vigentes.

ART. 8°. Se deroga la ley número 1,054, de 31 de julio de 1898, en lo que fuere contraria á la presente ley.

Y por cuanto, oído el Consejo de Estado, he tenido á bien aprobarla y sancionarla; por tanto, promúlguese y llévase a efecto en todas sus partes como ley de la República.

JERMAN RIESCO.
E. VILLEGAS.

SANTIAGO, 31 de diciembre de 1901.

PRODUCCIÓN DE SALITRE EN 1901.

En un informe publicado el 31 de diciembre de 1901 por los Sres. W. MONTGOMERY & Co., de Londres, se dice que el primer año del presente siglo se ha distinguido en el consumo universal de nitrato de soda, así como por su notable alza de precio. Se atribuye á esta última circunstancia las restricciones sobre su producción en unión de los definitivos arreglos comerciales; la extensión de mercados y la aplicación de principios científicos al uso del nitrato como fertilizador, ha producido también un constante aumento en el consumo. Debido al fracaso parcial de las cosechas europeas, se espera que habrá una gran urgencia para aumentar la producción de cereales en la próxima estación, lo cual, indudablemente, será un gran factor en la demanda de nitrato. El abastecimiento visible el 31 de diciembre de 1901, comparado con el de la misma fecha en 1900, muestra una deficiencia de 150,000 toneladas, pero se ha calculado que las consignaciones de Chile entre enero y marzo de 1902 llegarán á 135,000 toneladas, contra 67,000 toneladas por los meses correspondientes en 1901, así es que, al terminar el primer trimestre de 1902, habrá una existencia total de 777,000 toneladas comparadas con las 861,000 toneladas por el mismo período en 1901. El consumo de enero 1 á mayo 15 de 1901 fué de 770,000 toneladas, de manera que sólo un pequeño margen se deja para las contingencias imprevistas que surjan en el comercio del nitrato. Como, no obstante, el consumo en 1901 llegó á una cifra tan alta, no es muy probable que las cantidades de 1902 excedan á las de 1901.

El consumo total en el mundo en los últimos tres años ha sido el siguiente:

	1899.	1900.	1901.
	<i>Toneladas.</i>	<i>Toneladas.</i>	<i>Toneladas.</i>
Continente de Europa.....	1,017,000	991,000	1,036,000
Reino Unido.....	123,000	135,000	118,000
Estados Unidos.....	160,000	175,000	18,000
Otros países.....	30,000	23,600
Total.....	1,330,000	1,324,000	1,364,000
Embarques de Chile.....	1,373,000	1,429,000	1,263,000

PRÓRROGA DE PRIVILEGIOS DE INVENCION.

El Ministerio de Industria y Obras Públicas ha decretado lo siguiente:

“Núm. 3326.

SANTIAGO, 21 de noviembre de 1901.

“Vista la nota que precede, y teniendo en consideración que son numerosas las solicitudes de prórroga de privilegios exclusivos que se presentan sin observar formalidad alguna y que es necesario, para apreciar la justicia ó conveniencia que hay en otorgarlas, reglamentar la forma en que deben ser presentadas, decreto:

“Las solicitudes de prórroga de privilegios exclusivos que en lo sucesivo se presenten al Ministerio de Industrias y Obras Públicas, deberán venir acompañadas:

“1. De una copia del decreto que haya otorgado la patente del privilegio para el cual se solicita prórroga del plazo de implantación;

“2. Del poder ó mandato que autoriza al recurrente para solicitar dicha prórroga cuando proceda á nombre de otra persona; y

“3. De una exposición sustanciada de las causas que hayan impedido la implantación del privilegio dentro del plazo concedido y de las gestiones que haya ejecutado para implantarlo, expresando si ha mediado inversión de capitales en el país.

“Tómese razón, comuníquese y publíquese.

“RIESGO.

“RAFAEL ORREGO.”

COMERCIO MARÍTIMO INTERIOR.

El comercio marítimo interior ó sea de cabotaje, comprendiendo la introducción y extracción de productos nacionales y de mercaderías nacionalizadas durante el año de 1900, alcanzó á la crecida suma de \$226,761,022, cifra que comparada con la que arroja el ejercicio de 1899, da una diferencia á favor de 1900 de \$12,602,018.

Los puertos que aumentaron su tráfico en 1900 con relación á 1899 fueron los siguientes:

Valparaíso	\$1, 791, 808
Arica	834, 269
Iquique	1, 684, 273
Tocopilla	956, 734
Taltal	1, 308, 953
Caldera	3, 683, 564
Talcahuano	5, 547, 961
Coronel	2, 005, 130
Valdivia	1, 742, 683
Puerto Montt	827, 201
Ancud	794, 247

Los siguientes puertos sufrieron disminución durante el período á que se refiere:

Pisagua	\$932, 480
Antofagasta	2, 478, 943
Carrizal Bajo	2, 162, 344
Coquimbo	3, 001, 038

Los valores arriba mencionados son expresados en moneda de plata de 18 peniques.

ENTRADAS Y SALIDAS DE BUQUES EN VALPARAISO.

Durante el año de 1901 entraron en el puerto de Valparaíso 911 vapores cuya capacidad total ascendió á 1,680,030 toneladas, y 286

buques de vela cuya capacidad total ascendió á 258,130 toneladas. El total general de buques durante el expresado año fué 1,197, y el total general de toneladas fué 1,545,072. Durante el mismo período salieron de dicho puerto 916 vapores y 281 buques de vela (total, 1,197 buques) que representaban, respectivamente, 1,168,189 y 374,749 toneladas. En 1900 entraron 866 vapores con una capacidad de 1,103,210 toneladas y 210 buques de vela que representaban 246,418 toneladas; y salieron 865 vapores que representaban una capacidad de 1,124,190 toneladas y 212 buques de vela con una capacidad de 258,130 toneladas, ó sea un total general de 1,077 buques que representan una capacidad total de 1,382,320 toneladas.

Durante el año de 1901, el número de pasajeros llegados ascendió á 19,972, de los cuales 10,765 vinieron en vapores extranjeros. El número de pasajeros que salieron ascendió á 16,353, de los cuales 8,048 se fueron en buques extranjeros. En 1900 llegaron 18,784 y salieron 17,496.

NOTAS DIVERSAS.

Se ha concedido permiso á los Señores HERRERA DEL RÍO Y CÍA. para construir un ferrocarril de vía estrecha de Punta de Lobos á Salar Grande de Tarapacá.

Por ley del Congreso, dictada con fecha 1° de noviembre de 1901, el arancel de aduana que rigió durante el año de 1901, se declaró vigente para el actual de 1902.

ECUADOR.

PRESUPUESTO DE INGRESOS Y EGRESOS DEL GOBIERNO PARA 1902.

Por ley votada en el Congreso, publicada en el “Registro Oficial de la República del Ecuador,” en Quito, noviembre 9 de 1901, se dispuso que para los gastos de la Administración pública en el año económico de 1902 se destinase la suma de 13,418,504.25 sueres, que habrán de ser recaudados y distribuidos como sigue:

INGRESOS.		Sueres.
Renta aduanera	9,640,700.00	
Renta de ramos estancados	480,000.00	
Impuestos diversos	2,868,804.25	
Ventas de tierras, etc	423,000.00	
Arrendamientos	36,000.00	
		<hr/>
		13,418,504.25

Las rentas aduaneras proceden de las fuentes siguientes:

Derechos de importación.....	3, 200, 000. 00
Ciento por ciento de recargo	3, 200, 000. 00
Dos por ciento adicional sobre licores, exceptuando los vinos	5, 000. 00
Otro impuesto adicional sobre licores	300, 000. 00
Impuesto sobre la madera.....	35, 000. 00
Impuesto adicional sobre id.....	60, 000. 00
Derechos de exportación.....	1, 200, 000. 00
Cincuenta por ciento de recargo sobre id.....	600, 000. 00
Ochenta y dos centavos sobre la exportación del cacao	348, 500. 00
Derechos de piso	100, 000. 00
Recargo de ciento por ciento sobre id.....	100, 000. 00
Medio centavo sobre exportación en Guayaquil, Manta, Bahía, Puerto Bolívar, Esmeraldas, Loja y Tulcán	152, 000. 60
Otros derechos y recargos.....	340, 200. 00
	<hr/>
	9, 640, 700. 90

Los artículos estancados son la sal y la pólvora. La primera produce 330,000 sures al año; y la segunda, 120,000.

EGRESOS.

Los egresos han de ser como sigue:

Gastos del Congreso	111, 780. 00
Id. de la Presidencia de la República	43, 623. 00
Id. de la Vicepresidencia de la República	9, 609. 00
Id. del Consejo de Estado.....	1, 560. 00
Id. á cargo del Ministerio de la Interior, Policía, Obras Públicas, etc.	3, 603, 168. 00

REFORMAS Á LA LEY DE ADUANAS.

El Congreso de la República del Ecuador ha hecho las siguientes reformas á la Ley de Aduanas:

ART. 1. La 2ª parte del art. 11 dirá: “El Jefe de Vistas y el de Guarda-Almacenes serán designados por el Inspector de Aduanas.”

ART. 2. El art. 12 dirá: “Las Tesorerías de Hacienda de las provincias fronterizas á las Repúblicas vecinas, harán las veces de Colecturías de Aduana.”

ART. 3. El art. 13 dirá: “Son atribuciones y obligaciones del Inspector de Aduanas.”

ART. 4. En la atribución 2ª del art. 13, póngase “hicieren” en vez de “designasen.”

ART. 5. En la atribución 8ª del mismo artículo, varíese la palabra “conocer” por “reconocer.”

ART. 6. En la atribución 1ª del art. 15, suprimáanse las palabras “ó particular.”

ART. 7. En el art. 16 suprimáse la 2ª parte de la atribución 1ª:

ART. 8. La 2ª parte del N° 3º del art. 16, sustitúyase con la siguiente: “Todo retardo que pase de un mes, después de verificada la respectiva citación, para que se pida el despacho, será corregido con una multa equivalente al 10 por ciento sobre el valor de los correspondientes derechos.”

ART. 9. A la atribución 10ª del mismo artículo, agréguese: “La negligencia en el cumplimiento de este deber, hará responsable al Administrador, de los perjuicios que pudieren sobrevenir al Fisco.”

ART. 10. Suprimáanse las atribuciones 15ª y 16ª del art. 16.

ART. 11. A la atribución 21ª del citado artículo, añádase: “y los reclamos que haga el importador sobre aforo y liquidación de las mercaderías que se despachen.”

ART. 12. Suprimáse la atribución 24ª del referido art. 16.

ART. 13. A la atribución 23ª del art. 17, agréguese: “y los reclamos que se hagan por aforos, despacho y liquidación de derechos.”

ART. 14. En la atribución 1ª del art. 19, suprimáanse las palabras “excepto la correspondencia oficial, etc.”

ART. 15. En la atribución 1ª del art. 24, elimínense las palabras “robo público.”

ART. 16. En la atribución 6ª del expresado artículo, póngase: “á los seis días, á más tardar, de estar autorizado por el Vista un pedimento de despacho decretado por el Administrador, deben estar entregados todos los bultos pedidos, existentes en los depósitos de Aduana, siendo responsable, etc.”

ART. 17. Suprimáse el art. 25.

ART. 18. El inciso 2º del art. 26 debe colocarse al final de la atribución 6ª del art. 24.

ART. 19. Al art. 27, en la sección correspondiente, agréguese: “y conocimiento del Administrador.”

ART. 20. En el N° 6 del art. 39, en lugar de las palabras “se facilitará,” debe ponerse “deberá.”

ART. 21. En el inciso 2º del art. 45, cámbiese por 93 el número 94.

ART. 22. Al final de la 1ª parte del art. 51, agréguese: “el que no tendrá voto.”

ART. 23. El N° 10º del art. 56 dirá: “Pólvora y sal.”

ART. 24. La 2ª parte del N° 12, deberá decir: “con excepción de los N°s 1º, 3º, 6º, 7º, 8º y 9º.

ART. 25. En el N° 1º del art. 57, suprimáse la palabra “arados,” que se pondrá en el N° 7º del mismo artículo, y á este mismo número agréguese: “azadones, barras, barretas, palas y repuestos para arados.”

ART. 26. En el referido N° 7° deben ser hechas las siguientes reformas:

Agregar á las palapras “Botellas vacías,” “ordinarias para envases de licores.”

Suprimir las denominaciones “Cerdos gordos,” “Gasolina,” “Lama mineral.”

ART. 27. En el art. 60, después de “Alambre,” póngase “con púas.”

Agréguese: “Amianto,” “Columnas y vigas de hierro para construcciones,” “Planchas de hierro ornamentado para construcciones.”

Suprímase la palabra “Dinamita,” y después de “Vainilla de algarrobo,” las palabras restantes.

ART. 28. En el art. 61:

Suprímase “Estaño” y “Cola efervescente.”

Agréguese: “Azúcar,” “Sebo en rama,” “Machetes para rozar.”

Suprímase: “Tablas de madera para formar cajones.”

ART. 29. En el art. 63:

Después de “aguas gaseosas,” agréguese: “Que no sean de cristal ó vidrio,” “Ácido carbónico.”

En seguida de “Bronce,” póngase “Cobre,” “Estaño.”

Suprímase: “Ciruelas pasas.”

Después de “Chicha en general,” póngase: “Con excepción de las de uva.”

A la palabra “Excusados,” agréguese “y urinarios.”

Agréguese: “Fideos,” “Gasolina,” “Cola efervescente,” “Manteca de puerco ó vaca” y “Tablas recortadas para cajones.”

Suprímase: “Machetes para rozar,” “Máquinas para hojalateros y carpinteros, cuyo peso fuere menor de 50 kilos,” y “Tejados de vidrio y sus armazones.”

Póngase en el lugar respectivo: “Jamones crudos.”

Después de “Tachuelas,” se pondrá: “Y clavos de menos de media pulgada.”

ART. 30. En el art. 64:

Elimínense: “Alambiques á vapor, etc.,” “Azúcar,” “Fideos,” “Hachuelas” y “Machetes que no sean de rozar,” y agréguese “Liencillos.”

En vez de “Barriles vacíos,” póngase “Baúles vacíos,” y en lugar de “Manteca de puerco ó vaca,” póngase “Manteca que no sea de puerco ó vaca.”

Agréguese: “Ciruelas pasas,” “Frutas en jugo” y “Ollas de hierro ó acero.”

ART. 31. En el art. 65:

Agréguese: “Hachuelas,” “Machetes que no sean de rozar,” “Telas de cáñamo” y “Agua florida, Kananga, Divina de clase común y Bay rum.”

En “Etiquetas,” suprímase las palabras: Destinadas á fábricas existentes en el país.”

ART. 32. En el art. 66:

Elimínense: “Etiquetas en blanco para botellas;” y las palabras “para niños,” después de “juguetes;” “para varios usos,” después de “papel caneva perforado;” “Liencillo” y “Agua de florida, Kananga, etc.”

ART. 33. En el art. 67:

Agréguese “concertinas” después de “Acordiones.”

Después de la palabra “Alcoholes,” póngase “de más de 25 gramos Cartier.” En vez de “Carriles,” debe ponerse “Guarnieles.”

Después de las palabras “vestidos costurados de algodón,” póngase las demás suprimiendo “ó de lino.”

ART. 34. En el art. 68:

Después de “Encajes, sean de algodón,” agréguese “de lino ó lana;” determínese en “Guantes” la excepción á los de piel ó seda.

Agréguese: “Vestidos costurados de lino, como camisas, camisones, cuellos, puños, etc. Se exceptúan los de punto de media, que pagarán 50 centavos kilo, y los que tengan forro de seda, que se aforarán á dos sueres kilo.”

Suprímase: “Adornos confeccionados, etc.”

ART. 35. Al art. 69:

Agréguese: “Adornos confeccionados, que no sean de seda, para vestidos, calzado, etc.,” y “formas para sombreros.”

ART. 36. En el art. 70, agréguese, después de las palabras: “Guantes de seda,” “y de piel.”

ART. 37. En el art. 71, agréguese: “Adornos confeccionados de seda para vestidos” y “Vajilla de plata.”

ART. 38. En el art. 72, suprímase la palabra “ciento.”

ART. 39. Elimínense los arts. 76 y 77.

ART. 40. El art. 78 dirá: “Si en un bulto resultaren efectos de distinta clase ó mercaderías no pedidas y de más alto aforo, y si no se hubiese expresado claramente en el pedimento sus varios contenidos, todos serán aforados como los de más alta clase.”

ART. 41. En art. 81, después de las palabras “Todo bulto de mercaderías que resultare robado,” agréguese: “ó que no fuere entregado á la Aduana por el buque.”

ART. 42. En el art. 85, suprímase el último inciso.

ART. 43. El art. 86, en su inciso 2º, dirá: “En los sobordos se cobrará por derechos consulares el 10 por ciento sobre los derechos que se hubiesen abonado por la certificación de la factura consular.”

ART. 44. Al final del inciso 3º del art. 86, agréguese: “que formarán parte de los ingresos nacionales.”

ART. 45. En el art. 87, suprímase el último inciso.

ART. 46. En el inciso 4º del art. 95, elimínense las palabras “como, por ejemplo, la que habría si se aforaran los fideos á quince centavos kilo, en vez de diez.”

ART. 47. En el art. 111, póngase “veinte” en vez de “cinco.”

ART. 48. Suprímase el art. 118.

ART. 49. El art. 159 dirá: "Por todos los efectos que se importen á a República, excepto los inflamables, que pagarán la mitad, se cobrará en las Aduanas dos centavos por cada pie cúbico."

"Por cada 50 kilogramos de plomo, hierro y demás metales, cinco centavos."

"El derecho de piso se cobrará por cada mes ó fracción de mes, dándose por terminado todo mes empezado."

ART. 50. En el art. 167, las citas al art. 55 deberán referirse al art. 57, y debe suprimirse el art. 5.

ART. 51. Al inciso final del art. 170, agréguese: "Y sus recargos."

ART. 52. Suprímase el art. 181.

ART. 53. Agréguese el siguiente artículo: "El Ministro de Hacienda codificará la Ley de Aduanas, insertando las presentes reformas, y cuidará de enmendar las citas que estuvieren mal hechas."

ART. 54. La presente Ley regirá desde el 1º de enero de 1902.

Dado en Quito, capital de la República del Ecuador, á nueve de octubre de mil novecientos uno.

ESTADOS UNIDOS.

COMERCIO CON LA AMÉRICA LATINA.

IMPORTACIONES Y EXPORTACIONES.

En la página 323 aparece la última relación del comercio entre los Estados Unidos y la América latina, tomada de la compilación hecha por la Oficina de Estadística del Departamento de Hacienda de los Estados Unidos. Estos datos se refieren al valor del comercio arriba mencionado. La estadística corresponde al mes diciembre de 1901, comparada con la del mes correspondiente del año anterior, y también comprende los datos referentes á los doce meses que terminaron en diciembre de 1901, comparados con igual período de 1900. Debe explicarse que las estadísticas de las importaciones y exportaciones de las diversas aduanas referentes á un mes cualquiera no se reciben en el Departamento de Hacienda hasta el 20 del próximo mes, necesitándose algún tiempo para su compilación é impresión, de suerte que los datos estadísticos correspondientes al mes de diciembre, por ejemplo, no se publican sino en febrero.

COMERCIO EXTRANJERO EN 1901.

Los datos ya publicados por el Departamento del Tesoro, relativos al comercio extranjero de los Estados Unidos, muestran que el valor total de los artículos importados por los Estados Unidos durante el año común de 1901 exceden en \$51,271,342 á los que se importaron en

1900, en tanto que el valor de las exportaciones fué \$12,565,194 menor en 1901 que en 1900. El comercio total tuvo un aumento de \$38,706,148, ó sea de \$2,307,095,827 en 1900 á \$2,345,801,975 en 1901.

En el resumen de 1901, relativo al comercio extranjero del país, no se han incluido ni las importaciones del Puerto Rico ni las exportaciones á esta isla ni á Hawai, por más que se han incluido en el total correspondiente al año de 1900, siendo así que las dos juntas han enviado productos á los Estados Unidos por valor de \$11,697,551, y han recibido mercancías de los Estados Unidos en dicho año por valor de \$10,288,782. En 1901 ambas islas se consideraron como partes de los Estados Unidos. El total general de exportaciones en 1901 incluye el valor de las mercancías extranjeras reexportadas por valor de \$27,296,929 y \$24,936,001 en 1901 y en 1900 respectivamente.

Al examinarse la estadística de las importaciones, se ve que la mayor parte del aumento obtenido en 1901 se debe á los artículos que se emplean en los procedimientos de fabricación (que muestran un aumento de \$26,000,000), y los artículos de lujo, etc., muestran un aumento de \$18,000,000. Los artículos ya manufacturados listos para el consumo, representan una parte relativamente pequeña de dicho aumento (es decir, \$6,300,000), y los comestibles y animales muestran un aumento de poco más de una cuarta parte de un 1 por ciento, ó sea \$600,000. El promedio de las importaciones libres en 1901 fué 43.33, comparado con 41.28 en 1900. Los derechos cobrados en las aduanas ascendieron á \$243,329,967 en 1901, contra \$240,304,737 en 1900.

La baja en el valor de los artículos manufacturados exportados se debió, en gran parte, á la disminución en el total general de las exportaciones de cobre y manufacturas de este metal, incluso lingotes, barras y cobre viejo. El valor de dichas exportaciones sólo ascendió á \$33,534,899 en 1901, comparado con \$57,542,610 en 1900.

CLASIFICACIÓN DE LAS IMPORTACIONES Y EXPORTACIONES.

La siguiente relación contiene la clasificación de las importaciones y las exportaciones y el valor oficial de cada clase, así como el valor total tanto de las importaciones como de las exportaciones:

Comparación de las importaciones.

Clasificación.	1901.	1900.	Aumento.

^a Disminución.

COMERCIO CON LA AMÉRICA LATINA.

El valor total de las importaciones que los Estados Unidos han hecho de toda la América Latina en 1901 fué \$214,317,110, ó sea un 24.34 por ciento del valor total general de las mercancías extranjeras compradas. Esto acusa el gran aumento de \$44,065,763, comparado con el año anterior en que los productos recibidos de los mismos países

fueron por valor de \$170,251,347, y sólo representaron un 20.53 por ciento del valor total de las importaciones. El valor de las exportaciones de los Estados Unidos á toda la América Latina en 1901 ascendió á \$117,961,744, ó sea nada más que como un 8.05 por ciento del valor total de las exportaciones del país. En 1900 las exportaciones á la América Latina subieron á \$118,865,364, ó sea un excedente de \$1,502,590 respecto del año de 1901. Además de la estadística del comercio de los países latino-americanos comprendidos en la Unión Internacional de las Repúblicas Americanas, las cifras que aparecen en este artículo incluyen otras que representan transacciones comerciales con Cuba, las Antillas francesas, Miquelon, Langley, etc., Belize y la Guayana francesa, en cuanto á las importaciones, y las mismas islas y colonias, con la adición de las islas Falkland, en cuanto á las exportaciones.

Considerando las Repúblicas latino-americanas que pertenecen á la Unión Internacional, separadamente y en conjunto, la estadística correspondiente al año común de 1901 muestra que las importaciones que los Estados Unidos han hecho de aquellos países y las exportaciones de los Estados Unidos á los mismos, fueron como indica la tabla siguiente, en que se dan también las cifras correspondientes al año anterior, por vía de comparación:

IMPORTACIONES.

Países.	1901.	1900.	Aumento.
República Argentina.....	\$9,455,634	\$8,098,343	\$1,357,291
Brasil	79,350,725	64,914,507	14,436,218

Venezuela.....	3,052,393	3,016,762	35,631
Total.....	86,912,198	88,842,130	1,929,932

* Aumento.

El valor de las importaciones en los Estados Unidos procedentes de las 18 Repúblicas arriba mencionadas representa un 19 por ciento del valor total en 1901, y un 16.57 por ciento del correspondiente á 1900. El valor de las exportaciones de los Estados Unidos para estas Repúblicas sólo representó como un 5.95 por ciento de sus exportaciones totales en 1901, y un 6.02 por ciento las correspondientes á 1900. Por consiguiente, el saldo del comercio á su favor fué \$80,368,026 en 1901, contra \$49,338,924 en 1900.

SITUACIÓN ECONÓMICA DESDE UN PUNTO DE VISTA BRITÁNICO.

La situación de los Estados Unidos entre sus competidores comerciales, y especialmente con aquellos de Europa, está ilustrada por varios estados publicados por el "London Daily Mail Year Book for 1902." En varios capítulos de este libro se analiza y discute las condiciones prominentes en los Estados Unidos. Bajo el encabezamiento de ríqueza, los Estados Unidos ocupan el primer lugar de las grandes naciones; las cantidades correspondientes á los varios países que se comparan son: Estados Unidos, £16,350,000,000; Reino Unido, £11,806,000,000; Francia, £9,690,000,000; Alemania, £8,052,000,000; y Russia, £6,425,000,000. Mientras que los Estados Unidos se encuentra el primero en la lista, se muestra igualmente que es el país cuya deuda nacional es la más reducida, siendo las cantidades:

Estados Unidos.....	£221,000,000
Alemania.....	651,000,000
Reino Unido.....	706,000,000
Rusia.....	711,000,000
Francia.....	1,239,000,000

El tanto por ciento de la deuda, con relacion á la riqueza, es como sigue:

	Por ciento.
Estados Unidos	1.4
Reino Unido.....	6.0
Alemania.....	8.1
Rusia	11.1
Francia.....	12.8

Bajo el encabezamiento de “Competencia comercial,” dice el citado anuario que el primer año del Siglo XX se inauguró muy mal para dos de las principales naciones industriales.

Ei comercio de los Estados Unidos fué bueno y no mostró ninguna declinación desde el período floreciente de 1899 y 1900; y, al contrario, en más de las industrias, los Estados Unidos han continuado aumentando de una manera desproporcionada; y el de Francia, que ha permanecido menos expansivo al desarrollo, no fué afectado ni por la declinación ni aumento general. En Inglaterra y Alemania, sin embargo, la declinación se hizo sentir con fuerza.

Bajo el título de producción de trigo en el mundo, se ve que los otros países están muy lejos del lugar que ocupan los Estados Unidos en la producción de este cereal; los cálculos de la cosecha universal, por 1901, son como sigue en “quarters” ingleses (8 bushels):

Estados Unidos.....	90,000,000	España	13,000,000
Rusia.....	42,000,000	Rumania y Bulgaria	12,000,000
Francia.....	38,000,000	Alemania	11,000,000
India.....	30,000,000	Reino Unido.....	7,000,000
Italia.....	17,000,000	Australia	7,000,000
Hungria.....	16,000,000		

El producto del trigo de la República Argentina no está incluido en estos cálculos.

Bajo el capítulo de “Lucha por el comercio de hierro,” este libro llama la atención al hecho de que los Estados Unidos son ahora los más grandes productores de hierro y acero en el mundo, y dice:

“Se notará que el Reino Unido ha perdido terreno produciendo 396,749 toneladas menos en 1900 que en 1899; el total de la producción de la Gran Bretaña fué cerca de 5,000,000 de toneladas menos que en América. Una circunstancia poco satisfactoria en el comercio británico de hierro y acero, es que en 1900 importamos más hierro y acero que en ningún año anterior, y exportamos menos, mientras que los Estados Unidos exportaron más que nunca.”

Las tablas que acompañan este estado muestran que la producción de hierro en 1900 ha sido como sigue:

	Toneladas.
Estados Unidos	13,789,242
Reino Unido.....	8,908,570
Alemania.....	8,494,852
Francia.....	2,699,494
Rusia.....	2,821,000

La producción de acero fué como sigue:

	Toneladas.
Estados Unidos	10, 087, 322
Gran Bretaña	4, 901, 054
Alemania	4, 799, 000
Francia.....	1, 624, 046
Rusia.....	1, 494, 000

PROGRESO DURANTE UN SIGLO.

La Oficina de Estadística del Departamento del Tesoro ha publicado recientemente interesantes datos relativos al desarrollo industrial, comercial y financiero de los Estados Unidos durante el siglo diez y nueve. Entre los hechos que resaltan, está el desarrollo de la producción, el ensanchamiento del comercio, el crecimiento de la riqueza, el aumento de la moneda en circulación, así como el de los depósitos en bancos de ahorros y otros bancos, la disminución de interés en la deuda pública, y varios otros hechos que demuestran el adelanto del país.

Con referencia á la producción, se ve que el algodón ha aumentado de 155,556 fardos en 1800 á 9,436,416 fardos en 1900; la producción de lana, de 35,802,114 libras en 1840 á 302,502,328 libras en 1901; trigo, de 151,999,906 bushels en 1866 á 522,229,505 bushels en 1900; maíz, de 867,946,295 bushels en 1866 á 2,105,516 bushels en 1900; cobre, de 650 toneladas en 1850 á 270,588 toneladas en 1900; hierro, de 165,000 toneladas en 1830 á 15,800,000 toneladas en 1901; petróleo, de 21,000,000 galones en 1860 á 2,661,233,568 galones en 1900; carbón, de 3,358,899 toneladas en 1850 á 267,850,000 toneladas en 1901, y oro, de \$50,000,000 en 1850 á \$79,171,000 en 1900.

Durante el período que se compara, la exportación de mercaderías ha aumentado de \$70,971,780 en 1800 á \$1,487,764,991 en 1901, y las importaciones de \$91,252,768 en 1800 á \$83,172,165 en 1901. La riqueza del país ha aumentado de \$7,135,780,000 en 1850 á \$94,300,000,000 (calculado) en 1900; el aumento *per capita* ha sido de \$307.69 á \$1,235.86.

El total del dinero en circulación en 1860 fué de \$435,407,252, mientras que en 1901 fué de \$2,175,387,277. En 1830 los depósitos en los bancos de ahorro llegaron á \$6,973,304, mientras que en 1901 subieron á la suma de \$2,597,094,580.

La extensión ferrocarrilera se evidencia haciendo notar que el total de millas en 1850 era tan sólo de 9,021, mientras que en 1901 llegó á 199,378 millas; asimismo se nota el proporcional aumento de transporte y disminución de fletes. También está calculado que el territorio de la República se ha cuadruplicado y que la población ha aumentado dieziseis veces durante el período que se compara.

LAS IMPORTACIONES DE CAFÉ EN 1901

Las importaciones de café hechas por los Estados Unidos durante el año común de 1901 ascendieron á 1,072,009,182 libras y se valoraron

en \$70,156,044. Estas cifras representan la mayor cantidad de este artículo que jamás han importado los Estados Unidos, y exceden en 286,090,648 libras á las de 1900, en 193,810,468 libras á las de 1899 y en 267,745,247 libras á las de 1898. El abastecimiento neto en 1901 también fué el mayor que jamás se ha anunciado, habiendo ascendido á 1,027,926,869 libras, y el café exportado durante ese período de doce meses ascendió á 44,082,313 libras. En cuanto á los otros años comparados, los abastecimientos en bruto, las cantidades reexportadas y el abastecimiento neto, fueron como sigue:

Año.	Importaciones.	Exportaciones.	Abastecimiento neto.
	<i>Libras.</i>	<i>Libras.</i>	<i>Libras.</i>
1898.....	804,263,935	23,244,566	781,019,369
1899.....	878,198,584	26,552,552	851,645,972
1900.....	785,918,534	44,625,914	741,292,620

De las importaciones hechas en 1901, casi un 80 por ciento (por peso) procedieron del Brasil, como un 8.80 por ciento procedieron de la América del Sur, un poco más de un 6 por ciento de Centro América, y un poco más de un 2 por ciento de México, quedando solamente como un 3 por ciento que representa las compras hechas en el resto del mundo.

En cuanto á las importaciones de la América Latina, se dice que procedieron de los siguientes países, estableciéndose una comparación entre la estadística de 1901 con la de 1900:

Países.	1901.		1900.	
	Libras.	Valor.	Libras.	Valor.
Brasil.....	857,104,258	\$50,942,481	608,429,596	\$41,945,564
Otros países sudamericanos.....	94,333,994	6,804,717	56,052,222	4,993,145
Centro América.....	65,684,172	6,748,306	43,961,550	4,246,571
México.....	22,897,373	2,200,143	30,010,567	2,859,690
Las Antillas.....	7,971,330	628,989	9,148,580	739,700
Total.....	1,047,991,127	67,324,636	747,602,515	54,784,670

Los siguientes son los demás países de los cuales se hicieron importaciones de café durante los dos años comparados:

Países.	1901.		1900.	
	Libras.	Valor.	Libras.	Valor.
Indias Orientales.....	11,168,965	\$1,279,654	22,224,166	\$2,928,761
Otros países asiáticos.....	4,078,007	590,062	3,562,864	537,896
Reino Unido.....	4,750,201	526,946	2,128,942	263,289
Los Países Bajos.....	1,934,059	224,057	1,967,483	251,728
Alemania.....	1,750,612	173,017	4,416,834	331,131
Francia.....	150,001	17,549	2,159,374	222,257
Otros países europeos.....	78,045	5,372	1,721,330	176,420
África.....	37,445	3,161	49,813	5,505
De otros países.....	70,720	11,590	85,213	9,114
Total.....	24,018,055	2,831,408	38,316,019	4,726,101

PRODUCCIÓN MINERAL EN 1900.

Las cálculos de la producción mineral de los Estados Unidos durante el año de 1901, según datos suministrados á la Oficina de estadística del Tesoro en enero del presente año, indican que la producción de oro, plata, hierro, acero, cobre, carbón y aceite mineral, llegó á su máximo. Estos cálculos determinan la producción del oro en 1901 en \$80,218,800, contra \$79,171,000 en 1900, que fué la cantidad mayor de oro producida en los Estados Unidos. La producción de plata es calculada en 59,653,788 onzas, contra 57,647,000 onzas en el año anterior.

La producción del hierro en lingotes está estimada en 15,800,000 de toneladas, contra 13,789,242 en 1900, habiendo sido ese año el más abundante en este producto. La producción de carbón es calculada en 267,850,000 de toneladas, contra 240,965,917 toneladas en 1900, año que se distinguió por su gran producción. Los cálculos sobre petróleo colocan la producción en 2,772,000,000 de galones, contra 2,661,233,568 galones en 1900, cantidad que había excedido los años anteriores. El único artículo en la lista que muestra una pequeña disminución en 1901, comparándolo con 1900, es el cobre que disminuyó en 5,000 toneladas; la producción en ese año llegó á 265,625 toneladas. Estas cifras no sólo acusan un aumento en la producción de los Estados Unidos respecto de los años anteriores, sinó también un exceso con respecto á demás países.

En 1900 las estadísticas de Rusia con referencia á la producción de petróleo excedían un poco á las de los Estados Unidos, pero es probable que con las enormes cantidades que se dan como producidas en 1901, este último país vendrá á ocupar el primer lugar. Con respecto á la competencia en la producción de carbón, "The London Daily Mail Year Book" dice que los "Estados Unidos nos han vencido como país productor de carbón en los últimos dos años." La producción total de los Estados Unidos en 1900 excedió á la de todos los demás países, y la de 1901 excedió á la de 1900 en 27,000,000 de toneladas. Es, pues, evidente que los Estados Unidos van á la vanguardia de los países productores de carbón.

PRODUCCIÓN DE ORO Y PLATA.

Los cálculos preliminares del Sr. ROBERTS, Director de las Casas de Moneda, sobre la producción de oro y plata en los Estados Unidos, durante el año civil de 1901, indican solamente una pequeña ganancia respecto de la producción del año anterior. La producción de Alaska decayó como en \$1,000,000, mientras que en el Estado de Colorado hubo un pequeño aumento en el oro; los otros distritos han permanecido estacionarios. La producción de plata excedió á la del año anterior como en 2,000,000 de onzas finas.

El número total de onzas finas de oro producido aparece ser de

3,880,578, con un valor de \$80,218,800. El total de onzas finas de plata producida fué de 59,653,788, teniendo un valor comercial de \$35,792,200. El valor de la plata acuñada es aproximadamente de \$77,000,000. Se produjo oro, en mayor ó menor escala, en veinte y tres Estados y Territorios, y plata en veinte y dos Estados. Colorado es el Estado más productor de oro; el valor de su producción en 1901 fué estimado en \$29,000,000 y el de plata en \$20,833,333. El producto de oro de California se calculó en \$15,730,000, mientras que el de la plata sólo fué de \$1,118,333. Otros Estados productores en gran escala fueron: Montana, con \$5,023,300 oro y \$14,500,000 plata; Utah, \$3,824,300 oro y \$10,250,000 plata; Alaska, \$6,904,400 oro y \$55,000 plata; Arizona, \$4,193,400 oro y \$2,995,500 plata.

POBLACIÓN TOTAL EN 1900.

La Oficina del censo ha publicado un informe, el cual muestra que la población entera de los Estados Unidos, incluyendo la de sus distantes posesiones, fué de 84,233,069 el 1° de junio de 1900. El número de habitantes fué dividido como sigue: Estados Unidos, el continente, 75,994,575; Islas Filipinas, 6,961,339; Puerto Rico, 953,243; Hawaïi, 154,001; Alaska, 63,592; Guam, 9,000; Samoa americana, 6,100; personas en el servicio militar y naval del país, fuera del territorio del los Estados Unidos, 91,219. Las cifras que representan la población de Filipinas han sido tomadas de los cálculos estadísticos de la Comisión de Filipinas.

El informe anuncia que el duodécimo censo se tomó tan sólo en Alaska y Hawaïi, además de los Estados Unidos, pero que las cifras correspondientes al resto de los dominios de los Estados Unidos, han sido tomados de las mejores fuentes de información. El informe dice, que á la terminación del Siglo XVIII, la población era como de 5,333,000; y comparando estas cifras con las de 1900, se ve que el número de habitantes de los Estados Unidos ha aumentado muy cerca de dieciseis veces en cien años.

PRODUCCIÓN DE PIEDRAS PRECIOSAS EN 1901.

La estadística demuestra que no sólo se importaron más piedras preciosas y perlas á los Estados Unidos durante todo el año de 1901, sino también que la producción del país excedió con mucho á la de cualquier otro año en la historia del país. Los rasgos principales de esta industria pueden expresarse de la manera siguiente: (1) La producción continuada de safiros azules finos en el condado de Fergus, Estado de Montana, y los de colores de fantasía en el condado de Granito; (2) la explotación sistemática de la región de agua marina en el condado de Mitchell, en la Carolina del Norte; (3) un aumento de producción de turquesas en Nevada y en las minas de Nuevo México, en los condados de Grant y Santa Fe; (4) la gran venta de la piedra de adorno, conocida

por “turquesa matriz,” en la cual la joya y la ganga se sacan juntas, procedentes de todas estas minas de turquesas; (5) una extracción semejante de la joya y la roca ó filón de la región de esmeralda en el oeste de la Carolina del Norte, con el nombre de “esmeralda matriz;” (6) la explotación de los hermosos granates color rosado púrpura que en la actualidad se conocen por “rodolita,” en el condado de Macon, en la Carolina del Norte, y (7) el descubrimiento de turmalinas de primorosos colores en una nueva localidad en el condado de San Diego, Estado de California.

LAS IMPORTACIONES DE GOMA ELÁSTICA EN 1901.

El promedio del precio por libra de la goma elástica en bruto importada por los Estados Unidos en 1901, fué 51 centavos, comparado con 57.92 centavos in 1900. Así pues, aunque las importaciones en 1901 excedieron en 5,815,627 libras á las del año anterior, el valor total de las del último año sufrió una disminución de \$457,571. El número de libras importadas en 1901 fué 55,152,180, que representaban un valor total de \$28,120,218, y el total de las libras importadas en 1900 fué 49,337,183 valuadas en \$28,577,789. Estas importaciones, en ambos años, se hicieron de todos los países del mundo, pero la mayor parte de ellas procedieron del Brasil. Los países latino-americanos suministraron las siguientes cantidades en 1901, comparadas con las de 1900:

Países.	1901.		1900.	
	Libras.	Valor.	Libras.	Valor.
Centro-América.....	1, 247, 517	\$644, 917	1, 363, 131	\$747, 570
México.....	267, 565	113, 440	362, 960	178, 344
Antillas.....	42, 844	16, 152	35, 125	13, 152
Brasil.....	33, 719, 709	17, 124, 146	30, 571, 680	16, 918, 455
Otros países sudamericanos.....	1, 336, 131	567, 229	1, 161, 897	603, 356
Total.....	36, 613, 766	18, 465, 884	33, 494, 793	18, 460, 907

Los precios de factura de la goma elástica de las diferentes secciones del país varían, según puede verse por el promedio del precio por la libra de goma procedente de los países latine-americanos durante los dos años comparados, como sigue:

Países.	1901.	1900.
	Centavos.	Centavos.
Centro-América.....	51. 70	54. 84
México.....	42. 32	49. 17
Antillas.....	37. 70	37. 16
Brasil.....	50. 78	55. 31
Otros países sudamericanos.....	42. 45	51. 89

IMPORTACIÓN DE AZÚCAR.

En 1901 los Estados Unidos importaron 3,712,210,968 libras de azúcar que representaban un valor de \$79,619,806 comparadas, con las

3,757,029,255 de libras importadas en 1900, valuadas en \$91,742,493. Sin embargo, el total general correspondiente á este último año, comprendía 222,496,938 libras de azúcar de Hawaii, valuadas en \$9,159,432, y como quiera que dicho azúcar en la actualidad se considera como un producto nacional, los ingresos derivados de esa fuente no se incluyeron en la estadística de 1901. Por consiguiente, los verdaderos ingresos fueron mayores que los de 1901, aunque el valor total no fué tan grande. El peso total del azúcar importado, que en el arancel se clasifica como del "tipo holandés, que no exceda del núm. 16," fué 3,588,734,000 libras, y representaba un valor de \$76,503,947, en 1901, y además 3,701,447,303 libras de azúcar de Hawai, valuadas en \$90,101,689 en 1900. En 1901 las importaciones de azúcar de un grado más alto que el tipo holandés, núm. 16, pesaron 123,476,908 libras y se valoraron en \$3,115,859, comparadas con las importaciones en 1900, cuyo peso total ascendió á 55,581,952 libras, valuadas en \$1,640,804.

Las importaciones de azúcar de la América Latina durante los dos años comparados, fueron de un azúcar de un grado más bajo que el tipo holandés núm. 16, y se descomponen como sigue:

Países.	1901.		1900.	
	Libras.	Valor.	Libras.	Valor.
Centro América.....	8,954,556	\$220,491	2,542,007	\$56,295
Cuba.....	1,302,860,514	29,969,244	652,290,972	852,261
México.....	1,313,984	34,386	566,151	14,520
Brasil.....	368,266,987	6,442,317	123,522,066	2,320,508
Otros países sudamericanos.....	277,358,035	5,994,414	288,873,991	7,064,251
Total.....	1,958,754,076	42,660,852	1,067,795,187	26,307,835

El azúcar de la América Latina que entró en el mercado americano en 1901 representaba más de la mitad de la cantidad total, y más de la mitad del valor de las importaciones de azúcar hechas por los Estados Unidos, de todas las naciones del mundo, en tanto que en 1900 dichas importaciones sólo representaban poco más de la cuarta parte, tanto del peso total como del valor total del azúcar recibido en los puertos de los Estados Unidos.

CONSTRUCCIÓN DE FERROCARRILES EN 1901.

La construcción de ferrocarriles en los Estados Unidos, durante el año de 1901, excedió á cualquier año de los trascurridos desde 1890. El total de millas construidas fué de 5,057, las que agregadas á las 194,321 millas, que había listas en 1900, hacen un total de 199,378 millas.

En la distribución de esta red de ferrocarriles por Estados, Texas ha sido el más favorecido, pues le corresponden 583 millas; sigue Oklahoma con 428 millas; New México, 275; Georgia, 303; Wisconsin, 196; Missouri, 189; Indiana, 174; Minnesota, 171; Illinois, 164;

Michigan, 164; Louisiana, 160; Territorio Indio, 157; Arkansas, 156, y Pennsylvania, 153. Ningún otro Estado presenta un aumento de 150 millas en sus líneas en 1900.

Al mismo tiempo que ha tenido lugar la extensión de líneas y el aumento de carga, con la expansión de los intereses comerciales del país, el costo del transporte se ha reducido considerablemente. De acuerdo con la estadísticas, parece que el costo del transporte de una tonelada en 1882 era de \$1.24; en 1887, \$1.03; en 1890, 93 centavos; en 1895, 84 centavos; en 1897, 80 centavos, y en 1900, 75 centavos.

INFORME SOBRE LAS COSECHAS.

El oficial encargado del ramo de estadística en el Departamento de Agricultura, en un informe publicado en el mes de enero, calcula que el promedio de la producción de trigo en los Estados Unidos en 1901 fué 14.8 de bushels por acre, comparado con 12.3 de bushels en los años de 1900 y 1899, y con 13.3 de bushels, que ha sido el promedio de producción en los últimos diez años.

El área nuevamente sembrada de trigo de frío se calcula provisionalmente en 32,000,000 de acres, ó sea un aumento de un 2.9 por ciento, comparada con el área que se calcula haberse sembrado en la estación de siembras de 1900.

El área nuevamente sembrada de centeno de frío, se calcula provisionalmente en 1,250,000 acres, ó sea un aumento de un 2.9 por ciento comparada con el área que se calcula haberse sembrado en el otoño de 1900.

El Departamento de Agricultura no ha publicado ningún informe acerca del estado del trigo de frío después del 1° de diciembre de 1901. En esa fecha era un 86.7 por ciento del estado normal, comparado con un 97.1 por ciento en esa misma fecha en 1900.

Un boletín mensual sobre la cosecha, publicado por la Oficina Meteorológica del Departamento de Agricultura en el mes de febrero dice lo que sigue:

Los informes relativos al trigo de frío por lo general no son favorables, excepto en Kansas y Nebraska, donde la perspectiva es halagadora, aunque en algunas secciones del primero de estos Estados el ganado se ha comido la cosecha demasiado. El deshielo y la congelación alternativamente, y la poca ó ninguna protección suministrada por la nieve durante la mayor parte del mes de enero, en el valle del Misisipí y del Ohio, y en los Estados centrales del Atlántico, han sido muy perjudiciales al trigo de frío. En Kentucky y Tennessee hay un área considerable en tan mal estado, que se cree más acertado ararla y dedicarla á otras cosechas. La perspectiva general del trigo de frío es halagadora en la costa del Pacífico.

HONDURAS

MENSAJE DEL PRESIDENTE.

El Mensaje dirigido al Congreso Nacional por el Señor Presidente de la República de Honduras, General Don TERENCIO SIERRA, el 1° de enero de 1902, es un documento interesante, del que se insertan, á continuación algunos de los párrafos más importantes.

“Al presentarme ante vosotros á informaros de la situación general del país en el año que acaba de transcurrir, me es grato poder aseguraros que reina en Honduras la más completa paz, y que ella no se ha alterado en ningún punto de la República, ni ha habido el más leve temor de que llegara á turbarse.

* * * * *

“Paréceme que el país ha progresado en todos sentidos: la paz se afianza; la seguridad de que todos gozan es notoria; la población aumenta; la propiedad adquiere cada día mayor valor; la salubridad mejora, quizá por nuestro más extenso conocimiento de las prescripciones higiénicas y su acertada aplicación; el comercio y la agricultura prosperan; la instrucción se ensancha; el crédito nacional se consolida; las comunicaciones son ahora menos difíciles, y, en fin, hasta los desvalidos encuentran en nuestro suelo establecimientos de caridad donde hallan amparo y alivio las humanas miserias.

* * * * *

“El gasto hecho en la Policía de la capital, durante el año próximo anterior, fué de \$35,543.

* * * * *

“Se hacen importantes reformas en las cárceles, y es mejor cada día la higiene en casi todas los lugares de detención. El único establecimiento penal bien organizado que tenemos es la Penitenciaría de esta ciudad; los gastos de ella ascendieron á \$9,398.75.

* * * * *

“En el Hospital General se realizó una transformación considerable. La parte nueva agregada al edificio se inauguró el 15 de septiembre de 1900: en ella se ven todos los adelantos modernos que la ciencia y la experiencia aconsejan. Además, se han traído instrumentos de cirugía de última invención y están ya en uso: ésta es una mejora que facilita notablemente las operaciones. Fueron asistidos en nuestro Hospital General 723 enfermos, de los cuales sólo 37 murieron, ó sea poco más de un 5 por ciento. Los gastos del establecimiento ascendieron á \$24,356.78.

* * * * *

“Al Hospital de Amapala entraron, en el año, 241 enfermos, de los

cuales murieron 14. Suman \$15,445.56 los gastos de esa benéfica institución, cantidad suministrada por la Tesorería de dicho Hospital, que cobra un módico impuesto sobre las mercaderías por aquel puerto introducidas.

* * * * *

“Respecto de Estadística, os diré que la Oficina del ramo se ocupa en levantar el censo general de la República, y que los datos hasta ahora obtenidos, por deficientes que sean, no nos darán un número de habitantes menor que el que, por cálculos más ó menos arbitrarios, se ha atribuido á Honduras hasta esta fecha.

* * * * *

“Un año hace que teníamos 768 escuelas primarias. Hoy contamos con 784, es decir, 16 más que en aquella época. Aunque lentamente, la evolución del país en el sentido de su adelanto va notándose en todo, y no podía ser una excepción la Instrucción Pública.

“Los alumnos matriculados ascienden á 28,026; los profesores son 595; las profesoras 321.

“La Escuela Superior de Niñas establecida en esta ciudad, así como la Escuela Normal, han dado excelentes resultados; y respecto de la primera puedo aseguraros que los padres de familia, jueces irrecusables en la materia, están de ella altamente satisfechos.

“Tenemos seis Colegios Nacionales; hay siete privados que reciben subvención del Tesoro, y dos más sin auxilio oficial ninguno. Los alumnos de todos esos Colegios son en la actualidad 662, y sus profesores 159.

* * * * *

“Lo que pudiera deciros de la Administración de Justicia en sus relaciones con el Poder Ejecutivo, lo sabréis por la Memoria del señor Secretario del ramo; pero ne dejaré de manifestaros, aunque ello parezca innecesario, que la más absoluta independencia ha caracterizado los fallos y todos los actos de los tribunales hondureños.

* * * * *

“De la estadística judicial resulta que los delitos cometidos en Honduras durante el año que acaba de pasar ascendieron á 1,866; esta guarismo excede en 297 al de 1900; pero no es posible averiguar con toda certeza si hubo efectivamente mayor número de crímenes en este último año que en el anterior, lo que nada tendría de extraño dado el aumento de la población, ó si la superior eficacia de la policía y el laudable celo de las autoridades judiciales han logrado descubrir muchas infracciones de las leyes penales, infracciones que antes quedaban ignoradas.

* * * * *

“La situación militar que os presenté el año pasado es casi la misma de hoy, con la favorable diferencia de que el número de milicianos, que era entonces, incluyendo jefes y oficiales, de 46,927, es en la actualidad de 47 622.

* * * * *

“La situación de nuestra Hacienda, gracias á la paz en que vivimos y á las economías que ésta nos permite hacer, es á todos luces satisfactoria.

“Las rentas públicas produjeron en bruto \$2,986,952.77 y líquidas \$2,607,062.57. Agregando á esta suma el saldo de 1900 y otras entradas extraordinarias, tenemos que los ingresos de nuestro erario ascendieron á \$3,017,273.40. Los gastos fueron \$2,840,397.21. Quedó, pues, á favor del tesoro un saldo de \$176,876.19.

“La amortización de la deuda pública ascendió en el año último á \$805,144.73, con lo que la deuda total de la República quedó reducida á \$1,285,207.75.

“Cúmpleme manifestaros que la cantidad de ochocientos y tantos mil pesos amortizados en 1901 corresponde, en su mayor parte, á deudas contraídas por administraciones anteriores á la mía.

* * * * *

“El balance general de la nación se resume así: Activo (representado por numerario, especies, etc.), \$2,600,011.85; pasivo, \$1,332,400.40.

“Por consiguiente, hay un saldo á nuestro favor de \$1,267,611.45.

* * * * *

“La importación de Honduras, calculada en moneda del país, fué, en el año último, de \$4,168,599.51, y su exportación, de \$6,183,023.37; quedó, por tanto, á favor de nuestra balanza comercial la suma de \$2,014,423.86.

* * * * *

“El cambio, con relación al oro americano, fué de 115 á 130 por ciento; cambio sumamente favorable si se toma en cuenta el de la mayor parte de los países de Hispano-América en el mismo período de tiempo. Me refiero, por supuesto, á las naciones que se rigen por el patrón de plata.

* * * * *

“La agricultura mejora paulatinamente; sobre todo, se ensancha el cultivo del tabaco. Las excesivas lluvias perjudicaron en algunos departamentos la cosecha de cereales; pero en los pocos lugares donde llegó á sentirse verdadera escasez, fué ésta aliviada luego, ya introduciendo granos de otras lugares de la República, ya auxiliando el Gobierno con dinero á los vecindarios más pobres.

“Nuestra ganadería no ha obtenido en este último año tan buenas utilidades como en los anteriores. La exportación fué menor, especialmente á los Estados centroamericanos.

* * * * *

“Aunque por modo visible progresa la minería en Honduras, se halla todavía lejos de la producción que de ella debemos esperar; atendiendo á los grandes veneros de riqueza que encierran las entrañas de nuestro suelo. La exportación de metales subió en el año á \$2,279,115.50, cantidad que, comparada con la de 1900, que fué de 1,808,822, indica un mediano adelanto en esa industria. Gracias á

nuestras liberales leyes de minería, á las vías de comunicación que actualmente se construyen, y, particularmente, á la prodigiosa riqueza de nuestro territorio, podemos esperar que Honduras recobre la importancia que, como país minero, tuvo al lado de Méjico y el Perú en la época colonial.

“Comienzan á establecerse nuevas industrias de menor importancia. Contamos con tres fábricas más de puros y cigarrillos, con algunos telares, con varias fábricas de jabón y velas, y con otras diversas empresas que contribuyen á acrecentar la riqueza nacional y á promover su progreso.

* * * * *

“El servicio de Correos se ha mantenido, poco más ó menos, en el mismo estado en que se hallaba hace un año. El movimiento de paquetes postales aumentó considerablemente; y aunque este servicio no rinde al Correo provecho alguno, es para el comercio de gran utilidad. La confianza del público en cuanto al respeto que se tiene aquí por la correspondencia es absoluta. Puedo aseguraros que no hay noticia de que en todo el año se haya extraviado una carta, una tarjeta, la pieza más insignificante de las que han pasado por nuestras estafetas.

* * * * *

“El telégrafo se mantiene en el buen estado de costumbre, y en el año á que vengo refiriéndome se han reconstruido formalmente algunas líneas y se han colocado 120 millas más de alambre; con éstas, el total de nuestra red telegráfica alcanza á 3,166 millas. El número de mensajes, que aumentó de una manera notable, llegó á un total de 543,599, ó sea un exceso de 31,405 sobre el guarismo de los del año de 1900. Hay en la actualidad algunas líneas en construcción; para atender á esto tenemos en los almacenes del telégrafo material suficiente, lo mismo que para las reparaciones, que serán bien pocas en este año, pues todo nuestro servicio telegráfico ha sido cuidado con tal esmero, que son rarísimas é insignificantes las interrupciones.

* * * * *

“Durante el año último arribaron á los puertos de Honduras 2,999 embarcaciones, con un tonelaje de registro de 491,199. Esas naves nos trajeron 5,168 pasajeros y llevaron 3,928; de manera que han quedado en el país 1,240.

* * * * *

“Los trabajos en las carreteras han seguido sin interrupción; la del sur, especialmente, ha avanzado bastante. Está ya abierta al servicio público la sección de Tegucigalpa á Sabanagrande, que mide 55 kilómetros.

* * * * *

“Aunque no es satisfactorio todavía el movimiento de acuñación en nuestra Casa de Moneda, fué en este año superior al de 1900; se acuñaron \$3,948.52 más que en la época citada.

* * * * *

“Especial atención ha consagrado el Gobierno á la Escuela de Artes y Oficios, convencido como está de que una de las necesidades más urgentes de Honduras es tener hábiles artesanos. Para llegar á este resultado no sólo se mejoraron los talleres existentes sino que se estableció uno de zapatería y se está estableciendo una tenería; además, se ensancha actualmente el edificio para abrir otros talleres, como de carrocería, talabartería, etc. Ultimamente se ha dotado á la Escuela con una caldera nueva y una máquina de vapor, nueva también.

* * * * *

“Considerable es el número de obras públicas llevadas á cabo en todo el país.

* * * * *

“Nos hallamos felizmente en paz con todas las naciones, y mantenemos muy cordiales relaciones de amistad con nuestras hermanas las Repúblicas de la América Central.

* * * * *

“Guatemala dió en enero del año pasado una prueba del espíritu fraternal que la anima respecto de las otras cuatro secciones del Centro. Declaró libres de todo derecho de importación las mercancías de procedencia centroamericana. No dudo que aplaudiréis conmigo tan noble rasgo, que viene á confirmar lo establecido en el Tratado de Amistad vigente que con aquella República tenemos.

“Lo mismo que con Guatemala, se han mantenido en perfecta buena armonía nuestras relaciones con El Salvador. Representantes de Honduras asistieron al Congreso Jurídico de San Salvador. Los trabajos de aquel Congreso os fueron ya presentados por la Secretaría de Relaciones Exteriores.

“A pesar del asunto de límites que con Nicaragua discutimos, no se han alterado en un ápice nuestras relaciones con el Gobierno de aquella República. Debo decir algo acerca de ese asunto. Las Comisiones de uno y otro Estado trazaron sin dificultad la línea divisoria desde el Pacífico hasta el Portillo de Teotecacinte, es decir, en la parte poblada de ambas Repúblicas; mas al continuar el trazo hacia el Atlántico, hubo sustancial divergencia entre las dos Comisiones. Tomando en cuenta el espíritu fraternal de que están animados ambos pueblos y nuestras buenas relaciones con el Gobierno del General ZELAYA, no dudo que, dentro de poco, todo se arreglará armoniosamente.

* * * * *

“En el mes de agosto de 1900 recibimos invitación del Gobierno de Méjico para enviar Delegados á la segunda Conferencia Internacional Americana, que debía reunirse en la capital de aquella República el 22 de octubre de 1901. Aceptó Honduras la invitación del Gobierno mejicano, y con la conveniente oportunidad fueron nombrados, para representarnos en el Congreso Pan-Americano de Méjico, los Señores

Doctores Don JOSÉ LEONARD y Don FAUSTO DÁVILA que se hallan actualmente allá.

* * * * *

“La convención celebrada con el Reino de Bélgica para la extradición de criminales, el 10 de abril de 1900, fué ratificada en febrero de 1901.

* * * * *

“Por decreto del 23 de agosto de 1900, el Gobierno de Francia prorrogó hasta el 31 de diciembre de aquel año, la aplicación de la tarifa mínima francesa á los géneros coloniales procedentes de Honduras. Actualmente se estudia una convención aduanera propuesta por Su Excelencia el Señor de POURTALÉS GORGIER, lo mismo que otra sobre el cambio de paquetes postales con valor declarado.”

MÉXICO.

COMPARACIÓN ENTRE EL RESUMEN DEL PRESUPUESTO VIGENTE Y EL DE LA INICIATIVA PARA EL AÑO FISCAL DE 1902-1903.

El presupuesto que el Secretario del Tesoro ha presentado para el año económico de 1902-1903 se destina á hacer frente á los siguientes gastos, comparados con los gastos semejantes del año económico anterior:

Ramos.	Iniciativa para 1902-93.	Presupuesto vigente.	Aumento.	Diminución.
Poder Legislativo.....	\$1,145,984.80	\$1,130,983.30	\$15,001.50
Poder Ejecutivo.....	308,273.06	183,986.84	124,286.22
Poder Judicial.....	426,908.35	537,368.20	\$110,459.85
Secretaría de Relaciones.....	688,934.70	755,127.25	66,192.55
Secretaría de Gobernación.....	5,151,421.80	4,852,778.10	298,643.70
Secretaría de Justicia é Instrucción Pública.....	3,218,620.90	2,889,677.50	398,943.40
Secretaría de Fomento, Colonización é Industria.....	996,266.21	996,686.16	419.95
Secretaría de Comunicaciones y Obras Públicas.....	9,214,190.74	8,699,840.09	514,350.65
Secretaría de Hacienda y Crédito Público:				
Servicios administrativos.....	7,087,372.05	7,197,509.10	110,137.05
Deuda Pública.....	22,216,893.00	21,007,902.45	1,208,990.55
Secretaría de Guerra y Marina.....	14,283,950.22	14,023,242.84	260,707.38
Sumas.....	64,738,815.83	62,275,101.83	2,750,923.40	287,209.40

Importa el presupuesto	\$62,275,101.83
Importa el aumento.....	2,463,714.00
Importa la iniciativa.....	64,738,815.83

PRODUCCION DE AZÚCAR

Según la prensa mexicana, el año 1902 promete sur un gran período para la producción de azúcar en la República. Tanto los capitalistas extranjeros como los del país están invirtiendo grandes sumas en la mejora y engrandecimiento de los ingenios existentes, así como en la fundación de otros nuevos. En los Estados de Jalisco, Michoacan,

Morelos, Sinaloa, Sonora, Tamaulipas, y Veracruz, el capital americano, especialmente de New-York, Michigan é Illinois, y el francés de Paris, se invierte en nuevos y extensos ingenios, equipándolos con maquinarias de última invención para la producción de azúcar. También el capital nacional se emplea liberalmente en aumentar la capacidad y producción de los ingenios antiguos, agregándoles nuevos terrenos para caña y maquinaria moderna para la molienda y refinería. El "Mexican Herald" anuncia que maquinaria por valor de \$350,000 ha sido ordenada para entregarse en mayo á varios ingenios. Productores de azúcar bien entendidos, vaticinan que la producción de este año excederá en un 25 á 30 por ciento al de 1901.

Durante 1901 principiaron sus labores seis grandes é importantes ingenios, completamente provistos de maquinaria y demás cosas necesarias. Los establecimientos de refinería de San Cristóbal y Panuco, ambos en el Estado de Veracruz, y Alvarado en el Estado de Sinaloa, se explotan con grandes capitales, estando provistos de maquinaria moderna: estos sólo rendirán según se espera, considerables ganancias. Á esto debe agregarse el aumento correspondiente á los otros tres ingenios nuevos, así como la ganancia que resultará en los otros pequeños ingenios antiguos cuyos medios de producción han sido mejorados. Si la producción de azúcar en la República continua aumentando durante los próximos dos ó tres años, en la misma proporción que en los últimos cinco años, México llegará á ser un exportador de este producto.

EXPOSICIÓN PERMANENTE DE PRODUCTOS FABRILES É INDUSTRIALES.

Se ha organizado en la capital de México, con un capital social de \$300,000 en plata mexicana, una compañía comanditaria por acciones, que tiene por objeto establecer una Exposición permanente de productos fabriles mexicanos. A la cabeza de esta empresa se encuentra el Señor Don JOSÉ LANDERO y Cos, en cuyo favor se ha hecho por la Secretaría de Fomento la correspondiente concesión; y tan pronto como se obtenga, sobre lo que parece no haber duda, la sanción del Senado, empezarán á construirse los edificios necesarios para el objeto. A las manufacturas mexicanas que habrán de exhibirse allí se agregarán las extranjeras que se consumen actualmente en el país.

Los edificios tendrán que estar terminados y listos para su uso dentro del término de dos años, al fin de los cuales se efectuará solemnemente la inauguración del concurso.

Además de las manufacturas se exhibirán permanentemente colecciones completas de todos los productos de la industria, la minería y la agricultura de México, y las del mismo género que se reciban de otros países.

La compañía tendrá el derecho de cobrar á los expositores la

cantidad que se determine, por el espacio que les conceda; pero el que se ponga á disposición del gobierno, para cualquiera exhibición oficial que tenga por conveniente hacer, será otorgado gratuitamente.

Será obligación de los expositores marcar claramente en los artículos exhibidos el nombre del fabricante ó productor, el del agente que dicho fabricante ó productor tenga en México, si es extranjero, el precio del artículo, el objeto á que se le destina, y cuantos mas detalles sean precisos para informar completamente á los visitantes.

La compañía, por su parte, estará obligada á publicar en castellano, inglés, francés, alemán é italiano, un catálogo general de los artículos expuestos.

Se permitirá á la compañía la importación, libre de derechos, de los materiales que necesite para la construcción de los edificios. Los artículos extranjeros que vengan al concurso se admitirán como en calidad de depósito por el término de un año, y si al transcurrir este plazo no han sido exportados, satisfarán derechos conforme al arancel.

El Gobierno suministrará á la compañía todos los datos que sean accesibles y necesarios para impartir conocimiento exacto de la situación industrial del país, y de los recursos de los diferentes Estados y Territorios. Todos estos datos podrá publicarlos la compañía en el Catálogo General de la Exposición.

Se permitirá á los expositores que vendan los artículos expuestos, ó que los utilicen como muestras. Los artículos extranjeros que queden sin venderse no pagarán derechos, sino después de haber estado más de un año en el país.

PRECIO DE TERRENOS BALDÍOS.

El Diario Oficial del 14 de enero de 1902 publica la siguiente lista de los precios á que deberán venderse, en el próximo año económico de 1902-3, en plata mexicana y por hectárea, los terrenos baldíos de la nación, en los diferentes Estados y Territorios:

Precio de cada hectárea.		Precio de cada hectárea.	
Aguascalientes	\$2. 20	Oaxaca	\$1. 20
Campeche	1. 95	Puebla	3. 30
Chiapas	3. 00	Querétaro	2. 20
Chihuahua	1. 10	San Luis Potosí	2. 50
Coahuila	1. 10	Sinaloa	1. 20
Colima	1. 10	Sonora	1. 10
Durango	1. 10	Tabasco	3. 60
Guanajuato	2. 20	Tamaulipas	1. 20
Guerrero	1. 20	Tlaxcala	2. 20
Hidalgo	2. 50	Veracruz	2. 75
Jalisco	2. 20	Yucatán	2. 20
México	2. 75	Zacatecas	2. 20
Michoacán	3. 00	Distrito Federal	6. 10
Morelos	4. 40	Territorio de Tepic	2. 50
Nuevo León	1. 10	Territorio de la Baja California55

mines se trouvent près de Pastoria, au nord de Guerrero. Elles ont dû être exploitées il y a très longtemps.

Guidé par un indien, M. PUEBET a pénétré dans l'une d'elles. Il est descendu à plus de 100 mètres de profondeur. Dans ces galeries, le cinabre se trouve sous forme de grands gisements, à fleur de terre. Des roues en pierre, des *metates*, des haches en silex ont été trouvées en abondance dans ces galeries, ce qui permet à M. PUEBET de croire que l'exploitation de ces mines remonte à une époque antérieure à la conquête.

RÈGLES AU SUJET DU TRAFIC DU HENEQUEN.

Le journal "Mexican Herald," du 3 janvier 1902, dit que les cultivateurs et les exportateurs de Yucatan proposent de s'entendre pour ne pas vendre ou expédier aucune de cette fibre au-dessous d'un prix qu'ils fixeront. Si le prix sur les marchés étrangers (principalement New-York qui consomme 90 pour cent des exportations de Yucatan) descend au dessous d'un certain minimum, leur intention est de garder le henequen, espérant ainsi que les demandes augmenteront le prix de la marchandise. Les négociants en henequen sont tous des capitalistes qui peuvent se permettre de conserver leur article jusqu'à ce qu'ils jugent à propos de le vendre.

FABRIQUE DE POUDRE SANS FUMÉE.

Le Ministre de la Guerre vient de passer un contrat pour l'établissement d'une fabrique de poudre sans fumée. Cette usine sera construite dans les environs de Santa-Fé, sur des terrains cédés par les habitants de cette localité au gouvernement fédéral.

Les travaux qui seront incessamment entrepris d'après les plans de M. ALBINO VILLEGAS, ingénieur, devront être terminés avant juillet 1903.

LE COCO À HUILE.

De nombreux propriétaires d'Acapulco et de Manzanillo se livrent depuis quelque temps à l'exploitation du coco à huile qu'ils exportent.

Le coco à huile est un produit que l'on considérait jusqu'ici, dans ces régions, comme absolument négligeable. Aujourd'hui, ce commerce prend des proportions considérables et ceux qui s'y livrent fondent sur l'exportation de ce produit les plus grandes espérances.

LE CAOUTCHOUC MEXICAIN.

Il paraît, d'après des renseignements français, que le caoutchouc mexicain est coté actuellement sur les marchés américains et européens, de 47 à 55 cents la livre, prix excessivement élevé et qui n'est dépassé que par celui de Para (Brésil) dont les prix varient de 49 à

87 cents. Ces chiffres témoignent de l'excellente qualité du produit mexicain et sont dignes d'encourager les planteurs et d'augmenter la production.

EXPORTATIONS DE CUIVRE.

Les statistiques douanières montrent que pendant l'année fiscale 1901, le Mexique a exporté en Angleterre 6,583 tonnes de cuivre et plus de 23,000 tonnes aux Etats-Unis et en Europe, soit, pendant les douze mois, un total général d'exportation de 30,000 tonnes. Etant donné le fait que de nouvelles mines ont été creusées depuis la publication des statistiques officielles, on croit que, pendant l'année courante, les exportations dépasseront matériellement celles de 1901.

UNE EXPOSITION PERMANENTE À MEXICO.

Le Ministère de Fomento a soumis à l'approbation de la Chambre des Députés le contrat qu'il vient de conclure avec M. JOSÉ de LANDERO représentant de la "Compagnie Mexicaine d'Exposition Permanente."

Ce contrat se rapporte à la construction d'un grand édifice dans lequel seront exposés, en permanence, les produits nationaux.

NICARAGUA.

IMPORTATION DES ESSENCES.

Le "Diario oficial," du 18 avril 1901, publie le décret suivant:

"ARTICLE I. Ne pourront importer des essences pour la préparation des liqueurs que les fabricants munis d'une autorisation écrite du Directeur Général du Ministère compétent et moyennant paiement des droits établis dans le tarif.

"ARTICLE II. De même des huiles essentielles ne pourront être importées que par les pharmaciens ou les médecins pour être exclusivement employées à la préparation des médicaments ou prescriptions médicales.

Dans la demande en autorisation d'entrée à adresser au Ministère des Finances, les intéressés devront donner l'indication détaillée des essences à importer pour que l'autorisation ne s'applique qu'aux quantités jugées nécessaires aux besoins de la pharmacie."

PARAGUAY.

LES BOIS PRINCIPAUX DU PAYS.

On a constaté récemment une augmentation dans l'exportation du bois paraguayen et l'on croit que les bois mous de cette république

seront aussi recherchés, dans peu de temps, pour la fabrication du papier. Des 60 classes de bois qu'on emploie dans le pays, 20 classes seulement sont exportées dont voici les noms respectifs des principales:

1. *Curupai*.—Bois dur de couleur rouge, très durable et très employé pour des traverses et des pilotis. Jouit d'un bon marché en Argentine.

2. *Cèdre*.—Bien qu'il soit inférieur en grain et en odeur à la classe cubaine, une grande quantité de ce bois est exportée en Argentine et en Allemagne; avec ce dernier pays le commerce commença durant la guerre Hispano-Américaine. Le cèdre paraguayen est très demandé à Bremen où il est employé à la fabrication de boîtes à cigares. A vrai dire, ce bois est beaucoup plus semblable au caoba (acajou) qu'au cèdre, mais il a le grain et l'odeur de ce dernier.

3. *Laurier noir*.—On l'emploie pour des traverses mais n'étant pas dur comme le curupaie et étant inflammable, n'est pas beaucoup recherché.

4. *Palo de Rosa (Bois de rose)*.—Est pareil au bois de rose d'Angleterre mais sa couleur est plus claire. Il est très sec, prend un bon lustre et se prête à la fabrication de meubles. Il possède aussi des propriétés médicinales.

5. *Hirá-ro*.—Est un bois pur et flexible; aussi la demande en est elle considérable pour voitures et construction de bateaux, parcequ'il ne peut ni se contourner ni se fendre.

6. *Lapacho (noir et jaune)*.—Ce bois est excessivement demandé à Buenos-Ayres où on l'emploie pour la fabrication de charettes et la construction des ponts. On l'emploie aussi pour des traverses bien qu'il ne convienne pas, car il peut facilement prendre feu s'il n'est pas entièrement couvert de terre.

7. *Petereby negro*.—On l'emploie sur place pour la fabrication de meubles. Comme il est susceptible d'être bien travaillé et qu'il prend bon lustre, il aura un meilleur marché en Europe lorsqu'il sera mieux connu.

8. *Quebracho colorado* est le plus important des bois paraguayens; des quantités considérables sont exportées en Allemagne, principalement à Hambourg où on en trouve toujours un stock considérable. On l'emploie particulièrement dans le tannage et la demande en augmente chaque année. Les capitalistes allemands trouvent dans ce bois, un bon placement pour leur argent et une ligne de bateaux à vapeur est exclusivement employée dans ce commerce. Dans ce pays, il y a une fabrique d'extrait de quebracho et probablement plusieurs autres s'établiront avant peu de temps.

D'après une analyse faite récemment, les blocs de quebracho produisent une moyenne de 25 pour cent de substance tannique et un maximum de 29 pour cent. Le quebracho paraguayen contient plus d'extrait tannin et a une couleur plus fine que celui que l'on trouve en

Argentine. L'exportation des blocs de quebracho depuis 1895 jusqu'à 1898 a été la suivante:

	Tonnes.
1895.....	115,000
1896.....	114,000
1897.....	185,000
1898.....	147,000

Pendant l'année 1900, le bois a été très rare en Allemagne. Le prix des blocs de quebracho va probablement augmenter car les arbres coupés avec rapidité, obligent à pénétrer plus avant dans les forêts vierges, ce qui augmente le coût des travaux.

9. *Urunday-mi* est un des meilleurs bois durs du pays; il possède plusieurs des qualités du curupai et est plus durable que ce dernier.

10. *Iatane* est un beau bois de couleur dorée, semblable au bois satiné, et prend un bon vernis. Des caisses fabriquées avec ce bois protègent avec sécurité leur contenu contre les insectes de toute espèce. Ce bois a un grain fin et dur et durera des années dans la terre et l'eau. On l'emploie ici pour la fabrication de proues et de poupes de bateaux.

Palo Santo (Lignum vitæ).—Bois lourd et de couleur sombre, dont la quantité est très limitée. On l'emploie à la place de bronzes pour les coussinets de machines et les arbres moteurs. On en fait aussi des poulies. Le Palo Santo a les mêmes propriétés médicinales que le Lignum vitæ. Jusqu'à présent il a été exporté principalement en France.

DIVERSES CULTURES DE LA RÉPUBLIQUE.

Des diverses cultures du Paraguay, la plus grande partie se consomme dans le pays; cependant le tabac et les fruits s'exportent en certaines quantités, le premier en Allemagne et les autres dans la République Argentine.

Le tabac paraguayen est généralement le moins cher sur les marchés d'Allemagne, et comme tel pourra se vendre avec profit. L'essai d'une meilleure élaboration et, par conséquent, avec augmentation du prix n'a pas encore donné de bons résultats. On a dit que durant l'année 1900, les demandes ont été plus fortes que pendant les années antérieures et que les prix reçus ont été quelque peu meilleurs.

Le coton croît bien au Paraguay et est d'une qualité supérieure, chaque plante donnant 6 livres de fibres. On dit qu'une compagnie nord-américaine est sur le point d'établir une fabrique de tissus de coton à l'Assomption.

Les oranges, les bananes et les ananas viennent bien au Paraguay et s'exportent en quantités considérables à Buenos-Ayres. Des efforts ont été faits pour la culture de la *yerba-maté* ou thé du Paraguay et on dit qu'ils ont été couronnés d'un succès considérable. On exporte en France, en certaines quantités, des essences distillées de feuilles et de fleurs d'orangers.

La gomme n'existe pas en grande quantité, à l'état vierge, au Paraguay; mais les efforts tentés pour la cultiver, sont en progrès et l'on espère que l'espèce la plus convenable pour la culture artificielle sera la *maniocoba* du Brésil, à cause de sa croissance rapide et de sa robustesse en général. Le *maniocoba*, d'après ce qu'on dit, a donné un résultat excellent au Brésil et dans l'Amérique Centrale et l'on eroit que le gouvernement paraguayen offrira des avantages spéciaux aux agriculteurs, dans le but de développer cette industrie.

L'INDUSTRIE DE L'ÉLEVAGE.

Il y a, probablement, dit M. GOSLING, Consul d'Angleterre à Assomption, peu de pays comme le Paraguay où ce commerce puisse être installé avec un si petit capital et une telle espérance de prompt bénéfice. Les bénéfices de l'élevage pourront se calculer de 20 à 25 pour cent, mais dans quelques *estancias* bien dirigées, ils sont, sans doute, beaucoup plus forts et pourront atteindre jusqu'à 40 pour cent. La question des travailleurs est moins difficile dans cette classe d'industrie que dans n'importe quelle autre, parce que le péon paraguayen, bien qu'il ne soit pas généralement travailleur, est cependant bien préparé pour ce genre de travail, qui est agréable et intéressant pour lui.

Il y a peu de maladies parmi le bétail et la fièvre aphteuse qui a fait tant de ravages dans la République Argentine, a été très bénigne dans ses résultats au Paraguay. Cependant les chevaux souffrent cruellement d'une maladie appelée "mal de cadera" qui, bien que rapide dans ses effets, paraît être de même nature qu'une fièvre cerebro-spinale et un grand nombre de chevaux meurent chaque année. Inutile de dire que les colons qui essaient de s'établir au Paraguay doivent s'attendre à trouver quelques difficultés en face des nombreux et véritables avantages que le pays offre.

L'INDUSTRIE DES VIANDES DE CONSERVES.

Les industries du Paraguay sont encore dans l'enfance et n'offrent que peu d'intérêt en dehors du pays. Une loi, cependant, fut promulguée au mois de septembre de l'année dernière, ayant rapport à l'établissement de "saladeros" ou fabriques de viande de conserves qui, dans la suite, pourra devenir un commerce important. Les principaux points intéressants de cette loi sont que, jusqu'au 31 décembre 1910, les machines, matériaux nécessaires pour boîtes, sel commun et produits chimiques pourront être importés libres de droits. Les concessionnaires paieront, cependant, au gouvernement un petit impôt de 10 à 15 centavos pour chaque animal tué. Un "saladero" établi sur le Rio a donné, cette année, des résultats satisfaisants; 2,500 têtes de bétail ont été sacrifiées. Chaque bœuf vaut £2 rendu sur le marché et a produit 85 livres de cuir salé qui se vend à Montévidéo à raison de \$2 par quintal. Ainsi chaque animal tué, outre de donner 180 livres de

viande et 39 livres de graisse, a produit £1 10s. en moyenne de son cuir, ce qui fait un gain de 8s. à 14s. pour chaque animal.

RENSEIGNEMENTS MINIERS.

Au mois de septembre dernier on a accordé une concession à une entreprise particulière pour rechercher et exploiter des minéraux dans un vaste territoire situé au sud de l'Assomption et qui s'étend jusqu'aux frontières argentines, entre les limites des rivières Parana et Paraguay. Peu après la découverte de l'or et de traces d'argent et de cuivre, on a fait un arpentage.

On dit que le lingot d'or contient de 8s. jusqu'à £2 par tonne. On a également trouvé de petits dépôts de cuivre de bonne qualité mais pas en filons contenus, ainsi que de riches dépôts de fer, mais le manque de communication rend, pour le moment, difficile au Paraguay, le développement de la richesse minérale.

EXONERATION DES DROITS D'IMPORTATION SUR LES BICYCLETTES.

En vertu d'une loi du 31 août 1901, les bicyclettes, en général, et leurs accessoires sont exonérés des droits d'importation dans la République du Paraguay pour le terme d'un an, à partir de cette date.

SALVADOR.

CHANGEMENTS DANS LE TARIF.

En vertu de la loi du 21 mai 1901, publiée dans le "Diario Oficial" du 24 mai 1901, l'exportation de l'indigo est exempte de tout droit et impôt.

Le même journal officiel dit que, en vertu de la loi du 17 mai 1901, les sacs contenant du café destiné à l'exportation seront exempts de tous droits et impôts.

Le "Diario Oficial" du 27 mai 1901, dit que la loi du 22 mai 1901 rétablit le droit de 5 centavos par kilogramme applicable à l'importation du fil de couleur.

D'après le "Diario Oficial" du 19 août 1901, le Ministère des Finances aurait décidé que le tissu de coton écriu dit *mantadril*, muni d'une simple raie de couleur n'ayant pas plus d'un centimètre de largeur, suivrait le régime du No. 5 du tarif à 20 *centavos* le kilogramme et non pas la taxe du No. 10 qui s'applique au même tissu quand il est de couleur.

Le "Diario Oficial" du 7 octobre, 1901, dit que le Ministère des Finances aurait aussi décidé que la ouate de coton en feuilles, pour garniture intérieure de vêtements, non dénommée dans le tarif, serait rangée sous le No. 3 et taxée à raison de deux centavos le kilogramme.

En vertu des ordonnances ministérielles des 14 et 18 octobre, 1901, publiées dans le "Diario Oficial" des 17 et 18 octobre 1901, l'impor-

tation des sacs vides destinés à l'exportation de l'indigo, suivra le régime du No. 22 du tarif à la taxe de 50 centavos le kilogramme et respectivement, le montant des droits acquittés à l'importation des sacs vides destinés à l'exportation des minerais sera remboursé en monnaie courante aux exportateurs de ces produits au moment de l'exportation.

URUGUAY.

PRINCIPALES EXPORTATIONS DE MONTEVIDEO PENDANT NEUF MOIS.

Voici quelles ont été les principales exportations de Montevideo, pendant les neuf premiers mois de l'année 1901.

Peaux de bœuf	seches..	624,302
Peaux de bœuf	salées..	458,920
Peaux de mouton	balles..	9,589
Poils	idem..	64,927
Bœuf découpé en longues		1,012
et Minces tranches séchées	balles..	393,124
Bœuf frais	tonnes..	2,685
Suif, têtes de pore		33,904
Farine	sacs..	21,988
Son	idem..	6,824
Blé	idem..	4,428
Maïs	idem..	118,535
Graine de lin	idem..	6,176
Os et cendre d'os	tonnes..	7,900
Langues de bœuf	boîtes..	15,888
Cornes	nombre..	998,016

COMMERCE DE LA GRANDE-BRETAGNE AVEC L'AMÉRIQUE LATINE.

Les statistiques publiées dans les rapports préliminaires anglais "Accounts relating to trade and navigation of the United Kingdom," montrent que le commerce du Royaume-Uni avec l'Amérique latine pendant l'année civile 1901 a diminué en comparaison de celui de l'année 1900. La publication anglaise dont il s'agit ne donne pas toutes les transactions commerciales entre la Grande-Bretagne et les différents pays de l'Amérique latine, mais mentionne seulement les articles principaux d'importation et d'exportation. Des renseignements plus complets ne seront pas publiés avant plusieurs mois. Pendant l'année civile 1901, la valeur des marchandises importées par la Grande-Bretagne de la l'Amérique latine, s'est montée, d'après les rapports dont il s'agit, à £15,353,076 (\$74,715,744.35) contre £16,734,360 (\$81,437,762.94) en 1900. La valeur des exportations de la Grande-Bretagne à l'Amérique latine, autant quelle peut être constatée dans les rapports incomplets anglais, se montait en 1901 à £11,857,915 (\$57,706,543.35) contre £13,505,818 (\$65,726,063.30) en 1900.

Voici quels ont été les articles importés par la Grande-Bretagne de la République Argentine pendant les deux périodes en question, ainsi que l'évaluation de ces importations données dans les rapports anglais:

RÉPUBLIQUE ARGENTINE.

Importations.	1901.	1900.	Augmentation ou diminution.
Bétail		£667,500	+ £667,500
Mouton et agneau		289,000	— 289,000
Blé	£2,670,355	6,088,923	— 3,418,568
Maïs	2,616,524	1,514,313	+ 1,102,211
Viande fraîche de mouton	1,950,599	1,689,078	+ 261,521
Sucre brut	307,825	107,564	+ 200,261
Suif et stéarine	273,068	239,288	+ 33,780
Peaux	74,300	18,629	+ 55,671
Graine de lin	1,516,736	682,122	+ 834,614
Totaux	9,409,407	11,296,417	— 1,887,010

Le tableau ci-dessus ne comprend pas, pour l'une ou l'autre année, les importations de bœuf frais, de beurre, de fromage, de quebracho et un ou deux autres articles d'importance.

En 1900, le nombre de bestiaux vivants importés de la République Argentine par la Grande-Bretagne, se montait à 38,562 et celui de moutons et d'agneaux, à 178,969, contre aucun en 1901. Le nombre de livres de blé importées en 1901 était de 808,040,000, soit 13,467,333 boisseaux (en admettant qu'un boisseau contienne 60 livres), contre 1,852,400,000 livres (30,873,333 boisseaux) en 1900. La quantité de maïs importée était de 1,044,360,000 livres ou 18,649,286 boisseaux de 56 livres chacun, contre 652,620,000 livres ou 11,653,929 boisseaux en 1900. Les autres articles étaient: graine de lin, 664,528 quarts en 1901, contre 310,664 quarts en 1900; mouton frais, 127,165,400 livres en 1901, contre 111,479,500 livres en 1900; suif et stéarine, 20,440,400 livres en 1901, contre 17,826,900 livres en 1900; sucre, 67,422,300 livres en 1901, contre 21,756,900 livres en 1900; peaux, 3,263,100 livres en 1901, contre 757,500 livres en 1900.

Ci-après, détaillés, les articles exportés de la Grande-Bretagne à la République Argentine pendant les années 1901 et 1900 ainsi que leurs valeurs:

Articles.	1901.	1900.	Augmentation ou diminution.
Cotonade (marchandises à la pièce)	£1,174,882	£1,561,838	—£386,956
Jute (marchandises à la pièce)	326,451	321,072	+ 5,379
Toile (marchandises à la pièce)	49,190	46,340	+ 2,850
Tissus de laine	116,987	192,884	— 75,897
Laine filée	164,769	361,763	— 196,994
Tapis	26,692	45,867	— 18,175
Quincaillerie et coutellerie	46,335	56,897	— 10,562
Fer pour les chemins de fer	587,543	322,539	+ 265,004
Fer galvanisé	321,364	321,676	— 312
Tous les autres fers	394,382	433,673	— 39,291
Fers-blancs	50,491	73,734	— 23,243
Ciment	31,955	32,549	— 594
Poterie et porcelaine de Chine	41,642	57,645	— 16,003
Totaux	3,332,683	3,818,477	— 485,794

Les articles principaux importés du Brésil pendant les années 1901 et 1900 étaient les suivants :

Articles.	1901.	1900.	Augmentation ou diminution.
Café	£228,001	£90,805	+£137,196
Sucre brut	155,393	55,413	+ 99,980
Coton brut	270,041	669,595	— 399,554
Peaux fraîches	27,485	31,200	— 3,715
Totaux	680,920	847,013	166,093

Le rapport anglais ne mentionne pas spécifiquement les importations de caoutchouc.

En 1901, les importations de café pesaient 13,262,400 livres et en 1900, 4,385,300 livres; les importations de sucre avaient un poids total de 34,373,800 livres en 1901 et de 10,658,000 livres en 1900; le poids des peaux importées en 1901 était de 1,156,900 livres et en 1900, de 1,283,500 livres.

Voici quels ont été les articles principaux que la Grande-Bretagne a exportés au Brésil pendant les années 1901 et 1900 :

Articles.	1900.	1901.	Augmentation ou diminution.
Charbon et autres combustibles	£722,526	£803,837	£81,311
Cotonnade (marchandises à la pièce)	800,000	1,196,298	— 396,298
Jute (marchandises à la pièce)	30,816	15,236	— 15,680
Fil de jute	336,768	262,380	+ 74,388
Toile (marchandises à la pièce)	41,142	67,061	— 25,919
Tissus de laine	52,508	71,080	— 18,572
Laine filée	83,917	122,293	— 38,576
Quincaillerie et coutellerie	48,093	63,631	— 15,538
Fer pour les chemins de fer	71,933	94,948	— 23,015
Tous les autres fers manufacturés	186,894	320,417	— 133,523
Fers-blancs	45,945	74,187	— 28,242
Ciment	10,492	21,453	— 10,961
Poterie et porcelaine de Chine	57,446	64,417	— 6,971
Cuir	31,356	39,767	— 8,411
Huile de graines	52,016	54,183	— 2,167
Cuivre ouvré	35,893	63,136	— 27,243
Totaux	2,607,745	3,334,324	— 726,519

Pendant l'année 1901, la Grande-Bretagne a exporté au Brésil, 813,473 tonnes de charbon, de coke et de combustible patenté, contre 793,560 tonnes durant l'année 1900.

CHILI.

Pendant l'année civile 1901 l'Angleterre a importé du Chili, disent les rapports anglais, pour £1,455,435 de cuivre sous toutes les formes (minerai, matte, cuivre cémentatoire, non ouvré et en partie ouvré, etc.), contre £1,417,137 en 1900. Si tout le nitrate de soude importé par la Grande-Bretagne provient du Chili, ce qui est probable, la valeur d'importation de cet article chilien a augmenté de £910,047 en 1901, contre £1,155,462 en 1900, montant la valeur totale de 1901 à £2,365,482 et celle de 1900 à £2,573,467. Pendant l'année 1901, l'Angleterre n'a pas importé de blé du Chili, tandis qu'en 1900 la valeur du blé reçu du Chili se montait à £868.

Ci-après les articles que l'Angleterre a exportés au Chili pendant les deux années en comparaison :

Articles.	1901.	1900.	Augmen- tation ou diminution.
Cotonnade (marchandises à la pièce)	£744,384	£998,277	- £253,893
Tissus de laine	112,590	144,046	- 31,456
Laine filée	148,751	212,858	- 64,107
Tapis	31,478	45,105	- 13,627
Quincaillerie et coutellerie	35,159	32,680	+ 2,479
Fer pour les chemins de fer	86,688	25,199	+ 61,489
Fer galvanisé	115,536	144,459	- 28,923
Tous les autres fers	151,230	190,211	- 38,981
Total	1,425,816	1,792,835	- 367,019

PÉROU.

Pendant les années en question, les importations provenant de la République Péruvienne comprenaient les articles suivants :

Articles.	1901.	1900.	Augmen- tation ou diminution.
Sucre	£41,761	£129,353	- £87,592
Cuivre	285,152	111,717	+ 173,435
Laines d'alpaca, de llama et de vigogne	226,649	205,839	+ 20,810
Total	553,562	446,909	+ 106,653

Durant l'année 1901, l'Angleterre a importé du Pérou, 9,573,700 livres de sucre, contre 24,010,700 en 1900. Les quantités de laine d'alpaca, de lama et de vigogne importées pendant les années 1901 et 1900, furent respectivement 4,641,248 et 4,236,566 livres.

Voici quels ont été les articles principaux que la Grande-Bretagne a exportés au Pérou, pendant les deux années 1901 et 1900 :

Articles.	1901.	1900.	Augmen- tation ou diminution.
Cotonnade (marchandises à la pièce)	£358,069	£301,588	+ £56,481
Tissus de laine	85,707	81,627	+ 4,080
Laine filée	44,162	37,788	+ 6,374
Fer pour les chemins de fer	16,744	27,952	- 11,208
Tous les autres fers	31,575	29,830	+ 1,745
Total	536,257	478,785	+ 57,472

Toutes les autres marchandises importées de l'Amérique Latine, furent les suivantes :

Importation de l'Amérique Centrale: 23,837,000 livres de café, évaluées à £739,006 en 1901, contre 17,789,700 livres évaluées à £611,882 en 1900.

Importation de l'Amérique du Sud: 63,118,476 livres de laine, évaluées à £604,699, contre 30,205,932 livres en 1900, évaluées à £957,804.

Les articles importés des autres pays de l'Amérique Latine ne sont pas spécifiés, mais voici ceux exportés dans ces pays par la Grande-Bretagne:

Pays.	1901.	1900.	Augmentation ou diminution.
ANTILLES.			
Toile (marchandises à la pièce)	£155,830	£252,129	— £96,299
Fer manufacturé	57,669	72,813	— 15,144
Sacs d'emballage et autres	11,375	18,409	— 7,034
Total	224,874	343,351	— 118,477
CUBA ET PORTO-RICO.			
Fer pour les chemins de fer	14,184	20,243	6,059
Riz, farine de riz et farine	458,917	422,018	+ 36,899
Total	473,101	442,261	+ 30,840
MEXIQUE.			
Cotonnade (marchandises à la pièce)	252,901	401,288	— 148,387
Toile (marchandises à la pièce)	26,783	39,641	— 12,858
Fer galvanisé	63,976	79,900	— 15,924
Total	343,660	520,829	— 177,169
AMÉRIQUE CENTRALE.			
Cotonnade (marchandises à la pièce)	385,943	485,131	— 99,188
Fer galvanisé	19,560	18,961	+ 599
Sellerie et harnais *	39,847	43,546	— 3,699
Total	445,350	547,638	— 102,288
COLOMBIE.			
Cotonnade (marchandises à la pièce)	592,348	177,176	+ 415,172
Toile (marchandises à la pièce)	48,883	21,956	+ 26,927
Total	641,231	199,132	+ 442,099
VÉNÉZUÉLA.			
Cotonnade (marchandises à la pièce)	295,957	350,858	— 54,901
URUGUAY.			
Cotonnade (marchandises à la pièce)	311,967	344,092	— 32,125
Tissus de laine	32,515	49,201	— 16,686
Fer pour les chemins de fer	43,178	72,858	— 29,680
Tous les autres fers manufacturés	51,787	66,941	— 15,154
Total	439,447	532,092	— 92,645
AMÉRIQUE DU SUD (PAYS NON SPÉCIFIÉS).			
Locomotives	270,126	228,787	+ 41,339
Machines agricoles à vapeur	74,553	66,209	+ 8,344
Autres machines à vapeur	123,806	110,279	+ 13,527
Machines agricoles	82,981	107,568	— 24,587
Machines pour l'exploitation des mines	36,604	34,985	+ 1,619
Machines à tisser	108,735	130,122	— 21,387
Autres machines	356,799	410,918	— 53,119
Machines à coudre	38,190	56,368	— 18,178
Totaux	1,091,794	1,145,236	— 53,442

* Y compris l'Amérique du Sud.

Un des principaux articles que la Grande-Bretagne a, depuis des années, exporté à l'Amérique latine, ont été les cotonnades. Ce commerce paraît, pour quelques raisons, diminuer, c'est du moins ce que montrent les statistiques des deux dernières années. Le tableau suivant donne le nombre de mètres et la valeur des cotonnades que la

Grande-Bretagne a exportés à l'Amérique latine pendant les années 1901 et 1900:

Pays.	1901.		1900.	
	Mètres.	Valeur.	Mètres.	Valeur.
Antilles (autres que l'Inde Anglaise).....	81,069,400	\$752,167	84,048,300	\$761,628
Mexique.....	21,552,300	252,901	38,346,100	401,288
Amérique Centrale.....	43,931,700	385,943	58,888,100	485,131
Colombie.....	73,441,400	592,348	25,252,600	177,176
Venezuela.....	32,306,900	295,957	42,595,300	350,858
Pérou.....	33,669,600	358,069	27,627,100	301,588
Chili.....	69,243,100	744,384	98,025,800	998,277
Brésil.....	70,162,100	800,000	104,937,600	1,196,298

République Argentine.....	104,246,100	1,174,882	131,286,300	1,561,838
Totaux.....	558,407,100	5,668,627	641,609,400	6,578,174

PRODUCTION MINIÈRE DE L'AMÉRIQUE LATINE EN 1901.

Le "Engineering and Mining Journal" du 4 janvier 1902, contient un article très long au sujet des industries minières et de la métallurgie aux Etats-Unis. Ce même article donne aussi un aperçu approximatif du rendement minier des différents pays du monde producteurs de minéraux. Les données suivantes relatives à la production minière de l'Amérique Latine, pendant l'année 1901, ont été obtenues de cette publication.

Pendant l'année 1901, la production d'or du Mexique a augmenté légèrement; il en est de même de celle de l'Amérique Centrale, particulièrement dans la République du Salvador où, au moyen de capitaux américains, l'on a creusé de nouvelles mines importantes. On n'a pas encore reçu des pays de l'Amérique du Sud, des statistiques complètes au sujet de leur rendement mais il est un fait authentique, c'est que le Pérou et le Chili ont fait des efforts, pour le développement de cette industrie, qui ont été couronnés de succès.

La production de l'argent du monde a, en 1901, un tant soit peu diminué. Le Mexique, le second pays producteur du globe, a vu sa production d'argent diminuer. Les causes de cette diminution sont cependant temporaires et disparaîtront avant longtemps, étant dues, dans quelques cas, à de nouveaux développements qui ont arrêté momentanément le rendement de ce métal blanc, et dans d'autres, à la découverte de minerais moins bons. En Bolivie, la grande mine Huanchaca n'a pas produit la quantité d'argent des années précédentes, quoique ce déficit constaté dans la production de l'Amérique du Sud ait été, en partie, comblé par le plus grand rendement du Chili et du Pérou. Les fameuses mines Cerro de Pasco qui, pendant de nombreuses années, ont été exploitées seulement dans le but d'obtenir de l'argent,

se développent graduellement en mines de cuivre au fur et à mesure que sa profondeur augmente, mais continuent néanmoins à donner de grandes quantités d'argent. En Colombie, l'exploitation des mines a été sérieusement entravée par suite des troubles qui règnent dans le pays.

Voici le rang qu'occupaient, en 1900, les pays du monde producteurs de cuivre, par rapport à leur production: Etats-Unis, Espagne, Japon, Chili, Australie, Mexique et Allemagne. La production, dans la plupart de ces pays, fut aussi grande et dans quelques-uns plus abondante en 1901 qu'en 1900. Pendant la première période, le Chili a produit 26,111 tonnes de cuivre et le Mexique 22,403 tonnes. En 1901 les mines chiliennes ont augmenté grandement leurs exportations, et il est évident que dans un futur peu éloigné, ce sera le Mexique qui produira la plus grande quantité de ce métal; des gisements importants de cuivre ayant été trouvés dans ce dernier pays et exploités par des capitalistes des Etats-Unis. Le percement des puits des mines Nasosari fait des progrès et la mine Boles continue à donner un très grand rendement. Dans l'Amérique du Sud, un certain développement a été donné, en 1901, à l'industrie minière du Pérou, et le projet pour l'achèvement de la ligne de chemins de fer dans Cerro de Pasco et la construction de tunnels pour l'écoulement ou l'épuisement des eaux est en train de se réaliser.

En 1901, la production du plomb mexicain a un peu diminué pour les mêmes raisons que celles qui, pendant toute l'année, ont entravé l'exploitation des mines d'argent. En ce qui concerne la production de l'étain d'un bout à l'autre du monde, la Bolivie a conservé, en 1901, la position qu'elle occupait parmi les six sections productrices de ce métal, le rendement, pendant les deux années dont il s'agit, étant estimé à 6,000 tonnes. De petites quantités de ce métal sont aussi produites au Mexique et sont utilisées dans le pays. La production du nitrate de soude au Chili a été réglée par la quantité exportée, et les prix ont été très satisfaisants à cause des associations industrielles qui se sont formées.

BIBLIOGRAPHIE.

Les livres et les brochures qui seront envoyés au Bureau des Républiques Américaines, et qui contiendront des sujets ou matières traitant des pays de l'Union Internationale des Républiques Américaines, seront mentionnés dans le Bulletin Mensuel sous le titre "Bibliographie."

Sous le titre "Nombres géographiques indigènes de la República de Honduras," Tegucigalpa, 1901, in-8, 118 pages, le Dr. ALBERTO MEMBRENO vient de faire paraître un travail d'étymologie du plus grand intérêt, fruit de longues études et de laborieuses recherches et qui comble heureusement une lacune dans la bibliographie historique du Honduras.

- L'auteur, grâce à la connaissance du nahuatl et des divers dialectes des Indiens qui habitent actuellement certaines parties du Honduras, a pu donner l'étymologie de la plupart des noms de lieux de la République et de ceux d'origine aztèque du Guatemala et du Nicaragua renseignés dans l' "Anuario" de la Direction générale de statistique du Guatemala (1858) et dans la "Geografía de Nicaragua" de SOMENSTERN (1874), travail très difficile si l'on tient compte des modifications profondes que beaucoup de noms géographiques ont subies au cours des siècles et qui, parfois, les rendent absolument méconnaissables. Il résulte de cette étude que les noms de lieux nahoas sont nombreux en Honduras et se sont maintenus même parmi les tribus indiennes qui ont conservé leur idiome, que les mots qui, ont une terminaison empruntée à ces idiomes (telles que *terrique*, *guera*, *ire*, *li*, etc.), ont comme premier élément un mot nahoa; enfin, que le fait qu'après trois siècles les Espagnols n'ont pu faire adopter leurs dénominations géographiques par les peuplades indiennes, prouve à l'évidence que la domination nahoa a dû être de très longue durée au Honduras.

En résumé, le travail de M. MEMBRENO, le premier du genre publié au Honduras, présente, au point de vue linguistique et historique, un grand intérêt pour le pays, et il ne peut manquer d'attirer l'attention des Américanistes en Europe.

La "Revista Maritima Brasileira" a fait paraître, avec son numéro du mois d'octobre, un supplément qui sera consacré désormais à la publication des renseignements relatifs aux compagnies nationales et étrangères qui ont des lignes de bateaux à vapeur le long de la côte et sur les rivières du Brésil. Ce supplément traitera aussi de toutes les questions se rapportant aux chantiers de construction navale, aux arsenaux et aux bassins de radoub, etc., et donnera d'autres renseignements très complets au sujet du commerce maritime de la République. Cette revue publiera aussi en portugais, en français et en anglais, un glossaire des termes maritimes employés et qui ont été trouvés être d'un très grand service.

Un journal mexicain, le "Mundo," constate que l'industrie sucrière commence à prendre un grand développement au Mexique.

De toutes parts, écrit ce journal, les capitalistes forment des sociétés pour exploiter la culture de la canne. Il y a une tendance marquée chez les cultivateurs mexicains à abandonner la culture du maïs pour ce produit beaucoup plus rémunérateur.

On estime à environ 22 pour cent l'augmentation constatée dans la superficie des plantations de canne à sucre pendant l'exercice écoulé.

"Do Rio a Buenos Aires," tel est le titre d'un volume de 316 pages, contenant de nombreuses illustrations et dont l'auteur est M. ARTHUR DIAS, un des journalistes qui ont accompagné le Président CAMPOS dans la visite qu'il a faite récemment à la République Argentine. Cet ouvrage décrit longuement et d'une manière très intéressante les incidents du voyage et les impressions personnelles des voyageurs.

July 1, 1901.

BIBLIOGRAPHY OF BRAZIL.

PREPARED BY

P. LEE PHILLIPS, F. R. G. S.,

Chief of Division of Maps and Charts, Library of Congress.

The most complete list of Books, Magazine Articles, and Maps relating to Brazil that has ever been published, embracing everything of value upon history, biography, government, laws, religion, education, inducements and advantages offered immigrants, topography, coast line, soil, mineral wealth, flora, fauna, climate, natural advantages, transportation facilities, and all other subjects of whatever nature concerning the country.

Of special interest to librarians and specially useful in libraries.

The work is published under the auspices of the Bureau of American Republics, and it will be sent to any who may desire it on receipt of one dollar.

ADDRESS THE

BUREAU OF THE AMERICAN REPUBLICS,

WASHINGTON, D. C.

BIBLIOGRAFÍA DEL BRASIL.

PREPARADA POR

P. LEE PHILLIPS, F. R. G. S. •

Jefe de la Sección de Mapas y Cartas, Biblioteca del Congreso.

La lista más completa de Libros, Artículos de Revistas y Mapas referentes al Brasil que se ha publicado, y que comprende todo lo de valor relativo á historia, biografía, gobierno, leyes, religión, educación, alicientes y ventajas ofrecidas á inmigrantes, topografía, la costa, suelo, riqueza mineral, flora, fauna, clima, ventajas naturales, facilidades de transporte y á todas las otras materias concernientes á la naturaleza del país.

De especial interés á los bibliotecarios y particularmente útil en las bibliotecas.

Este trabajo está publicado bajo los auspicios de la Oficina de las Repúblicas Americanas y será remitido, mediante el recibo de un dollar, á las personas que lo soliciten.

DIRIGIRSE AL

BUREAU OF THE AMERICAN REPUBLICS,

WASHINGTON, D. C.

De la América del Sur, 63,118,476 libras de lana, valuadas en £1,604,699, contra 30,205,932 libras, en 1900, valuadas en £957,804.

No se han enumerado las importaciones de otros países latino-americanos, pero las exportaciones á dichos países fueron como sigue:

Países.	1901.	1900.	Aumento ó desminu- ción.
ANTILLAS.			
Tejidos de lino en pieza	£155,830	£252,129	— £96,299

Maquinaria para minas	36,604	34,985	+ 1,619
Maquinaria para textiles	108,735	130,122	— 21,387
Otra clase de maquinaria	356,799	410,918	— 53,119
Máquinas de coser	38,190	56,368	— 18,178
Total	1,091,794	1,145,236	— 53,442

Uno de los artículos de exportación principales de la Gran Bretaña á la América latina durante muchos años ha sido el de los tejidos de algodón en pieza. Por alguna causa parece que este comercio está disminuyendo, según lo demuestran las cifras correspondientes á los dos últimos años. En la siguiente tabla se incluye el número de yardas ex-

portadas y el valor de las mismas en 1901, comparadas con una estadística semejante de 1900:

Países.	1901.		1900.	
	Yardas.	Valor.	Yardas.	Valor.
Las Antillas (que no son inglesas)	81,069,400	£752,167	84,084,300	£761,628
México	21,552,300	252,901	38,346,100	401,288
Centro América	43,931,700	385,943	58,888,100	485,131
Colombia	73,441,400	592,348	25,252,600	177,176
Venezuela	32,306,900	295,957	42,595,300	350,858
Perú	33,669,600	358,069	27,627,100	301,588
Chile	69,243,100	744,384	98,023,500	998,277
Brasil	70,162,100	800,000	104,937,600	1,196,298
Uruguay	28,784,500	311,976	30,602,200	344,092
República Argentina	104,246,100	1,174,882	131,286,300	1,561,838
Total	558,407,100	5,668,627	641,609,400	6,578,174

PRODUCCIÓN MINERA DE LA AMÉRICA LATINA.

El "Engineering and Mining Journal," correspondiente at 4 de enero de 1902, publica una extensa revista de la industria minera y metalúrgica de los Estados Unidos, y en dicho artículo incluye un resumen de la producción de los demás países del mundo que producen minerales. De dicha revista se han obtenido los siguientes datos relativos á la producción de minerales de la América latina durante el año de 1901.

En Mexico hubo un pequeño aumento en la producción de oro consignada en 1901, y otro tanto puede decirse de la América Central, y especialmente de San Salvador, donde se han abierto algunas minas importantes con capital americano. Ninguno de los países sudamericanos ha presentado hasta ahora un informe completo acerca de su producción, pero se sabe que el Perú y Chile están aumentando su explotación de minas y que están obteniendo buenos resultados.

No cabe duda de que la producción de plata del mundo en 1901 muestra cierta disminución. México, que es el segundo país productor de plata del globo, ha mermado su producción. Las circunstancias que causaron esta merma fueron principalmente de índole transitoria, y es muy probable que desaparezcan antes de mucho tiempo, puesto que en muchos casos dicha merma se debe á la suspensión de la producción, en espera de nuevos sucesos, y en otros casos al descubrimiento de minerales de clases inferiores. En Bolivia, la gran mina denominada Huanchaca no ha dado tan buen resultado como otros años, aunque esta deficiencia de la producción de la América del Sur la compensa en parte el aumento obtenido en el Perú y en Chile. Las famosas minas de Cerro de Pasco, que durante tantos años se explotaron para obtener plata solamente, se están convirtiendo gradualmente en minas de cobre de una profundidad creciente, por más que la proporción de plata que rinden continúa siendo grande. La explotación de minas se ha interrumpido seriamente en Colombia á causa del estado anormal del país.

Los países productores de cobre del mundo, clasificados según su producción el año de 1900, son los siguientes: Los Estados Unidos, España, el Japón, Chile, Australia, México y Alemania. En 1901 la producción de la mayor parte de estos países fué tan grande—y en algunos de ellos mayor—que en 1900. En el período primeramente mencionado, la producción de Chile fué 26,111 toneladas, y la de México fué 22,403 toneladas. En 1901 las minas chilenas aumentaron considerablemente sus embarques, y es evidente que el mayor aumento en la producción de este metal, que debe esperarse en el inmediato futuro, ha de proceder de México, donde se están explotando muchos depósitos de cobre importantes con capital americano. La apertura de las minas de Nasosari progresa, y la producción de las de Boleo continúa siendo grande. Una gran parte del trabajo de desarrollo efectuado en la América del Sur en 1901, tuvo lugar en el Perú, en tanto que está formalizándose el proyecto de terminar los ferrocarriles en el Cerro de Pasco y el del desagüe de las minas por medio de un túnel.

En 1901 la producción de plomo en México mostró una disminución debida á las mismas causas que influyeron en la explotación de las minas de plata durante todo el año. En la producción de estaño en todo el mundo en 1901, Bolivia sigue conservando su puesto entre las seis naciones que producen este metal, habiéndose fijado el cálculo de la producción de ambos años en 6,000 toneladas inglesas. En México también se producen pequeñas cantidades que se usan en el país. La producción de nitrato en Chile se ha regulado por la cantidad exportada, y los precios han sido satisfactorios, debido á las combinaciones industriales que se han formado.

CULTIVO DEL RAMIÉ.

De “El Economista Hispano-Americano” reproducimos el siguiente interesante trabajo:

“La facilidad del cultivo y de la aclimatación del ramié, su pronto desarrollo, el poco capital exigido, y los beneficios considerables que su explotación promete al agricultor, deben hacer que se extienda, en grandes proporciones, la siembra de esta planta.

“Las aplicaciones en que puede utilizarse esta fibra tan rica, son tan numerosas que, por mucho tiempo, no tendrá límite su consumo para la manufactura, por considerable que sea su explotación agrícola.

“El cultivo del ramié es simplemente una cuestión de días, y apenas necesita de cuidado. La planta crece y se reproduce con una exuberancia portentosa, y su duración, sin resiembros, es materialmente fabulosa, pues dura cincuenta ó más años; conociéndose en la China plantas de más de cien años.

“Uno que otro plantío se ha hecho, de vez en cuando, en el país, como por ensayo para un artículo de exportación. Todos ellos han probado perfectamente, creciendo la planta y llegando á su máximo de desarrollo; y si no han tenido buen resultado mercantilmente, no debe culparse por eso ni á los terrenos ni á la temperatura, sino á la imprevisión en todo sentido, á la pequeña escala en que se emprendió la negociación como simple ensayo, á la falta de maquinaria empleada para su beneficio, á la inoportunidad de la cosecha, á la falta de conocimientos para el empaque, á la falta de diligencia para asegurar mercado de consumo, y por fin, á la falta de perseverancia y de una concentración formal y seria en el asunto.

“La planta del ramié no tiene enemigos; ni el barreno, ni el gusano, ni ningún otro insecto la persigue. Tampoco le hacen mal las escarchas, los hielos ni las sequías; pues que siendo una planta pivotante, entierra sus raíces en el subsuelo hasta encontrar la humedad que necesita. La abundancia de agua tampoco le causa ningún perjuicio, y sus raíces pueden resistir en los terrenos anegados. La cantidad de *tanino* que contiene la planta, la pone al abrigo de la *filoxera*.

“Otra de las ventajas, y quizás la más importante, es que produce tres, cuatro, cinco y hasta seis cosechas en un año, según la calidad del terreno, el número de riegos y la temperatura del lugar. Así, con una temperatura de 22° C., con pocos riegos y en setenta y cinco días de vegetación, da de tres á cuatro cortes; con una temperatura media de 27°, con riegos algo más abundantes, cinco cortes; con temperatura de 28° á 30° y abundante riego, hasta seis cortes al año; calculándose que cada corte rinde de 18 á 22 toneladas de tallos verdes por hectárea.

“La producción mínima de cada corte puede calcularse, por consiguiente, en 16 toneladas de tallos verdes por hectárea de 10,000 metros cuadrados.

“Tomando, pues, un término medio, podemos decir que por cada corte, en una hectárea de 10,000 metros cuadrados, se obtienen 20 toneladas de tallos verdes.

“La resistencia del ramié á la tracción es digna de toda atención; y así lo ha comprobado la Sociedad de Ingenieros Civiles de París, que ha establecido su resistencia comparativa con las demás plantas textiles, como sigue:

Ramié.....	100
Cañamo	36
Lino	25
Seda	13
Algodón.....	12

“Las fibras son de calidad superior á las de los demás textiles, en su solidez, en su duración y en su resistencia también á los agentes químicos y atmosféricos.”

BIBLIOGRAFÍA.

En esta sección del Boletín Mensual se tratará de los libros y folletos enviados á la Oficina de las Repúblicas Americanas, que se refieren á asuntos relacionados con los países de la Unión Internacional de Repúblicas Americanas.

El canje de publicaciones de Centro y Sud América puede efectuarse por conducto de la "Smithsonian Institution," Wáshington, D. C., por medio de las agencias de distribución que tiene en aquellos países, y que son las siguientes:

Argentina: Museo Nacional, Buenos Aires.

Bolivia: Oficina Nacional de Inmigración, Estadística y Propaganda Geográfica, La Paz.

Chile: Universidad de Chile, Santiago.

Colombia: Biblioteca Nacional, Bogotá.

Costa Rica: Oficina de Depósito, Reparto y Canje Internacional, San José.

Guatemala: Instituto Nacional de Guatemala, Guatemala.

Honduras: Biblioteca Nacional, Tegucigalpa.

México: Todos los envíos gozan de la franquicia del correo.

Nicaragua: Ministerio de Relaciones Exteriores, Managua.

Paraguay: Oficina General de Informaciones y Canje y Comisaría General de Inmigración, Asunción.

Perú: Biblioteca Nacional, Lima.

El Salvador: Museo Nacional, San Salvador.

Uruguay: Oficina de Depósito, Reparto y Canje Internacional, Montevideo.

Venezuela: Museo Nacional, Caracas.

En la Oficina de las Repúblicas Americanas se ha recibido un ejemplar del libro de clasificación de los artículos de Exposición que ha de tener lugar en San Luis en 1903. Se requieren en él 43 páginas para hacer la debida enumeración de los grupos en que se dividirán dichos artículos.

Éstos se reparten entre en 15 departamentos, de la manera siguiente: Educación, 8; las artes, 6; bellas artes, 13; manufacturas, 34; transporte, 6; agricultura, 27; horticultura, 7; bosques, 31; minería y metalurgia, 5; pesca y caza, 5; antropología, 4; economía social, 13, y cultura física, 3. El total muestra 144 grupos y 807 clases, y bajo cada clasificación puede exhibirse un número de artículos. Nada puede dar una idea más clara y cabal, en tan reducido espacio, de la diversidad de ocupaciones humanas, ni de una manera tan comprensiva el gran alcance de la Exposición que se está preparando para el año de 1903, á la cual han sido invitadas todas las naciones del mundo.

Muchos países han aceptado ya la invitación que se les ha enviado, y los trabajos de construcción están progresando rápidamente. El promedio del espacio de terreno para los edificios será 200 acres. El de las areas adyacentes será de 1,000 acres. El capital disponible en la actualidad asciende á un total de \$15,000,000, sin contar una asignación de \$1,000,000 hecha for el Estado de Missouri, y varias otras gruesas sumas asignadas por otros Estados para edificios y los artículos que han de exhibirse. Tanto el libro de clasificación como el Reglamento de la Exposición, se enviarán gratis, por el correo, at que los pida al Director de la Exposición Universal, Saint Louis, Missouri.

En la biblioteca de la Oficina de las Repúblicas Americanas se ha recibido el tomo 1, Núm. 1, del "Journal of Geography" correspondiente al mes de enero de 1902, revista mensual ilustrada, consagrada al adelanto de los conocimientos geográficos. El Señor RICHARD E. DODGE, catedrático de geografía en la Escuela Normal perteneciente á la Universidad de Columbia, de Nueva York; J. PAUL GOODE, catedrático de geografía en la Universidad de Pennsylvania, Filadelfia, y EDWARD M. LEHNERTS, catedrático de geografía de la Escuela Normal del Estado, en Winona, Minnesota, son los redactores de esta revista. Entre los asuntos de que trata el número de enero, debemos mencionar especialmente el que se titula "Useful Products of the Century Plant" (Productos Útiles de un Magney), ó sea una disertación sobre México, por WILLIAM R. MARSHALL, y la primera parte de un trabajo intitulado "Trade and Industries of Western South America" (El Comercio y las Industrias del Oeste de la América del Sur), por EMORY R. JOHNSON.

La "Revista Maritima Brazileira," trae desde el número correspondiente al mes de octubre de 1901, una sección adicional que en lo sucesivo se ha de consagrar á la publicación de informes relativos tanto á las compañías nacionales como á las extranjeras de navegación costera y pluvial que operan en el Brasil. Además, se ocupará de los astilleros, arsenales y diques secos, etc., y publicará otros informes detallados relativos al comercio marítimo de la República. En otra sección de la Revista se publica un glosario de términos marítimos en portugués, francés é inglés, el cual ha de encontrarse muy útil y valioso.

"Do Rio a Buenos Aires" es un tomo de 316 páginas, esmeradamente impreso, que contiene numerosos grabados, cuyo autor, el Señor ARTURO DIAS, es uno de los periodistas que acompañaron al Presidente CAMPOS SALLES durante su viaje á la República Argentina. En dicho libro se describen con suma amenidad los episodios del viaje, y el autor expresa minuciosamente sus impresiones acerca de Buenos Aires y la República Argentina.

BOLETIM MENSAL

DA

SECRETARIA DAS REPUBLICAS AMERICANAS,

União Internacional das Republicas Americanas.

VOL. XII.

FEVEREIRO DE 1902.

No. 2.

BRAZIL.

O ORÇAMENTO DA RECEITA PARA 1902.

O “Diario Official” de 27 de Dezembro de 1901, publica a lei do orçamento da receita do Brazil para 1902. A receita geral da Republica do Brazil para 1902 é orçada em ouro 42,876:666\$637 e papel 257,461:000\$, contra 58,870:641\$000, ouro, e 286,092:200\$000, papel, para o exercicio de 1901, e será realizada com o producto do que fôr arrecadado dentro do mencionado exercicio sob os titulos abaixo designados:

[Em milreis.]

Verbas.	Importancias.	
	Ouro.	Papel.
Direitos de importação.....	33, 430, 000	130, 680, 000
Rendas internas	1, 000, 000	72, 744, 000
Taxas de consumo		34, 870, 000
Renda extraordinaria.....	90, 000	7, 645, 000
Fundo de resgate		2, 920, 000
Fundo de garantia.....	8, 356, 667	
Fundo de amortização dos empréstimos internos.....		6, 000, 000
Fundo destinado ás obras de melhoramentos de portos		2, 530, 000
Fundo destinado ao serviço de soccorro naval.....		72, 000
Total.....	42, 876, 667	258, 061, 000

ESTRADA DE FERRO DE MANÁOS A MAHÚ.

No dia 16 de Dezembro de 1901, foi approvedo o seguinte decreto, auctorisando o Governo a conceder ao Engenheiro JOAQUIM HUET BACELLAR a construcção de uma estrada de ferro de Manáos até a foz do rio Mahú.

“ARTIGO 1º. Fica o Governo auctorisado a conceder ao engenheiro JOAQUIM HUET BACELLAR, respeitados os direitos adquiridos, a construcção, uso e gozo de uma estrada de ferro que, partindo de Manãos, siga o rumo geral do norte até á foz do rio Mahú.

“§1º. As condições technicas do traçado e todos os seus pontos obrigados serão fixados definitivamente pelo Ministerio da Industria, Viação e Obras Publicas, ouvido o da Guerra, á vista dos estudos que lhe forem apresentados, respeitados os direitos de concessões anteriores.

“§2º. Obrigar-se-ha o concessionario a apresentar os estudos definitivos dentro do prazo de dous annos, a contar da data do decreto do Poder Executivo, fazendo-lhe a respectiva concessão, e a iniciar os trabalhos da construcção dentro do prazo de dous annos a contar da data da approvação dos estudos.

“§3º. Findos esses prazos, caducará a concessão, salvo si o Poder Executivo julgar attendivel alguma consideração de força maior, podendo então prolongar os prazos a mais um anno no maximo.

“ART. 2º. O prazo da concessão será de 50 annos, contados da data da assignatura do contrato, revertendo a estrada ao dominio da União ao findar-se o referido prazo.

“PARAGRAPHO UNICO. Serão concedidos ao concessionario todos os favores e vantagens inherentes a taes concessões que não tragam onus para o Thesouro Federal.

“ART. 3º. O Poder Executivo, além das clausulas que lhe parecerem convenientes, estabelecerá no contrato o minimo de kilometros a constituir-se annualmente.

“ART. 4º. Revogam-se as disposições em contrario.

“M. FERRAZ DE CAMPOS SALLES.

“ALFREDO MAIA.

“CAPITAL FEDERAL, 16 de Dezembro de 1901.”

EXPORTAÇÃO DA BORRACHA NO MEZ DE DEZEMBRO DE 1901.

O Senhor A. BEZERRA, membro correspondente honorario da União Internacional, teve a bondade de remetter a esta Secretaria o seguinte quadro demonstrativo da exportação da borracha pelos portos de Manãos e Pará no mez de Dezembro de 1901:

Exportação.	Liverpool.	Havre.	Hamburgo.	Genova.	Antuerpia.	América.	Grande Total.
	<i>Kilo</i>	<i>Kilos.</i>	<i>Kilos.</i>	<i>Kilos.</i>	<i>Kilos.</i>	<i>Kilos.</i>	<i>Kilos.</i>
De Manãos	714, 612	75, 550	29, 512	11, 650	1, 041, 671	1, 872, 995
Do Pará	726, 152	163, 838	16, 203	607	804, 884	1, 711, 684

No. 23446.

Por esta decisão, expedida no dia 2 de Janeiro de 1902, dispõe-se que se fará um reembolso dos direitos de exportação para certos artigos de aço fabricados pela companhia denominada "International Metal Lath Company," estabelecida em Niles, Ohio.

No. 23447.

Por esta decisão, expedida no dia 6 do mesmo mez, manda-se fazer uma restituição dos direitos de exportação sobre raquetas para o jogo chamado "lawn tennis," fabricados pela companhia de Chicago conhecida sob o nome de "Spalding Manufacturing Company."

No. 23448.

Por esta decisão, expedida no dia 7 do mesmo mez, em forma de circular aos inspectores e demais empregados das alfandegas dos Estados Unidos, com o objecto de evitar que se commettam fraudes no transporte das mercadorias importadas e despachadas em bond, manda-se que se affixem sellos de chumbo nos fardos, caixões e carros em que aquellas forem conduzidas.

Dispõe esta circular qual a forma e côr dos rotulos que devem ser affixados sobre os envolveros e sobre os carros, e quaes os seus dizeres, ao mesmo tempo que o aviso declarando que qualquer pessoa que destruir os sellos, incorrerá na multa de mil pesos e poderá ser presa por um periodo de tempo que não exceda de cinco annos.

No. 23449.

REEMBOLSO DE DIREITOS—CERTIFICADO DE IMPORTAÇÕES.

[Circular No. 4.]

DEPARTAMENTO DO THESOURO, 7 de Janeiro de 1902.

Aos empregados das alfandegas e outros interessados:

A expedição de copias de certificados de importações, nos casos em que se provar que os originaes não foram destruidos, podendo causar

perda ao fisco, é conveniente que o administrador da alfandega que expedir os ditos certificados originaes de importação os remetta directamente ao inspector da alfandega do porto em que devem ser usados, e que em caso algum sejam entregues ás partes interessadas.

Portanto, modifica-se o Regulamento das Alfandegas como se segue:

“ART. 1164. Quando o importador de materia prima usada ou que deva ser usada na fabricação de artigos exportados ou que se hão de exportar, com a restituição da quantia dos direitos, de qualquer porto que não seja o porto de importação, ou quando a pessoa a quem tenha sido entregue a dita materia prima, pedir por escripto ao inspector da alfandega do porto em que importou a dita materia prima, um certificado de importação e do pagamento dos direitos, o inspector da alfandega expedirá e transmittirá o dito certificado ao inspector da alfandega do porto designado no pedido, no qual se reclamará a restituição dos direitos, devendo o dito certificado ser expedido de accordo com a formula no. 794, e nelle se expressará claramente o nome do porto no qual deverá ser usado.

“Este certificado pode ser apresentado no porto de exportação, e si qualquer parte da materia prima nelle descripta fôr usada na fabricação de artigos exportados de outro porto que não seja aquelle em que for apresentado, o inspector de alfandega que tiver em seu poder o certificado, mediante pedido por escripto da pessoa que o apresentou, transmittirá uma copia do mesmo para ser usada no outro porto. A dita copia deverá ser feita na forma do modelo no. 183.”

O. L. SPAULDING.

Subsecretario.

No. 23450.

ESTATUARIA.

As estatuas de marmore que de accordo com os devidos certificados resultem ser obras de escultores profissionaes reconhecidos no paiz onde foram feitas, serão introduzidas de conformidade com o paragrapho 454, lei de 1897, com um direito de 20 por cento *ad valorem*.

DEPARTAMENTO DO THESSOURO,

7 de Janeiro de 1902.

SENHOR: Este Departamento está de posse de um relatorio do fiscal Federal no districto do sul de Nova York, dizendo que a appellação no caso dos Estados Unidos, appellante, contra TOWNSEND & TOWNSEND, appellado (processo 2996), foi resolvida contra o Governo no Tribunal de appellação dos Estados Unidos do segundo districto, no dia 11 do mez proximo passado, tendo o Tribunal confirmado a decisão do de jurisdicção inferior, sem expor razões.

As mercadorias que fizeram objecto do processo, consistiam em estatuas de marmore importadas para a venda como sendo estatuaría

para cemiterios,” e representavam “A Fé,” “A Memoria,” “A Historia,” “O Anjo,” “O Pesar,” etc., todas as quaes foram sujeitas ao pagamento de um direito, como manufacturas de marmore, de 50 por cento *ad valorem*, de conformidade com o paragrapho 115 da lei de 24 de Julho de 1897. Os importadores protestaram, allegando que as mercadorias eram “estatuas,” isto é, obras profissionaes do um escultor, e sujeitas ao pagamento do direito de 20 por cento *ad valorem*, de conformidade com o paragrapho 454 da mesma lei.

As provas apresentadas neste caso demonstraram que os escultores que fizeram as estatuas, cujos certificados estavam juntos ás facturas eram escultores profissionaes de reputação em Carrara e tinham feito as estatuas por modelos que elles mesmos tinham desenhado.

Baseando-se nestas provas, o Tribunal confirmou a decisão do de jurisdicção inferior, declarando que as estatuas deviam ser introduzidas pagando um direito de 20 por cento *ad valorem*, de conformidade com o paragrapho 454 da lei de 24 de Julho de 1897, como se dizia no protesto dos importadores.

O Procurador Geral communicou a este Departamento que se não continuará o processo. Ficais auctorizado, portanto, a remetter a usual relação certificada para o reembolso da quantia paga em excesso dos direitos cobrados.

Sou com respeito,

O. L. SPAULDING,
Subsecretario.

AO INSPECTOR DA ALFANDEGA,
Nova York, N. Y.

No. 23451.

TIJOLOS PARA LIMPAR.

Os tijolos para limpar preparados com pedra pomes moida e mesclada com areia e depois impressada, serão sujeitos a um direito de \$6 por tonelada, de conformidade com o paragrapho 92, lei de 1897, como pedra pomes inteira ou em parte manufacturada.

DEPARTAMENTO DO THESOURO,
7 de Janeiro de 1902.

SENHOR: Este Departamento está de posse de um relatorio do fiscal federal do districto sul de Nova York, em que communica que a appellação no caso dos Estados Unidos contra R. J. WADDELL & Co. (No. 3159), foi resolvida recentemente contra o Governo no Tribunal districtal de appellação dos Estados Unidos do segundo circuito.

As mercadorias que fizeram objecto do processo, consistiam em tijolos para limpar, preparados com pedra pomes moida e areia mescladas e impressadas em tijolos de differentes tamanhos. Foram submettidos a despacho como “artigos compostos de substancias mineraes dos quaes

não existe classificação especial,” e sujeitos á taxa de 35 por cento *ad valorem*, conforme o paragrapho 97 da lei de 24 de Julho de 1897. Os importadores protestaram, allegando que as mercadorias iam ser classificadas como pedra pomes manufacturada inteira ou em parte e sujeitas á taxa de \$6 por tonelada, de conformidade com o paragrapho 92 da mesma lei. A reclamação foi apoiada pelo Tribunal districtal de appellação dos Estados Unidos, confirmando o Tribunal a decisão do de jurisdição inferior, sem expor razões.

O Procurador Geral comunicou a este Departamento que se não continuará o processo. Ficaes auctorizado, portanto, a remetter a usual relação certificada para a restituição da quantia paga em excesso dos direitos exigidos.

Sou com respeito,

O. L. SPAULDING,
Subsecretario.

AO INSPECTOR DA ALFANDEGA,
Nova York, N. Y.

No. 23452.

Por esta decisão que é a dada no dia 3 de Janeiro de 1902, pela Junta Geral de Avaliadores (United States Board of General Appraisers) na cidade de Nova York, declara-se que os artigos de algodão inteiramente acabados, como os cobertores de cama, ou as mantas para cavallos, que não tenham mescla de outra substancia, cujas orlas ou bordas estejam cosidas ou ribeteadas, devem ficar comprehendidos no paragrapho 310 da lei de 1897, como “tecidos de algodão de todas as classes, em peça ou em outra forma,” e por conseguinte devem pagar direitos de accordo com o disposto no quadro I da dita lei, e não de accordo com o paragrapho 332, como “manufacturas de algodão não especificadas.”

No. 23453.

Esta decisão, que é a adoptada pela Junta Geral de Avaliadores, a 3 de Janeiro de 1902, com o No. 5,058, dispõe que nos casos que se encontram pendentes, por virtude de appellação estabelecida em devida forma perante a “Board of Reappraisement,” o administrador da alfandega carece de auctoridade para fazer uma liquidação; e a que fizer será nulla e sem nenhum valor.

No. 23454.

Por esta decisão (G. A. 5059) dispõe-se que os tecidos de algodão para fazer luvas que se assemelham aos artigos de ponto de meia que

se fazem na machina milanese, e enjos fios não podem ser contados, desfiando-os ou por outro meio pratico, devem pagar direitos como manufacturas de algodão não especificadas, conforme o paragrapho 322 da lei de tarifa de 1897, mas não de accordo com as disposições (paragraphos 305 até 310 inclusive) da referida lei relativas aos tecidos de algodão cujos fios podem ser contados.

Nos. 23455, 23456, e 23457.

Pela primeira destas tres decisões modificam-se alguns artigos do Regulamento para o serviço dos Hospitaes da Marinha dos Estados Unidos.

Pela segunda, estabelece-se a classe de armazem ou deposito em que o chá deve ser depositado, enquanto durar a inspecção ou exame daquella mercadoria.

Pela terceira dispõe-se como devem ser classificadas as mercadorias conhecidas com o nome de *bean stick* e *bean cake*, quando se importarem nos Estados Unidos ou suas possessões.

No. 23458.

Por esta decisão mandam-se publicar de novo para conhecimento geral, varios artigos do codigo intitulado “Estatutos Revisados dos Estados Unidos” e do Regulamento da Junta de Inspectores relativos ao bom serviço dos vapores nos Estados Unidos, e aos deveres de seus officiaes.

No. 23459.

REEMBOLSO DE DIREITOS SOBRE PRECINTAS DE COURO CRÚ.

Reembolso de direitos sobre precintas de couro crú, feitas com couros seccos arsenicados por Chas. A. Schieren & Co., Nova York, N. Y.

DEPARTAMENTO DO THESOURO,
11 de Janeiro de 1902.

SENHOR: Na exportação de precintas de couro crú, manufacturadas por CHAS. A. SCHIEREN & Co., de Nova York, N. Y. inteiramente de couros seccos arsenicados, será concedido um reembolso igual á quantia dos direitos de importação cobrados sobre o material que tem sido usado, menos a deducção legal de 1 por cento.

A declaração preliminar deverá especificar as marcas e numeros dos volumes e o conteudo de cada volume, como o indica a factura de

exportação. No caso das precintas com pontas metallicas, deverá ser declarado o numero de cartões e o numero de pés lineaes das precintas contidas nelles em em cada volume. Quando as precintas são ponte-adas, deverá ser declarado o numero total de embrulhos que contêm 100 pés de precintas das differentes larguras commerciaes cada um, e o comprimento total das diversas larguras contidas em cada volume e no embarque inteiro.

O pedido de restituição de direitos deverá conter o numero total de pés lineaes de cada largura commercial das precintas exportadas, e o numero de pés quadrados de couro representado pelas precintas separadamente e em conjuncto. O citado pedido deverá conter, além das declarações de estylo, que as precintas foram fabricadas do material e na maneira estabelecida na declaração jurada pelos manufactureiros, datada de 18 de Dezembro de 1901.

Na liquidação, será tomada como base para o reembolso de direitos, a quantidade de couro que foi importado e que possa igualar a quantidade de precintas exportadas (medida superficial) como fica declarada no pedido de reembolso de direitos, depois de comprovar-se oficialmente as dimensões declaradas; mas em caso algum excederá um lado de couro de rez importada para cada 15 pés quadrados de precintas exportados.

Com respeito,

O. L. SPAULDING,
Sub-secretario.

[No. 23460.]

REEMBOLSO DE DIREITOS SOBRE ASPHALTO REFINADO.

Ficam extensivas as instrucções deste Departamento, de 26 de Outubro de 1899 (Decisão No. 23042), ás exportações de asphalto refinado manufacturado pela "Sicilian Asphalt Paving Company" de Nova York, N. Y.

DEPARTAMENTO DO THESOURO,
11 de Janeiro de 1902.

SENHOR: As instrucções deste Departamento de 26 de Outubro de 1899, estabelecendo um typo para conceder a restituição de direitos sobre asphalto refinado manufacturado pela "Warren-Scharf Asphalt Paving Company," pela presente ficam extensivas ás exportações de asphalto refinado, manufacturado inteiramente de asphalto crú importado do lago de Trindade pela Sicilian Asphalt Paving Company de Nova York.

Com respeito,

O. L. SPAULDING,
Sub-secretario.

AO INSPECTOR DA ALFANDEGA,
Nova York.

No. 23461.

Por esta decisão, que foi expedida a 13 de Janeiro de 1902, manda-se que as barras de ferro, de forma oval e de diversos tamanhos, em cuja fabricação foi usado como combustível o carvão de lenha, e que não estejam especificadas na lei de 1897, devem pagar direitos á razão de \$12 por tonelada, como “barras e peças de ferro laminado ou batido, não especificadas,” conforme o paragrapho 124 da mesma lei.

No. 23462.

ARTIGOS FABRICADOS POR ENCARCERADOS.

A compensação de que trata o art. 4 da lei de 22 de Junho de 1874, não pode ser concedida nos casos que envolvem a importação de artigos manufacturados por encarcerados.

DEPARTAMENTO DO THESOURO,
13 de Janeiro de 1902.

SENHOR: Este Departamento está de posse do vosso officio de 3 do corrente em que communicais que certa pessoa em Kingston, Canadá, deseja dar informações a este Governo relativas á importação illegal nos Estados Unidos, de certos artigos manufacturados no Canadá por encarcerados, com a condição de que receba uma recompensa pelas ditas informações.

Tambem requereis que se vos informe si o Departamento concederia ou não, ao denunciador, a metade da quantia resultante da apprehensão dos artigos feitos por encarcerados, ja sejam introduzidos nos Estados Unidos na forma legal, ou clandestinamente.

Em resposta, tenho a honra de informar-vos que a secção 31 da lei de 24 de Julho de 1897 prohibe a introdução de generos, objectos e mercadorias manufacturadas inteiramente ou em parte, em paiz estrangeiro, por encarcerados, e o Secretario do Thesouro está auctorizado para prescrever as medidas que forem necessarias para o fiel cumprimento desta disposição. Esta lei é uma reproducção das leis anteriores sobre a materia.

A decisão No. 11934, de Outubro de 1891, deste Departamento, diz que quando se provar por testemunho sufficiente que se tem effectuado contra a lei, a importação de mercadorias manufacturadas por encarcerados, as ditas mercadorias poderão, á opção do importador, ser exportadas immediatamente sem pagarem direitos, ou, não seguindo este modo de proceder, as mercadorias serão apprehendidos, iniciando-se o juizo respectivo para sua condemnação e destruição de accordo com a lei.

Esta disposição está ainda em vigor e desta se depreheende que, como os artigos desta descripção não podem entrar nos Estados Unidos para

o consumo, não é possível cobrar direitos, nem dispor delles, por meio de hasta publica, e como a secção 4 da lei sobre denuncias dispõe a compensação para denunciantes sómente nos casos em que os direitos estiverem retidos ou se tiver incorrido em uma multa, pena ou confiscação, um pedido de recompensa como denunciante não pode ser considerado favoravelmente por este Departamento.

Com respeito,

O. L. SPAULDING,
Subsecretario.

Sr. LEGARE PHENIZ,

*Agente Especial do Departamento do Thesouro,
Ogdensburg, N. Y.*

No. 23463.

REEMBOLSO DE DIREITOS—MARCAS DE SACCOS.

A decisão deste Departamento, de 28 de Abril de 1899 (No. 21067), é applicavel ao lado do sacco que leva a marca pela qual seu conteudo é conhecido no commercio.

DEPARTAMENTO DO THESOURO,
14 de Janeiro de 1902.

SENHOR: Este Departamento está de posse de vosso officio de 21 do proximo passado, transmittindo a reclamação de Bemis Brothers Bag Company, pedindo que se lhes conceda o desconto sobre os 4,480 saccos contendo farinha de caroço de algodão, por estarem comprehendidos, com anterioridade, na guia No. 1501 e exportados pelo vapor *Othello* no dia 22 de Novembro de 1901.

Parece que foram cumpridos todos os requisitos do regulamento, com a excepção de que as palavras “para reembolso de direitos,” não apparecem no mesmo lado do sacco em que se encontram as marcas de embarque.

Em resposta, tenho de informar-vos que a decisão deste Departamento de 28 de Abril de 1899 (no. 21067) prescreve que “taes marcas devem ser feitas com tinta indelevel, no lado do sacco que exhibe as marcas, e em letras não menores de 2 pollegadas de altura com um largo proporcional.” Esta decisão refere-se ao lado do sacco que leva a marca pela qual seu conteudo é conhecido no commercio, e não é applicavel á marca de embarque. Pode haver casos em que o conteudo dos saccos não está designado por nenhuma marca ou nome commercial, e nos quaes só apparece a marca de embarque; em tal caso, a decisão acima mencionada será cumprida, si as palavras “para reembolso” apparecem no lado do sacco em que se encontram as marcas de embarque.

A vista dos factos expostos, ficais auctorizado pela presente para

proceder á liquidação do despacho em questão, e expedir um certificado para o reembolso de direitos.

Com respeito,

O. L. SPAULDING,
Sub-secretario.

INSPECTOR DA ALFANDEGA,
Nova Orleans, La.

No. 23464.

OBRA CHAMADA DE “APPLICAÇÃO” NÃO É “BORDADO”—CHINELLAS OU SANDALIAS PAGARÃO OS DIREITOS ESTABELECIDOS PARA CALÇADO.

As chinellas ou sandalias turcas enfeitadas com fios metallicos, feitas em sua maior parte de couro, pagarão direitos de accordo com o paragrapho 438 da lei de 1897, como “calçado feito de couro” e não como artigos bordados com fios metallicos, em virtude do disposto nos paragraphos 339 e 179.

A designação caprichosa de qualquer artigo, não descripto como tal em uma lei aduaneira, não é motivo para retiral-a da classe generica descripta na Tarifa.

A mercadoria em questão consiste em chinellas turcas, despachada pelo avaliador como “calçado feito de couro e bordado na parte superior com fios metallicos.” Foi classificada pelo inspector conforme o paragrapho 179, da lei de tarifa de 1897, em virtude da condição inserta no paragrapho 339 da mesma lei. As partes protestam que os artigos citados devem pagar direitos á razão de 25 por cento *ad valorem*, segundo o provisto no paragrapho 438 da dita tarifa, como “botas e sapatos feitos de couro.”

Os direitos, de accordo com o paragrapho 179, são 60 por cento *ad valorem* sobre “rendas, bordados, tranças, galões, enfeites ou outros artigos feitos inteiramente ou em maior parte de arame ou lamella de ouropel, franjas ou fios de metal.” A parte a proposito do paragrapho 339, diz o que segue:

“339. * * * vestidos * * * e outros artigos ou tecidos bordados de qualquer maneira á mão ou por machina, seja com uma letra, monogramma, ou de outro modo; artigos de bastidor ou applicados; * * * todos os precedentes, compostos em todo ou em principal parte de linho, algodão, ou outra fibra vegetal, e não especificados em outra parte desta tarifa; * * * com tanto que não paguem nenhuns vestidos ou outro artigo ou tecido, bordados á mão ou á machina, uma taxa menor que a imposta em qualquer quadro desta tarifa sobre quaesquer bordados das mesmas materias que com ponham taes bordados.”

Das provas e do exame da amostra do artigo submettido á nossa consideração, encontramos que tal enfeite de fios metallicos não é bordado ou feito da mesma maneira como bordados á mão ou á machina.

Este é o que se conhece sob o nome de trabalho de applicação, sendo cosido o enfeite sobre o sapato com fio de algodão ou linho. A Junta tem sustentado uniformemente que os artigos de applicação não são bordados ou artigos bordados (como nos casos: De Maesener, G. A., 1151; Mandel, G. A., 2943; Muser, G. A., 4030). Ainda que os artigos, tecidos ou vestidos applicados, feitos de linho, algodão ou outras fibras vegetaes, são especificados no dito paragrapho 339, observar-se-há que a ultima parte do citado paragrapho, em virtude do qual o Inspector justifica sua classificação, refere-se unicamente a artigos bordados, excluindo assim, de uma maneira implicita, os artigos de outra natureza, inclusive as chinellas em questão.

As chinellas não podem ser comprehendidas no paragrapho 179, porque as provas demonstram satisfactoriamente, que o valor do couro nos ditos artigos é, pelo menos, tres vezes o valor dos enfeites metallicos, e além disto, o paragrapho refere-se sómente a mercadorias compostas em sua maior parte de fios metallicos, ou dos outros materiaes mencionados nelle.

A phrase “sapatos feitos de couro,” inserta no paragrapho 438, tem sido uniformemente interpretada para significar sapatos compostos em sua maior parte de couro (como nos casos: Wise, 93 Fed. Rep., 443; Robitsek, G. A., 249; Sang Chong, G. A., 3790; Wing Tuck & Co., G. A., 4547. Tambem, veja-se: Estados Unidos contra Churchill, 106 Fed. Rep., 672, e Alins, G. A., 4531). A Junta já decidiu muitas vezes que uma chinella é uma especie de sapato ligeiro, assim chamada devido a que se pode pôr com facilidade e usal-a em trajo de casa. (Casos: Vantine, G. A., 319, e Robitsek, G. A., 1373.)

Por conseguinte, estando os artigos compostos em sua maior parte de couro, são comprehendidos no dito paragrapho 438, como “sapatos feitos de couro.” Não tem significação alguma que os artigos em questão sejam conhecidos ou vendidos no commercio sob o nome de chinellas turcas, e não sob o nome especifico de sapatos. A designação de qualquer artigo, não descripto como tal em uma lei aduaneira, não é um motivo para retiral-a da classe generica descripta na tarifa (casos: White, 53 Fed. Rep., 787; Claffin, 121; 2 C. C. A., 647; Charnock, G. A., 3248).

Em vista dos casos precedentes e do exame feito, consideramos que as chinellas de que tratamos, devem pagar direitos á razão de 25 por cento *ad valorem*, de conformidade com o paragrapho 438.

Por conseguinte, a classificação do requerente é confirmada e a decisão do inspector revogada.

PROGRESSO DURANTE UM SEculo.

Estatisticas interessantes relativas ao desenvolvimento industrial, commercial e financeiro dos Estados Unidos, durante o seculo XIX,

foram publicadas ultimamente pela Secção de Estatística do Departamento do Thesouro. Entre os factos apresentados demonstrando o progresso do paiz são o desenvolvimento da producção, o desenvolvimento do commercio, o augmento da riqueza publica, o augmento da circulação monetaria, o augmento dos depositos nas caixas economicas e o crescente numero de depositantes nas caixas economicas e outras instituições bancarias e o decrescimento na importancia dos juros da divida publica.

Quanto á producção do paiz vê-se que a producção de algodão subiu de 155,556 fardos em 1800 a 9,436,416 fardos em 1900; a de lã, de 35,802,114 libras em 1840 a 302,502,328 libras em 1901; trigo, de 151,999,906 alqueires em 1866 a 522,229,505 alqueires em 1900; milho, de 867,946,295 alqueires em 1866 a 2,105,516 alqueires em 1900; cobre, de 650 toneladas em 1850 a 270,588 toneladas em 1900; ferro em linguados, de 165,000 toneladas em 1830 a 15,800,000 toneladas em 1901; petroleo, de 21,000,000 gallões em 1860 a 2,661,233,568 gallões em 1900; carvão de pedra, de 3,358,899 toneladas em 1850 a 267,850,000 toneladas em 1901, e ouro, no valor de \$50,000,000 em 1850 a \$79,171,000 em 1900.

Durante o periodo de que se trata, o valor das exportações tem crescido de \$70,971,780 em 1800 a \$1,487,764,991 em 1901, e o das importações de \$91,252,768 em 1800 a \$823,172,165 em 1901. A riqueza publica do paiz subiu de \$7,135,780,000 em 1850 a \$94,300,000,000 em 1900, a riqueza por cabeça sendo de \$307.69 em 1850 e de \$1,235.86 em 1900.

A circulação monetaria em 1860 foi de \$435,407,252, comparada com \$2,175,387,277 em 1901. Em 1830 os depositos nas caixas economicas foram de \$6,973,304, ao passo que em 1901 attingiram a \$2,597,094,580.

Pode-se ter uma idea do augmento havido na extensão das vias ferreas pelo facto de que em 1850 a extensão total foi de 9,021 milhas, ao passo que em 1901 attingiu a 199,378 milhas. Houve um augmento nos transportes de fretes e uma diminuição nas taxas destes. Calcula-se que no periodo em referencia a area da Republica tem quadruplicado e a população tornou-se dez-e-seis vezes maior.

SITUAÇÃO ECONOMICA SOB O PONTO DE VISTA INGLEZ.

A posição que occupam os Estados Unidos entre seus concurrentes commerciaes, particularmente os da Europa, se vê dos dados estatisticos publicados no Annuario do "London Daily Mail" para o anno de 1902. Nos diversos capitulos desta obra se analysam e se discutem os principaes elementos da situação economica dos Estados Unidos. Quanto á riqueza, os Estados Unidos occupam o primeiro lugar na lista das grandes nações, as cifras para os diversos paizes sendo como segue: Estados Unidos, £16,350,000,000; Reino Unido, £11,806,000,000; França, £9,690,000,000; Allemanha, £8,052,000,000; Russia, £6,425,000,000.

A divida publica dos Estados Unidos é a mais pequena como se pode ver do seguinte quadro:

Estados Unidos	£221, 000, 000
Allemanha	651, 000, 000
Reino Unido.....	706, 000, 000
Russia	711, 000, 000
França	1, 239, 000, 000

A proporção por cento da divida á riqueza é como segue:

Estados Unidos	1. 4
Reino Unido.....	6. 0
Allemanha	8. 1
Russia.....	11. 1
França	12. 8

Tratando da concorrência commercial diz o Anuario que o primeiro anno do seculo XX começou infelizmente para duas das quatro principais nações industriaes do mundo. O commercio dos Estados Unidos não mostrou diminuição sobre o dos annos de grande prosperidade de 1899 e 1900, mas, ao contrario, a maioria das industrias continuavam a gozar de grande prosperidade. A França, que tinha respondido em menor gráo a essa prosperidade, não foi affectada pela decadencia ou pelo progresso nos outros paizes. Na Inglaterra e na Allemanha, porém, a depressão industrial foi severamente sentida.

Quanto a producção de trigo do mundo, vê-se que os Estados Unidos occupam o primeiro lugar entre os paizes productores deste cereal. A colheita de trigo do mundo em 1901 foi distribuida assim, em quarteiros inglezes:

Estados Unidos	90, 000, 000	Hespanha.....	13, 000, 000
Russia	42, 000, 000	Romania e Bulgaria	12, 000, 000
França	38, 000, 000	Allemanha.....	11, 000, 000
India	30, 000, 000	Reino Unido	7, 000, 000
Italia	17, 000, 000	Australia	7, 000, 000
Hungria	16, 000, 000		

A producção de trigo da Republica Argentina não está comprehendida neste calculo do “Daily Mail.”

No capitulo intitulado “Fight for the Iron Trade” (Lucta pelo Commercio de Ferro), o annuario chama a attenção para o facto de que hoje os Estados Unidos são o paiz maior productor de ferro e aço do mundo. A este respeito diz o seguinte:

“Notar-se-á que o Reino Unido tem retrogrado, produzindo 396,749 toneladas menos em 1900 que em 1899, a producção total da Grã Bretanha sendo de cerca de 5,000,000 toneladas menos que a dos Estados Unidos. Outra feição pouco satisfactoria do commercio de ferro e aço da Grã Bretanha é que em 1900 importámos o ferro e o aço em maior quantidade, e exportamos menor quantidade destes productos que em qualquer anno anterior, ao passo que as exportações de ferro e aço dos Estados Unidos foram as maiores jamais registradas.”

Os quadros que acompanham a esta exposição mostram que a produção de ferro em linguados em 1900 foi como segue:

	Toneladas.
Estados Unidos	13, 789, 242
Reino Unido	8, 908, 570
Allemanha.....	8, 494, 852
França	2, 699, 494
Russia.....	2, 821, 000

A produção de aço foi a seguinte:

	Toneladas.
Estados Unidos	10, 087, 322
Grã Bretanha.....	4, 901, 054
Allemanha	4, 799, 000
França	1, 624, 046
Russia.....	1, 494, 000

CONDIÇÃO DAS COLHEITAS.

O relatório mensal sobre as colheitas, publicado pela Secção Meteorologica do Departamento de Agricultura, diz o seguinte: As informações relativas á condição do trigo são em geral pouco satisfactorias excepto em Kansas e Nebraska, onde a perspectiva é animadora, ainda que em algumas secções destes dous Estados a colheita soffreu por ser usada como pasto. A falta de neve para proteger as sementeiras durante a maior parte do mez de Janeiro, e as frequentes geladas alterando com os degelos nos Estados banhados pelos rios Mississippi e Ohio e nos Estados centraes da costa do Atlantico, tem deixado o trigo em condições muito desfavoraveis. Em uma zona consideravel de Kentucky e Tennessee a condição do trigo é tão desfavoravel que a area semeada será lavrada de novo e semeada de outras colheitas. A condição do trigo de inverno na costa do Pacifico é muito satisfactoria.

CONSTRUÇÃO DE ESTRADAS DE FERRO EM 1901.

A construção de vias ferreas nos Estados Unidos em 1901 excedeu á de qualquer anno anterior desde 1890. A extensão das linhas construidas em 1901 foi de 5,057 milhas. Accrescentando-se a extensão das linhas em trafego em 1900, que foi calculada em 194,321 milhas, a extensão total attinge a 199,378 milhas.

Essas novas vias ferreas são distribuidas assim: Texas occupa o primeiro lugar, com 583 milhas; seguem-lhe Oklahoma, com 428 milhas; New Mexico, com 275 milhas; Georgia, com 303 milhas; Wisconsin, com 196 milhas; Missouri, com 189 milhas; Indiana, com 174 milhas; Minnesota, com 171 milhas; Illinois, com 164 milhas; Michigan, com 164; Louisiana, 160 milhas; Territorio Indiano, 157 milhas; Arkansas, 156 milhas, e Pennsylvania 153 milhas. Dos outros Estados, nenhum augmentou suas vias-ferreas por extensão maior de 150 milhas.

Ao passo que a extensão das vias ferreas e a quantidade de cargas transportadas têm augmentado constantemente como resultado do assombroso desenvolvimento commercial do paiz, os preços pelo transporte de cargas têm soffrido consideravel redução. Segundo estatísticas subministradas pela Repartição de Estatísticas, o preço por tonelada de carga transportada foi de 1.24 centavos em 1882; 1.03 centavos em 1887; 93 centavos em 1890; 84 centavos em 1895; 80 centavos em 1897, e 75 centavos em 1900.

PRODUÇÃO DE MINERAES EM 1901.

Estatísticas da produção mineral dos Estados Unidos em 1901, organisadas pela Secção de Estatística do Departamento de Thesouro, mostram que a produção de ouro, prata, ferro, aço, cobre, carvão de pedra e oleo mineral em 1901 foi a maior jamais registrada. A produção de ouro em 1901 foi calculada em \$80,218,800, contra \$79,171,000 em 1900, que representa a maior produção de ouro até agora realizada nos Estados Unidos. A produção de prata em 1901 é calculada em 59,653,788 onças, comparada com 57,647,000 onças no anno anterior. A produção de ferro em linguados é calculada em 15,800,000 toneladas de 2,240 libras cada uma, contra 13,789,242 toneladas em 1900, que foi a maior produção registrada nos annos anteriores a este. A produção de carvão de pedra é calculada em 267,850,000 toneladas de 2,240 libras cada uma, contra 240,965,917 toneladas em 1900. A produção de petroleo em 1901 foi estimada em 2,772,000,000 gallões, contra 2,661,233,568 gallões em 1900, que foi a maior produção havida anteriormente a este anno. O cobre é o unico producto na lista cuja produção mostra uma ligeira diminuição em 1901 comparada com a de 1900. A produção deste mineral em 1901 foi de 265,625 toneladas, ou seja 5,000 toneladas menos que em 1900. Estes algarismos mostram não só que a produção de mineraes nos Estados Unidos em 1901 excedeu á de qualquer anno anterior, mas que excedeu á de qualquer outro paiz.

Em 1900 as cifras da produção de petroleo da Russia excederam ás dos Estados Unidos, mas é provavel que a enorme produção dos Estados Unidos estimada para 1901, fará que este paiz occupe outra vez o primeiro lugar na lista dos paizes productores de petroleo. Quanto á concorrência na produção do carvão, diz o Anuario do "London Daily Mail" que "os Estados Unidos nos têm sobrepujado nos ultimos dous annos como um paiz productor de carvão." A produção total de carvão dos Estados Unidos em 1900 excedeu á de qualquer outro paiz, e como a produção de 1901 foi 27,000,000 toneladas mais que em 1900, é evidente que os Estados Unidos occupam o primeiro lugar na lista das nações productoras de carvão.

EXPORTAÇÕES DE TRIGO.

As exportações de trigo e de farinha dos Estados Unidos durante o primeiro trimestre do exercício de 1902 (os meses de Julho, Agosto e Setembro de 1901) ascenderam a 83,940,000 alqueires (2,284,496.67 toneladas metricas). Nos seis annos fiscaes anteriores, as exportações de trigo effectuadas durante o primeiro trimestre foram de 20 a 30 por cento do total das exportações de trigo feitas durante o anno. A maxima exportação de trigo feita no primeiro trimestre durante os seis annos immediatamente anteriores a este, foi de 54,291,000 *alquires* no primeiro trimestre do anno fiscal de 1897, ou seja 25 por cento do total. Si as exportações no primeiro trimestre do corrente exercício constituírem 25 por cento do total das exportações, este total attingirá a 332,000,000 *alquires*, que é 114,000,000 *alquires* mais que a quantidade exportada no anno anterior.

Si a colheita de trigo deste anno for tão diminuta como tem sido calculada, é evidente que será impossivel exportar tão avultada quantidade. A quantidade de trigo que a Europa terá de importar para satisfazer as exigencias do consumo foi estimado em muito menos de 300,000,000 alqueirés, e por conseguinte será de admirar que seja mantida a proporção de exportação consignada para o primeiro trimestre. As exportações effectuadas no mez de Agosto foram o dobro das de Agosto de 1899, quasi o dobro das de Agosto de 1897 (anno em que houve diminuta colheita na Europa) e muito mais que o dobro das de Agosto nos ultimos seis annos. Por conseguinte, uma diminuição nos embarques desde Agosto, não destroe as estimativas de uma seria redução na colheita Europeia.

Que ha tal redução na colheita da Europa e consequente necessidade de cereaes em consideravel quantidade pode-se ver das seguintes estatisticas: A producção total de trigo do Imperio Allemão em 1900 foi de 3,841,165 toneladas metricas, e a de centeio foi de 8,550,659 toneladas, ou um total de 12,391,824 toneladas de cereaes para pão. Além da producção nacional, foram importadas 978,874 toneladas de trigo e 817,242 toneladas de centeio, ou seja um total de 1,816,026 toneladas. Por conseguinte, se-vê que o consumo total dos principaes cereaes usados na fabricacão de pão foi de 14,207,850 toneladas, o que mostra um augmento de 22 por cento em dez annos. Em 1900 houve uma boa colheita e as importações foram minimas, mas devido á secca, um máo inverno e outras causas, a colheita de 1901 foi consideravelmente menor que a normal; e n'uma memoria apresentada ao Governo pela mais eminente organisação agricola da Allemanha se calcula que a falta de cereaes na Prussia determinará a compra dos mesmos no estrangeiro pelo valor nunca menor de \$67,246,000, tendo-se como base os preços médios do anno passado. Neste calculo se comprehende pouco mais da metade do Imperio Allemão, e si as mesmas

condições prevalecerem em todo o Imperio sera preciso importar cereaes pelo valor de \$100,000,000 durante o inverno.

POPULAÇÃO TOTAL EM 1900.

Segundo o relatorio da Repartição do Recenseamento, ultimamente publicado, a população total dos Estados Unidos, incluindo suas possessões insulares, no dia 1º de Junho de 1900, foi de 84,233,069 habitantes, distribuidos assim: O continente norte-americano, 75,994,575 habitantes; as Philippinas, 6,961,339; Porto Rico, 953,243; Hawaï, 154,001; Alaska, 63,592; Guam, 9,000; Samoa americana, 6,100; pessoas no serviço militar e naval dos Estados Unidos que estão fóra do paiz, 91,219. Os algarismos correspondentes á população das Philippinas foram subministrados pelo chefe da secção de estatisticas da Commissão Philippina.

Diz o relatorio que o recenseamento decimo-segundo dos Estados Unidos comprehende, além do continente norte-americano, sómente Alaska e Hawaï e que os algarismos correspondentes ás demais possessões dos Estados Unidos são tomados de fontes fidedignas, os mais exactos que se podiam obter. Em fim do seculo XVIII, a população dos Estados Unidos foi avaliada em 5,333,000 habitantes, pelo que verifica-se que a população em 1900 é quasi dezeseis vezes maior do que era ha cem annos.

OBRAS DE MELHORAMENTO NO PORTO DE SAN PEDRO.

Diz-se que o Governo dos Estados Unidos vai empregar milhões de dollars em obras de melhoramento no porto de San Pedro, situado na costa meridional do Estado da California. Um contracto foi celebrado ha algum tempo para a construcção de um quebra-mar que será de 8,500 pés de extensão e custará \$3,000,000. A sexta parte dos trabalhos já esta concluida e na restante os trabalhos estão sendo proseguídos com comparativa rapidez. Espera-se que o porto será concluido dentro de quatro annos, ainda que antes d'aquella data, terá-se conseguido o fim que se tinha em vista, que é a creação de um ancoradouro externo de uma milha quadrada de extensão onde poderão ancorar-se os maiores navios do mundo.

Depois de despendidos \$2,000,000 em obras de melhoramento deste porto, haverá uma superficie de agua de 800 geiras com uma profundidade de 24 pés e um ancoradouro de 9 milhas de extensão. Depois de concluido este porto poderá ser comparado vantajosamente com os principaes portos commerciaes do mundo, taes como o do Clyde, do Tamisa, etc. O quebra-mar está sendo construido na parte que dá accesso ao porto. Torna possivel a approximação dos navios seja qual for o tempo e permite uma ancoragem externa a qual dará grande importancia ao valor do porto.

MEXICO.

PERSPECTIVA DE UM AUGMENTO NA PRODUÇÃO DO ASSUCAR.

Segundo a imprensa do Mexico, o anno de 1902 promette ser notavel pela producção de assucar na Republica. Capitalistas, tanto nacionaes como estrangeiros, estão empregando avultadas sommas nessa industria, melhorando e ampliando as plantações existentes e estabelecendo outras novas. Nos Estados de Jalisco, Michoacan, Morelos, Sinaloa, Sonora, Tamaulipas e Veracruz, capital americano e francez, está sendo empregado em novas e extensas plantações, tendo installações as mais modernas e aperfeçoadas para a producção de assucar. A capacidade productora das velhas plantações está sendo augmentada pela acquisição de novos terrenos para o cultivo da canna e de machinas aperfeçoadas para moer e refinar o assucar.

O "Mexican Herald" noticia que machinas no valor de \$350,000 foram encommendadas para diversas plantações, as quaes deverão ser entregues em Maio de 1902. Os cultivadores de assucar esperam que a produção deste genero este anno será de 25 a 30 por cento em excesso da de 1901. Só com o producto das refinações de San Cristoba e Penuco, no Estado de Veracruz, e a de Alvarado no Estado de Sinaloa, ter-se-há realizado a maxima porcentagem de augmento calculada. A isto deve-se ajuntar o producto das outras tres novas plantações, assim como o augmento provavel de producção dos pequenos e mais velhos engenhos como resultado do emprego nelles de processos mais modernos. Si a producção de assucar do Mexico continuar augmentando na mesma proporção durante os proximos dous ou tres annos como se deu nos ultimos cinco annos, este paiz tornar-se-há um exportador do producto.

NICARAGUA.

DIREITOS DE IMPORTAÇÃO SOBRE ESSENCIAS E OLEOS ESSENCIAES.

Um decreto publicado no "Diario Oficial" em Abril e Novembro de 1901, contem as seguintes disposições:

"ARTIGO 1º. Essencias para a preparacão de licores poderão ser importadas sómente pelos fabricantes que teem auctorização escripta do Director Geral do Ministerio competente, sujeitando-se ao pagamento dos direitos estipulados na tarifa vigente.

"ART. 2º. Os oleos essenciaes não poderão ser importados senão por chimicos ou medicos pharmaceuticos e deverão ser usados exclusivamente na preparacão de medicinas ou prescripções medicinaes."

Nos pedidos de auctorização que se fizerem ao Ministerio da Fazenda, as pessoas interessadas deverão especificar as essencias que se desejam importar, de forma que a auctorização concedida pelo Ministerio será applicavel sómente áquellas que podem ser usadas na preparacão de drogas.

URUGUAY.

EXPORTAÇÃO PELO PORTO DE MONTEVIDÉO NOS PRIMEIROS NOVE MEZES DE 1901.

O seguinte quadro mostra as principaes mercadorias que foram exportadas pelo porto de Montevidéo nos primeiros nove mezes de 1901:

Couros seccoos de boi.....	624, 302
Couros salgados de boi.....	458, 920
Pelles de carneiro.....	fardos.. 9, 589
Lã.....	id.... 64, 927
Pello.....	id.... 1, 012
Xarque.....	id.... 393, 124
Carne fresca.....	toneladas.. 2, 685
Sebo.....	pipas.. 33, 904
Farinha de trigo.....	saccos.. 21, 988
Farelo.....	id.... 6, 824
Trigo.....	id.... 4, 428
Milho.....	id.... 118, 535
Linhaça.....	id.... 6, 176
Ossos e cinzas.....	toneladas.. 7, 900
Linguas seccoas em conserva.....	caixas.. 15, 888
Chifres.....	998, 016

COMMERCIO DA GRÃ BRETANHA COM A AMERICA LATINA EM 1901.

Segundo estatisticas dadas no relatorio preliminar publicado pelo Governo inglez com o titulo de “Accounts Relating to Trade and Navagation of the United Kingdom,” para o anno de 1901, o commercio da Grã Bretanha com a America latina em 1901 mostra uma consideravel redução comparado com o de 1900. As estatisticas dessa publicação, porém, não comprehendem todas as transacções commerciaes da Grã Bretanha com os paizes da America latina, ainda que se dão as quantidades e os valores dos principaes artigos de importação e exportação. Informações mais completas não serão publicadas por alguns mezes. Segundo as informações preliminares as importações na Grã Bretanha procedentes da America latina foram no valor de £15,353,076 em 1901, contra £16,734,360 em 1900. As exportações da Grã Bretanha para os paizes sul-americanos foram avaliadas em £11,857,915 em 1901, contra £13,505,818 em 1900.

Dá-se em seguida o summario do commercio da Grã Bretanha com a America latina, cada paiz sendo considerado separadamente.

REPUBLICA ARGENTINA.

Importação.	1901.	1900.	Diferença.
Gado vacuum.....	£667, 500	£667, 500
Gado lanigero.....	289, 000	289, 000
Trigo.....	£2, 670, 355	6, 088, 923	3, 418, 568
Milho.....	2, 616, 524	1, 514, 313	1, 102, 211
Carneiros.....	1, 950, 599	1, 689, 078	261, 521
Assucar não refinado.....	307, 825	107, 564	200, 261
Sebo e estearina.....	273, 068	239, 288	33, 780
Couros.....	74, 300	18, 629	55, 671
Linhaça.....	1, 516, 736	682, 122	834, 614
Total.....	9, 409, 407	11, 296, 417	1, 887, 010

No quadro supra não se comprehendem as importações de carne fresca, manteiga, queijo, quebracho e mais dous ou tres artigos de importancia.

O numero de gado vaccum e gado lanigero que a Grã Bretanha importou da Republica Argentina em 1900, foi de 38,562 e 178,969, respectivamente, ao passo que em 1901, não houve importações destes productos. A quantidade de trigo importada em 1901 foi de 808,040,000 libras, ou 13,467,333 alqueires, contra 1,852,400,000 libras ou 30,873,333 alqueires em 1900. A quantidade de milho que se importou em 1901 foi de 1,044,360,000 libras ou 18,649,286 alqueires, contra 652,620,000 libras (11,653,929 alqueires) em 1900. Outras importações da Republica Argentina foram: Linhaça, 664,528 quarteiros em 1901, contra 310,664 quarteiros em 1900; carneiros, 127,165,400 libras em 1901, contra 111,479,500 libras em 1900; sebo e estearina, 20,440,400 libras em 1901, contra 17,826,900 libras em 1900; assucar, 67,422,300 libras em 1901, contra 21,756,900 libras em 1900; couros, 3,263,100 libras em 1901, contra 757,500 libras em 1900.

Os productos da Grã Bretanha exportados para a Republica Argentina nos dous annos em comparação, com seus respectivos valores, foram como segue:

Artigos.	1901	1900	Diferença.
Artigos de algodão.....	£1, 174, 882	£1, 561, 838	386, 956
Artigos de juta.....	326, 451	321, 072	5, 379
Artigos de linho.....	49, 190	46, 340	2, 850
Tecidos de lã.....	116, 987	192, 884	75, 897
Tecidos de estambre.....	164, 769	361, 763	196, 994
Tapetes.....	26, 962	45, 867	18, 175
Ferragens e cutelaria.....	46, 335	56, 897	10, 562
Ferro de estrada de ferro.....	587, 543	322, 539	265, 004
Ferro galvanizado.....	321, 364	321, 676	312
Ferro fundido e forjado.....	394, 382	433, 673	39, 291
Folha de lata.....	50, 491	73, 784	23, 243
Cimento.....	31, 955	32, 549	594
Louça de barro e porcelana.....	41, 642	57, 645	16, 003
Total.....	3, 332, 683	3, 818, 477	485, 794

Os principaes artigos importados do Brazil em 1901, comparados com os de 1900, foram como segue:

Artigos.	1901.	1900.	Diferença.
Café.....	£228, 001	£90, 805	£137, 196
Assucar não refinado.....	155, 393	55, 413	99, 980
Algodão em rama.....	170, 041	669, 595	399, 554
Couros salgados.....	27, 485	31, 200	3, 715
Total.....	680, 920	847, 013	166, 093

Respeito á importação da borracha não se faz distincção de paizes no relatorio preliminar.

A quantidade de café recebida em 1901 foi de 13,262,400 libras,

contra 4,385,300 libras em 1900; as importações de assucar ascenderam a 34,373,800 libras em 1901, contra 10,658,000 libras em 1900; a quantidade de couros importada do Brazil em 1901, foi de 1,156,900 libras, contra 1,283,500 libras em 1900.

Os principaes artigos da Grã Bretanha exportados para o Brazil nos dous annos que se comparam, foram como segue:

Artigos.	1900.	1901.	Differença.
Carvão e outros combustiveis.....	£722, 526	£803, 837	£81, 311
Artigos de algodão.....	800, 000	1, 196, 298	396, 298
Artigos de juta.....	30, 816	15, 236	15, 580
Fios de juta.....	336, 768	262, 380	74, 388
Artigos de linho.....	41, 142	67, 061	25, 919
Tecidos de la.....	52, 508	71, 080	18, 572
Tecidos de estambre.....	83, 917	122, 293	38, 376
Ferragens e cutelaria.....	48, 093	63, 631	15, 538
Ferro de ferro-carril.....	71, 953	94, 948	23, 015
Ferro manufacturado.....	186, 894	320, 417	133, 523
Folha de lata.....	45, 945	74, 187	28, 242
Cimento.....	10, 492	21, 453	10, 961
Louça de barro e porcellana.....	57, 446	64, 417	6, 971
Couros.....	31, 356	39, 767	8, 411
Azeite de semente.....	52, 016	54, 183	2, 167
Manufacturas de cobre.....	35, 893	63, 136	27, 243
Total.....	2, 607, 745	3, 334, 324	726, 519

A quantidade total de carvão de pedra, coke e combustivel de patente exportada da Grã Bretanha para o Brazil em 1901, foi de 813,473 toneladas, contra 793,560 toneladas em 1900.

CHILE.

Conforme os dados estatisticos consignados no relatorio preliminar, as importações de cobre em todas as formas, em 1901, procedentes do Chile, foram avaliadas em £1,455,435, contra £1,417,137 em 1900. Si o nitrato de soda importado pela Grã Bretanha em 1901 veio em sua totalidade do Chile, como é provavel, as importações deste artigo foram no valor de £2,365,482 em 1901, contra £2,578,467 em 1900. Em 1901, não houve importações de trigo chileno, ao passo que em 1900, o valor do trigo recebido do Chile foi de £868.

As exportações para o Chile nos dous annos que se comparam, incluíram os seguintes artigos:

Artigos.	1901.	1900.	Differença.
Artigos de algodão.....	£744, 384	£998, 277	253, 893
Tecidos de la.....	112, 590	144, 046	31, 456
Tecidos de estambre.....	148, 751	212, 858	64, 107
Tapetes.....	31, 478	45, 105	13, 627
Ferragens e cutelaria.....	35, 159	32, 680	2, 479
Ferro de estrada de ferro.....	8, 688	25, 199	61, 489
Ferro galvanizado.....	115, 536	144, 459	28, 923
Ferro manufacturado.....	151, 230	190, 211	33, 981
Total.....	1, 425, 816	1, 792, 835	367, 019

PERU.

As importações de productos do Peru nos dous annos em comparação incluíram os seguintes artigos:

Artigos.	1901.	1900.	Differença.
Assucar.....	£41,761	£129,353	— £87,592
Cobre.....	285,152	111,717	+ 173,435
Lã de alpaca, lama e vicunha.....	226,649	205,839	+ 20,810
Total	553,562	446,909	+ 106,653

A quantidade de assucar importada do Peru em 1901, foi de 9,573,700 toneladas, contra 24,010,700 toneladas em 1900. A quantidade de lã de alpaca, lama e vicunha importada em 1901 e 1900, foi de 4,641,248 toneladas e 4,236,566 toneladas, respectivamente.

Os principaes artigos exportados pela Grã Bretanha com destino ao Peru nos dous annos em comparação foram como segue:

Artigos.	1901.	1900.	Differença.
Artigos de algodão	£358,069	£301,588	+ £56,481
Tecidos de lã	85,707	81,627	+ 4,080
Tecidos de estambre	44,162	37,788	+ 6,374
Ferro de estrada de ferro.....	16,744	27,952	— 11,208
Ferro manufacturado	31,575	29,830	+ 1,745
Total	536,257	478,785	+ 57,472

Os demais productos recebidos da America Latina foram como segue:

Da America Central se receberam 23,837,900 libras de café no valor de £739,006 em 1901, contra 17,789,700 libras no valor de £611,882 em 1900:

Da America do Sul se importaram 63,118,476 libras de lã, no valor de £1,604,699, contra 30,205,932 libras, no valor de £957,804 em 1900.

As importações dos demais paizes da America Latina não são especificadas, mas as exportações para esses paizes foram como segue:

Paizes.	1901.	1900.	Differença.

Total	558,407,100	5,668,627	641,609,400	6,578,174

PRODUÇÃO MINERAL DA AMERICA LATINA EM 1901.

Uma revista comprehensiva da industria mineira e metallurgica dos Estados Unidos em 1901, vem publicada no periodico “Engineering and Mining Journal” em seu numero de 4 de Janeiro ultimo, sendo incorporado nesse artigo um resumo da producção dos outros paizes productores de mineraes do mundo. Dessa publicação são tomados os seguintes dados relativos á producção mineral da America latina em 1901.

No Mexico houve um pequeno augmento na producção de ouro em 1901, e o mesmo se pode dizer da America Central, onde, em Salvador particularmente, foram exploradas durante o anno algumas novas minas de importancia. Ainda não temos estatisticas completas da producção mineral dos paizes sul-americanos mas é sabido que tanto o Peru como o Chile vão augmentando suas operações mineiras.

A producção de prata do mundo em 1901 baixou consideravelmente. Houve uma redução na producção do Mexico, paiz que occupa o segundo lugar na lista dos paizes productores desse metal. As condições que determinaram essa diminuição eram em maior parte de natureza temporaria e é provavel que em breve desapparecerão, sendo o resultado de interrupções nos trabalhos de extracção emquanto se fizeram novas explorações e da extracção de minério de inferior qualidade. Na Bolivia, a producção da grande mina de Huanchaca em 1901 foi inferior á dos annos anteriores, mas essa diminuição na producção sul-americana de prata, é em parte compensada pela maior producção do Peru e do Chile. As famosas minas de Cerro de Pasco, por muitos annos exploradas só em busca da prata, estão agora sendo trabalhados para o cobre, ainda que é consideravel a proporção de prata que ellas contêm. Na Republica da Colombia, as operações mineiras foram interrompidas como resultado da situação instavel desse paiz.

Em 1900 os principaes paizes productores de cobre, na ordem de sua importancia, eram: Estados Unidos, Hespanha, Japão, Chile, Australia, Mexico e Allemanha. Na maior parte destes paizes, a producção de cobre em 1901 foi igual, e em alguns delles maior, que em 1900. A producção do Chile em 1901 foi de 26,111 toneladas, e a do Mexico 22,403 toneladas. Os embarques das minas chilenas augmentaram-se muito em 1901. No proximo futuro o Mexico deverá augmentar muito sua producção desse metal, porque, neste paiz importantes depositos de cobre estão sendo explorados por capitães americanos. Fazem-se explorações nas minas de Nasosari e a producção da mina de Boleo continua ser grande. Quanto á America do Sul, houve grande actividade na exploração das minas de cobre do Peru em 1901, ao passo que projecto para a construcção da estrada de ferro até as minas do Cerro de Pasco e a drenagem das minas está sendo realizado.

Houve uma diminuição na producção de chumbo no México em 1901, que foi devida ás mesmas causas que operaram na exploração da prata. Na producção de estanho do mundo em 1901, a Bolivia mantem seu lugar entre os seis paizes productores, a producção deste paiz, tanto em 1901 como em 1900, sendo calculada em 6,000 toneladas de 2,240 libras cada uma. No Mexico se produzem tambem pequenas quantidades de chumbo para o consumo nacional. A producção de nitrato de soda no Chile foi regulada pela quantidade exportada, e os preços deste producto, devido ás combinações industriaes, têm sido muito satisfactorios.

BIBLIOGRAPHIA.

Nesta secção do Boletim Mensal se tratará dos livros e folhetos enviados á Secretaria das Republicas Americanas que se referem a assumptos de interesse aos paizes da União Internacional das Republicas Americanas.

Recebemos na bibliotheca desta Secretaria um exemplar do livro de classificação dos productos que devem figurar na Louisiana Purchase Exposition que terá lugar em São Luis em 1903. São precisas 53 paginas para fazer a simples enumeração dos grupos e classes de exhibições. Estes grupos se distribuem entre 15 secções: Instrução, 8; bellas artes, 6; artes liberaes, 13; manufacturas, 34; machinas, 5; electricidade, 5; vias de comunicação, 6; agricultura, 27; horticul-tura, 7; florestas, 3; minas e metallurgia, 5; peixes e e caça, 5; anthro-pologia, 4; economia social, 13, e cultura physica, 3. Ha 144 grupos e 807 classes, cada classe podendo abranger grande numero de amos-tras. Não ha nada que demonstre mais claramente, em espaço tão pequeno, a diversidade das occupações humanas, ou que mostre de modo mais comprehensivo o grande escopo da exposição que se está preparando para o anno de 1903, e em que todas as nações do mundo foram convidadas para tomarem parte.

Muitos paizes já acceitaram o convite e os trabalhos de construcção estão progredindo com rapidez. Os terrenos da Exposição abrangem uma area de 1,000 geiras. Os edificios da exposição occuparão, cada um, uma area de 200 geiras. Os capitães que foram subscriptos para a realização da exposição montam a \$15,000,000, não incluindo a verba de \$1,000,000 votada pelo Estado de Missouri e varios outras avultadas sommas votadas por outros Estados para seus edificios e exhibições. O livro de classificação e o regulamento da exposição serão enviados gratis a quem se dirija ao Director of Exhibits, World's Fair, St. Louis, Mo.

A “Revista Maritima Brasileira,” em seu ultimo numero, inaugurou uma secção de informações sobre o movimento maritimo e fluvial do Brazil, com o fim de organizar a estatistica dos recursos industriaes e commerciaes maritimos e tornar melhor conhecidas as sedes de trabalho existentes nos portos maritimos e fluviaes deste paiz.

Sobre as companhias de navegação as informações devem abranger: O percurso em que seus navios navegam e os portos em que tocam; o nome, tonelagem, força nominal, marcha, etc.; dias de sahida e provaveis de regresso; preços de passagens e de fretes, etc.; ligeiro historico desde a fundação, si possivel, e quaesquer outras informações que possam interessar.

Sobre os estabelecimentos de construcção naval, ou de fabrico de machinas maritimas ou mesmo destinados a concerto de navios e

machinismos as informações devem abranger: Ligeiro historico desde a fundação, si possível, nome, deslocamento, etc., dos navios e mais embarcações que os mesmos tenham construido; resenha detalhada do que tenha sido realizado, quer em obra nova, quer em reparos; resenha do que está habilitado a fazer e com preços, caso seja possível; logar em que funciona e quaes os meios de ir até o mesmo.

Sobre diques, mortonas, cabreas, saveiros, etc.: Resenha dos trabalhos feitos; resenha do que poderá fazer; tabellas de preços; informações detalhadas sobre hora de utilisal-os e modo de fazel-o.

Sobre o serviço de carga e descarga, as informações que aproveitem.

Um estudo extenso da colonização e seus problemas foi feito pelo Sr. POULTNEY BIGELOW, M. A., membro da Sociedade Real de Geographia, que acaba de publicar na typographia de McCCLURE, PHILLIPS & Co. de Nova York (1901), um volume em oitavo de 365 paginas com o titulo de "The Children of the Nations" (Os Filhos das Nações). Neste livro o auctor tentou mostrar, tão resumidamente quanto possível, a influencia que a metropole exerce sobre as colonias e a accção reflexiva destas em beneficio ou prejuizo daquella. Tambem procura mostrar a razão por que um paiz tem exito e outro não em sua colonização: Como os Estados Unidos agora têm possessões coloniaes, o Sr. BIGELOW exprime a esperança de que o Congresso estabeleça uma universidade nacional para o estudo dos assumptos de que um funcionario colonial deve ter conhecimento. Um dos capitulos dessa obra é consagrado ao desenvolvimento da America do Sul, e trata das primeiras colonias dos hespanhóes naquella parte do Novo Mundo.

Em outro capitulo se descreve a colonização do Brazil por Portugal, e cinco outros são consagrados ás diversas phases da historia das Antilhas. Um destes é de interesse especial ao povo dos Estados Unidos no momento actual, pois trata das possessões dinamarquezas nas pequenas Antilhas. Este livro é em grande parte o resultado de observações pessoas do auctor feitas durante extensas viagens em regiões sob o dominio das grandes nações colonizadoras.

Sob o titulo "Do Rio a Buenos Aires," o Sr. ARTHUR DIAS publica as impressões da viagem que fez por occasião da visita do Dr. CAMPOS SALLES ao General ROCA. É um livro de 316 paginas e é escripto em linguagem fluente que concita á leitura e deleita o espirito.

"Diario da Bahia." Recebemos este bom jornal que se edita em Bahia. É órgão official e tem como gerente o Sr. FRANCISCO ANTONIO CAYMMI.

Recebemos "A Provincia do Pará," importante diario que se publica no Pará.

BULLETIN MENSUEL

DU

BUREAU DES RÉPUBLIQUES AMÉRICAINES,

Union Internationale des Républiques Américaines.

VOL. XII.

FÉVRIER 1902.

No. 2.

RÉPUBLIQUE ARGENTINE.

DÉBOUCHÉ POUR LES APPAREILS ÉLECTRIQUES.

La Légation de Belgique à Buenos-Ayres vient de transmettre à son gouvernement un rapport au sujet de l'emploi des appareils électriques, et qui traite plus particulièrement de l'adoption de l'éclairage électrique dans la République Argentine.

On signale aussi les avantages qu'offre ce pays comme débouché pour les fournitures électriques, etc. Voici, en partie, la teneur de cet article:

La République Argentine n'est pas restée en arrière des autres nations en ce qui concerne les applications du courant électrique; actuellement, elle constitue même un débouché important pour les articles d'électricité en général.

Buenos-Ayres est remarquable par l'étendue de ses voies de communication. Cette ville compte, en effet, plus de 450 kilomètres de lignes de tramways, avec 2,000 voitures environ. La traction animale disparaît peu à peu devant la traction électrique. Celle-ci fut mise en usage par M. CARLOS BRIGHT, en 1897, et il existe actuellement déjà une centaine de kilomètres de voie parcourue par les voitures électriques; en outre, de nombreuses transformations sont en cours d'exécution et on projette l'établissement de nouvelles lignes.

Parmi les projets les plus intéressants, il y a lieu de citer le suivant:

Un syndicat anglais, la "Buenos-Ayres Metropolitan Railway Company, Limited," a acquis la concession d'une ligne souterraine de chemin de fer électrique destinée à relier la place Victoria (point central de la ville) à la station des chemins de fer de l'Ouest pour être continuée ensuite à ciel ouvert. Le projet comprend 8 kilomètres de ligne, dont

3½ en tunnel. On vient de commencer les travaux préliminaires de sondage.

Les compagnies qui exploitent actuellement des lignes de tramways électriques sont au nombre de trois, ce sont: la Buenos-Ayres and Belgrano Electric Tramway Company, Limited; la Capital Tramway Company, Limited, et les Buenos-Ayres Electric Tramways. Ces trois sociétés sont anglaises.

Le système de traction uniquement adopté est le trolley aérien.

La compagnie "La Capital" est la seule qui produise elle-même la force électrique qu'elle consomme; les autres l'empruntent aux différentes usines de production de courant établies dans la ville. La puissance des générateurs de cette société est de 900 kilowatts; elle dispose d'une batterie d'accumulateurs de 1,000 kilowatts-heures et d'une autre de 450. Elle dessert les nouveaux abattoirs de Liniers, où fonctionnement des grues électriques roulantes pour le chargement de la viande.

Sans compter les installations électriques pour l'usage particulier de leurs propriétaires, le pays compte près d'une quarantaine d'usines distributrices.

Outre Buenos-Ayres, plusieurs villes sont éclairées à l'électricité. Dans la capitale, l'éclairage public et celui des particuliers utilisent ensemble un pouvoir de plus de 4,000,000 de bougies.

Les principales installations de distribution à Buenos-Ayres sont les suivantes: Sociedad Primitiva de Gas de Buenos Aires (distribution, 2,500 chevaux électriques de force); Compañía General de Electricidad (capacité, plus de 4,000 chevaux); River Plate Electric Light and Traction Company (possède des installations à Buenos-Ayres, Rosario, La Plata et Tucuman; capacité totale, 3,200 chevaux); Compañía Alemana Transatlántica de Electricidad (capacité, 7,000 chevaux).

La ville de Córdoba possède également une installation remarquable, celle de la Córdoba Power and Light Company, Limited, qui dispose d'une force de près de 3,000 chevaux.

L'emploi de l'électricité comme force motrice est assez considérable pour des usages industriels et pour le fonctionnement des ascenseurs, appareils de ventilation et autres.

L'industrie des articles d'électricité a pris un certain développement à Buenos-Ayres, où on en fabrique plusieurs qui venaient jadis de l'étranger.

En 1900 s'est constituée une société, La Teutonia, dont le but est d'installer une fabrique de lampes à arc, de dynamos et de charbons pour lampes.

Toutefois, l'importation conserve sa place prépondérante sur le marché, où la plupart des grandes maisons américaines, anglaises, allemandes et françaises sont représentées.

Pour les articles dont il s'agit, l'industrie américaine occupe dans l'Argentine une situation de beaucoup plus importante que celle de ses

concurrentes d'Europe. La South American Electric Supply Company, société de New-York constituée pour la vente des produits de la General Electric Company, de Schenectady, fait un chiffre d'affaires considérable.

Les seuls articles belges dont l'importation vaille la peine d'être mentionnée ont été jusqu'ici le matériel téléphonique et les fils conducteurs.

SURTAXE À L'ENTRÉE DES MARCHANDISES.

Il résulte d'un télégramme adressé au Département des Affaires Étrangères, par le Ministre résident de Belgique à Buenos-Ayres qu'une surtaxe de 5 pour cent à prélever sur la valeur des marchandises importées dans la République Argentine a été votée par la Chambre des Députés et que les droits de douane devront désormais être acquittés en or.

La loi établissant les modifications dont il s'agit n'a pas encore été promulguée.

L'INDUSTRIE DU LAIT.

Si on compare les statistiques de 1901 avec celles de 1895, on constatera que depuis cette dernière époque on a établi dans la République Argentine plusieurs grandes laiteries, en dehors des maisons importantes constructrices de machines pour la fabrication du beurre. En 1896, il existait dans la République 201 laiteries, représentant un capital de \$2,728,917 papier et 200 fabriques de fromage au capital de \$3,061,521 papier. La "Review of the River Plate," du 14 décembre 1901, dit qu'à la date ci-dessus mentionnée, il y avait dans le pays 523 laiteries, représentant un capital de \$12,000,000 en dehors d'un grand nombre de presses à fromage. En 1896 les deux laiteries les plus importantes fabriquaient journellement 2 tonnes de beurre. Au mois de décembre 1901, une seule laiterie, la "Unión Argentina," était capable de produire 30 tonnes de lait par jour; le capital placé dans la fabrique se montait à \$1,000,000 et celui placé dans les 42 crémèries à vapeur, situées dans les différentes parties de la province de Buenos-Ayres, se montant à \$250,000. Une autre laiterie pouvait produire 5 tonnes de beurre par jour, pendant que le rendement total de sept autres laiteries était de 20 tonnes par jour. Pendant l'année 1894 on exportait 19 tonnes et demie de beurre et en 1901 plus de 3,000 tonnes, dont presque toutes furent vendues sur les marchés anglais.

CONSTRUCTION DE CANAUX POUR L'ASSAINISSEMENT DE LA PROVINCE DE BUENOS-AYRES.

D'après une communication de la légation de Belgique à Buenos-Ayres, il résulte qu'une grande partie de la fertile province de ce nom

est sujette à des inondations périodiques, qui se produisent à la suite des pluies abondantes de la saison hivernale et causent aux terrains agricoles et d'élevage des dommages considérables.

Le gouvernement de la province nourrit, depuis une dizaine d'années, le projet de combattre ce mal par le creusement d'une série de canaux destinés à porter à la mer les eaux dont il s'agit en utilisant, dans la mesure du possible, les rivières existantes.

Une commission nommée "Dirección de Desagües," autorisée à cet effet par une loi provinciale du 8 juillet dernier, a ouvert un concours pour la mise en adjudication des travaux d'assainissement:

Il s'agit d'une œuvre de grande importance. En effet, la longueur des canaux principaux sera d'environ 1,006 kilomètres représentant, en chiffres ronds, 31 millions de mètres cubes de terrassements.

Les travaux sont divisés en trois sections, dont chacune pourra faire l'objet d'un contrat particulier.

Ils seront exécutés conformément aux plans et cahiers des charges qui se trouvent à la disposition des intéressés dans les bureaux de la commission à La Plata.

Un plan général est également déposé à légation argentine à Londres; mais, de toute façon, il sera nécessaire que les entrepreneurs aillent étudier les travaux sur place.

Les offres seront reçues à la Plata jusqu'au 1^{er} mars prochain, mais il est assez probable que ce terme pourrait au besoin être reculé.

Les industriels ne devraient pas perdre de vue les fournitures auxquelles ces travaux donneront lieu, en cas d'exécution, en fait de matériaux de construction, machines, engins, appareils, outils, rails, pompes, wagons, etc.

DERNIÈRES STATISTIQUES SUR LA RÉCOLTE.

Un rapport publié récemment par le Ministère de l'Agriculture montre que pour la récolte de 1901-2, il a étéensemencé 3,269,066 hectares de blé et 782,880 hectares de graine de lin. De la récolte précédente, 3,379,746 hectares furent consacrés au blé et 607,352 à la plantation de la graine de lin. D'après ceci, il paraît qu'il y a eu une diminution de 80,000 hectares dans l'aire ensemencée de blé et une augmentation de 175,000 hectares dans celle plantée de graine de lin. On rapporte aussi que la récolte des céréales de la province de Córdoba, au lieu d'être presque complètement perdue, a repris d'une façon si remarquable que l'on espère qu'elle produira un rendement moyen. On dit aussi que la perspective des récoltes de maïs est belle et que le rendement de la luzerne sera plus abondant qu'à l'ordinaire.

PROJET D'UN CHEMIN DE FER DE SAN-JUAN À PATQUÍA.

Les journaux des provinces Andean rapportent que le chemin de fer à voie de 1 mètre que l'on se propose de construire et qui reliera

San Juan à Patquia et qui, croit-on, donnera une plus grande extension au commerce de San-Juan et de Mendoza, a excité dans le pays, un intérêt considérable. A Patquia, ce chemin de fer se rencontrera avec le Argentine Northwestern Railway, lequel joint à Pean Funes le Central Cordoba Railway. La nouvelle ligne permettra aux viticulteurs de San-Juan d'entrer en concurrence avec ceux de Mendoza et ouvrira, en outre, une route directe pour les vins des deux provinces, leur permettant ainsi d'atteindre les places actuellement accessibles seulement par des chemins détournés.

ACHAT DE FIL CONDUCTEUR.

Le Ministre de la République Argentine à Londres a été autorisé par son Gouvernement d'acheter 200 tonnes de fil conducteur No. 7 pour la construction de lignes télégraphiques entre Boca del Rio Negro et Bahía San Blas et Cabo Blanco. La dépense est estimée à £ 2.200.

BRÉSIL.

LE COMMERCE DES MORUES À RIO-JANEIRO.

Le Consul de France, à Rio-Janeiro, écrit que ce port offre un débouché assez considérable à l'importation des morues (bacalhao). On peut estimer de 5 à 6 millions de kilogrammes la quantité qui est annuellement introduite dans ce port pour y être consommée immédiatement, soit dirigée sur d'autres points de l'intérieur du Brésil.

La population d'origine portugaise fait spécialement un grand usage de cet aliment qui constitue un mets fort apprécié sur les tables brésiliennes.

Les morues importées sur cette place, proviennent spécialement du Canada, par voie d'Halifax ou de New York en tines (tambours) ou barriques dont le poids varie entre 54 et 58 kilogrammes, et de Norvège par voie de Hambourg, en caisses oblongues de poids à peu près égal aux tines (55 à 58 kilogrammes).

Les importations de morues en 1899 et 1900 ont été les suivantes:

Importations.	1899.	1900.
	<i>Kilos.</i>	<i>Kilos.</i>
Morues américaines (Canada)	2,818,000	3,902,000
Morues norvégiennes	1,884,000	1,768,000
Morues françaises de Terre-Neuve.....	5,510
Morues diverses (Espagne, Portug).....	1,755	29,072

On constate par ce relevé que l'importation des morues américaines a une tendance à augmenter sensiblement au détriment des morues européennes de Norvège; ces dernières sont pourtant plus appréciées.

Elles sont plus épaisses, plus fraîches et plus savoureuses, et leur prix est un peu supérieur. A Rio même, elles sont consommées de préférence et la clientèle les recherche, tandis que les morues américaines, plus petites et plus sèches, emballées en tines, d'un maniement plus facile, sont surtout dirigées sur les marchés de l'intérieur.

Les droits de douane sur les morues sont relativement modérée, 60 reis par kilogramme (poids net), ce qui, tenant compte du paiement du 25 pour cent or, représente au change actuel 850 reis le franc, environ 10 centimes par kilogramme ou 10 fr. par 100 kilogrammes.

MESURES DESTINÉES À ACTIVER LA VENTE DU CAFÉ BRÉSILIEN.

La Légation de Belgique à Rio-Janeiro écrit, qu'en vue de la baisse continuelle dans le prix du café brésilien, le gouvernement fédéral prend des mesures pour porter remède à cette situation.

Un décret présidentiel vient d'ouvrir au Ministère de l'Industrie un crédit de 70 contos de reis pour organiser la propagande du café brésilien à l'extérieur, dans le double but d'augmenter la consommation du principal produit national et de le défendre sur les marchés étrangers au point de vue de la qualité, de la quantité, du prix et de la provenance.

Ce service de propagande sera fait principalement au moyen d'expositions permanentes de différents échantillons de café brésilien. Ces expositions seront organisées de préférence dans les consulats de la République à Lisbonne, au Havre, Marseille, Paris, Cênes, Trieste, Londres, Hambourg, Anvers, Bruxelles, Vienne et Saint Pétersbourg.

Les collections d'échantillons seront faites de façon à réunir, dans chaque exposition, tous les éléments de comparaison entre les produits brésiliens et ceux d'autres provenances.

Des instructions spéciales du Ministre des Relations extérieures régleront les rapports des consuls avec le directeur de ce service de propagande, qui devra présenter un rapport semestriel sur les opérations de son service.

ETAT DE SAINT-PAUL.

D'après les dernières statistiques il a été produit dans l'Etat de Saint-Paul:

Articles.	Quantité.	Valeur.
Eau-de-Vie.....tonneaux..	80, 295	9, 604:647\$000
Coton.....kilos..	370, 503	1, 803:490\$500
Riz.....litres..	22, 031, 400	2, 761:214\$000
Sucre.....arobes..	701, 597	6, 915:525\$000
Café.....kilos..	762, 628, 755	116, 356:826\$200
Haricots.....litres..	70, 430, 307	5, 884:645\$000
Mais.....idem..	392, 233, 726	32, 462:567\$800
Tabac.....kilos..	32, 046, 315	1, 910:360\$000
Vin.....bordelaises..	838	359:550\$000
Totaux.....		178, 085:481\$500

Il faut encore compter 6,745,978\$000 en plus pour la production du charbon de bois, fournitures de bois et pierres.

12,081 personnes sont employées au service de l'élevage qui a donné:

Betail, etc.	Nombre.	Valeur.
Chevaux et mulets.....	112, 375	8, 688, 130\$000
Moutons	53, 841	8, 421, 160\$000
Cochons	989, 844	13, 992, 546\$000
Têtes de bétail	197, 385	9, 573, 750\$000
Miel		273, 553\$000
Cire.....		35, 115\$560
Totaux		32, 984, 234\$560

Le rendement général de l'Etat a donc été de 217, 815, 697\$066.

Les chemins de fer ont fait une recette totale de 66,989,252\$364.

Il y a 14 bibliothèques publiques qui renferment en tout 74,188 volumes; la presse compte 187 journaux; la Caissé d 'Epargne avait un solde disponible de 4,393,253\$073.

ETAT DE MINAS GERAES.

Le " Minas Geraes " constate que les mesures adoptées par le Congrès fédéral et par le Congrès de l'Etat, dans le but de protéger l'industrie minière, commencent à produire les résultats heureux que l'on en était en droit d'attendre.

Pendant les sept premiers mois de 1900, il a été exporté de Minas Geraes, 2,435,866 grammes d'or d'une valeur de 5,689 contos et 37,915 tonnes de manganèse représentant 1,022 contos de reis; la presque totalité de l'or, soit 2,331,590 grammes, a été exportée en Angleterre qui a aussi importé 13,000 tonnes de manganèse. Durant cette même période, l'exportation des pierres précieuses s'est élevée à près de 464 contos.

La situation financière de Minas Geraes a déjà permis au gouvernement de remettre en Europe 315,297 francs pour le paiement du coupon de son emprunt extérieur à échoir au 15 juillet prochain.

L'INDUSTRIE DES ALLUMETTES.

Le Consul Général anglais à Rio-de-Janeiro rapporte que l'on a placé dans les fabriques d'allumettes, plus de 18,000 contos. Presque toutes les fabriques possèdent les machines les plus perfectionnées pour fabriquer toutes sortes d'allumettes, créant ainsi dans le pays une industrie réelle; quelques-unes cependant n'ont pas les moyens de se les procurer et ne peuvent pas par conséquent fabriquer les bois et les boîtes. Les droits d'importation imposées sur ces accessoires ont été cependant si réduits qu'il est plus avantageux pour ces dernières fabriques de les importer que de les faire construire dans le pays; le droit imposé sur les boîtes complètement finies et étiquetées n'étant seulement que de

400 reis par kilogramme, pendant que ceux perçus sur les bois et autres articles employés dans la fabrique ne sont, en moyenne, que de 1,600 reis par kilogramme, le taux sur le bois et les étiquettes étant de 2 milreis par kilogramme. Il est toutefois évident que ceux qui fabriquent des allumettes avec le matériel tout préparé, enduisant seulement de soufre le bout des bois après les avoir reçus, travaillent beaucoup plus avantageusement que les fabriques complètement équipées.

DÉBOUCHÉ POUR LES APPAREILS PHOTOGRAPHIQUES ET ACCESSOIRES.

D'après une communication du Consul des Etats-Unis à Bahia, les appareils les plus demandés actuellement dans cet Etat sont les petits appareils à main, avec objectifs rectilinéaires rapides, de préférence avec plaques comptées en centimètres.

Les papiers les plus en usage sont ceux à la gélatine, mats et luisants, et un papier à développement rapide.

Jusque tout récemment, les photographes de profession développaient uniquement au fer, mais depuis quelque temps, ils développent au métol et à l'hydroquinone; quelques-uns d'entre eux emploient aussi le pyro.

Quant aux photographes amateurs, ils se servent pour la plupart de métol, d'hydroquinone et quelque peu de glycine.

CINABRE À OURO PRETO.

La "Cote Libre," de Bruxelles, Belgique, dit que les explorations à Ouro Preto, Brésil, ont révélé l'existence dans ce district de particules rondes de cinabre, dont certains fragments pèsent autant que 300 grammes et contiennent de 0.88 à 4.73 pour cent de mercure. Ces gisements se trouvent dans une veine qui a une inclinaison de 30°, ce qui rend l'exploitation comparativement facile.

CHILI.

MODIFICATIONS AUX DISPOSITIONS DOUANIÈRES.

D'après une communication de la Mission de Belgique à Santiago, en date du 12 décembre 1901, le Congrès national aurait été saisi d'un projet de loi déposé par l'Exécutif et portant l'établissement d'une surtaxe de 10 pour cent sur les marchandises importées au Chili. La Mission ajoute que cette mesure, qui doit être appliquée dix jours après la promulgation de la loi, sera certainement votée.

D'autre part, une loi en date du 9 décembre 1901, a déclaré libre à l'entrée l'hyposulfite de soude. Ce produit est destiné au traitement des minerais de cuivre pauvres et de certains minerais argentifères.

ÉTATS-UNIS.

COMMERCE EXTÉRIEUR PENDANT L'ANNÉE 1901.

Les rapports préliminaires publiés par le Bureau des Statistiques du Ministère des Finances montrent que, pendant l'année civile 1901, la valeur des articles importés par les Etats-Unis a dépassé de \$51,271,342 celle de l'année civile 1900, pendant que la valeur des exportations en 1901, était \$12,565,194 de moins que celle de l'année 1900. Le total général du commerce s'est monté à \$38,706,148 de plus qu'en 1900, ou de \$2,307,095,827 en 1900 à \$2,345,801,975 en 1901. Les importations provenant de Porto-Rico et des îles Sandwich, et les exportations à ces derniers pays, ne sont pas comprises dans le rapport sommaire de 1901 relatif au commerce extérieur du pays, mais le sont dans le rapport de 1900; ces îles, prises ensemble, ayant exporté aux Etats-Unis pour \$11,697,551 de produits et ayant importé de ces derniers états \$10,288,782 d'articles, pendant cette année-là.

En 1901, ces deux pays furent considérés comme faisant partie des Etats-Unis. Les totaux d'exportation pour l'année 1901 comprennent les valeurs des marchandises étrangères réexportées, évaluées respectivement en 1901 et 1900 à \$27,296,929 et \$24,936,001. Si on étudie les statistiques d'importation, on constatera que la plus grande partie de l'augmentation de 1901 est due aux articles entrant dans les différents procédés de l'industrie du pays (augmentation, \$26,000,000) et les articles de luxe, etc. (augmentation, \$18,000,000). Les articles manufacturés pour la consommation représentent comparativement un petite portion d'augmentation (\$6,300,000) et les denrées alimentaires et les animaux montrent une augmentation d'un peu plus d'un quart pour cent (\$600,000). En 1901, le pourcentage des articles importés, exempts de droits de douane, était de 43.33 contre 41.28 en 1900. Le total des droits de douane perçus se montait en 1901 à \$243,329,967, contre \$240,304,737 en 1900.

La réduction constatée dans la valeur des articles manufacturés exportés, fut due, en grande partie, à la diminution du total général des exportations de cuivre et des articles fabriqués avec ce dernier métal, y compris les lingots, les barres et les vieux débris de cuivre. Les valeurs de ces exportations se montaient seulement, en 1901, à \$33,534,899, contre \$57,542,610 en 1900.

Les cinq principaux articles dont les exportations montrent une diminution en 1901, en comparaison de 1900, furent le maïs, le fer, l'acier, le cuivre, le coton et les huiles minérales. Les quantités de coton et d'huile minérale ont augmenté quoique leur valeur ait diminué. La réduction du fer et de l'acier, due en partie à la baisse des prix, s'est montée à \$27,000,000. La diminution des exportations de maïs fut due uniquement aux récoltes de ce grain qui ont été moins abondantes aux Etats-Unis.

CLASSIFICATION DES IMPORTATIONS ET EXPORTATIONS.

Voici quelles étaient, d'après les statistiques officielles, les classifications et les valeurs des importations et exportations des Etats-Unis, pendant les années 1901 et 1900:

Comparaison des importations.

Classification.	1901.	1900.	Augmen- tion.
Denrées alimentaires et animaux	\$219, 934, 786	\$219, 338, 443	\$596, 343
Articles bruts entrant dans les différents procédés de l'industrie du pays	304, 031, 545	280, 380, 796	23, 650, 749
Articles entièrement ou partiellement manufacturés destinés à être employés comme matériaux dans les manufactures et les arts mécaniques	87, 185, 552	84, 803, 857	2, 381, 695
Articles manufacturés pour la consommation	138, 757, 953	132, 475, 418	6, 282, 535
Articles de luxe	130, 511, 220	112, 151, 200	18, 360, 020
Total	880, 421, 056	829, 149, 714	51, 271, 342

Comparaison des exportations.

Classification.	1901.	1900.	Diminution.
Produits agricoles	\$940, 246, 438	\$904, 655, 411	* \$35, 591, 077
Produits manufacturiers	395, 144, 030	441, 406, 942	46, 262, 912
Produits miniers	40, 416, 597	39, 222, 902	* 193, 695
Produits forestiers	50, 491, 255	54, 481, 146	3, 989, 891
Produits des pêches	7, 426, 684	8, 074, 684	548, 000
Produits divers	4, 358, 936	5, 169, 027	810, 091
Produits étrangers	27, 296, 929	24, 936, 001	* 2, 360, 928
Total	1, 465, 380, 919	1, 477, 946, 113	12, 565, 194

* Augmentation.

Les importations et exportations d'or et d'argent, pendant l'année 1901, comparées avec celles de l'année précédente, furent les suivantes:

Métaux.	1901.		1900.	
	Importa- tions.	Exporta- tions.	Importa- tions.	Exporta- tions.
Or	\$54, 761, 880	\$57, 729, 889	\$66, 749, 084	\$54, 134, 623
Argent	31, 146, 782	55, 638, 901	40, 100, 343	66, 221, 664

IMPORTATIONS ET EXPORTATIONS PAR GRANDES DIVISIONS.

Pendant les années civiles 1901 et 1900, les valeurs des importations et exportations des Etats-Unis, par grandes divisions, furent les suivantes:

Pays.	1901.	1900.	Augmen- tation.
IMPORTATIONS.			
Amérique du Nord	\$158, 732, 432	\$130, 361, 453	\$28, 370, 979
Amérique du Sud	120, 384, 181	102, 706, 633	17, 677, 548
Europe	454, 496, 304	441, 610, 461	12, 885, 843
Asie	125, 093, 643	120, 378, 219	4, 714, 324
Océanie	10, 813, 409	23, 067, 642	* 12, 254, 233
Afrique	10, 901, 087	11, 025, 306	* 124, 219
Total	880, 421, 056	829, 149, 714	51, 271, 342
EXPORTATIONS.			
Amérique du Nord	199, 240, 353	198, 788, 019	452, 334
Amérique du Sud	42, 557, 504	41, 248, 051	1, 309, 453
Europe	1, 099, 574, 016	1, 116, 399, 524	* 16, 825, 508
Asie	59, 068, 723	58, 726, 173	342, 550

Afrique	29, 652, 093	22, 979, 170	6, 672, 923
Total	1, 465, 380, 919	1, 477, 946, 113	12, 565, 194

* Diminution.

COMMERCE AVEC L'AMÉRIQUE LATINE.

En 1901, la valeur totale des marchandises importées par les Etats-Unis de toute l'Amérique Latine était de \$214,317,110, ou 24.34 pour cent de la valeur totale de toutes les marchandises importées par les Etats-Unis, ou \$44,065,763 de plus que l'année 1900, quand les produits reçus des mêmes pays valaient \$170,251,347 et représentaient seulement que 20.53 pour cent de la valeur totale des importations. La valeur des marchandises exportées des Etats-Unis à tous les pays de l'Amérique Latine était, en 1901, de \$117,961,744, ou environ 8.05 pour cent du total général de toutes les exportations du pays. En 1900, les exportations à l'Amérique Latine valaient \$118,865,364, ou \$1,503,590 de plus que pendant l'année 1901. Outre les statistiques commerciales des pays de l'Amérique Latine faisant partie de l'Union Internationale des Républiques Américaines, les chiffres donnés dans cet article comprennent aussi celles relatives aux transactions commerciales avec Cuba, l'Inde Française, Miquelon, Langley, etc., l'Honduras Britannique et la Guyane Française en ce qui concerne les importations et avec les îles Falkland ou Malouines en ce qui concerne les exportations.

Voici, d'après les statistiques de l'année civile 1901, quelles étaient les valeurs des marchandises importées par les Etats-Unis de chacun des pays de l'Amérique Latine faisant partie de l'Union Internationale et celles des produits exportés des Etats-Unis dans ces pays. Les chiffres pour l'année précédente sont aussi donnés à titre de comparaison.

IMPORTATIONS.

Pays.	1901.	1900.	Augmentation.
République Argentine	\$9,455,634	\$8,098,343	\$1,357,291

Total	86, 912, 198	88, 842, 130	1, 929, 932

*Augmentation.

La valeur des marchandises importées par les Etats-Unis des dix-huit Républiques ci-dessus, représente 19 pour cent de la valeur totale de toutes les importations reçues par ce dernier pays en 1901 et 16.67 pour cent du total général de 1900. La valeur des marchandises exportées par les Etats-Unis à ces Républiques représentait environ 5.93 pour cent du total de ses exportations en 1901 et seulement 6.02 pour cent du total de 1900. La balance commerciale en faveur des Républiques était par conséquent \$80,368,026 en 1901, contre \$49,338,924 en 1900.

CONDITIONS ÉCONOMIQUES AU POINT DE VUE ANGLAIS.

La place qu'occupent les Etats-Unis parmi ses compétiteurs commerciaux, particulièrement ceux d'Europe, est décrite dans le "London Daily Mail Year Book" de l'année 1902. Les différents chapitres de cet ouvrage traitent des conditions aux Etats-Unis. Sous le rapport de la richesse, les Etats-Unis sont placés à la tête des grandes nations, les chiffres donnés pour les différents pays en question étant les suivants:

Etats-Unis	£16, 350, 000, 000
Royaume-Uni	11, 806, 000, 000
France	9, 690, 000, 000
Allemagne	8, 052, 000, 000
Russie	6, 425, 000, 000

Pendant que les Etats-Unis occupent le premier rang sur la liste des nations, quant à la richesse, il est montré aussi quelle est, de toutes les nations, celle qui est la moins endettée; les chiffres étant les suivants:

Etats-Unis	£221, 000, 000
Allemagne	651, 000, 000
Royaume-Uni	706, 000, 000
Russie	711, 000, 000
France	1, 239, 000, 000

En prenant pour base la richesse de chacun de ces pays, le pourcentage de la dette est donné comme suit:

	Pour cent.
Etats-Unis.....	1.4
Royaume-Uni.....	6
Allemagne.....	8.1
Russie.....	11.1
France.....	12.8

En ce qui concerne la compétition commerciale, l'annuaire dit que la première année du 20^e siècle a commencé très mal pour deux des quatre principales nations industrielles. Le commerce des Etats-Unis a été bon, n'a pas diminué depuis la période favorable de 1899 et 1900, mais au contraire a constamment continué à prendre une plus grande extension. Celui de la France n'a pas été affecté par les progrès qui ont été faits ou les décroissements qui se sont produits ailleurs. Le commerce de l'Angleterre et de l'Allemagne, cependant, a diminué sensiblement.

En ce qui concerne la récolte de blé du monde, les Etats-Unis en ont produit une plus grande quantité que n'importe quel autre pays. Voici quelles sont, en quarts anglais, (8 boisseaux), les quantités de cette céréale que les pays suivants ont produites pendant l'année 1901.

Etats-Unis.....	90,000,000	Espagne.....	13,000,000
Russie.....	42,000,000	Roumanie et Bulgarie.....	12,000,000
France.....	38,000,000	Allemagne.....	11,000,000
Inde.....	30,000,000	Royaume-Uni.....	7,000,000
Italie.....	17,000,000	Australie.....	7,000,000
Hongrie.....	16,000,000		

Le "Daily Mail" ne comprend pas dans son estimation la production de blé de la République Argentine.

Sous la rubrique "Fight for the Iron Trade," l'annuaire attire l'attention sur le fait que les Etats-Unis sont les plus grands producteurs de fonte et d'acier, et s'exprime ainsi:

"On peut remarquer que la production de fer et d'acier en Angleterre a diminué, le rendement ayant été de 396,749 tonnes de moins en 1900 qu'en 1899; le total pour la Grande Bretagne étant près de 5,000,000 tonnes de moins que la quantité produite en Amérique. Une chose qui n'est pas très satisfaisante dans le commerce du fer et de l'acier, en Angleterre, est, qu'en 1900, nous avons importé plus de fer et d'acier que dans les années précédentes et en avons exporté moins; tandis que les Etats-Unis en ont exporté plus que jamais."

Les tableaux statistiques, qui accompagnent ce rapport, montrent qu'en 1900, la production de la fonte a été la suivante:

	Tonnes.
Etats-Unis.....	13,789,242
Royaume-Uni.....	8,908,570
Allemagne.....	8,494,852
France.....	2,699,494
Russie.....	2,821,000

Voici quelle a été la production de l'acier:

	Tonnes.
Etats-Unis	10, 087, 322
Grande-Bretagne	4, 901, 054
Allemagne	4, 799, 000
France	1, 624, 046
Russie	1, 494, 000

CONSTRUCTION DE CHEMINS DE FER EN 1901.

Durant l'année 1901, on a construit plus de chemins de fer aux Etats-Unis que pendant n'importe quelle année depuis 1890, la longueur totale des lignes construites étant de 5,057 milles. Si on ajoute à cette dernière longueur, l'étendue des voies ferrées de 1900 qui était de 194,321 milles, on obtiendra un total général montant à 199,378 milles.

Dans la distribution, par Etat, de cette extension de voies, le Texas est à la tête de la liste avec 588 milles; Oklahoma vient après avec 428 milles; le Nouveau-Mexique est le troisième avec 275 milles; la Géorgie, le 4^e avec 303 milles; l'Etat de Wisconsin, le 5^e, avec 196 milles; le Missouri, le 6^e, avec 189 milles; l'Indiana, le 7^e, avec 174 milles; l'Etat de Minnesota, le 8^e, avec 171 milles; l'Illinois, le 9^e, avec 764 milles; le Michigan, le 10^e, avec 164 milles; la Louisiane, le 11^e avec 160 milles; le Territoire Indien, le 12^e, avec 157 milles; l'Arkansas, le 13^e avec 156 milles et la Pensylvanie, le 14^e, avec 153 milles. Pendant l'année, l'étendue des voies ferrées d'aucun autre Etat, n'a atteint 150 milles de longueur. Pendant que le parcours des chemins de fer et le montant du tonnage a constamment augmenté en rapport avec le développement des intérêts commerciaux du pays, le prix du fret a considérablement diminué. D'après les chiffres publiés par le Bureau des statistiques, le prix du fret étant en 1882, de 1.24 cents par tonne; en 1887, il était de 1.03 cents; en 1890, de 93 cents; en 1895, de 84 cents; en 1897 de 80 cents; et en 1900, de 75 cents.

EXTENSION DU COMMERCE EXTÉRIEUR.

La revue périodique "Export Implement Age," publiée à Philadelphie au mois de janvier 1902, contient un article très intéressant dont voici la teneur:

Toutes choses considérées, dit cette publication, c'est un excellent travail que font les fabricants d'outils américains en étendant leur commerce aux pays étrangers. Bien que l'activité des fabricants anglais et autres se soit accrue, elle n'a pas été suffisante, si l'on en juge d'après les derniers rapports, pour enrayer d'une façon appréciable le commerce extérieur des Etats-Unis. Cette affirmation n'est pas inspirée par un étroit esprit de parti, mais elle est basée sur les rapports des consuls anglais de plusieurs pays et ils ne sauraient être taxés d'exagération.

Dans la fabrication des instruments agricoles, il y a une force qui fait que l'esprit d'invention est toujours sur le qui-vive. Elle trouve, sa source dans les différences de sol et de climat. Les outils américains s'adaptent de mieux en mieux à ces diversités de conditions, et ceux qui en font usage à l'étranger reconnaissent que l'effort fait dans ce sens a été heureux.

De bonnes raisons exhortent d'un côté le fabricant américain et l'encouragent de l'autre à examiner les dernières statistiques de l'exportation et à comparer les rapports des consuls américains et britanniques. L'exportation des outils, grands et petits, a augmenté l'exportation des machines à battre et des faucheuses aussi bien que des instruments de moindres dimensions. Ce fait prouve que l'on adopte de plus en plus les méthodes américaines à l'étranger. De fait, au dire d'un voyageur fort bien renseigné et qui arrive d'Europe, il y a une tendance générale à adopter les méthodes américaines, non seulement pratiquement dans l'emploi des machines, mais encore théoriquement pour ainsi dire; on en vient aux méthodes de culture du sol, à l'emploi des engrais et d'autres détails que l'on trouve journellement appliqués dans les fermes américaines.

Les habitudes de milliers de cultivateurs européens relativement isolés ont été dérangées, et ce dérangement, au dire d'un chimiste agricole européen qui vient de visiter les Etats-Unis, non seulement continuera mais encore s'accroîtra. Il dit qu'on s'attache avec moins de ténacité aux vieilles méthodes et que l'on prête plus d'attention aux suggestions qui viennent de l'étranger et à l'expérience des autres. Cela est naturel et logique. Les gens se rapprochent les uns des autres, et les hommes et les nations cessent d'être des étrangers les uns pour les autres. Les relations sont plus nombreuses, et le commerce ouvre des chemins inconnus jusqu'ici au monde extérieur.

PRODUCTION MINIÈRE EN 1901.

Les chiffres fournis, en janvier 1902, par le Bureau de la Statistique du Ministère des Finances, indiquent que, pendant l'année 1901, le rendement d'or, d'argent, de fer, d'acier, de charbon et d'huile minérale des Etats-Unis a atteint son maximum. Durant l'année 1901, la production d'or aux Etats-Unis s'est montée, d'après les estimations, à \$80,218,800, contre \$79,171,000 en 1900, cette dernière quantité ayant surpassé toutes celles des années précédentes. Le rendement d'argent est donné en 1901 comme ayant été de 59,653,788 onces, contre 57,647,000 onces durant l'année précédente. La production de la fonte est estimée à 15,800,000 tonnes, contre 13,789,242 tonnes en 1900, le rendement de cette dernière année ayant excédé tous ceux antérieurs. La production du charbon est estimée à 267,850,000 tonnes, contre 240,965,917 tonnes en 1900, jusqu'ici l'année du plus grand rendement.

En ce qui concerne le pétrole, l'entière production est estimée à 2,772,000,000 gallons, contre 2,661,233,568 gallons en 1900, quand les chiffres excédaient tous ceux des années précédentes. Le seul article dans la liste montrant, en 1901, une légère diminution, en comparaison de l'année 1900, est le cuivre, dont la production a été de 5,000 tonnes environ de moins qu'en 1900, le rendement étant estimé en 1901 à 265,625 tonnes.

Ces statistiques montrent que pendant l'année 1901, non seulement la production minière aux Etats-Unis a été plus grande que jamais, mais que dans chaque article, les chiffres de production ont excédé tous ceux de tous les autres pays. En 1900, la Russie a produit un petit peu plus de pétrole que les Etats-Unis, mais il est plus que probable que le total énorme donné pour 1901, placera de nouveau ces derniers Etats, à la tête. Quant à la production de charbon, voici comment s'exprime le "London Daily Mail Year Book." "Pendant les deux dernières années, les Etats-Unis nous ont devancé comme pays producteur de charbon." Pendant l'année 1900, les Etats-Unis ont produit plus de charbon que n'importe quel autre pays et comme en 1901 le rendement a été de 27,000,000 de tonnes de plus qu'en 1900, il est évident que les Etats-Unis sont à la tête des nations productrices de charbon.

LA PRODUCTION DE L'OR ET DE L'ARGENT.

L'estimation préliminaire de M. ROBERTS, le Directeur de l'Hôtel des Monnaies, au sujet de la production de l'or et de l'argent aux Etats-Unis pendant l'année civile 1901, indique seulement une légère augmentation sur le rendement de l'année précédente. La quantité d'or produite à Alaska a diminué d'environ \$1,000,000, tandis que dans l'Etat de Colorado elle a augmenté légèrement. Dans les autres districts producteurs de ce métal précieux la production a été presque la même. Pendant l'année en question, les Etats-Unis ont produit 2,000,000 d'onces d'argent fin de plus que pendant l'année précédente.

Le rendement d'or fin est indiqué comme ayant été de 3,880,578 onces, évaluées à \$80,218,800. L'argent fin produit était de 59,653,788 onces, ayant une valeur commerciale de \$35,792,200. La valeur de l'argent monnayé est estimée approximativement à \$77,000,000. L'or a été produit en plus ou moins grande quantité dans vingt-trois Etats ou Territoires et l'argent dans vingt-deux. Le Colorado est l'Etat qui a produit la plus grande quantité de ces deux métaux, la valeur de sa production d'or étant estimée, en 1901, à \$29,000,000 et celle de l'argent produit à \$20,833,333. La production d'or de la Californie était évaluée à \$15,730,700 et celle de l'argent à \$1,118,333. Voici quels furent les autres grands Etats producteurs: Montana, \$5,023,300 d'or et \$14,500,000 d'argent; Utah, \$3,824,300 d'or et \$10,250,000 d'argent; Alaska, \$6,904,400 d'or et \$55,000 d'argent; Arizona, \$4,193,400 d'or et \$2,995,500 d'argent.

AUGMENTATION DU COMMERCE AVEC LE GRANDE-BRETAGNE.

Le commerce d'outils entre les Etats-Unis et l'Angleterre a pris de telles proportions, dit le "Export Implement Age" du mois de janvier 1902, que les exportateurs des Etats-Unis et les vendeurs et acheteurs de la Grande-Bretagne ne peuvent manquer d'apprendre avec intérêt que des relations commerciales plus intimes vont être établies entre les Etats-Unis et Manchester. Le Directeur de la Manchester Ship Canal Company est actuellement aux Etats-Unis en train de négocier l'établissement de nouvelles lignes de bateaux à vapeur entre les ports de l'Atlantique et Manchester. Le commerce maritime des Etats-Unis avec Manchester s'élève déjà à 3,000,000 de tonnes. Un service régulier de bateaux à vapeur a été établi depuis des années de New-York, Savannah, le Nouvelle-Orléans et Galveston à Manchester, ainsi qu'un service de navires à voile partant à intervalles inégaux de Baltimore, de Newport-News, de Brunswick (Géorgie), de Mobile et de Pensacola. Un service direct rapide de bateaux à vapeur va être établi entre Philadelphie et Manchester par les lignes de Manchester et la Leyland Shipping Company. La question la plus importante qui se rattache à cette nouvelle compagnie, c'est que le coût pour envoyer des cargaisons de marchandises à Manchester est inférieur de 5 cents et 1 dixième par 100 livres à celui qu'exige le transport à Liverpool.

POPULATION TOTALE EN 1900.

Le Bureau de Recensement a publié un rapport qui montre que la population entière des Etats-Unis, y compris ses possessions extérieures, était, au 1^{er} juin 1900, de 84,233,069 habitants. Le nombre d'habitants est divisé de la façon suivante: Etats-Unis, proprement dits, 75,994,575 habitants; îles Philippines, 6,961,339; Porto-Rico, 953,243; îles Sandwich, 154,001; Alaska, 63,592; Guam, 9,000; Samoa américaine, 6,100; personnes appartenant à l'armée ou à la marine, 91,219. Les chiffres de la population des îles Philippines sont ceux donnés dans les estimations du statisticien de la Commission des Philippines.

Le rapport annonce que le douzième recensement ne s'étend seulement que jusque Alaska et Hawaï en dehors du "continent des Etats-Unis," mais que les chiffres qui sont donnés pour le reste des possessions des Etats-Unis proviennent des meilleures sources. Il est dit, dans le rapport, qu'à la fin du XVIII^e siècle, la population était de 5,333,000 habitants environ et si on compare ce dernier chiffre avec celui de 1900, on constatera qu'en cent ans la population des Etats-Unis est devenue près de seize fois plus grande.

PROGRÈS DURANT LE SIÈCLE.

Le Bureau des Statistiques du Ministère des Finances a publié récemment des chiffres très intéressants au sujet du développement

industriel, commercial et financier des Etats-Unis, pendant le XIX^e siècle. Ces chiffres statistiques donnent une idée de l'augmentation de la production, de l'extension du commerce, de l'accroissement de la richesse, de la grande quantité de monnaies en circulation, du plus grand nombre de dépôts dans les caisses d'épargne et dans les autres banques, de la diminution des intérêts de la dette publique, en un mot, du progrès prodigieux du pays.

En ce qui concerne la production, celle du coton a augmenté de 155,556 balles en 1800 à 9,436,416 balles en 1900; celle de la laine, de 35,802,114 livres en 1840 à 302,502,328 livres en 1901; le blé, de 151,999,906 boisseaux en 1866 à 522,229,505 boisseaux en 1900; le maïs, de 867,946,295 boisseaux en 1866 à 2,105,516 boisseaux en 1900; le cuivre, de 650 tonnes en 1850 à 270,588 tonnes en 1900; la gueuse, de 165,000 tonnes en 1830 à 15,800,000 tonnes en 1901; le pétrole, de 21,000,000 gallons en 1860 à 2,661,233,568 gallons en 1900; le charbon, de 3,358,899 tonnes en 1850 à 267,850,000 tonnes en 1901; et l'or, de \$50,000,000 en 1850 à \$79,171,000 en 1900.

Pendant la période en considération, les exportations de marchandises ont augmenté de \$70,961,780 en 1800 à \$1,487,764,991 en 1901, et les importations de \$91,252,768 en 1800 à \$823,172,165 en 1901. La richesse du pays a augmenté, d'après les estimations, de \$7,135,780,000 en 1850 à \$94,300,000,000 en 1900, l'augmentation par tête étant en 1900 de \$928.17.

Le total de la monnaie en circulation était, en 1860, de \$435,407,252, contre \$2,175,387,277 en 1901. En 1830, les dépôts dans les caisses d'épargne se montaient à \$6,973,304, tandis qu'en 1901 ils atteignaient la somme de \$2,597,094,580.

L'augmentation de l'étendue des chemins de fer est démontrée par le fait qu'en 1850 les voies ferrées avaient une longueur de 9,021 milles, et en 1901 atteignaient 199,378 milles de longueur; le transport des marchandises ayant augmenté et le prix du fret ayant diminué en rapport avec cette extension. On estime aussi que l'étendue du territoire de la République a quadruplé, durant la période en considération, et que la population est seize fois plus grande.

AVIS DE NON PAIEMENT DES TRAÎTES.

Le notaire public aux Etats-Unis, chargé de dresser protêt pour le non paiement d'une traite, n'est nullement obligé de donner avis du non paiement de la dite traite au tireur et à chacun des endosseurs, comme semblent le croire un grand nombre d'industriels et négociants étrangers.

Le notaire public, après avoir dressé son protêt, remplit une note imprimée destinée à chacun des endosseurs et au tireur; ces avis sont épinglés au protêt, laissant la charge au requérant de les faire suivre aux intéressés.

Néanmoins, il se présente souvent que le notaire public prend soin de prévenir directement le tireur et les endosseurs, mais la loi ne l'y contraint pas, et il ne peut, en conséquence, être tenu responsable du défaut de notification.

RAPPORT SUR LA RÉCOLTE.

Le Bulletin concernant la récolte et publié mensuellement par l'Observatoire du Ministère de l'Agriculture, dit:

Les rapports au sujet du froment touselle sont généralement défavorables excepté dans le Kansas et le Nebraska où l'espérance d'une bonne récolte est assez encourageante quoique cependant, dans quelques sections du premier Etat mentionné, la plante ait été brouté de trop près. Dans le Mississippi, les vallées de l'Ohio et les Etats situés près de l'Atlantique, le gelée alternant avec le dégel, avec peu ou point de neige pour protéger le blé pendant la plus grande partie du mois de janvier, ont été très défavorables à cette céréale.

Dans le Kentucky et le Tennessee, une aire considérable est dans de si mauvaises conditions, qu'elle sera labourée de nouveau et consacrée à la culture d'autres plantes. Sur la côte du Pacifique, on a la perspective d'une assez bonne récolte.

PRODUCTION DES CLOUS EN 1900.

L'Association américaine du fer et de l'acier vient de publier un relevé statistique de la production des clous et crampons en fer et en acier aux Etats-Unis en 1900.

La production totale des clous coupés (non compris les clous forgés) a été de 1,573,494 barils (de 100 livres) en 1900, contre 1,904,340 barils en 1899, soit une diminution de 330,846 barils ou 17 pour cent. Le chiffre maximum avait été atteint en 1886, avec 8,160,973 barils.

Quant aux pointes de Paris, leur production a dépassé celle des clous coupés de 5,660,485 barils en 1900, de 5,713,790 barils en 1899, de 5,846,254 barils en 1898 et de 6,890,446 en 1897.

Pour les deux dernières années la production des clous coupés s'est répartie comme suit entre les dix Etats producteurs:

Etats.	1899	1900
	<i>Barils.</i>	<i>Barils.</i>
Pennsylvania.....	920,133	777,611
Ohio.....	386,215	261,216
Wisconsin, Virginia et Indiana.....	178,006	168,469
Massachusetts et New York.....	149,700	155,968
Maryland, Kentucky et Illinois.....	255,286	193,230
Moutana, Colorado, Wyoming et California.....	15,000	17,000
Total pour les clous coupés.....	1,904,340	1,573,494
Production des pointes de Paris.....	7,618,130	7,233,979
Total général.....	9,522,470	8,807,473

GUATEMALA.

DROITS D'EXPORTATION SUR LE CAFÉ.

Le 12 août 1901, le Gouvernement de Guatémala a rendu un décret No. 617 concernant les droits applicables à l'exportation de café. Voici quelle en est la teneur :

Sous réserve de toutes considérations autres que pourrait en décréter l'abrogation, est prorogé pour une période d'une année, jusqu'au 30 juin 1902, le décret No. 609 de juillet 1900.

En conséquence, l'exportation du café en fèves continuera à acquitter, par quintal, un impôt de six pesos en monnaie du pays, le café en parchemin restant assujetti à un droit de sortie proportionnel à la taxe sus indiquée.

MEXIQUE.

DE TAMPICO AU PACIFIQUE.

[Suite du rapport sur le Mexique de M. le Baron MONCHEUR, Ministre Plénipotentiaire de Belgique à Washington.]

L'industrie se borne, outre les sucreries, dont j'ai déjà parlé à deux fabriques de cotonnades. L'une d'elles, la Bella Vista, située un peu au nord de Tépïc, appartient à la maison espagnole AGUIRRE, qui possède également les sucreries; 165 métiers y sont mus au moyen d'une roue Pelton qu'actionne une chute d'eau de 100 mètres. Cette fabrique produit surtout le coton écreu (manta).

La manufacture de BARON et FORBES possède 170 mètres, mis en mouvement par deux turbines hydrauliques de la force de 210 chevaux. Elle fabrique exclusivement du calicot blanchi et la production journalière est de 300 pièces, valant 4 piastres (10 francs) chacune. Cet établissement, fondé en 1838, est un des plus anciens du pays. Naturellement, tout le matériel a été renouvelé plusieurs fois.

Une autre fabrique de cotonnades, mais de beaucoup moindre importance, appartenant à la maison de *ropa* de Don JOSÉ MENCHACA, est établie à Santiago sur le Rio Lerma. Ces usines emploient le coton récolté dans le territoire de Tépïc et aux environs d'Acapulco (Guerrero).

L'industrie de l'exploitation des bois se borne à quelques envois de cèdre à San Francisco.

J'ai déjà dit que les forêts ne manquent pas de beaux bois d'ébénisterie. J'ai vu des échantillons d'acajou, d'ébène et autres essences rares destinés à l'exposition de Paris. Mais l'exploitation ne serait pas rémunératrice à cause des frais énormes pour amener les bois jusqu'à la mer. Les voies de communication naturelles font

défaut. D'ailleurs, la marchandise une fois arrivée au Pacifique ne peut être envoyée que sur le marché de San Francisco. Le fret pour l'Europe ou New-York serait trop élevé pour qu'il fût possible de lutter contre les produits des forêts du golfe de Mexique.

L'électricité n'a pas encore reçu beaucoup d'applications, bien que les chutes d'eau soient nombreuses. Ainsi, j'ai vu à 16 kilomètres de Tépéc une chute représentant une force de 1,000 chevaux et qui n'est aucunement utilisée. La ville est en négociations pour établir l'éclairage électrique, en employant la force motrice d'une puissante chute d'eau située à 3 kilomètres.

Elle va établir aussi une distribution d'eau, et les établissements métallurgiques peuvent lui faire leurs offres pour la fourniture importante de tuyaux en fer qui devra lui être livrée à cette occasion.

L'exploitation des mines d'argent était assez active du temps de la domination espagnole, mais elle s'est considérablement ralentie. Les entreprises minières faites récemment n'ont pas donné, en général, de bons résultats. Comme les voies de communication sont déplorables, il n'est possible d'exploiter que les minerais dont la teneur est assez élevée pour supporter les frais énormes qu'entraîne leur transport jusqu'aux fonderies.

Les principales exploitations sont maintenant celles de Zopilote, dans le district de Santiago (compagnie allemande) et celle de Castellana, non loin de la frontière de Jalisco.

A la Yesca, il y a six veines de minerai d'argent assez riche, qui ont déjà été exploitées du temps des Espagnols. Ces mines ont été achetées dernièrement pour la somme de 200,000 piastres par une compagnie américaine.

Comme dans tout l'ouest de la République, j'ai rencontré à Tépéc, beaucoup d'ingénieurs américains faisant des recherches pour découvrir de nouvelles mines.

Le port de San Blas a beaucoup perdu de son importance depuis que les marchandises étrangères en destination des villes de l'intérieur ne transitent plus par le territoire de Tépéc.

La douane, qui était de deuxième classe, a vu ses recettes diminuer tellement qu'elle a été ramenée à la troisième classe.

Le port est d'ailleurs peu sûr; les installations maritimes font presque totalement défaut. Les moustiques sont un tel fléau dans la ville qu'ils nuisent réellement à son développement.

La principale maison d'importation est celle de MM. LANZAGORTA & Co. (espagnole). Elle fait venir de Hambourg des voiliers avec chargement complet, mais le chiffre de ses affaires a beaucoup diminué. Elle vend les articles de *ropa*, *mercería*, *ferreteria* et *abarrotes*.

La maison possède une savonnerie où l'on emploie l'huile de noix de palme. Cette noix, qui se recueille en grande abondance le long de la côte, vaut à San Blas 6 piastres (15 francs) les 57 kilogrammes.

La Compagnie du central mexicain avait commencé il y a quinze ans le chemin de fer de San Blas à Tépïc. Les 19 premiers kilomètres étaient terminés quand la compagnie renonça à son projet, et les rails déjà posés furent enlevés et se trouvent encore dans le port.

Les environs de San Blas sont bien cultivés; les champs en plein rapport, pourvus de moyens d'irrigation et enclos de fils de fer, ont une valeur relativement considérable, qui peut atteindre en moyenne 70 francs l'hectare.

D'après les renseignements que j'ai, dus à l'obligeance du directeur de la douane de San Blas, la valeur des importations durant le dernier exercice a été de 143,326 piastres-or, soit 717,000 francs.

Les principaux articles importés ont été: matières minérales, 24,023 piastres; tissus, 12,842; machines, 65,587; matières végétales, 10,760 piastres.

Les matières minérales comprennent de la ronce artificielle, du fer ondulé, des tuyaux pour conduits d'eau, des carrelages, etc.

La rubrique "tissus" comprend surtout des cotonnades de couleur, venant des Etats-Unis et d'Angleterre.

L'introduction des machines représente une faible valeur si l'on déduit du total de 65,000 piastres le somme de 48,000 piastres montant du prix d'une machine pour sucrerie introduite par la maison AGUIRRE pour son nouvel établissement. Mais c'est là un fait exceptionnel, de sorte que la valeur moyenne des importations des machines ne doit pas dépasser 20,000 piastres par an. La machine pour sucrerie est indiquée dans la statistique comme provenant de Belgique.

Les "matières végétales" consistent surtout en planches de sapin destinées à confectionner les caisses qu'emploient les sucreries pour leurs expéditions.

Par une de ces anomalies fréquentes au Mexique, tandis que les forêts de Tépïc abondent encore en futaie, on trouve plus d'intérêt à faire venir des Etats-Unis les planches et autres bois de construction. Cette importation a eu une valeur de 9,225 piastres-or (46,000 francs).

En 1886-87 la valeur totale des importations, qui est à présent de 143,000 piastres, était de 350,000 piastres. On peut juger, d'après ces chiffres, de la décadence de la place.

Les exportations ne comprennent que les productions du territoire même de Tépïc. Elles sont tout à fait insignifiantes, si on en excepte les minerais et métaux précieux. Ceux-ci représentent, en effet une valeur de 194,512 piastres argent, alors que le total des exportations est seulement de 228,527 piastres argent.

Les articles autres que les métaux précieux, envoyés à l'étranger, ont consisté comme ci-après: tabac préparé, 6,118 piastres; tabac en feuilles, 3,900 piastres; caoutchouc, 6,609 piastres; bois de cèdre, 7,000 piastres; café, 1,300, piastres.

On peut voir, d'après ces chiffres, combien les richesses agricoles

du territoire sont encore peu exploitées, le port de San Blas étant le seul par lequel les produits de Tépïc puissent maintenant sortir.

Le tabac préparé a été expédié dans l'Amérique Centrale; celui en feuilles en Allemagne; le bois de cèdre aux Etats-Unis. Le caoutchouc provient de l'exploitation des arbres croissant à l'état sauvage.

L'Etat de Sinaloa, dont la superficie est trois fois plus grande que celle de la Belgique, s'étend du nord au sud entre le Pacifique et la grande Cordillère qui traverse le Mexique dans toute sa longueur. Sa configuration rappelle la partie de l'Italie, de Rome à Naples, mais sur une bien plus grande échelle, resserrée entre les Apennins et la mer Tyrrhénienne.

Pour se rendre par voie de terre de Tépïc à Sinaloa, on traverse le district de Santiago et d'Acaponeta dont j'ai déjà parlé, et après avoir franchi le Rio de las Cañas on entre dans le district de Rosario de l'Etat de Sinaloa, district célèbre pour les mines d'argent du Tajo, exploitées par une compagnie américaine. Après un nouveau trajet de 30 lieues, on arrive à Mazatlan, le port le plus important du Mexique sur l'Océan Pacifique.

La ville de Mazatlan, qui a 15,000 habitants, est en voie de progrès; il y règne plus d'activité que dans la plupart des villes de terre chaude au Mexique.

Le port naturel est très vaste, mais mal protégé contre les vents du nord-ouest. Les installations pour le chargement et le déchargement des navires sont encore rudimentaires; mais le Gouvernement de l'Etat Sinaloa fera exécuter bientôt des travaux pour les améliorer.

Le commerce de Mazatlan a perdu une partie du Hinterland qu'il desservait. En effet, depuis la création des chemins de fer, les Etats de Durango et de Chihuahua font leurs importations, soit par la voie de Tampico, soit directement des Etats Unis. Malgré ce déficit, la place de Mazatlan n'a pas vu, grâce à son activité, diminuer le chiffre de ses affaires.

Elle est restée l'entrepôt des marchandises en destination d'une partie de Sonora, de la Basse Californie, de l'Etat de Sinaloa tout entier et du nord de Tépïc. Dans ces divers Etats, la consommation a d'ailleurs augmenté en même temps que se développait la richesse publique, grâce aux exploitations minières.

Mazatlan réexpédie même les marchandises étrangères nationalisées bien loin au sud, le long de la côte du Pacifique jusque San Benito de Chiapas près de la frontière du Guatémala.

Ce port peut acquérir beaucoup plus d'importance encore par la construction du chemin de fer de Durango à Mazatlan. Alors, en effet, les Etats de Chihuahua, Durango et même Zacatecas auront intérêt à faire leurs importations par le Pacifique, les frais de transport en chemin de fer depuis le port de débarquement jusqu'à destination devant être beaucoup moins grands que par Tampico ou Vera-Cruz.

Si cette ligne vient à être construite, les chemins de fer du sud des Etats-Unis et la Compagnie de l'International Mexicain, dont le réseau en est la continuation depuis la frontière jusqu'à Durango, pourront constituer ce qu'on appelle en Amérique un "système," c'est-à-dire, organiser un trafic direct de voyageurs et de marchandises entre l'est et le sud des Etats-Unis d'une part et Mazatlan de l'autre avec correspondance dans ce port avec des vapeurs direct pour la Chine et le Japon. Ce "système" ferait une concurrence à celui qui fait le trafic entre l'Amérique et l'Extrême-Orient, via San Francisco.

Cette éventualité ferait naturellement la fortune de Mazatlan, mais c'est un rêve dont elle pourra se bercer longtemps encore sans le voir s'accomplir.

D'abord la ligne de Durango à Mazatlan à travers le massif énorme de la Sierra Madre présente de terribles difficultés; ensuite l'organisation d'un nouveau "système," détournant un trafic déjà établi, rencontre de très sérieux obstacles dans l'ordre commercial.

De solides maisons de commerce sont établies à Mazatlan depuis longtemps; elles sont presque toutes étrangères—allemandes, françaises, espagnoles, mais le nombre de ces dernières diminue.

Naturellement, le commerce de la place même ne leur suffirait pas. Certaines d'entre elles ont en magasin un stock de marchandises de 2 millions de francs. Elles font surtout le commerce de gros avec les localités de l'intérieur. La concurrence qu'elles se font entre elles est vive et elles sont obligées de chercher, pour leurs achats à l'étranger, des prix aussi bas que possible.

Elles n'ont pas de spécialité, mais au contraire chacune d'elles vend en même temps la ropa, la ferretería, la quincaillerie et les abarrotes. Elles ont été amenées à généraliser ainsi leur négoce, parce que les commerçants établis dans les petites villes de l'intérieur et qui viennent à Mazatlan faire leurs achats de gros, s'adressent de préférence aux maisons où ils peuvent trouver réunis tous les articles dont ils désirent fournir leurs magasins.

Les articles en fer émaillé viennent exclusivement d'Allemagne. Les vitres et la cristallerie sont envoyées de Belgique.

Les magasins vendent tous les ans environ 500 révolvers belges, imitation du Smith, à 10 piastres (25 francs) la pièce, tandis que la Smith véritable coûte 35 (87 francs 50 centimes).

La pointe de Paris venait anciennement de Belgique, mais on la commande maintenant en Allemagne. Les boulons venaient aussi de notre pays, mais la production américaine a offert des prix plus avantageux.

En général, les outils et appareils divers sont de fabrication américaine, parce que les ouvriers, ayant appris à s'en servir avec des américains, les préfèrent à ceux de provenance européenne dont le maniement ne leur est pas aussi familier.

Les charrues américaines commencent à remplacer les instruments

plus que primitifs dont on se servait jusqu' à présent. La maison CHARPENTIER vend annuellement environ 300 charrues d'une marque américaine. Ces instruments, du poids de 25 kilogrammes, sont achetés en Amérique 2 dollars, or (10 francs 50 centimes) et se revendent de 8 à 15 piastres, argent (20 à 35 francs), les frais de transport étant très élevés.

MM. CHARPENTIER placent annuellement environ 2,000 barils de ciment Portland, livrés à bord à Hambourg au prix de 6 francs 75 centimes le baril de 180 kilogrammes. Le ciment est fort employé à Mazatlan pour le pavement des cours intérieures, trottoirs, etc.

L'amidon belge, qui semblait avoir le monopole, a été détrôné par une marque allemande qu'on trouve aujourd'hui dans tous les magasins.

Vu la difficulté des communications avec les Etats de l'intérieur de la République, les commerçants de la côte du pacifique trouvent intérêt à importer d'Europe divers articles que les villes du centre achètent aux fabriques du pays. Ainsi à Mazatlan et autres villes du Pacifique, on commande encore en Angleterre ou en France une quantité d'articles en coton imprimé que les magasins de la capitale achètent aux manufactures d'Orizaba. Le fret de Hambourg à Mazatlan par voilier coûte beaucoup moins, en effet, que les transports à dos de mule nécessaires pour faire venir les produits de l'intérieur vers la côte. Pour la même raison, les imprimeries de Mazatlan achètent leur papier à San Francisco, tandis qu'à Mexico le papier fabriqué non loin de là, à San Rafaël, sert à l'impression des journaux.

Les toiles de lin viennent souvent d'une fabrique irlandaise. On en importe aussi maintenant d'Espagne.

J'ai pu remarquer souvent que les Espagnols s'efforcent toujours, quand les prix le leur permettent, d'accorder la préférence à leurs compatriotes.

Les fers ondulés galvanisés trouvent un grand débit. On les expédie très loin dans les mines, où ils servent à la construction des hangars, abris et bâtiments divers pour magasins et machines. On préfère les provenances anglaises parce que chaque feuille a précisément les dimensions requises pour être chargée facilement à dos de mule.

Les machines à vapeur et autres viennent surtout d'Amérique. Ce n'est pas tant le prix qui est le motif de cette préférence que la rapidité avec laquelle la fourniture est faite. Ce point est très important pour les mines, car souvent quand une machine est reconnu nécessaire, elle doit être placée à bref délai; autrement les travaux peuvent se trouver arrêtés.

Les poutrelles métalliques sont encore fort peu employées, mais un ingénieur de l'Etat qui entreprend de nombreuses constructions à Mazatlan, s'efforce d'en répandre l'usage.

Il y a quelques industries à Mazatlan, et on est en train d'en établir beaucoup de nouvelles, mais sur une petite échelle. La maison

MELCHERS possède une fabrique de "manta." Elle produit 15,000 pièces de tissus par an.

Un Américain a établi une carrosserie qui fournit l'Etat de Sinaloa. Les voitures du genre américain sont adaptées à la nature des chemins qui exigent des véhicules à la fois légers et solides. Le même industriel a adjoint à cet établissement une fabrique d'allumettes et une autre de glace.

La fonderie de Sinaloa, ETCHEGUREN & Co., possède des ateliers de construction importants. On y fabrique des moteurs à vapeur, des machines pour mines, sucreries, etc. Ses prix sont fort élevés, et les machines sortant de ces ateliers reviennent à peu près au même prix que si elles étaient importées. Néanmoins, cet établissement reçoit beaucoup de commandes. Il rend aussi de grands services pour les réparations. C'est lui qui a construit la charpente métallique d'un très grand marché couvert, inauguré récemment à Mazatlan.

L'industrie des conserves de poissons en boîtes pourrait se faire avec grand succès, car il y a des quantités énormes de poissons dans les lagunes près de la côte. La pêche se pratique peu, faute de débouchés pour ses produits.

En fait de conserves on se borne jusqu'à présent à faire sécher au soleil le "camarón," espèce de grosse crevette qu'on envoie à San Francisco, où les Chinois en sont très friands.

Il résulte des informations que j'ai recueillies à la douane de Mazatlan, dont les archives ont été gracieusement mises à ma disposition, que les importations dans ce port se sont élevées, durant le dernier exercice, à 1,286,417 piastres or (6,432,285 francs).

Les principales importations ont été les suivantes: matières animales, 68,352 piastres; matières végétales, 107,705 piastres; matières minérales, 367,552 piastres; tissus, 419,108 piastres; machines, 80,405 piastres; armes et explosifs, 20,569 piastres.

Les matières végétales comprennent du bois d'Amérique pour une valeur de 20,000 piastres, du jute des Indes pour confection des sacs destinés au transport du minerai.

Parmi les matières minérales on trouve la houille, le carrelage, les fers travaillés de toute espèce, beaucoup de ronce artificielle pour clôtures et de tuyaux pour conduits d'eau, ainsi que du mercure pour le traitement des minerais.

D'assez grandes quantités de dames-jeannes sont expédiées d'Allemagne aux fabriques d'eaux-de-vie de Mezcal.

Les articles compris sous la rubrique "tissus" consistent surtout en fils de coton de couleur et en tissus de coton également de couleur venant d'Angleterre et des Etats-Unis.

L'importation des étoffes de laine est insignifiante; elles arrivent d'Angleterre, mais sont souvent d'origine belge.

Les machines sont destinées aux mines ainsi qu'aux petites industries locales.

Les explosifs consistent en dynamite pour les mines.

Les exportations ont atteint pendant le dernier exercice la valeur de 5,760,664 piastres-argent; elles ont du reste consisté pour la presque totalité en produits des mines d'or et d'argent dont le montant a été de 5,492,015 piastres, généralement en destination des Etats-Unis. Le reste, soit 268,650 piastres seulement (670,000 francs), est représenté par les articles suivants, à savoir, les cuirs et peaux, les bois de cèdre, la nacre de Basse Californie, les peaux d'alligator, les bois de teinture, les "garbanzos" (gros pois) en destination de l'Espagne.

Le port de Mazatlan est desservi par la ligne américaine Pacific Mail Steamship Company, faisant le service entre San-Francisco et Panama; un vapeur tous les dix jours dans chaque sens.

Depuis peu une compagnie allemande, la Kosmos, a organisé une ligne mensuelle de vapeurs entre Hambourg et San-Francisco, avec escale à Mazatlan. Ces bateaux sont très utiles à cette place pour l'importation de certaines marchandises européennes qui, à cause de leur nature, ne peuvent subir les lenteurs des voiliers.

La compagnie anglaise Pacific Steam Navigation Company va bientôt aussi prolonger jusqu'à Mazatlan son service entre les ports de l'Amérique du Sud.

Enfin, diverses compagnies secondaires ont des petits vapeurs faisant le cabotage entre les ports mexicains du Pacifique et du golfe de Californie.

LES MINES D'ARGENT DE PEÑOLES.

La légation de Belgique à Mexico, a transmis au "Bulletin Commercial," de Bruxelles, les quelques informations suivantes au sujet des mines d'argent de Peñoles, à Mapimi, qui ont la réputation d'être les plus productives de la République du Mexique.

La compagnie qui les exploite dispose de capitaux considérables; au point de vue des bénéfices et de la distribution de dividendes, elle se place en tête des exploitations mexicaines. Elle emploie dans ses mines et ateliers plus de 5,000 ouvriers. Elle vient de construire six nouveaux fourneaux et d'établir une nouvelle installation électrique. Les ateliers et les mines sont reliés par une voie ferrée électrique. La compagnie peut maintenant broyer 1,500 tonnes de minerai par jour.

Les mines ont une étendue considérable. Les filons les plus riches se trouvent à 2,000 et 2,800 pieds de profondeur. Toutes les dispositions sont prises pour assurer de la façon la plus économique l'extraction du minerai. Les propriétés de la compagnie sont situées dans les montagnes de la Buffa, à côté de la ville de Mapimi; la mine la plus ancienne, connue sous le nom de Opuela, est exploitée depuis plus de deux

siècles. La compagnie actuelle a découvert et exploité des filons à une profondeur de 1,500 à 2,000 pieds; les anciens concessionnaires avaient arrêté les travaux à une profondeur de 1,200 pieds, croyant avoir épuisé les gisements.

Les dépôts trouvés à une plus grande profondeur assurent maintenant l'exploitation des mines de Peñoles pour un grand nombre d'années.

Les nouvelles installations de la mine de Peñoles ont comporté une dépense de 500,000 à 600,000 piastres.

Beaucoup d'autres compagnies minières ont été fondées dans ce district qui, d'après les prévisions du délégué (géologue) en chef du gouvernement, est appelé à devenir le plus important producteur de métal argent de la République.

La ville de Mapimi est reliée au chemin de fer Central par une ligne à voie étroite allant de Bermejillo, d'où elle est mise également en communication, via San-Pedro, avec le Mexican International Railway.

Le district renferme aussi des gisements de minerai de cuivre. Plusieurs mines vont être mises en exploitation et il en existe déjà quelques-unes, dont la production est importante, entre autres The Descubridora Mine, à 38½ kilomètres nord-ouest de la ville, qui fournit 500 tonnes de minerai par jour. La construction d'une voie ferrée reliant cette propriété à la ligne principale du chemin de fer Central est projetée et sera probablement construite dans le courant de l'année prochaine.

CONVENTION MARITIME POSTALE ENTRE LA COMPAGNIE HARRISON ET LE GOUVERNEMENT MEXICAIN.

Un contrat a été signé entre le gouvernement mexicain et la Compagnie de navigation anglaise Harrison Line connue sous le nom de Charente Steamships, Limited, pour assurer le service maritime postal entre l'Angleterre et le Mexique. Les navires doivent effectuer deux départs mensuels de Liverpool et toucher deux fois par mois à chacun des ports de Tampico et de la Vera-Cruz. Les steamers de la nouvelle ligne devront également faire escale, soit à l'aller, soit au retour, aux autres ports mexicains de Tuxpan, Coatzacoalcas, Frontera, Laguna, Campêche et Progreso. Les paquebots desserviront La Barbade, Saint-Thomas, La Trinité, La Guayra, Puerto Cabello, Curaçao, Santa Marta, Savanilla, Cartagena, Port-au-Prince, Kingston, Colon et la Nouvelle-Orléans. La Compagnie est tenue de transporter à titre gracieux pour le compte du gouvernement mexicain, 10 tonnes métriques de marchandises. La tonne sera calculée à raison de 2,204 livres anglaises en poids, ou 40 pieds cubes (1.132 mètres cubes) en volume.

Comme compensation à ces charges, les navires de la Compagnie

bénéficient d'une réduction de 40 pour cent sur les droits de tonnage établis par le décret du 1^{er} juillet 1898.

Un contrat absolument identique a été passé avec la Compagnie allemande de navigation à vapeur Hamburg-Amerika Line.

PERSPECTIVE D'UNE PLUS GRANDE PRODUCTION DE SUCRE.

D'après les journaux mexicains, l'année 1902 promet d'être très productive en sucre. Les capitalistes de la République et ceux de l'étranger emploient de gros capitaux à améliorer et à agrandir les plantations existantes et à en créer de nouvelles. A Jalisco, Michoacan, Morelos, Sinaloa, Sonora, Tamaulipas et Veracruz, les capitaux des Etats-Unis, principalement ceux provenant de New-York, du Michigan et de l'Illinois, et le capital français venant particulièrement de Paris, ont été placés dans de nouvelles plantations immenses qui possèdent toutes tout le matériel d'exploitation le plus perfectionné nécessaire à la production du sucre. Les capitaux du pays sont généralement employés pour augmenter la capacité et la production des anciennes plantations et pour perfectionner les machines à moudre et à raffiner le sucre. Le journal "Mexican Herald" dit que l'on a commandé pour plusieurs plantations pour \$350,000 de machines qui doivent être délivrées au mois de mai 1902.

Les sucriers bien placés, pour connaître les conditions dans lesquelles se trouve cette industrie, s'attendent à ce que le rendement de l'année sera de 25 à 30 pour cent de plus qu'en 1901. Pendant cette dernière année on a créé six nouvelles plantations importantes, pourvues complètement de tout le matériel nécessaire à leur exploitation et qui seront en plein rapport en 1902. Les raffineries San Cristobal et Panuco, situées toutes deux dans l'Etat de Veracruz, et celle d'Alvarado, qui se trouve dans l'Etat de Sinaloa, exploitées avec de grands capitaux et possédant le matériel d'exploitation le plus perfectionné, produiront à elles seules une quantité de sucre qui sera égale au pour cent maximum de l'augmentation revendiquée. Il faut ajouter à ceci, les productions que rapporteront les trois autres nouvelles plantations, aussi bien que l'augmentation qui résultera des nouvelles méthodes employées dans l'exploitation des anciennes et moins grandes plantations. Si, pendant les deux ou trois années à venir, la production de sucre de la République continue à augmenter dans les mêmes proportions que pendant les cinq années qui viennent de s'écouler, le Mexique deviendra un exportateur de ce produit.

PROJET D'IRRIGATION.

Le "Mexican Herald" dit que l'association des intérêts dans le district du Lac, près de Zapotlan et Sapula, à l'ouest de Guadalajara, a eu pour résultat un projet immense d'irrigation que est prêt de se

réaliser. Il consiste en une série de canaux, tunnels, digues, etc., et en l'acquisition d'une force équivalente à celle de 10,000 chevaux. Le lac Zapotlan servira de base d'opération et sera la source d'approvisionnement d'eau que les ingénieurs estiment être de 100,000,000 mètres cubes.

Il y aura deux tunnels principaux; le premier qui partira du lac à un point nommé Huescalapa et qui s'étendra sur une longueur de 8 kilomètres et le second qui aura une longueur de 4 kilomètres et demi. Pour la production de la force motrice, on établira plusieurs chutes d'eau: une sur le bord du lac, une autre de 5 mètres de haut près du chemin de fer Central à la ville de Zapotlan et une troisième à la sortie du tunnel Huescalapa. Il y aura en connexion avec le second tunnel à Barranca de la Muerte, trois autres chutes d'eau qui permettront de distribuer, au moyen de canaux, l'eau et d'irriguer les vallées de Sagula, Viamajac et Amatitlan. Pour compléter ce grand système d'irrigation, on construira, dans la lagune, deux canaux principaux de 30 mètres de largeur et de 3 mètres de profondeur, l'un qui la traversera par le milieu et l'autre qui aura différents cours transversaux qui conduiront l'eau dans de plus petits canaux d'irrigation. Sur les sommets de la Sierra del Tigre et San-Andres, on construira plusieurs grandes digues ou réservoirs pour recueillir l'eau de pluie qui tombe en grande abondance pendant les saisons pluvieuses. L'eau de ces digues se jetteront dans le lac Zapotlan.

PAVAGE DE LA VILLE DE MEXICO.

Pendant l'année 1901, les deux compagnies des Etats-Unis qui ont passé des contrats pour la réparation des rues de la ville de Mexico ont pavé, avec l'asphalte, les aires suivantes:

La compagnie "Barber" a pavé 55 rues, mesurant 95,567 mètres carrés, et ont reçu pour ces travaux, un à-compte de \$538,399.17. La compagnie "Neufchatel" a pavé 33 rues, mesurant 42,500 mètres carrés, et ont reçu comptant, une somme de \$219,189.13.

En outre, les entrepreneurs du pays ont étendu sur les trottoirs, du ciment Portland, le long de 205 rues, représentant une surface de 118,258 mètres carrés. Pour les autres trottoirs, on a employé 854 mètres carrés d'asphalte, 58,765 mètres carrés de ferraille (le long de 106 rues) et 192,172 mètres carrés de dalles (le long de 119 rues).

On continuera, pendant toute l'année 1902, à paver des rues et à construire des trottoirs.

DÉCOUVERTE DE MINES DE MERCURE.

Au cours d'une récente excursion dans l'Etat de Guerrero, un Américain, M. C. W. PUEBETT, a découvert plusieurs mines de mercure abandonnées et qui constituent une véritable richesse. Deux de ces

mines se trouvent près de Pastoria, au nord de Guerrero. Elles ont dû être exploitées il y a très longtemps.

Guidé par un indien, M. PUEBETT a pénétré dans l'une d'elles. Il est descendu à plus de 100 mètres de profondeur. Dans ces galeries, le cinabre se trouve sous forme de grands gisements, à fleur de terre. Des roues en pierre, des *metates*, des haches en silex ont été trouvées en abondance dans ces galeries, ce qui permet à M. PUEBETT de croire que l'exploitation de ces mines remonte à une époque antérieure à la conquête.

RÈGLES AU SUJET DU TRAFIC DU HENEQUEN.

Le journal "Mexican Herald," du 3 janvier 1902, dit que les cultivateurs et les exportateurs de Yucatan proposent de s'entendre pour ne pas vendre ou expédier aucune de cette fibre au-dessous d'un prix qu'ils fixeront. Si le prix sur les marchés étrangers (principalement New-York qui consomme 90 pour cent des exportations de Yucatan) descend au dessous d'un certain minimum, leur intention est de garder le henequen, espérant ainsi que les demandes augmenteront le prix de la marchandise. Les négociants en henequen sont tous des capitalistes qui peuvent se permettre de conserver leur article jusqu'à ce qu'ils jugent à propos de le vendre.

FABRIQUE DE POUDRE SANS FUMÉE.

Le Ministre de la Guerre vient de passer un contrat pour l'établissement d'une fabrique de poudre sans fumée. Cette usine sera construite dans les environs de Santa-Fé, sur des terrains cédés par les habitants de cette localité au gouvernement fédéral.

Les travaux qui seront incessamment entrepris d'après les plans de M. ALBINO VILLEGAS, ingénieur, devront être terminés avant juillet 1903.

LE COCO À HUILE.

De nombreux propriétaires d'Acapulco et de Manzanillo se livrent depuis quelque temps à l'exploitation du coco à huile qu'ils exportent.

Le coco à huile est un produit que l'on considérait jusqu'ici, dans ces régions, comme absolument négligeable. Aujourd'hui, ce commerce prend des proportions considérables et ceux qui s'y livrent fondent sur l'exportation de ce produit les plus grandes espérances.

LE CAOUTCHOUC MEXICAIN.

Il paraît, d'après des renseignements français, que le caoutchouc mexicain est coté actuellement sur les marchés américains et européens, de 47 à 55 cents la livre, prix excessivement élevé et qui n'est dépassé que par celui de Para (Brésil) dont les prix varient de 49 à

87 cents. Ces chiffres témoignent de l'excellente qualité du produit mexicain et sont dignes d'encourager les planteurs et d'augmenter la production.

EXPORTATIONS DE CUIVRE.

Les statistiques douanières montrent que pendant l'année fiscale 1901, le Mexique a exporté en Angleterre 6,583 tonnes de cuivre et plus de 23,000 tonnes aux Etats-Unis et en Europe, soit, pendant les douze mois, un total général d'exportation de 30,000 tonnes. Etant donné le fait que de nouvelles mines ont été creusées depuis la publication des statistiques officielles, on croit que, pendant l'année courante, les exportations dépasseront matériellement celles de 1901.

UNE EXPOSITION PERMANENTE À MEXICO.

Le Ministère de Fomento a soumis à l'approbation de la Chambre des Députés le contrat qu'il vient de conclure avec M. JOSÉ de LANDERO représentant de la "Compagnie Mexicaine d'Exposition Permanente."

Ce contrat se rapporte à la construction d'un grand édifice dans lequel seront exposés, en permanence, les produits nationaux.

NICARAGUA.

IMPORTATION DES ESSENCES.

Le "Diario oficial," du 18 avril 1901, publie le décret suivant:

"ARTICLE I. Ne pourront importer des essences pour la préparation des liqueurs que les fabricants munis d'une autorisation écrite du Directeur Général du Ministère compétent et moyennant paiement des droits établis dans le tarif.

"ARTICLE II. De même des huiles essentielles ne pourront être importées que par les pharmaciens ou les médecins pour être exclusivement employées à la préparation des médicaments ou prescriptions médicales.

Dans la demande en autorisation d'entrée à adresser au Ministère des Finances, les intéressés devront donner l'indication détaillée des essences à importer pour que l'autorisation ne s'applique qu'aux quantités jugées nécessaires aux besoins de la pharmacie."

PARAGUAY.

LES BOIS PRINCIPAUX DU PAYS.

On a constaté récemment une augmentation dans l'exportation du bois paraguayen et l'on croit que les bois mous de cette république

seront aussi recherchés, dans peu de temps, pour la fabrication du papier. Des 60 classes de bois qu'on emploie dans le pays, 20 classes seulement sont exportées dont voici les noms respectifs des principales:

1. *Curupai*.—Bois dur de couleur rouge, très durable et très employé pour des traverses et des pilotis. Jouit d'un bon marché en Argentine.

2. *Cèdre*.—Bien qu'il soit inférieur en grain et en odeur à la classe cubaine, une grande quantité de ce bois est exportée en Argentine et en Allemagne; avec ce dernier pays le commerce commença durant la guerre Hispano-Américaine. Le cèdre paraguayen est très demandé à Bremen où il est employé à la fabrication de boîtes à cigares. A vrai dire, ce bois est beaucoup plus semblable au caoba (acajou) qu'au cèdre, mais il a le grain et l'odeur de ce dernier.

3. *Laurier noir*.—On l'emploie pour des traverses mais n'étant pas dur comme le curupaie et étant inflammable, n'est pas beaucoup recherché.

4. *Palo de Rosa (Bois de rose)*.—Est pareil au bois de rose d'Angleterre mais sa couleur est plus claire. Il est très sec, prend un bon lustre et se prête à la fabrication de meubles. Il possède aussi des propriétés médicinales.

5. *Hiré-ro*.—Est un bois pur et flexible; aussi la demande en est elle considérable pour voitures et construction de bateaux, parcequ'il ne peut ni se contourner ni se fendre.

6. *Lapacho (noir et jaune)*.—Ce bois est excessivement demandé à Buenos-Ayres où on l'emploie pour la fabrication de charettes et la construction des ponts. On l'emploie aussi pour des traverses bien qu'il ne convienne pas, car il peut facilement prendre feu s'il n'est pas entièrement couvert de terre.

7. *Petereby negro*.—On l'emploie sur place pour la fabrication de meubles. Comme il est susceptible d'être bien travaillé et qu'il prend bon lustre, il aura un meilleur marché en Europe lorsqu'il sera mieux connu.

8. *Quebracho colorado* est le plus important des bois paraguayens; des quantités considérables sont exportées en Allemagne, principalement à Hambourg où on en trouve toujours un stock considérable. On l'emploie particulièrement dans le tannage et la demande en augmente chaque année. Les capitalistes allemands trouvent dans ce bois, un bon placement pour leur argent et une ligne de bateaux à vapeur est exclusivement employée dans ce commerce. Dans ce pays, il y a une fabrique d'extrait de quebracho et probablement plusieurs autres s'établiront avant peu de temps.

D'après une analyse faite récemment, les blocs de quebracho produisent une moyenne de 25 pour cent de substance tannique et un maximum de 29 pour cent. Le quebracho paraguayen contient plus d'extrait tannin et a une couleur plus fine que celui que l'on trouve en

Argentine. L'exportation des blocs de quebracho depuis 1895 jusqu'à 1898 a été la suivante:

	Tonnes.
1895	115,000
1896	114,000
1897	185,000
1898	147,000

Pendant l'année 1900, le bois a été très rare en Allemagne. Le prix des blocs de quebracho va probablement augmenter car les arbres coupés avec rapidité, obligent à pénétrer plus avant dans les forêts vierges, ce qui augmente le coût des travaux.

9. *Urunday-mi* est un des meilleurs bois durs du pays; il possède plusieurs des qualités du curupai et est plus durable que ce dernier.

10. *Iatane* est un beau bois de couleur dorée, semblable au bois satiné, et prend un bon vernis. Des caisses fabriquées avec ce bois protègent avec sécurité leur contenu contre les insectes de toute espèce. Ce bois a un grain fin et dur et durera des années dans la terre et l'eau. On l'emploie ici pour la fabrication de proues et de poupes de bateaux.

Palo Santo (Lignum vitae).—Bois lourd et de couleur sombre, dont la quantité est très limitée. On l'emploie à la place de bronzes pour les coussinets de machines et les arbres moteurs. On en fait aussi des poulies. Le Palo Santo a les mêmes propriétés médicinales que le Lignum vitae. Jusqu'à présent il a été exporté principalement en France.

DIVERSES CULTURES DE LA RÉPUBLIQUE.

Des diverses cultures du Paraguay, la plus grande partie se consomme dans le pays; cependant le tabac et les fruits s'exportent en certaines quantités, le premier en Allemagne et les autres dans la République Argentine.

Le tabac paraguayen est généralement le moins cher sur les marchés d'Allemagne, et comme tel pourra se vendre avec profit. L'essai d'une meilleure élaboration et, par conséquent, avec augmentation du prix n'a pas encore donné de bons résultats. On a dit que durant l'année 1900, les demandes ont été plus fortes que pendant les années antérieures et que les prix reçus ont été quelque peu meilleurs.

Le coton croît bien au Paraguay et est d'une qualité supérieure, chaque plante donnant 6 livres de fibres. On dit qu'une compagnie nord-américaine est sur le point d'établir une fabrique de tissus de coton à l'Assomption.

Les oranges, les bananes et les ananas viennent bien au Paraguay et s'exportent en quantités considérables à Buenos-Ayres. Des efforts ont été faits pour la culture de la *yerba-maté* ou thé du Paraguay et on dit qu'ils ont été couronnés d'un succès considérable. On exporte en France, en certaines quantités, des essences distillées de feuilles et de fleurs d'orangers.

La gomme n'existe pas en grande quantité, à l'état vierge, au Paraguay; mais les efforts tentés pour la cultiver, sont en progrès et l'on espère que l'espèce la plus convenable pour la culture artificielle sera la *maniocoba* du Brésil, à cause de sa croissance rapide et de sa robustesse en général. Le *maniocoba*, d'après ce qu'on dit, a donné un résultat excellent au Brésil et dans l'Amérique Centrale et l'on croit que le gouvernement paraguayen offrira des avantages spéciaux aux agriculteurs, dans le but de développer cette industrie.

L'INDUSTRIE DE L'ÉLEVAGE.

Il y a, probablement, dit M. GOSLING, Consul d'Angleterre à Assomption, peu de pays comme le Paraguay où ce commerce puisse être installé avec un si petit capital et une telle espérance de prompt bénéfice. Les bénéfices de l'élevage pourront se calculer de 20 à 25 pour cent, mais dans quelques *estancias* bien dirigées, ils sont, sans doute, beaucoup plus forts et pourront atteindre jusqu'à 40 pour cent. La question des travailleurs est moins difficile dans cette classe d'industrie que dans n'importe quelle autre, parce que le péon paraguayen, bien qu'il ne soit pas généralement travailleur, est cependant bien préparé pour ce genre de travail, qui est agréable et intéressant pour lui.

Il y a peu de maladies parmi le bétail et la fièvre aphteuse qui a fait tant de ravages dans la République Argentine, a été très bénigne dans ses résultats au Paraguay. Cependant les chevaux souffrent cruellement d'une maladie appelée "mal de cadera" qui, bien que rapide dans ses effets, paraît être de même nature qu'une fièvre cerebro-spinale et un grand nombre de chevaux meurent chaque année. Inutile de dire que les colons qui essaient de s'établir au Paraguay doivent s'attendre à trouver quelques difficultés en face des nombreux et véritables avantages que le pays offre.

L'INDUSTRIE DES VIANDES DE CONSERVES.

Les industries du Paraguay sont encore dans l'enfance et n'offrent que peu d'intérêt en dehors du pays. Une loi, cependant, fut promulguée au mois de septembre de l'année dernière, ayant rapport à l'établissement de "saladeros" ou fabriques de viande de conserves qui, dans la suite, pourra devenir un commerce important. Les principaux points intéressants de cette loi sont que, jusqu'au 31 décembre 1910, les machines, matériaux nécessaires pour boîtes, sel commun et produits chimiques pourront être importés libres de droits. Les concessionnaires paieront, cependant, au gouvernement un petit impôt de 10 à 15 centavos pour chaque animal tué. Un "saladero" établi sur le Rio a donné, cette année, des résultats satisfaisants; 2,500 têtes de bétail ont été sacrifiées. Chaque bœuf vaut £2 rendu sur le marché et a produit 85 livres de cuir salé qui se vend à Montévidéo à raison de \$2 par quintal. Ainsi chaque animal tué, outre de donner 180 livres de

viande et 39 livres de graisse, a produit £1 10s. en moyenne de son cuir, ce qui fait un gain de 8s. à 14s. pour chaque animal.

RENSEIGNEMENTS MINIERS.

Au mois de septembre dernier on a accordé une concession à une entreprise particulière pour rechercher et exploiter des minéraux dans un vaste territoire situé au sud de l'Assomption et qui s'étend jusqu'aux frontières argentines, entre les limites des rivières Parana et Paraguay. Peu après la découverte de l'or et de traces d'argent et de cuivre, on a fait un arpentage.

On dit que le lingot d'or contient de 8s. jusqu'à £2 par tonne. On a également trouvé de petits dépôts de cuivre de bonne qualité mais pas en filons contenus, ainsi que de riches dépôts de fer, mais le manque de communication rend, pour le moment, difficile au Paraguay, le développement de la richesse minérale.

EXONERATION DES DROITS D'IMPORTATION SUR LES BICYCLETTES.

En vertu d'une loi du 31 août 1901, les bicyclettes, en général, et leurs accessoires sont exonérés des droits d'importation dans la République du Paraguay pour le terme d'un an, à partir de cette date.

SALVADOR.

CHANGEMENTS DANS LE TARIF.

En vertu de la loi du 21 mai 1901, publiée dans le "Diario Oficial" du 24 mai 1901, l'exportation de l'indigo est exempte de tout droit et impôt.

Le même journal officiel dit que, en vertu de la loi du 17 mai 1901, les sacs contenant du café destiné à l'exportation seront exempts de tous droits et impôts.

Le "Diario Oficial" du 27 mai 1901, dit que la loi du 22 mai 1901 rétablit le droit de 5 centavos par kilogramme applicable à l'importation du fil de couleur.

D'après le "Diario Oficial" du 19 août 1901, le Ministère des Finances aurait décidé que le tissu de coton écriu dit *mantadril*, muni d'une simple raie de couleur n'ayant pas plus d'un centimètre de largeur, suivrait le régime du No. 5 du tarif à 20 centavos le kilogramme et non pas la taxe du No. 10 qui s'applique au même tissu quand il est de couleur.

Le "Diario Oficial" du 7 octobre, 1901, dit que le Ministère des Finances aurait aussi décidé que la ouate de coton en feuilles, pour garniture intérieure de vêtements, non dénommée dans le tarif, serait rangée sous le No. 3 et taxée à raison de deux centavos le kilogramme.

En vertu des ordonnances ministérielles des 14 et 18 octobre, 1901, publiées dans le "Diario Oficial" des 17 et 18 octobre 1901, l'impor-

tation des sacs vides destinés à l'exportation de l'indigo, suivra le régime du No. 22 du tarif à la taxe de 50 centavos le kilogramme et respectivement, le montant des droits acquittés à l'importation des sacs vides destinés à l'exportation des minerais sera remboursé en monnaie courante aux exportateurs de ces produits au moment de l'exportation.

URUGUAY.

PRINCIPALES EXPORTATIONS DE MONTEVIDEO PENDANT NEUF MOIS.

Voici quelles ont été les principales exportations de Montevideo, pendant les neuf premiers mois de l'année 1901.

Peaux de bœuf	seches..	624, 302
Peaux de bœuf	salées..	458, 920
Peaux de monton.....	balles..	9, 589
Poils.....	idem..	64, 927

COMMERCE DE LA GRANDE-BRETAGNE AVEC L'AMÉRIQUE LATINE.

Les statistiques publiées dans les rapports préliminaires anglais "Accounts relating to trade and navigation of the United Kingdom," montrent que le commerce du Royaume-Uni avec l'Amérique latine pendant l'année civile 1901 a diminué en comparaison de celui de l'année 1900. La publication anglaise dont il s'agit ne donne pas toutes les transactions commerciales entre la Grande-Bretagne et les différents pays de l'Amérique latine, mais mentionne seulement les articles principaux d'importation et d'exportation. Des renseignements plus complets ne seront pas publiés avant plusieurs mois. Pendant l'année civile 1901, la valeur des marchandises importées par la Grande-Bretagne de la l'Amérique latine, s'est montée, d'après les rapports dont il s'agit, à £15,353,076 (\$74,715,744.35) contre £16,734,360 (\$81,437,762.94) en 1900. La valeur des exportations de la Grande-Bretagne à l'Amérique latine, autant quelle peut être constatée dans les rapports incomplets anglais, se montait en 1901 à £11,857,915 (\$57,706,543.35) contre £13,505,818 (\$65,726,063.30) en 1900.

Voici quels ont été les articles importés par la Grande-Bretagne de la République Argentine pendant les deux périodes en question, ainsi que l'évaluation de ces importations données dans les rapports anglais :

RÉPUBLIQUE ARGENTINE.

Importations.	1901.	1900.	Augmentation ou diminution.
Bétail		£667,500	+ £667,500
Mouton et agneau.....		289,000	— 289,000
Blé.....	£2,670,355	6,088,923	— 3,418,568
Maïs.....	2,616,524	1,514,313	+ 1,102,211
Viande fraîche de mouton.....	1,950,599	1,689,078	+ 261,521
Sucre brut.....	307,825	107,564	+ 200,261
Suif et stéarine.....	273,068	239,288	+ 33,780
Peaux.....	74,300	18,629	+ 55,671
Graine de lin.....	1,516,736	682,122	+ 834,614
Totaux	9,409,407	11,296,417	— 1,887,010

Le tableau ci-dessus ne comprend pas, pour l'une ou l'autre année, les importations de bœuf frais, de beurre, de fromage, de quebracho et un ou deux autres articles d'importance.

En 1900, le nombre de bestiaux vivants importés de la République Argentine par la Grande-Bretagne, se montait à 38,562 et celui de moutons et d'agneaux, à 178,969, contre aucun en 1901. Le nombre de livres de blé importées en 1901 était de 808,040,000, soit 13,467,333 boisseaux (en admettant qu'un boisseau contienne 60 livres), contre 1,852,400,000 livres (30,873,333 boisseaux) en 1900. La quantité de maïs importée était de 1,044,360,000 livres ou 18,649,286 boisseaux de 56 livres chacun, contre 652,620,000 livres ou 11,653,929 boisseaux en 1900. Les autres articles étaient : graine de lin, 664,528 quarts en 1901, contre 310,664 quarts en 1900; mouton frais, 127,165,400 livres en 1901, contre 111,479,500 livres en 1900; suif et stéarine, 20,440,400 livres en 1901, contre 17,826,900 livres en 1900; sucre, 67,422,300 livres en 1901, contre 21,756,900 livres en 1900; peaux, 3,263,100 livres en 1901, contre 757,500 livres en 1900.

Ci-après, détaillés, les articles exportés de la Grande-Bretagne à la République Argentine pendant les années 1901 et 1900 ainsi que leurs valeurs :

Articles.	1901.	1900.	Augmentation ou diminution.
Cotonade (marchandises à la pièce)	£1,174,882	£1,561,838	—£386,956
Jute (marchandises à la pièce)	326,451	321,072	+ 5,379
Toile (marchandises à la pièce).....	49,190	46,340	+ 2,850
Tissus de laine	116,987	192,884	— 75,897
Laine filée.....	164,769	361,763	— 196,994
Tapis	26,692	45,867	— 18,175
Quincaillerie et coutellerie.....	46,335	56,897	— 10,562
Fer pour les chemin de fer.....	587,543	322,539	+ 265,004
Fer galvanisé.....	321,364	321,676	— 312
Tous les autres fers.....	394,382	433,673	— 39,291
Fers-blancs.....	50,491	73,734	— 23,243
Ciment.....	31,955	32,549	— 594
Poterie et porcelaine de Chine	41,642	57,645	— 16,003
Totaux	3,332,683	3,818,477	— 485,794

Les articles principaux importés du Brésil pendant les années 1901 et 1900 étaient les suivants:

Articles.	1901.	1900.	Augmen- tation ou dimi- nution.
Café.....	£228,001	£90,805	+£137,196
Sucre brut.....	155,393	55,413	+ 99,980
Coton brut.....	270,041	669,595	— 399,554
Peaux fraîches.....	27,485	31,200	— 3,715
Totaux.....	680,920	847,013	166,093

Le rapport anglais ne mentionne pas spécifiquement les importations de caoutchouc.

En 1901, les importations de café pesaient 13,262,400 livres et en 1900, 4,385,300 livres; les importations de sucre avaient un poids total de 34,373,800 livres en 1901 et de 10,658,000 livres en 1900; le poids des peaux importées en 1901 était de 1,156,900 livres et en 1900, de 1,283,500 livres.

Voici quels ont été les articles principaux que la Grande-Bretagne a exportés au Brésil pendant les années 1901 et 1900:

Articles.	1900.	1901.	Augmen- tation ou diminution.
Charbon et autres combustibles.....	£722,526	£803,837	£81,311
Cotonnade (marchandises à la pièce).....	800,000	1,196,298	—396,298
Jute (marchandises à la pièce).....	30,816	15,236	— 15,680
Fil de jute.....	336,768	262,380	+ 74,388
Toile (marchandises à la pièce).....	41,142	67,061	— 25,919
Tissus de laine.....	52,508	71,080	— 18,572
Laine filée.....	83,917	122,293	— 38,576
Quincaillerie et coutellerie.....	48,093	63,631	— 15,538
Fer pour les chemins de fer.....	71,933	94,948	— 23,015
Tous les autres fers manufacturés.....	186,894	320,417	—133,523
Fers-blancs.....	45,945	74,187	— 28,242
Ciment.....	10,492	21,453	— 10,961
Poterie et porcelaine de Chine.....	57,446	64,417	— 6,971
Cuir.....	31,356	39,767	— 8,411
Huile de graines.....	52,016	54,183	— 2,167
Cuivre ouvré.....	35,893	63,136	— 27,243
Totaux.....	2,607,745	3,334,324	—726,519

Pendant l'année 1901, la Grande-Bretagne a exporté au Brésil, 813,473 tonnes de charbon, de coke et de combustible patenté, contre 793,560 tonnes durant l'année 1900.

CHILI.

Pendant l'année civile 1901 l'Angleterre a importé du Chili, disent les rapports anglais, pour £1,455,435 de cuivre sous toutes les formes (minerai, matte, cuivre cimentatoire, non ouvré et en partie ouvré, etc.), contre £1,417,137 en 1900. Si tout le nitrate de soude importé par la Grande-Bretagne provient du Chili, ce qui est probable, la valeur d'importation de cet article chilien a augmenté de £910,047 en 1901, contre £1,155,462 en 1900, montant la valeur totale de 1901 à £2,365,482 et celle de 1900 à £2,573,467. Pendant l'année 1901, l'Angleterre n'a pas importé de blé du Chili, tandis qu'en 1900 la valeur du blé reçu du Chili se montait à £868.

Ci-après les articles que l'Angleterre a exportés au Chili pendant les deux années en comparaison :

Articles.	1901.	1900.	Augmentation ou diminution.
Cotonnade (marchandises à la pièce)	£744,384	£998,277	— £253,893
Tissus de laine	112,590	144,046	— 31,456
Laine filée.....	148,751	212,858	— 64,107
Tapis	31,478	45,105	— 13,627
Quincaillerie et coutellerie.....	35,159	32,680	+ 2,479
Fer pour les chemins de fer	86,688	25,199	+ 61,489
Fer galvanisé.....	115,536	144,459	— 28,923
Tous les autres fers	151,230	190,211	— 38,981
Total	1,425,816	1,792,835	— 367,019

PÉROU.

Pendant les années en question, les importations provenant de la République Péruvienne comprenaient les articles suivants :

Articles.	1901.	1900.	Augmentation ou diminution.
Sucre	£41,761	£129,353	— £87,592
Cuivre.....	285,152	111,717	+ 173,435
Laines d'alpaca, de llama et de vigogne	226,649	205,839	+ 20,810
Total	553,562	446,909	+ 106,653

Durant l'année 1901, l'Angleterre a importé du Pérou, 9,573,700 livres de sucre, contre 24,010,700 en 1900. Les quantités de laine d'alpaca, de lama et de vigogne importées pendant les années 1901 et 1900, furent respectivement 4,641,248 et 4,236,566 livres.

Voici quels ont été les articles principaux que la Grande-Bretagne a exportés au Pérou, pendant les deux années 1901 et 1900 :

Articles.	1901.	1900.	Augmentation ou diminution.
Cotonnade (marchandises à la pièce)	£358,069	£301,588	+ £56,481
Tissus de laine	85,707	81,627	+ 4,080
Laine filée.....	44,162	37,788	+ 6,374
Fer pour les chemins de fer	16,744	27,952	— 11,208
Tous les autres fers.....	31,575	29,830	+ 1,745
Total	536,257	478,785	+ 57,472

Toutes les autres marchandises importées de l'Amérique Latine, furent les suivantes :

Importation de l'Amérique Centrale: 23,837,000 livres de café, évaluées à £739,006 en 1901, contre 17,789,700 livres évaluées à £611,882 en 1900.

Importation de l'Amérique du Sud: 63,118,476 livres de laine, évaluées à £604,699, contre 30,205,932 livres en 1900, évaluées à £957,804.

Les articles importés des autres pays de l'Amérique Latine ne sont pas spécifiés, mais voici ceux exportés dans ces pays par la Grande-Bretagne :

Pays.	1901.	1900.	Augmen- tation ou diminution.
ANTILLES.			
Toile (marchandises à la pièce)	£155,830	£252,129	— £96,299
Fer manufacturé	57,669	72,813	— 15,144
Sacs d'emballage et autres	11,375	18,409	— 7,034
Total	224,874	343,351	— 118,477
CUBA ET PORTO-RICO.			
Fer pour les chemins de fer	14,184	20,243	6,059
Riz, farine de riz et farine	458,917	422,018	+ 36,899
Total	473,101	442,261	+ 30,840
MEXIQUE.			
Cotonnade (marchandises à la pièce)	252,901	401,288	— 148,387
Toile (marchandises à la pièce)	26,783	39,641	— 12,858
Fer galvanisé	63,976	79,900	— 15,924
Total	343,660	520,829	— 177,169
AMÉRIQUE CENTRALE.			
Cotonnade (marchandises à la pièce)	385,943	485,131	— 99,188
Fer galvanisé	19,560	18,961	+ 599
Sellerie et harnais ^a	39,847	43,546	— 3,699
Total	445,350	547,638	— 102,288
COLOMBIE.			
Cotonnade (marchandises à la pièce)	592,348	177,176	+ 415,172
Toile (marchandises à la pièce)	48,883	21,956	+ 26,927
Total	641,231	199,132	+ 442,099
VÉNÉZUÉLA.			
Cotonnade (marchandises à la pièce)	295,957	350,858	— 54,901
URUGUAY.			
Cotonnade (marchandises à la pièce)	311,967	344,092	— 32,125
Tissus de laine	32,515	49,201	— 16,686
Fer pour les chemins de fer	43,178	72,858	— 29,680
Tous les autres fers manufacturés	51,787	66,941	— 15,154
Total	439,447	532,092	— 92,645
AMÉRIQUE DU SUD (PAYS NON SPÉCIFIÉS).			
Locomotives	270,126	228,787	+ 41,339
Machines agricoles à vapeur	74,553	66,209	+ 8,344
Autres machines à vapeur	123,806	110,279	+ 13,527
Machines agricoles	82,981	107,568	— 24,587
Machines pour l'exploitation des mines	36,604	34,985	+ 1,619
Machines à tisser	108,735	130,122	— 21,387
Autres machines	356,799	410,918	— 53,119
Machines à coudre	38,190	56,368	— 18,178
Totaux	1,091,794	1,145,236	— 53,442

^a Y compris l'Amérique du Sud.

Un des principaux articles que la Grande-Bretagne a, depuis des années, exporté à l'Amérique latine, ont été les cotonnades. Ce commerce paraît, pour quelques raisons, diminuer, c'est du moins ce que montrent les statistiques des deux dernières années. Le tableau suivant donne le nombre de mètres et la valeur des cotonnades que la

Grande-Bretagne a exportés à l'Amérique latine pendant les années 1901 et 1900:

Pays.	1901.		1900.	
	Mètres.	Valeur.	Mètres.	Valeur.
Antilles (autres que l'Inde Anglaise).....	81,069,400	\$752,167	84,048,300	\$761,628
Mexique.....	21,552,300	252,901	38,346,100	401,288
Amérique Centrale.....	43,931,700	385,943	58,888,100	485,131
Colombie.....	73,441,400	592,348	25,252,600	177,176
Venezuela.....	32,306,900	295,957	42,595,300	350,858
Pérou.....	33,669,600	358,069	27,627,100	301,588
Chili.....	69,243,100	744,384	98,025,800	998,277
Brésil.....	70,162,100	800,000	104,937,600	1,196,298
Uruguay.....	28,784,500	311,976	30,602,200	344,092
République Argentine.....	104,246,100	1,174,882	131,286,300	1,561,838
Totaux.....	558,407,100	5,668,627	641,609,400	6,578,174

PRODUCTION MINIÈRE DE L'AMÉRIQUE LATINE EN 1901.

Le "Engineering and Mining Journal" du 4 janvier 1902, contient un article très long au sujet des industries minières et de la métallurgie aux Etats-Unis. Ce même article donne aussi un aperçu approximatif du rendement minier des différents pays du monde producteurs de minéraux. Les données suivantes relatives à la production minière de l'Amérique Latine, pendant l'année 1901, ont été obtenues de cette publication.

Pendant l'année 1901, la production d'or du Mexique a augmenté légèrement; il en est de même de celle de l'Amérique Centrale, particulièrement dans la République du Salvador où, au moyen de capitaux américains, l'on a creusé de nouvelles mines importantes. On n'a pas encore reçu des pays de l'Amérique du Sud, des statistiques complètes au sujet de leur rendement mais il est un fait authentique, c'est que le Pérou et le Chili ont fait des efforts, pour le développement de cette industrie, qui ont été couronnés de succès.

La production de l'argent du monde a, en 1901, un tant soit peu diminué. Le Mexique, le second pays producteur du globe, a vu sa production d'argent diminuer. Les causes de cette diminution sont cependant temporaires et disparaîtront avant longtemps, étant dues, dans quelques cas, à de nouveaux développements qui ont arrêté momentanément le rendement de ce métal blanc, et dans d'autres, à la découverte de minerais moins bons. En Bolivie, la grande mine Huanchaca n'a pas produit la quantité d'argent des années précédentes, quoique ce déficit constaté dans la production de l'Amérique du Sud ait été, en partie, comblé par le plus grand rendement du Chili et du Pérou. Les fameuses mines Cerro de Pasco qui, pendant de nombreuses années, ont été exploitées seulement dans le but d'obtenir de l'argent,

se développent graduellement en mines de cuivre au fur et à mesure que sa profondeur augmente, mais continuent néanmoins à donner de grandes quantités d'argent. En Colombie, l'exploitation des mines a été sérieusement entravée par suite des troubles qui règnent dans le pays.

Voici le rang qu'occupaient, en 1900, les pays du monde producteurs de cuivre, par rapport à leur production: Etats-Unis, Espagne, Japon, Chili, Australie, Mexique et Allemagne. La production, dans la plupart de ces pays, fut aussi grande et dans quelques-uns plus abondante en 1901 qu'en 1900. Pendant la première période, le Chili a produit 26,111 tonnes de cuivre et le Mexique 22,403 tonnes. En 1901 les mines chiliennes ont augmenté grandement leurs exportations, et il est évident que dans un futur peu éloigné, ce sera le Mexique qui produira la plus grande quantité de ce métal; des gisements importants de cuivre ayant été trouvés dans ce dernier pays et exploités par des capitalistes des Etats-Unis. Le percement des puits des mines Nasosari fait des progrès et la mine Boles continue à donner un très grand rendement. Dans l'Amérique du Sud, un certain développement a été donné, en 1901, à l'industrie minière du Pérou, et le projet pour l'achèvement de la ligne de chemins de fer dans Cerro de Pasco et la construction de tunnels pour l'écoulement ou l'épuisement des eaux est en train de se réaliser.

En 1901, la production du plomb mexicain a un peu diminué pour les mêmes raisons que celles qui, pendant toute l'année, ont entravé l'exploitation des mines d'argent. En ce qui concerne la production de l'étain d'un bout à l'autre du monde, la Bolivie a conservé, en 1901, la position qu'elle occupait parmi les six sections productrices de ce métal, le rendement, pendant les deux années dont il s'agit, étant estimé à 6,000 tonnes. De petites quantités de ce métal sont aussi produites au Mexique et sont utilisées dans le pays. La production du nitrate de soude au Chili a été réglée par la quantité exportée, et les prix ont été très satisfaisants à cause des associations industrielles qui se sont formées.

BIBLIOGRAPHIE.

Les livres et les brochures qui seront envoyés au Bureau des Républiques Américaines, et qui contiendront des sujets ou matières traitant des pays de l'Union Internationale des Républiques Américaines, seront mentionnés dans le Bulletin Mensuel sous le titre "Bibliographie."

Sous le titre "Nombres géographiques indigènes de la República de Honduras," Tegucigalpa, 1901, in-8, 118 pages, le Dr. ALBERTO MEMBRENO vient de faire paraître un travail d'étymologie du plus grand intérêt, fruit de longues études et de laborieuses recherches et qui comble heureusement une lacune dans la bibliographie historique du Honduras.

L'auteur, grâce à la connaissance du nahuatl et des divers dialectes des Indiens qui habitent actuellement certaines parties du Honduras, a pu donner l'étymologie de la plupart des noms de lieux de la République et de ceux d'origine aztèque du Guatemala et du Nicaragua renseignés dans l' "Anuario" de la Direction générale de statistique du Guatemala (1858) et dans la "Geografía de Nicaragua" de SOMENSTERN (1874), travail très difficile si l'on tient compte des modifications profondes que beaucoup de noms géographiques ont subies au cours des siècles et qui, parfois, les rendent absolument méconnaissables. Il résulte de cette étude que les noms de lieux nahoas sont nombreux en Honduras et se sont maintenus même parmi les tribus indiennes qui ont conservé leur idiome, que les mots qui, ont une terminaison empruntée à ces idiomes (telles que *terique, guera, ire, li*, etc.), ont comme premier élément un mot nahoas; enfin, que le fait qu'après trois siècles les Espagnols n'ont pu faire adopter leurs dénominations géographiques par les peuplades indiennes, prouve à l'évidence que la domination nahoas a dû être de très longue durée au Honduras.

En résumé, le travail de M. MEMBRENO, le premier du genre publié au Honduras, présente, au point de vue linguistique et historique, un grand intérêt pour le pays, et il ne peut manquer d'attirer l'attention des Américanistes en Europe.

La "Revista Maritima Brasileira" a fait paraître, avec son numéro du mois d'octobre, un supplément qui sera consacré désormais à la publication des renseignements relatifs aux compagnies nationales et étrangères qui ont des lignes de bateaux à vapeur le long de la côte et sur les rivières du Brésil. Ce supplément traitera aussi de toutes les questions se rapportant aux chantiers de construction navale, aux arsenaux et aux bassins de radoub, etc., et donnera d'autres renseignements très complets au sujet du commerce maritime de la République. Cette revue publiera aussi en portugais, en français et en anglais, un glossaire des termes maritimes employés et qui ont été trouvés être d'un très grand service.

Un journal mexicain, le "Mundo," constate que l'industrie sucrière commence à prendre un grand développement au Mexique.

De toutes parts, écrit ce journal, les capitalistes forment des sociétés pour exploiter la culture de la canne. Il y a une tendance marquée chez les cultivateurs mexicains à abandonner la culture du maïs pour ce produit beaucoup plus rémunérateur.

On estime à environ 22 pour cent l'augmentation constatée dans la superficie des plantations de canne à sucre pendant l'exercice écoulé.

"Do Rio a Buenos Aires," tel est le titre d'un volume de 316 pages, contenant de nombreuses illustrations et dont l'auteur est M. ARTHUR DIAS, un des journalistes qui ont accompagné le Président CAMPOS dans la visite qu'il a faite récemment à la République Argentine. Cet ouvrage décrit longuement et d'une manière très intéressante les incidents du voyage et les impressions personnelles des voyageurs.

EXPORTADORES.
FABRICANTES.

IMPORTADORES.
ALMACENISTAS.

Estampadores y Blanqueadores de Telas de Algodón.

GÉNEROS Y ARTÍCULOS DE FANTASIA.

Dedicamos especial atención á la conversión y blanqueo de géneros de algodón para llenar los requerimientos de todos los mercados extranjeros.

Solicitamos corresponsales en todas partes del mundo.

Nuestra dirección por cable: "CLAFLIN." Usamos la clave "A. B. C.," la "A1" y "Liebers."

Se reciben productos extranjeros en consignación, ó en cambio de mercancías.

COMPañÍA INCORPORADA CON EL TÍTULO DE

WRIGHT'S INDIAN VEGETABLE PILL CO.

372 PEARL STREET,
NEW YORK.

ESTABLECIDA HACE 50 AÑOS.

Es la única fabricante de las preparaciones siguientes: Píldoras Indias Vegetales de Wright, Jarabe Indio Vegetal de Wright, Elixir de Opio de McMunn, Gotas Anodinas de Clavo de comer para el dolor de muelas, Vermífugo pronto y eficaz de Perry, Píldoras de Zarzaparrilla de Leidy para la sangre, Bálsamo Romano para los Ojos, Místura Específica de Crossman.

Los Importadores de Drogas y Medicinas en los países de la América Latina se servirán escribir pidiendo las listas de los precios, y preguntando cuáles son los términos y condiciones del pago. Estos remedios están ampliamente anunciados en los dichos países, y se venden en todas partes del mundo.

El Corsé de Forma Erecta conocido
con el nombre de

"W. B." ERECT FORM CORSET

ES EL ÚNICO ENTERAMENTE CORRECTO.

En la Exposición Pan-Americana le fué concedido el premio más alto. Sigue fielmente los perfiles naturales del cuerpo, y no comprime el busto. Toda la fuerza que se necesite para encintarlo se ejerce en él sobre los músculos fuertes y vigorosos de las caderas y de la espalda, y así es que con su uso se hace resaltar de la manera más admirable, como es esencial para las exigencias de la presente moda, el bien redondeado busto y las caderas. Hay un modelo especial para cada forma de cuerpo.

Para obtener catálogos, listas de precios, y cualesquiera otros informes, debe dirigirse quien los desee á

WEINGARTEN BROS.,

377-379 Broadway,

New York,

Que son los fabricantes de corsés, en mayor cantidad, que existen en el mundo.

RATES OF POSTAGE FROM THE UNITED STATES TO LATIN-AMERICAN COUNTRIES.

The rates of postage from the United States to all foreign countries and colonies (except Canada, Mexico and Cuba) are as follows:

	Cents.
Letters, per 15 grams ($\frac{1}{2}$ ounce)	5
Single postal cards, each	2
Double postal cards, each	4
Newspapers and other printed matter, per 2 ounces	1
Commercial papers {	
Packets not in excess of 10 ounces	5
Packets in excess of 10 ounces, for each	
2 ounces or fraction thereof	1
Samples of merchandise {	
Packets not in excess of 4 ounces	2
Packets in excess of 4 ounces, for each	
2 ounces or fraction thereof	1
Registration fee on letters and other articles	8

Ordinary letters for any foreign country (except Canada, Mexico, and Cuba) must be forwarded, whether any postage is prepaid on them or not. All other mailable matter must be prepaid, at least partially.

Matter mailed in the United States addressed to Mexico is subject to the same postage rates and conditions as it would be if it were addressed for delivery in the United States, except that articles of miscellaneous merchandise (fourth-class matter), not sent as *bona fide* trade samples, should be sent by "Parcels Post;" and that the following articles are *absolutely excluded* from the mails without regard to the amount of postage prepaid or the manner in which they are wrapped:

All sealed packages, other than letters in their usual and ordinary form; *all* packages (including packages of second-class matter) which weigh more than 4 pounds 6 ounces, except such as are sent by "Parcels Post;" publications which violate any copyright law of Mexico.

Single volumes of printed books in *unsealed packages* are transmissible to Mexico in the regular mails without limit as to weight.

Unsealed packages of mailable merchandise may be sent by "Parcels Post" to Bolivia, British Guiana, British Honduras, Chile, Colombia, Costa Rica, Guatemala, Honduras, Mexico, Nicaragua, Salvador, and Venezuela, at the rates named on page xv.

RATES OF POSTAGE FROM THE UNITED STATES TO LATIN-AMERICAN COUNTRIES—Continued.

(See page IX.)

PROHIBITED ARTICLES TO ALL FOREIGN COUNTRIES.

Poisons, explosives, and inflammable articles, live or dead animals, insects (especially the Colorado beetle), reptiles, fruits or vegetable matter liable to decomposition, and substances exhaling a bad odor, excluded from transmission in domestic mails as being in themselves, either from their form or nature, liable to destroy, deface, or otherwise injure the contents of the mail bags, or the persons of those engaged in the postal service; also obscene, lewd, or lascivious books, pamphlets, etc., and letters and circulars concerning lotteries, so-called gift concerts, etc. (also excluded from domestic mails); postal cards or letters addressed to go around the world; letters or packages (except those to Mexico) containing gold or silver substances, jewelry or precious articles; any packet whatever containing articles liable to customs duties in the countries addressed (except Cuba and Mexico); articles other than letters which are not prepaid at least partly; articles other than letters or postal cards containing writing in the nature of personal correspondence, unless fully prepaid at the rate of letter postage; articles of a nature likely to soil or injure the correspondence; packets of commercial papers and prints of all kinds, the weight of which exceeds 2 kilograms (4 pounds 6 ounces), or the size 18 inches in any direction, except *rolls* of prints, which may measure 30 inches in length by 4 inches in diameter; postal cards not of United States origin and United States postal cards of the largest ("C") size (except as letters), and except also the reply halves of double postal cards received from foreign countries.

There is, moreover, reserved to the Government of every country of the Postal Union the right to refuse to convey over its territory, or to deliver, as well, articles liable to the reduced rate in regard to which the laws, ordinances, or decrees which regulate the conditions of their publication or of their circulation in that country have not been complied with.

 Full and complete information relative to all regulations can be obtained from the United States Postal Guide.

ANIMALS FOR BREEDING PURPOSES.

Registration of Boulonnaise horses in the French stud book "Chevaux de Trait."

TREASURY DEPARTMENT, *January 16, 1902.*

SIR: Referring to the regulations of this Department of June 22, 1899 (T. D. 21298), regarding the importation of animals for breeding purposes under the provisions of paragraph 473 of the act of July 24, 1897, I have to state that the Secretary of Agriculture advises this Department that the stud book "Chevaux de Trait," mentioned on page 3 of said regulations, is composed of several sections, one of which is devoted to the registration of Boulonnaise horses; that the sections included in this stud book are as follows: Boulonnaise, Nivernaise, Ardennaise, Bretonne, Maine-Anjou, and Normande; that one section is published for each of the varieties of draft horses above named, and that it is therefore allowable under these regulations to admit Boulonnaise horses which show registration and certificate of pedigree from the section Boulonnaise of the stud book "Chevaux de Trait Français." You will be governed accordingly.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *New York, N. Y.*

No. 23469—G. A. 5061.

METAL SCRAPS.

Old scraps of metal, consisting of the shells of exploded cartridges and the scrap metal from which the same were originally cut, collected around arsenals, and composed of copper and nickel with traces of lead, but containing no zinc, copper being the component material of chief value therein, are not assessable with duty as "argentine, albata, or German silver, unmanufactured," under the provisions of paragraph 174, act of July 24, 1897, and are not included within the provisions of section 6 or paragraph 588 of said act, but are specifically included within and entitled to free entry under the provisions of paragraph 533 of said act.

No. 23470—G. A. 5062.

MEASUREMENT OF RUGS WITH SELVAGE.

The selvage of oriental rugs is to be included in the measurement of such articles, which are made dutiable under the provisions of paragraph 379, tariff act of 1897, at the rate of 10 cents "per square foot," and in addition thereto 40 per cent ad valorem.

No. 23471—G. A. 5063.

CLIPPINGS FROM DUTCH METAL—FUNCTION OF LOCAL APPRAISER—PROTEST AGAINST FREE ENTRY.

1. Clippings from Dutch metal, fit only for remanufacture, are free of duty under paragraph 505, tariff act of 1897, and are not dutiable under paragraph 193 as manufactures of metal (*Grempler v. United States*, 107 Fed. Rep., 687; 46 C. C. A., 557).

2. Local appraisers are in no sense classifying officers, their recommendations to collectors as to the character of goods being purely advisory.

3. Whether a party importing goods, which are admitted to free entry, can legally enter protest and claim that they are dutiable, *quere?*

No. 23472—G. A. 5064.

REIMPORTED GRAIN BAGS.

SHIP'S EQUIPMENT.

The theory upon which the equipment of a ship is regarded as non-dutiable is that it forms part of the vessel itself, ships and vessels arriving in the course of navigation not being imported merchandise within the meaning of tariff legislation.

GRAIN BAGS.

Grain bags exported containing feed to be used by cattle on the voyage, and returned empty in bales, but which were not in any sense owned by the reimporting vessel, or used on her voyage, or in any way identified with her appliances, are not part of her equipment.

United States v. Chain Cable (2 Sumn., 362; 25 Fed. Cas., 391); *The Conqueror* (49 Fed. Rep., 99; *ib.*, 166 U. S., 110); *The Gertrude* (3 Story, 68; 10 Fed. Cas., 265); *In re Swift Beef Company* (G. A. 4754) followed. *Kennedy v. United States* (95 Fed. Rep., 127) distinguished.

No. 23473—G. A. 5065.

PIPES AND PIPE BOWLS.

Tobacco pipes and pipe bowls made in chief value of clay are dutiable as "pipes and pipe bowls of clay," at the rate of 50 cents per gross and 25 per cent ad valorem, under paragraph 459, act of 1897, and not as "pipes and pipe bowls of whatever material composed," at the rate of 60 per cent ad valorem under said paragraph. The words "made of clay" in this paragraph mean "made wholly or in chief value of clay." (G. A. 4547 and G. A. 4532 cited.)

No. 23473a—G. A. 5065a.

FRENCH BRANDY FROM HAVANA.

RECIPROCITY PRIVILEGES—TRANSIT FROM FRANCE MUST BE CONTINUOUS.—To be entitled to the benefits of the reciprocal commercial agreement with that country (T. D. 19405), merchandise shipped from France must not be diverted at an intermediate port in such way as to become part of the commerce of another country.—In re Booth (G. A. 4719); In re La Montagne (G. A. 4538) followed.

TRANSSHIPMENT.—Mere transshipment is not such a diversion.—*Gant v. Peaslee* (2 Curt., 250; 9 Fed. Cas., 1143); In re Herman (G. A. 4751).

CUBAN EXPORTATION.—Brandy purchased in Havana, Cuba, brought there from France and thence to the United States, and entered upon a Havana invoice, must be deemed an exportation from Cuba, unless a contrary inference is justified by all the facts. A French consular invoice made after the goods arrived in this country, and an ex parte affidavit and customs declarations by interested parties, are not sufficient evidence of a continuous transit from France, with transshipment at Havana.

Whether the shipment, though purchased in Cuba, would be considered an importation from there had the voyage from France been uninterrupted, *quære*.

[Before the United States General Appraisers at New York, January 21, 1902.]

In the matter of the protest, 47620b-156, of The Florida Brewing Company against the decision of the collector of customs at Tampa, Fla., as to the rate and amount of duties chargeable on certain merchandise, imported per *Olivette*, and entered December 22, 1900.

Opinion by SOMERVILLE, General Appraiser:

This protest relates to 199 cases of brandy imported into the port of Tampa, Fla., by the Florida Brewing Company. The facts in the case are these: When making their entry the importers produced an uncertified invoice for the merchandise made by Dussaq & Co., of Havana, Cuba, against the said Florida Brewing Company, and reciting that the brandy was received from St. Nazaire, France, by the steamer *La Navarre*, and transshipped by the steamer *Olivette* to Tampa. Later they presented an invoice certified by the United States Consul in Bordeaux, France, which is headed "Invoice of 199 cases cognac purchased by Messrs. Dussaq & Co., of Havana, in

transit to Key West from ———, of Bordeaux, to be shipped per steamship *Dragut*, via St. Nazaire, transshipped in *La Navarre*." The exporter's declaration on this invoice states that it is intended to make entry of the merchandise at Key West; but the invoice was made out and certified, at the request of the protestants, after the merchandise had arrived in this country, which materially lessens its weight as evidence. There is also before us an affidavit by the manager of the Florida Brewing Company setting forth: "That the said Florida Brewing Company purchased from Dussaq y Cia., of Havana, in the island of Cuba, one hundred and ninety-nine cases of brandy, said brandy to be shipped from St. Nazaire, France, to Tampa, Florida, via Havana; that the said one hundred and ninety-nine cases of brandy were so shipped from St. Nazaire, France, by the steamship *La Navarre*, to Havana, Cuba, from whence they were transferred to the steamship *Olivette*, and brought to Tampa."

The importers' declaration on the entry states that the goods were imported from "France via Havana."

Upon this evidence we are asked to rule that the merchandise was produced in and imported from France, and is accordingly entitled to be entered at a duty of \$1.75 per gallon, under the reciprocal commercial agreement with France (T. D. 19405), rather than at \$2.25 per gallon, under paragraph 289 of the tariff act of 1897, as assessed by the collector. The importers allege that the Havana firm were merely acting as their brokers.

If the goods were intended to be entered at a port of the United States when they left France, transshipment at Havana would not change their character as an importation from France (In re Hermann Brothers, G. A. 4751). As said by Judge Curtis in *Gant v. Peaslee* (2 Curt., 250; 9 Fed. Cas., 1143), this fact would affect "only the route and means of their transit, not their place of departure or destination." If, on the other hand, the shipment was diverted at Havana in such manner as to make the exportation in effect from there, the French origin of the goods can not save them from liability to full duty (In re La Montagne, G. A. 4538; In re Booth, G. A. 4719).

The proof is defective in several particulars. No direct evidence that the goods are the product of France has been presented. The alleged relation of Dussaq & Co., of Havana, to the importers has not been affirmatively shown. From the record facts the transaction appears to have been a sale to the importers, by the Havana firm, of goods purchased in France. Whether this would affect the status of the importation if its transit from France had been uninterrupted, save by transshipment, we do not say, because we think the inference of the latter fact from the evidence would be unjustified. So far as the evidence points to a continuous voyage, it is ex parte and interested in its character, and hardly of sufficient weight to support

a finding that the merchandise did not become part of the commerce of Cuba. The French invoice names no consignee in the United States, and nothing is found in the record which satisfactorily shows that the brandy in question could not have been sold in Cuba by Dussaq & Co., and the order of the Florida Brewing Company filled out of similar stock on hand or to arrive (In re Booth, *supra*). It should be observed that this case was reopened after a default on the part of the protestants, who were allowed more than two months to supply further evidence, which they have failed to do.

The protest is overruled and the collector's decision affirmed.

No. 23473*b*—G. A. 5065*b*.

CRUDE DRUG (QUILLAYA OR SOAP-BARK SIFTINGS).

Siftings which are a by-product resulting from the process of cutting up soap bark by machinery, and which are less valuable than the crude bark from which they are derived, are free of duty under paragraph 548, tariff act of 1897, as crude drugs "not advanced in value or condition by refining or grinding, or by other process, and not specially provided for.

No. 23477.

DRAWBACK—BILLS OF LADING.

Bills of lading for drawback purposes should be signed in the usual manner, and the notation "For custom-house purposes," be signed or initialed in ink or indelible pencil.

TREASURY DEPARTMENT, *January 24, 1902.*

SIR: The Department is in receipt, by reference of the Commissioner of Internal Revenue, of your letter of the 7th instant, relative to requiring the signature of the representative of transportation lines upon bills of lading, when same are stamped or indorsed "For custom-house purposes only, not negotiable, no other copy for custom-house issued."

In reply, I have to state that bills of lading for custom-house purposes, should be signed in the usual manner and the notation stamped thereon, that the bill of lading is issued for custom-house purposes, must be signed or initialed by the representative signing the bill of lading in ink or indelible pencil.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

Mr. L. E. TOWNSLEY, *Chicago, Ill.*

No. 23478.

TRANSIT GOODS.

Transit goods may be entered at the port of first arrival for transportation and exportation via any port or subport in the United States under section 3005, Revised Statutes, as amended.

TREASURY DEPARTMENT, *January 24, 1902.*

SIR: The Department is in receipt of your letter of November 19 last, reporting your reason for disallowing the entry under section 3005 of the Revised Statutes, as amended, of merchandise intended for transit through the United States and exportation from Sumas, Wash.

You state that "as Sumas is not designated under article 730, regulations of 1899, as a port by which bonded merchandise may pass out of the country, it was deemed proper to disallow the use of that port as a frontier port for transportation and exportation goods in bond. T. D. 21829 is understood at this office to be the latest decision designating ports for the purpose above named."

In reply, I have to inform you that merchandise shown by the invoice, bill of lading, manifest, or other satisfactory evidence to be intended for transit through the United States and exportation therefrom may be entered at the port of arrival for transportation and exportation via any port or subport in the United States under the act of May 21, 1900, amending section 3005 of the Revised Statutes. (See T. D. 22250 of May 25, 1900, and 22605 of November 14, 1900.)

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *Boston, Mass.*

No. 23479.

BONDS FOR TRANSPORTATION AND EXPORTATION UNDER SECTION 3005 OF THE REVISED STATUTES.

[Circular No. 9.]

TREASURY DEPARTMENT, *January 25, 1902.*

To collectors and other officers of the customs:

The limitation of four and six months, according to destination, specified in article 735 of the Customs Regulations of 1899 and Treasury decision 22605 of November 14, 1900, for bonds covering merchandise entered for transportation and exportation under section 3005 of the Revised Statutes, as amended by the act of May 21, 1900 (T. D. 22250), has been found, in many instances, too short a period for full compliance with the regulations governing such shipments. The Department therefore hereby amends said article 735 of the

regulations so as to extend the time limit of such bonds to one year from the date of entry, irrespective of the destination of the goods.

O. L. SPAULDING,
Assistant Secretary.

No. 23480.

INTERNATIONAL CODE OF SIGNALS.

[Circular No. 10.]

TREASURY DEPARTMENT,
BUREAU OF NAVIGATION,
Washington, D. C., January 25, 1902.

To collectors of customs, masters of vessels, and others:

As stated in the Code List published by this office for 1901, the new International Code of Signals came into use on January 1, 1901. From January 1, 1901, to January 1, 1902, the new edition of the code and the old edition were to be used concurrently, but from January 1, 1902, information was given that the new edition alone would be used.

It now appears that the British Board of Trade has decided that, while it is to be assumed in all cases that the new code will be used on and after January 1, 1902, if signalmen in any case can not make out a signal by the new code and find that it is translatable by the old code they are not to refuse to receive it.

Similar action may be taken in the United States, and signals in such cases made from vessels according to the old code may be received and reported.

It is suggested that the fact that the old code has been used by a vessel be brought in each case to the attention of the Bureau of Navigation, Treasury Department.

A copy of this circular should be posted at each custom-house for the information of masters and other persons concerned.

E. T. CHAMBERLAIN,
Commissioner.

Approved.

O. L. SPAULDING,
Assistant Secretary of the Treasury.

No. 23481.

HIDES.

Method of appraisement of hides.—Additional duty under section 32, act of 1897, not to be levied if advance in value is due solely to shrinkage after shipment.

TREASURY DEPARTMENT, *January 25, 1902.*

SIR: The Auditor for the Treasury Department invites the attention of the Department to warehouse entry No. 7 of 1901, at your

port, covering certain hides. It appears that the hides shrunk during the voyage of importation; that the total number of pounds landed and returned by the weigher was, and usually is in such cases, less than the number of pounds stated in the invoice; and that the appraiser, in finding the market value, multiplies the number of pounds landed by the unit of value stated in the invoice, which usually makes the total appraised value less than the invoice value.

It is the duty of appraising officers to appraise merchandise in the condition in which imported and not in the condition in which invoiced and shipped; for instance, so-called wet or green hides may be invoiced and shipped, but upon arrival they are found to have dried to some extent or shrunk during the voyage of importation, and therefore the appraiser has before him hides of a different character and admittedly of a greater unit value than the hides invoiced and shipped, and it is his duty to find the value in the foreign market on the date of shipment of the hides of the kind before him and not of the kind invoiced and shipped. (See secs. 10 and 19, Customs Administrative Act.)

In this connection, your attention is invited to *Reiss v. Magone* (39 Fed. Rep., 105), *Robertson v. Bradbury* (132 U. S., 491), and *American Sugar Refining Company v. United States* (181 U. S., 610); also Treasury decision 9305 of March 23, 1889, in relation to castile soap, wherein it is held that where the difference between the invoice weight and the weigher's return may be due to evaporation or other like causes, and it appears to the satisfaction of the appraiser and collector that the foreign market value per pound of the goods landed has proportionately enhanced, so that there has been no diminution of the total entered value of the invoice in the foreign market, the foreign market value per pound would be represented by the results which would be obtained by dividing the total foreign market value of the invoice by the number of pounds landed. In such a case the total dutiable value can not be less than the invoice value. Whenever the appraiser's advance, or any portion thereof, is due solely to the shrinkage of the hides after shipment, the changed condition being beyond the control either of the exporter or the importer, such advance shall not be held an advance *per se* to make market value, and additional duty will not be levied under section 32, act July 24, 1897. You will be governed accordingly.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *Erie, Pa.*

No. 23482.

LEMONS IN BOXES.

To ascertain the actual net weight of lemons imported in boxes the actual gross weight of each line imported must be found by weighing, separately, a sufficient number of representative packages of the different lines, the gross weight to be marked on each box tested. The total gross weights of the several lines must be obtained by applying the average weights ascertained to the number of boxes of each line, and the tare must be found by weighing a sufficient number of empty boxes of each size.

TREASURY DEPARTMENT, *January 25, 1902.*

SIR: The Department duly received your letter of the 19th ultimo, in reply to Department's communication of the 16th idem, concerning the allegation of James A. Twohey as to a lack of uniformity between your port and other ports in the method of weighing lemons, imported in boxes, for the purpose of assessment of duty.

In this connection, I have to state that the Department is in receipt of a report from the collector of customs at New York, from which it appears that while the weights of boxes of the same line imported into that port are practically uniform, the weights of boxes of different lines vary materially, in some cases from 66 pounds net to 77 pounds net; that in the case of "Maiori" fruit the boxes frequently weigh more than 100 pounds net, and that at different seasons of the year lemons in boxes of the same mark show an appreciable difference.

It further appears from said report that the practice prevailing at the port of New York in the ascertainment of the weights of imported lemons is as follows:

A test of the actual gross weight of each line is made when the merchandise is landed by weighing, separately, a sufficient number of representative packages of the different lines. The gross weight is marked on each box tested, and the total gross weight of the several lines is obtained by applying the average weight, ascertained by test, to the number of boxes of each line tallied by the official tallyman. The tare is ascertained by weighing a sufficient number of empty boxes of each size.

The Department is not advised as to whether lemons in boxes of various lines or sizes are likewise imported at Detroit, but if such be the case, you will cause the practice at your port to conform to that prevailing at the port of New York, as above indicated.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *Detroit, Mich.*

No. 23483.

TOBACCO SCRAPS.

Tobacco scraps exported from a bonded manufacturing warehouse dutiable on reimportation as manufactured tobacco.

TREASURY DEPARTMENT, *January 25, 1902.*

SIR: The Department duly received your letter of the 15th instant, relative to the decision of the Board of United States General Appraisers dated the 30th ultimo (G. A., 5056—T. D., 23443), covering a certain importation of "tobacco scraps."

You state that "this merchandise at the time of its original entry appeared to be entitled to free entry as domestic products returned in the same condition as when exported, and, consequently, an examination of the merchandise in question was made upon the wharf, and the entry thereof was liquidated on November 23, 1900; and that subsequently this office received a T. and E. entry from Petersburg, Virginia, which showed that the goods were exported from a warehouse, class 6, and in view of said information and the understanding of this office as to the provisions of section 27 of the act of July 24, 1897, the entry was reliquidated and the merchandise charged with duty at 55 cents per pound, under the provisions of paragraph 215, by reason of the language employed in section 27, to wit, 'except articles manufactured in bonded warehouses and exported pursuant to law, which shall be subject to the same rate of duty as if originally imported.'"

The Board found "as a matter of fact that the tobacco in question was unmanufactured," that "as no internal-revenue tax was paid upon it prior to exportation, it falls within the purview of said section 27 as an article which is the growth or product of the United States, and which, after exportation without the payment of any internal-revenue tax, has been reimported," and hence "is liable only to a duty equal to the tax imposed by the internal-revenue laws upon such articles, as claimed in the protest."

You refer to the concluding proviso to paragraph 483 of the act of July 24, 1897, imposing a duty equal to the remitted internal-revenue tax on reimported manufactured tobacco and to the revised regulations concerning the tax on tobacco, snuff, and cigars (series 7, No. 8, revised, Internal Revenue Bureau), showing that scrap tobacco under certain conditions is treated as a manufacture of tobacco subject to the internal-revenue tax of 12 cents a pound and conclude that "the finding of the Board of Appraisers that the tobacco in question is 'unmanufactured,' and then, in the same paragraph, holding that it is liable to a duty equal to the tax imposed by the internal-revenue laws, which internal-revenue law holds scrap tobacco to be manufactured, is an apparent contradiction."

The Department concurs in this view, and hereby directs you to take an appeal under section 15 of the act of June 10, 1890, from the decision in question.

Your attention is invited to the fact that exportation from a bonded manufacturing warehouse is *prima facie* evidence that the merchandise was manufactured, as only manufactured articles can be withdrawn for exportation from such warehouses under section 15 of the act of July 24, 1897.

Respectfully,

O. L. SPAULDING,
Assistant Secretary.

COLLECTOR OF CUSTOMS, *New York, N. Y.*

No. 23484.

INVOICES.

Whenever merchandise is actually purchased, the invoice and declaration indorsed thereon must be signed by the purchaser or his duly authorized agent.

TREASURY DEPARTMENT, *January 28, 1902.*

SIR: I have the honor to acknowledge the receipt of your letter of the 13th ultimo, inclosing copy of a dispatch from the Consul-General at Marseilles, in regard to the difficulty of enforcing the regulation that commission merchants abroad purchasing merchandise for and shipping the same to importers in this country should sign the declaration to be indorsed on the invoice as the agent of the purchaser. It is alleged that the application of this rule is fraught with considerable inconvenience, both to shippers and consular officers, for the reason that in certain cases, notwithstanding the commission merchants abroad do not contest the propriety of the application of the rule to their business operations, the American importers have refused to forward powers of attorney. American Consuls elsewhere are satisfied to permit commission merchants to sign invoices in their own names as sellers, and commission merchants abroad with long lists of occasional customers in the United States can not tell when they will receive a cablegram authorizing a purchase, under which circumstances it is impossible to secure a power of attorney in time.

Your Department's circular of December 18, 1900, embodying this Department's letter of December 3, 1900 (T. D. 22646), was predicated upon the fact that the item of commission appearing in the invoices having indorsed thereon a declaration signed by a commission merchant as "seller" would be treated as part of the dutiable value of the merchandise covered by such invoice, and it was for the purpose of protecting merchants doing a legitimate commission business that the Department suggested the wisdom of requiring declarations to be

signed by commission merchants as the agent of the purchaser. A consideration of sections 2 and 3 of the act of June 10, 1890, would seem to fully sustain the position of the Department.

In the first section referred to it is provided—

“That all invoices of imported merchandise shall be * * * signed by the person owning or shipping the same, if the merchandise has been actually purchased, or by the manufacturer or owner thereof, if the same has been procured otherwise than by purchase, or by the duly authorized agent of such *purchaser*, manufacturer, or owner.”

It will be perceived that the person owning and shipping is the purchaser, and the law provides that the invoice shall be signed either by him or by the duly authorized agent of “such purchaser.” Section 3 provides—

“That all such invoices * * * shall have indorsed thereon * * * a declaration signed by the purchaser, manufacturer, owner, or agent.”

It is apparent that the words “manufacturer” and “owner” refer specifically and solely to goods obtained otherwise than by purchase, and that whenever goods are actually purchased the invoice and declaration thereon must be signed by the purchaser or his agent. There is no provision for a declaration by the “seller” as such. While section 3 does not specifically require the agent to be duly authorized, section 2 does, and as the acts of signing the invoice and signing the declaration in most cases would be performed by the same person, it would not appear unreasonable to require that the agent of the purchaser signing the declaration be duly authorized; but in this connection I am of opinion that the due authorization by a resident of this country of a commission merchant abroad to purchase merchandise for him and sign the invoice would be a sufficient authorization of such agent to sign the declaration.

Respectfully,

O. L. SPAULDING,
Acting Secretary.

The SECRETARY OF STATE.

No. 23485—G. A. 5066.

SAMPLE CIGARS DISTRIBUTED AT PAN-AMERICAN EXPOSITION.

Cigars gratuitously distributed in large quantities to the jury of awards at the Pan-American Exposition were properly assessed for duty under the provisions (paragraph 217) of tariff act of 1897.

Merchandise on exhibition at the exposition must be considered to have been constructively in bonded warehouse, and on withdrawal becomes subject to duty.

No. 23486—G. A. 5067.

HANDMADE PRINTING PAPER.

Handmade printing paper is dutiable under paragraph 401, act of July 24, 1897, as handmade paper, and not under paragraph 396 of said act as printing paper.

Every part of a statute should be given effect if possible.

No. 23487—G. A. 5068.

TURKISH TOWELS AND WASH CLOTHS.

Turkish towels and wash cloths made of cotton or flax, with an uncut loop or pile, are not dutiable as "pile fabrics" under the provisions of paragraph 315, act of July 24, 1897, but are dutiable at the rate of 45 per cent ad valorem, according to the component material of chief value thereof, under the provisions of paragraph 322 or 347 of said act.

The term "pile fabrics" as used in said paragraph is limited and restricted in meaning to articles or fabrics of kindred nature and kindred materials, with the associate articles grouped in the same paragraph, such as velvets, velveteens, etc., and is so known and used in trade and commerce. (*In re Herrman*, 56 Fed. Rep., 477.)

No. 23488—G. A. 5069.

PUMICE-STONE BRICKS.

Scouring bricks made of ground pumice stone and sand, mixed and pressed into different sizes, are dutiable at the rate of \$6 per ton, under paragraph 92, act of July 24, 1897, by similitude to pumice stone wholly or partly manufactured.

No. 23489—G. A. 5070.

DENTISTS' CEMENT.

Two separate compounds, one a powder and the other a mixture of formaldehyde, oil of cloves, and creosote, the two being sold together under the trade name "formagen," designed to be used together and known commercially as dentists' cement, are dutiable at the rate of 20 per cent ad valorem under paragraph 89, act of July 24, 1897, as "other cement." (Citing *T. D. 8507* and *9375*; *G. A. 1963*, *3370*, and *3371*, and *Cement Company v. Seeberger*, 39 Fed. Rep., 763.)

A compound of formaldehyde, oil of cloves, and creosote, separately imported, designed to be used in connection with a powder to form a cement, and also serving as an antiseptic, is dutiable as a nonalcoholic medicinal preparation, under paragraph 68 of said act.

No. 23490—G. A. 5071.

**TRAVELING ROLLS IN PART OF WOOL, COTTON OR FLAX
CHIEF VALUE.**

The proviso in paragraph 391, silk schedule, tariff act of 1897, that "all manufactures, of which wool is a component material, shall be classified and assessed for duty as manufactures of wool," applies only to said paragraph, or at most to the schedule in which the paragraph is found. Accordingly, so-called traveling rolls composed in part of wool, cotton or flax being the component material of chief value, are dutiable under paragraph 322 or 347 of said act, as manufactures of cotton or flax, not specially provided for.

It is not necessary to ascertain which of two paragraphs in the tariff is applicable to imported merchandise, where it appears conclusively that one or the other of them is appropriate, if the rate in each case is the same.

CENTRAL AMERICAN TREATY OF PEACE.

The Governments of Nicaragua, Salvador, Honduras and Costa Rica desirous of contributing by all the means in their power to the maintenance of the peace and good harmony that exists and should exist among them have agreed to celebrate a Convention of Peace and Obligatory Arbitration and to that effect have named as their respective Plenipotentiaries:

The Government of Nicaragua: His Excellency Señor Doctor Don FERNANDO SANCHEZ, Minister of Foreign Relations.

The Government of Salvador: His Excellency Señor Doctor Don SALVADOR RODRIGUEZ, Sub-Secretary of Foreign Relations.

The Government of Honduras: His Excellency Señor Doctor Don CESAR BONILLA, Minister of Foreign Relations.

The Government of Costa Rica: His Excellency Señor Don LEONIDAS PACHECO, Minister of Foreign Relations.

Who, after having presented their credentials and the same being found in good and due form, have agreed upon the following covenant:

ARTICLE I. It is declared that the present Convention has for its object the incorporation in form of Public Treaty the conclusions to which have arrived their Excellencies, the Presidents, General Don J.

SANTOS ZELAYA, General Don TOMAS REGALADO, General Don TERENCIO SIERRA and Don RAFAEL IGLESIAS, in the several conferences that have been held in this port with the sole object of maintaining and assuring by all possible means the peace of Central America.

ART. II. The contracting Governments establish the principle of obligatory arbitration in order to adjust every difficulty or question that might present itself between the contracting parties, binding themselves in consequence to submit them to a Tribunal of Central American Arbitrators.

ART. III. Each one of the contracting parties shall name an Arbitrator and a substitute to constitute the Tribunal. The term of the Arbitrators shall be for one year counting from their acceptance and then they may be re-elected.

ART. IV. The Arbitrators of those States among whom exists the disagreement shall not form part of the tribunal for the consideration of the concrete case, this remaining entirely with the Arbitrator or Arbitrators of the remaining States.

ART. V. If, through pairing, there should be no decision the Tribunal shall select a third among the substitutes. The third should necessarily adhere to one of the views given out.

ART. VI. As soon as a difficulty or question presents itself between two or more States their respective Governments shall advise the remaining signers of the present Convention.

ART. VII. The contracting Governments establish and recognize the right of each one of them to offer without delay, singly or conjointly, their good offices to the Governments of the States that are in disagreement, even without previous acceptance by them, and though they should not have notified them of the difficulty or question pending.

ART. VIII. The friendly offices exhausted without satisfactory result the Government or Governments that would have exercised them shall notify the others, declaring at the proper time, arbitration proceedings. This declaration shall be communicated with the greatest possible brevity to the member of the Tribunal corresponding to the President of the same, with the object that within a period not exceeding fifteen days the Tribunal that is to know and decide the case comes together. The installation of the Tribunal shall be communicated by telegraph to the signing Governments, demanding from the contending parties the presentation of their claims within the fifteen days following.

ART. IX. The Tribunal shall give its judgment within five days following the expiration of the term which has been spoken of.

ART. X. The difficulties that may arise through questions of pending limits or through interpretation or execution of treaties of limits shall be submitted by the Governments interested to the knowledge and decision of a foreign Arbitrator of American nationality.

ART. XI. The Governments of the States in dispute solemnly agree not to execute any hostile act, warlike preparations or mobilization of forces, with the object of not impeding the arrangement of the difficulty or question through the means established by the present agreement.

ART. XII. The Presidency of the Arbitration Tribunal shall be held alternately for annual periods by each one of the members, following the alphabetical order of the States represented, the first year corresponding to the Costa Rican Arbitrator, the second to that of Salvador and so on. When in the event foreseen in Article IV, the member filling the Presidency of the Tribunal shall be prohibited from acting, the temporary Presidency for the case in question shall be filled by the Arbitrator that may be available according to precedent established in the foregoing paragraph. The Tribunal shall be held in the Capital of the State to which the Arbitrator belongs, who should preside.

ART. XIII. The Arbitration Tribunal shall dictate all those rational dispositions that it considers necessary to fully carry out the high mission which is conferred upon it by this Treaty.

ART. XIV. With the object of preventing those abuses that might be committed in a State by political emigrants from another against the public peace and tranquility of this, the contracting Governments agree to send to the frontier those emigrants with respect to whom a petition should be made by the Government interested.

ART. XV. With the object of harmonizing as much as possible the ideas and tendencies of the Governments of the States signing, in all that relates to the maintenance and strengthening of the bonds of Central American friendship and good intelligence among them, while for such ends there are not established permanent Legations among the contracting States, the nomination of Consuls-General is recommended from each one in the other States who shall have at the same time the character of Confidential Agents from their respective Governments.

ART. XVI. The present Convention shall be submitted to the ratification of the respective Congresses as soon as possible and once ratified by them all will enter into force thirty days after without the need of exchange.

ART. XVII. For the installation of the Arbitration Tribunal established by this agreement the 15th of September of the current year—Anniversary of the Independence of Central America—is named.

ART. XVIII. In the desire that the present Convention may unite all the States of the Central American family, the signing Governments shall invite, jointly or separately, the Government of the Republic of Guatemala to adhere to its stipulations if it shall be possible.

In witness whereof we sign four copies of the same tenor in the Port of Corinto, Republic of Nicaragua, the 20th day of January 1902.

(Signed) FERNANDO SANCHEZ.

(Signed) SALVADOR RODRIGUEZ.

(Signed) CESAR BONILLA.

(Signed) LEONIDAS PACHECO.

The present Treaty being drawn up in accordance with instructions to that effect, the President of the Republic [of Nicaragua] resolves to give it his approval.

National Palace, Managua, January 28th, 1902.

ZELAYA.

The Minister of Foreign Relations

SANCHEZ.

ARGENTINE REPUBLIC.

BUDGET FOR 1902.

The budget law of the Republic was enacted by Congress on January 29, 1902, and promulgated by the President on the following day. This measure reads as follows:

"The Senate and Chamber of Deputies of the Argentine Nation, assembled in Congress, etc., sanction with the force of law—

"ARTICLE 1. The general budget of expenses of the administration for the financial year 1902 is fixed at \$33,027,233.26 gold and \$102,943,692.66 currency, distributed as follows:

ORDINARY BUDGET.

Expenses.	Gold.	Paper.
Congress		\$2,558,180.00
Ministry of the Interior		14,609,481.84
Ministry of Foreign Affairs and Worship	\$387,141.20	1,350,840.00
Ministry of Finance		7,857,621.82
Public debt	23,984,123.51	12,093,810.12
Ministry of Justice and Education		13,039,099.24
Ministry of War		18,001,580.76
Ministry of Marine	11,462.40	11,033,284.00
Ministry of Agriculture	12,000.00	2,991,960.00
Ministry of Public Works	300,000.00	11,262,086.00
Pensions, etc		5,500,748.88
Extraordinary expenditures	8,332,496.15	2,645,000.00
Total	33,027,223.26	102,943,692.66

"ART. 2. The expenses established in the ordinary budget shall be covered by the following resources:

GOLD.

Importation duties	\$33,000,000
Exportation duties	2,800,000
Storage and lighterage	1,300,000
Lights and buoys	210,000

National-bank service.....	420,000
Province of Córdoba.....	200,000
Matriculation and examination fees.....	100,000
Total	63,390,000

“ART. 3. The extraordinary expenses shall be covered by the following resources:

“Five per cent of the additional duty on imports during a year (Law No. 3871), \$4,400,000 gold; sale of bonds of the Law of 1891, \$9,500,000 gold; total, \$13,900,000.

“ART. 4. The service of the bonds delivered to the Bank of the Nation by the National Bank in payment of the judicial deposits is fixed at 3 per cent interest and 10 per cent amortization, and that of the

bonds delivered by the National Bank to the Conversion Office, in payment of the popular loan, at 6 per cent and 2 per cent amortization.

"ART. 5. Imported merchandise subject to 10 per cent or more duty shall pay an additional 2 per cent on the value.

"ART. 6. The Executive Power may exempt the subproducts of the *saladeros* and extracts at meat factories from export duties during 1902.

"ART. 7. All merchandise subject to import duties shall also pay an additional 5 per cent.

"ART. 8. The salaries and expenses of the University of the Capital shall be paid out of its receipts.

"ART. 9. During 1902, a deduction of 5 per cent shall be made from all civil-service salaries and pensions, including those of the masters and pensioners of the National Council of Education, and the sums deducted shall be deposited in the Bank of the Nation.

"ART. 10. The sum of \$30,000 shall be deducted from the amount to which each of the Provinces is entitled out of the proceeds of the National Lottery, in order to pay the respective subventions mentioned in Section 8 of the Annex C. As to the Provinces of Corrientes, Salta, Jujuy, Rioja, Catamarca, Mendoza, Santiago del Estero, San Luis, and San Juan, the amount deducted shall be divided equally between the said subventions and the works referred to in Law No. 3967.

"ART. 11. Two special drawings of \$150,000 each shall be made in the lottery, and out of the first shall be paid 10 per cent for a *Casa de Aislamiento* in Santa Fé, 20 per cent to the Society of Benéficencia of the Capital for the Sanatorium, 'Siglo XIX,' and 70 per cent to the Argentine League against Tuberculosis for the construction of a sanatorium for poor persons suffering from that disease. The proceeds of the second drawing shall be delivered to the *Asociacion Nacional de Ejercicios Fisicos* and to the *Club de Gimnasia y Esgrima*.

"ART. 12. The resources in gold referred to in article 2 shall be paid in gold or in legal currency money at the rate of the day.

"ART. 13. The members of the civil service, with at least ten years' service, who may lose their employment by virtue of this law, shall receive a single donation of two months' pay."

A decree of the National Executive, after referring to articles 7 and 12 of the above law, makes the following provisions:

"ARTICLE 1. The additional duty of 5 per cent shall be made effective from the 1st of February next (1902), inclusive.

"ART. 2. The rate of 235 per cent for the payment in paper money of the duties in gold is fixed from the 1st of February next (1902) and until further orders of the Ministry of Finance.

"ART. 3. The new rate which may be fixed shall be communicated by the Under Secretary of Finance to the respective collecting offices."

FOREIGN COMMERCE OF 1901.

"El Diario" of Buenos Ayres, under date of January 29, 1902, publishes an interesting article upon the foreign commerce of the Argentine Republic for 1901, compiled from data taken from the advance sheets of the Bulletin of Statistics.

The imports of the Republic for the twelve months were valued at \$113,959,749 gold, of which \$95,252,275 were subject to the payment of duty, and \$18,707,474 were admitted free. A comparison of these figures with the imports of 1900 shows that there has been a decrease of \$1,250,177 gold in the imports of merchandise that paid duty, and an increase of \$1,724,857 gold in the import of articles not subject to duty—that is to say, a net increase in the imports of 1901, as compared with those of 1900, of \$474,680 gold.

The exports from the Argentine Republic in 1901 aggregated \$167,716,102 gold, consisting of \$93,342,581 worth of nondutiable products, and \$74,373,521 worth subject to export duties. The exportation of dutiable articles in 1901, as compared with 1900, increased in the sum of \$18,204,144, while those not subject to export duties diminished to the amount of \$5,088,454. The total value of the exports, however, were \$13,115,690 more in 1901 than in 1900.

The imports of specie in 1901 rose to \$2,383,120, and the exports of the same to \$2,376,270.

The commerce of the Argentine Republic in 1901 with the nations of the world is shown in the following table:

Country.	Imports.	Exports.	Country.	Imports.	Exports.
	<i>Gold.</i>	<i>Gold.</i>		<i>Gold.</i>	<i>Gold.</i>
Africa		\$2,891,259	Netherlands	\$573,409	\$1,753,931
Belgium	\$8,688,657	13,457,731	Paraguay	1,767,644	216,053
Bolivia	138,732	541,049	Spain	3,912,536	2,131,713
Brazil	4,386,047	9,702,488	United States	15,533,639	9,296,454
Chile	111,076	563,173	Uruguay	679,236	3,710,663
France	9,959,641	28,637,121	West Indies	43,679	366,782
Germany	16,724,549	21,479,883	Other countries	244,083	38,723,093
Great Britain	36,460,808	29,920,759			
Italy	14,736,103	4,318,950	Total	113,959,749	167,716,102

There was a notable increase in the value of the imports from the United States, which nation now ranks third in the list of importing countries, Great Britain and Germany occupying the first and second places, in the order named. The following tables show the increase and decrease, respectively, in 1901, of articles entering into the foreign commerce of the Argentine Republic, as compared with 1900:

INCREASE.

[Values in gold.]

Chemical products	\$354,208	Lumber and its manufactures	\$358,724
Foodstuffs	501,561	Paper and paper products	117,125
Iron	2,670,392	Stone, earthenware, etc	1,261,762
Other metals	12,680	Sundry manufactures	123,820

DECREASE.

[Values in gold.]

Beverages.....	\$187, 278	Paints and dyes	\$22, 724
Leather and leather products..	102, 952	Textiles and textile products..	4, 650, 039
Live animals	161, 623	Tobacco	109, 874

The following table shows the values of the principal articles exported in 1901:

[Values in gold.]

Bran	\$1, 454, 428	Quebracho:	
Corn	18, 887, 397	Ties	\$1, 989, 195
Linseed.....	16, 515, 263	Extract.....	451, 004
Flour.....	2, 711, 298	Refrigerated beef.....	4, 490, 447
Hides:		Frozen wethers.....	5, 041, 023
Salted	5, 281, 756	Sheepskins.....	7, 339, 811
Dry	8, 848, 438	Sugar.....	3, 952, 998
Jerked beef	2, 879, 455	Wheat.....	26, 240, 755
Tallow and grease	3, 902, 909	Wool.....	44, 666, 483
Live stock	3, 084, 755		

The stock products exported amounted to \$90,646,411 gold in 1901, an increase over the previous year of \$19,392,125. A considerable portion of this increase was caused by the large exports of wool in 1901, due principally to delay in marketing the output of the previous year. The total value of the exports of wool during the year referred to was \$16,646,411 gold. The other principal articles of this class the exportation of which increased in 1901 is shown by the following statistics:

[Values in gold.]

Frozen meats	\$2, 559, 540	Jerked beef	\$899, 868
Hides	688, 826	Tallow	1, 097, 238

There was a decrease in 1901, as compared with 1900, in the exports of live stock of \$2,857,375. The total value of the agricultural products exported during the year amounted to \$71,596,099 gold, or \$5,830,257 less than the exports of the same products in 1900. The exports of wheat diminished during the same period in the amount of \$22,386,820. There was also a decrease in the exportation of hay in 1901 to the amount of \$321,044. There was an increase in 1901 in the exports of the following articles:

[Values in gold.]

Linseed.....	\$5, 859, 252	Sugar.....	\$2, 751, 375
Corn	6, 694, 650	Flour.....	939, 213
Peanuts.....	153, 438	Bran	291, 508

The duties on imports in 1901 amounted to \$32,188,032. The export duties, owing to the abnormally heavy shipments of wool, rose to \$3,107,660, while the export duties collected on other products amounted to \$2,734,559 gold and \$878,716 national currency, respectively. The total customs duties collected during the year 1901

aggregated \$38,130,251 gold and \$138,615 national currency. These duties, compared with those collected in 1900, show a decrease in 1901 in the gold receipts of \$479,320, and an increase in the receipts payable in paper money of \$138,615.

PRINCIPAL EXPORTS IN 1901.

During 1901 the Argentine Republic exported the following commodities (which represent the principal exports), as compared with the exports of similar articles in 1900:

Articles.	1901.	1900.
Dry oxhides.....number..	2,421,957	2,308,726
Salt oxhides.....do.....	1,082,111	1,050,737
Dry horsehides.....do.....	125,745	81,658
Salt horsehides.....do.....	135,615	38,445

Tobacco.....bales.....	17,087	14,887
Sugar.....tons.....	57,931	17,855

A bale of sheepskins, wool, or hair in the Argentine Republic weighs 450 kilograms (992.07 pounds); a bale of goatskins, 370 kilograms (815.7 pounds); a bale of hay, 50 kilograms (110.23 pounds); a cask of tallow, 100 kilograms (220.46 pounds), and a case of butter, 25 kilograms (55.115 pounds). The tons referred to are metric tons, representing 1,000 kilograms or 2,204.6 pounds.

The destinations of the exports were as follows, only the principal countries being considered:

United States.—Dry oxhides, 1,096,563; salt oxhides, 48,496; dry horsehides, 550; sheepskins, 254 bales; wool, 27,198 bales; hair, 802 bales; tallow, 59 casks; goatskins, 2,455 bales; linseed, 33,335 tons; quebracho, 4,647 tons, and sugar, 11 tons.

United Kingdom.—Dry oxhides, 59,784; salt oxhides, 47,035; salt horsehides, 1,013; sheepskins, 8,502 bales; goatskins, 70 bales; hair, 288 bales; wool, 57,252 bales; tallow, 178,133 casks; frozen wethers, 2,722,727; frozen beef, 480,101 quarters; wheat, 120,031 tons; maize, 258,357 tons; linseed, 63,027 tons; flour, 355 tons; bran, 7,884 tons; oilseed, 14,457 bags; pollards, 41,601 bags; hay, 3,085 bales; quebracho, 1,342 tons; butter, 55,356 cases, and sugar, 57,081 tons.

Germany.—Dry oxhides, 228,258; salt oxhides, 447,474; dry horsehides, 119,582; sheepskins, 2,947 bales; hair, 368 bales; wool, 97,881 bales; tallow, 4,700 casks; wheat, 35,589 tons; maize, 106,963 tons; linseed, 59,347 tons; flour, 2 tons; bran, 44,719 tons; pollards, 1,580 bags; oilseed, 52,343 bags; hay, 237 bales; quebracho, 81,840 tons; tobacco, 5,255 bales, and butter, 15 cases.

France.—Dry oxhides, 97,993; salt oxhides, 145,019; dry horsehides, 1,791; salt horsehides, 134,602; sheepskins, 52,679 bales; goatskins, 1,664 bales; hair, 541 bales; wool, 248,042 bales; wheat, 8,919 tons; maize, 67,389 tons; linseed, 29,840 tons; bran, 10,557 tons; pollards, 261,329 bags; oilseed, 13,143 bags; quebracho, 14,020 tons, and sugar, 659 tons.

Belgium.—Dry oxhides, 128,981; salt oxhides, 369,522; dry horsehides, 2,557; sheepskins, 699 bales; goatskins, 151 bales; wool, 95,044 bales; hair, 2,189 bales; tallow, 10,369 casks; wheat, 127,576 tons; maize, 136,857 tons; linseed, 37,534 tons; flour, 292 tons; bran, 4,998 tons; pollards, 2,882 bags; oilseed, 26,362 bags; hay, 5,503 bales; quebracho, 23,016 tons, and tobacco, 11,664 bales.

Italy.—Dry oxhides, 286,605; dry horsehides, 50; sheepskins, 9,469 bales; goatskins, 7 bales; wool, 7,430 bales; hair, 936 bales; tallow, 46,618 casks; wheat, 35,772 tons; maize, 29,026 tons; linseed, 8,906 tons; flour, 100 tons, and tobacco, 1 bale.

Brazil.—Dry oxhides, 5,836; sheepskins, 21 bales; tallow, 24,915 casks; wheat, 126,093 tons; maize, 14,532 tons; linseed, 5 tons; flour, 61,212 tons; bran, 1,302 tons; pollards, 1,312 bags; hay, 410,906 bales, and butter, 325 cases.

RAILWAY STATISTICS FOR 1901.

The "Review of the River Plata" for January 4, 1902, published a table giving the approximate returns of the Argentine railways, from which the appended statistics are obtained, the capital, receipts, expenses, and profits being expressed in gold.

GOVERNMENT RAILWAYS,

Name of line.	Length.	Capital.	Receipts.	Ex- penses.	Profits.	Passen- gers.	Freight.	Inter- est.
	<i>Km.</i>						<i>Tons.</i>	<i>Per cent.</i>

Total	14,745	486,616,831	43,423,116	22,542,995	20,880,121	19,696,250	13,443,399	4.29

* Loss.

According to the above table the railway lines, both Government and private, have a total extent of 16,761 kilometers (10,414.78 miles), with a combined capital of \$541,575,613. The total receipts in 1901 were \$45,414,523 and the total expenditures, \$23,902,605, leaving profits to the amount of \$21,511,918. The number of passengers carried was 20,105,222 and the number of tons of freight transported was 14,501,775.

RESOURCES OF THE TERRITORY OF SANTA CRUZ.

According to the "Bulletin Commercial," of Brussels, the Territory of Santa Cruz, situated in the southern part of the Argentine Republic, seems destined to become, in the future, a field of prosperous enterprises. Sheep are already raised in large numbers and cattle of all kinds could be acclimated, for it appears that herds of wild cattle are still to be found there.

The climate of this country resembles in many respects that of Canada. Cereals, however, are not cultivated, but alfalfa is, while the country is covered with numerous natural prairies.

The lands are still sold by the State at low prices, thus enabling purchasers to obtain a clear title to them. The most promising lands and those offering the greatest facilities for development are situated near the coast; they can be bought for prices ranging from 7,000 to 8,000 *pesos* per square league. Farther in the interior the price per square league falls to 5,000 and even 3,000 *pesos*. The most advantageous of the interior lands are to be found on the banks of the Santa Cruz River.

The Government of the Argentine Republic, is, it appears, intending to improve the natural ports along the coast of Santa Cruz.

THE FROZEN MEAT INDUSTRY.

The Belgian legation at Buenos Ayres writes to the "Bulletin Commercial" that the total commercial movement of the *saladeros* of the Rio de la Plata and Rio Grande was as follows for 1901, compared with the two years preceding:

Number of animals slaughtered.

Establishments.	1901.	1900.	1899.
Buenos Ayres (Province)	73,300	39,000	19,500
Rivers of the Argentine Republic and Uruguay	39,700	22,000	8,600
Montevideo	115,800	88,400	86,200
Rio Grande	50,000	3,000
Total	278,800	150,100	117,300

As is shown by the above figures, it is especially in the Province of Buenos Ayres that the progress of the meat-packing industry is the most remarkable.

The "Review of the River Plate," of the same city, published the following résumé of the exports of frozen meat from the Argentine Republic during the last three years:

Year.	Sheep.	Quarters of beef.
1899	2,485,949	113,431
1900	2,385,214	265,965
1901	2,722,727	497,375

The large increase in the exports of beef is due especially to the prohibiting of the importation in England of Argentine live stock, on account of the foot-and-mouth disease which prevailed in the latter country in 1900 and which now seems to have completely disappeared.

REGISTRATION OF POSTAL MATTER.

On January 2, 1902, the Post-Office Department of the United States issued information to postmasters relative to registered matter for the Argentine Republic. This was to the effect that the Department had been officially advised that any mailable matter addressed for delivery at any post-office in the Argentine Republic may now be registered, registration being no longer restricted to articles addressed for delivery at certain specified post-offices.

IMMIGRATION IN 1901.

The immigration returns for 1901 have been published and show that, during the twelve months covered, 160,582 persons arrived in the

Argentine Republic and 112,665 departed. Of the arrivals 125,951 were immigrants, of whom 90,127 came direct from foreign lands and 35,824 by way of Montevideo. The departures were represented by 80,251 emigrants and 32,414 passengers. In the year 1900 the total number of arrivals was 132,456, of whom 105,902 were immigrants; in 1899 the arrivals numbered 145,699, including 111,083 immigrants. The greater number of immigrants in 1901 were Italians, though an increase in the arrivals of Polish Jews and Roumanians was also noted. The occupations of most of the immigrants were embraced under those connected with agriculture.

THE LINSEED CROP.

Reports from the Argentine Republic indicate that the linseed crop of the River Plate region will be considerably in excess of early predictions. Conservative estimates called for an 8,000,000-bushel crop, but, basing their figures on the shipments of the first four weeks of 1902, the opinion is becoming general that the crop will be 10,000,000 and possibly 12,000,000 bushels.

MISCELLANEOUS NOTES.

The imports of live stock through the ports of Buenos Ayres and La Plata during 1901 consisted of 29 Durham, 1 Hereford, 4 Polled Angus, and 4 other cattle; total, 38; fancy-bred horses to the number of 181; foreign-bred asses, numbering 427; sheep to the number of 14,381—Lincolns, 14,295; Rambouillets, 80; and Hampshires, 6; and 3 swine of English breeds.

The alcohol tax in 1901 amounted to \$13,228,650.59. Of this sum \$12,091,543.13 was collected from the domestic product and \$1,137,107.46 from the imported alcohol. The number of liters of alcohol produced in the Republic in 1901 was 14,843,412, while 3,596,796 liters were imported.

During the year 1901 the following live animals were exported: Cattle, 16,826; horses, 11,130; sheep, 4,089; and swine, 240. These went to Brazil, Paraguay, Uruguay, Spain, and South Africa.

The American Vitriified Conduit Company, of Akron, Ohio, was recently awarded a contract for 500,000 feet of vitriified conduit for telephone wires in Buenos Ayres.

The population of the city of Buenos Ayres on December 31, 1901, was estimated at 848,367.

BOLIVIA.

**TREATY WITH THE UNITED STATES FOR THE EXTRADITION OF
FUGITIVES FROM JUSTICE.**

Signed at La Paz, April 21, 1900.

Ratification with amendments advised by the Senate, December 18, 1900.

Ratified by the President, August 2, 1901.

Ratified by Bolivia, December 19, 1901.

Ratifications exchanged at La Paz, December 23, 1901.

Proclaimed, December 30, 1901.

The United States of America, and the Republic of Bolivia, being desirous to confirm their friendly relations and to promote the cause of justice, have resolved to conclude a treaty for the extradition of fugitives from justice between the United States of America and the Republic of Bolivia, and have appointed for that purpose the following representatives plenipotentiary:

The President of the United States to Dr. GEORGE H. BRIDGMAN his Envoy Extraordinary and Minister Plenipotentiary to Bolivia, and the President of Bolivia, Dr. ELIODORO VALLAZÓN, his Minister of Foreign Relations, who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following articles:

ARTICLE I. The Government of the United States and the Government of Bolivia, mutually agree to deliver up persons who, having been charged with or convicted of any of the crimes and offenses specified in the following article, committed within the jurisdiction of one of the contracting parties, shall seek an asylum or be found within the territories of the other: *Provided*, that this shall only be done upon such evidence of criminality as according to the laws of the place where the fugitive or person so charged shall be found, would justify his or her apprehension and commitment for trial if the crime or offense had been there committed.

ART. II. Extradition shall be granted for the following crimes and offenses:

1. Murder, comprehending assassination, parricide, infanticide, and poisoning; attempt to commit murder; manslaughter, when voluntary.
2. Arson.
3. Robbery, defined to be the act of feloniously and forcibly taking from the person of another money, goods, documents or other property by violence or putting him in fear; burglary.
4. Forgery, or the utterance of forged papers; the forgery or falsification of official acts of Government, of public authorities, or of courts of justice, or the utterance of the thing forged or falsified.

5. The counterfeiting, falsifying or altering of money, whether coin or paper, or of instruments of debt created by National, State, Provincial or Municipal Governments, or of coupons thereof, or of bank notes, or the utterance or circulation of the same; or the counterfeiting, falsifying or altering of seals of State.

6. Embezzlement by public officers, embezzlement by persons hired or salaried, to the detriment of their employers where in either class of cases the embezzlement exceeds the sum of two hundred dollars; larceny.

7. Fraud or breach of trust by a bailee, banker, agent, factor, trustee, or other person acting in a fiduciary capacity, or director or member or officer of any company, when such act is made criminal by the laws of both countries and the amount of money or the value of the property misappropriated is not less than \$200.00, or 500.00 *bolivianos*.

8. Perjury; subornation of perjury.

9. Rape, abduction; kidnapping.

10. Willful and unlawful destruction or obstruction of railroads which endangers human life.

11. Crimes committed at sea.

(a) Piracy, by statute or by the law of nations.

(b) Revolt, or conspiracy to revolt, by two or more persons on board a ship on the high seas against the authority of the master.

(c) Wrongfully sinking or destroying a vessel at sea, or attempting to do so.

(d) Assaults on board a ship on the high seas with intent to do grievous bodily harm.

12. Crimes and offenses against the laws of both countries for the suppression of slavery and slave-trading.

Extradition is also to take place for participation in any of the crimes and offenses mentioned in this Treaty, provided such participation may be punished, in the United States as a felony, and in Bolivia by imprisonment at hard labor.

ART. III. Requisitions for the surrender of fugitives from justice shall be made by the diplomatic agents of the contracting parties, or in the absence of these from the country or its seat of Government, may be made by the superior consular officers.

If the person whose extradition is requested shall have been convicted of a crime or offense, a duly authenticated copy of the sentence of the court in which he was convicted, or if the fugitive is merely charged with crime, a duly authenticated copy of the warrant of arrest in the country where the crime has been committed, and of the depositions or other evidence upon which such warrant was issued, shall be produced.

The extradition of fugitives under the provisions of this Treaty shall be carried out in the United States and in Bolivia, respectively, in conformity with the laws regulating extradition for the time being in force in the State on which the demand for surrender is made.

ART. IV. Where the arrest and detention of fugitive are desired on telegraphic or other information in advance of the presentation of formal proofs, the proper course in the United States shall be to apply to a judge or other magistrate authorized to issue warrants of arrest in extradition cases and present a complaint on oath, as provided by the statutes of the United States.

When, under the provisions of this article, the arrest and detention of a fugitive are desired in the Republic of Bolivia, the proper course shall be to apply to the Foreign Office which will immediately cause the necessary steps to be taken in order to secure the provisional arrest or detention of the fugitive.

The provisional detention of a fugitive shall cease and the prisoner be released if a formal requisition for his surrender, accompanied by the necessary evidence of his criminality, has not been produced under the stipulations of this Treaty, within two months from the date of his provisional arrest or detention.

ART. V. Neither of the contracting parties shall be bound to deliver up its own citizens or subjects under the stipulations of this Treaty.

ART. VI. A fugitive criminal shall not be surrendered if the offense in respect of which his surrender is demanded be of a political character, or if he proves that the requisition for his surrender has, in fact been made with a view to try or punish him for an offense of a political character.

No person surrendered by either of the high contracting parties to the other shall be triable or tried, or be punished, for any political crime or offense, or for any act connected therewith, committed previous to his extradition.

If any question shall arise as to whether a case comes within the provisions of this article, the decision of the authorities of the Government on which the demand for surrender is made, or which may have granted the extradition, shall be final.

ART. VII. Extradition shall not be granted, in pursuance of the provisions of this Treaty, if legal proceedings or the enforcement of the penalty for the act committed by the person claimed has become barred by limitation, according to the laws of the country to which the requisition is addressed.

ART. VIII. No person surrendered by either of the high contracting parties to the other shall, without his consent, freely granted and publicly declared by him, be triable, or tried, or be punished, for any crime or offense committed prior to his extradition, other than that for which

he was delivered up, until he shall have had an opportunity of returning to the country from which he was surrendered.

ART. IX. All articles seized, which are in the possession of the person to be surrendered at the time of his apprehension, whether being the proceeds of the crime or offense charged, or being material as evidence in making proof of the crime or offense, shall, so far as practicable and in conformity with the laws of the respective countries, be given up when the extradition takes place. Nevertheless, the rights of third parties with regard to such articles shall be duly respected.

ART. X. If the individual claimed by one of the high contracting parties, in pursuance of the present Treaty, shall also be claimed by one or several other powers on account of crimes or offenses committed within their respective jurisdictions, his extradition shall be granted to the State whose demand is first received: *Provided*, That the Government from which extradition is sought is not bound by treaty to give preference otherwise.

ART. XI. The expenses incurred in the arrest, detention, examination, and the delivery of fugitives under this Treaty shall be borne by the State in whose name the extradition is sought: *Provided*, that the demanding Government shall not be compelled to bear any expense for the services of such public officers of the Government from which extradition is sought as receive a fixed salary; *And, provided*, that the charge for the services of such public officers as receive only fees or perquisites shall not exceed their customary fees for the acts or services performed by them, had such acts or services been performed in ordinary criminal proceedings under the laws of the country of which they are officers.

ART. XII. The present Treaty shall take effect on the thirtieth day after the date of the exchange of ratifications, and shall not operate retroactively.

The ratifications of the present Treaty shall be exchanged at La Paz as soon as possible, and it shall remain in force for a period of six months after either of the contracting Governments shall have given notice of a purpose to terminate it.

In witness whereof, the respective Plenipotentiaries have signed the above articles, both in the English and the Spanish languages, and have here unto affixed their seals.

Done in duplicate at the city of La Paz, Bolivia, this twenty-first day of April of one thousand nine hundred.

GEORGE H. BRIDGMAN.

ELIODORO VILLAZÓN.

**CONVENTION FOR THE EXCHANGE OF MONEY ORDERS BETWEEN
THE UNITED STATES AND THE REPUBLIC OF BOLIVIA.**

The Post Office Department of the United States and the Postal Administration of the Republic of Bolivia being desirous of establishing a system of exchange of Postal Money Orders between the two countries, the undersigned, Dr. GEORGE H. BRIDGMAN, for the United States of America, and Dr. FEDERICO DIEZ DE MEDINA for the Republic of Bolivia, duly authorized for that purpose, have agreed upon the following Articles :

ARTICLE I. There shall be a regular exchange of Money Orders between the two countries :

ART. II. The amounts of orders in both directions shall be expressed in United States money ; and on account of the frequent fluctuations of the rate of exchange between the two countries, it is agreed that all amounts shall be converted into their proper equivalents by the Post Office Department of Bolivia ; that is to say, the sums received by the postal administration of Bolivia for orders drawn on the United States, shall be converted at the time of issue into United States money, at the current rate of exchange, and the amounts of orders drawn in the United States on Bolivia shall in like manner be rendered by the postal administration of Bolivia into the currency of Bolivia at the current rate of exchange on the day of the arrival of the list described in Article IX.

ART. III. 1. The maximum of each order is fixed at one hundred dollars (\$100).

2. No money order shall include the fractional part of a cent.

ART. IV. The amounts of money orders shall be deposited by the remitters and paid to the payees in gold coin, or in other legal money of the same current value. However, in case there should be in circulation in either country a paper currency of legal tender but of less value than gold, the Administration of that country shall have the right to receive and employ the same in its relations with the public taking into account the difference of value.

ART. V. 1. The Bolivian Post Department shall have power to fix the rates of fees paid by the public on all money orders issued in Bolivia, and the Post Office Department of the United States shall have the same power in regard to all money orders issued in the United States.

2. Each country shall communicate from time to time to the other its tariff of charges (fees paid by the public), which shall be established under this Convention, and these rates shall in all cases be payable in advance by the remitters, and shall not be repayable.

3. It is understood, moreover, that each country is authorized to suspend, temporarily, the exchange of money orders should circumstances give rise to abuses or cause detriment to the postal revenues.

ART. VI. Each country shall keep the fees paid by the public charged on all money orders issued within its jurisdiction.

ART. VII. The service of the Postal Money Order System between the two countries shall be performed exclusively by the agency of offices of exchange. On the part of the United States the office of exchange shall be New York, N. Y., and on the part of Bolivia, La Paz.

ART. VIII. No money order shall be issued unless the applicant furnishes the name and address of the person to whom the amount is to be paid, and his own name and address; or the name of the firm or company who are the remitters or payees, together with the addresses of each.

ART. IX. 1. The particulars of all money orders drawn in the United States upon Bolivia shall be entered at the Exchange Office New York, N. Y., in a list similar to the form marked "A" (in the Appendix) in which shall be shown the amount of each order in United States money, which list after having received the impression of the New York dating stamp, shall be forwarded to the Exchange Post Office of Bolivia, where it shall be impressed with the date stamp of that office, and where the requisite arrangement for effecting payment of the orders shall be carried out.

2. In like manner the particulars of money orders drawn in Bolivia upon the United States shall be entered at the exchange office at La Paz in a list similar to the form marked "B" (in the Appendix) in which shall be shown the amount of each in the money of both countries, which list after having received the impression of the dating stamp of that office, shall be forwarded to the exchange office at New York, N. Y., where it shall receive the impression of the dating stamp in use in that office, and where the necessary arrangements for effecting payment of the orders shall be carried out.

3. Each list as well as the entries in the lists dispatched, shall be numbered consecutively 1, 2, 3, 4, 5, etc., in the order of dispatch, commencing on July 1st of each calendar year, and the receipt of each list shall be acknowledged on either side, by means of the first subsequent list forwarded in the opposite direction.

4. Such a list shall be transmitted by each mail dispatched from Bolivia to the port of New York, and *vice versa*, and of each list dispatched a duplicate shall be sent by the following mail.

5. Should it happen that on the day when the list is to be dispatched, there are no orders to be certified for payment, the list must nevertheless be sent. But, in that event, the exchange office will write across the list the words: "*No Money Orders.*"

6. Should any list, or the duplicate thereof, fail to be received in due course, the despatching exchange office, on receiving information to that effect, shall transmit without delay a duplicate or triplicate of the list duly certified as such.

ART. X. 1. As soon as the list of the dispatching office shall have reached the receiving office of exchange, the latter shall reissue money orders in favor of the payees for the amounts specified in the list, and shall forward them, free of postage to the addresses or to the offices of destination, in conformity with the regulations in each country for the payment of money orders.

2. When the lists shall show irregularities which the receiving office shall not be able to rectify, that office shall demand an explanation with as little delay as possible. Pending the receipt of the explanation the reissue of money orders of payment relating to the entries found to be erroneous in the list shall be suspended.

3. One copy of each exchange list shall be returned by the receiving office of exchange to the dispatching office, but before returning such copy, the receiving exchange office shall enter therein the names of the respective offices of payment of the orders enumerated in the list, and, in the lists from the United States, returned by the Exchange Office at La Paz, the latter office shall also enter the amount of each order in the money of Bolivia according to the conversion made by it.

ART. XI. 1. The orders issued by each country on the other shall be subject as regards payment to the regulations which govern the payment of domestic money orders in the country on which they are drawn.

2. The paid orders shall remain in the possession of the country of payment.

ART. XII. When it is desired that any error in the name of the remitter or payee shall be corrected, or that the amount of a money order shall be repaid to the remitter, application must be made by the remitter to the postal administration by which the order was issued.

ART. XIII. Duplicate orders shall only be issued by the postal administration of the country in which the original orders were payable and in conformity with the regulations established or to be established in that country.

ART. XIV. 1. Repayment of orders to remitters shall not be made until an authorization for such repayment shall first have been obtained by the country of issue from the country where such orders are payable, and the amounts of the repaid orders shall be duly credited to the former country in the quarterly account. (Article XVI.).

2. It is the province of each postal administration to determine the manner in which repayment to remitters is to be made.

ART. XV. 1. Orders which shall not have been paid within twelve calendar months from the month of issue shall become void, and the sums received shall accrue to and be at the disposal of the country of origin.

2. The Bolivian postal administration shall, therefore, enter to the

credit of the United States in the quarterly account all money orders entered in the lists received from the United States which remain unpaid at the end of the period specified (Article XVI.)

3. On the other hand the Post Office Department of the United States shall, at the close of each month, transmit to the Bolivian postal administration, for entry in the quarterly account, a detailed statement of all orders included in the lists dispatched from the latter office which under this article become void.

ART. XVI. 1. At the close of each quarter an account shall be prepared by the Postal Administration of Bolivia showing in detail the totals of the lists containing the particulars of orders issued in either country during the quarter, and the balance resulting from such transactions.

2. Two copies of this account shall be transmitted to the Post Office Department of the United States at Washington, and the balance, after proper verification, shall, if due by the Post Office Department of the United States, be paid at La Paz, but if due by the Bolivian Postal Administration, it shall be paid in New York, and in the money of the country to which the payment is made.

3. Payments may also be made in money or by drafts, or by bills of exchange on points other than La Paz or New York, by mutual agreement between the two departments.

ART. XVII. 1. If, pending the settlement of an account, one of the two postal administrations shall ascertain that it owes the other a balance exceeding one thousand dollars (\$1,000), the indebted administration shall promptly remit the approximate amount of such balance to the credit of the other, but nothing herein contained shall prevent such administration from remitting a lesser amount than one thousand dollars (\$1,000) at discretion. This account and the letters which accompany such intermediate remittances shall be in accordance with the forms * ("C") ("D") ("E") ("F") annexed to this Convention.

2. If payment by the debtor administration be not made within a period of three months from the time such balance accrues, the creditor administration shall have the right to demand and receive interest thereon.

ART. XVIII. 1. The postal administration in each country shall be authorized to adopt any additional rules (if not repugnant to the foregoing), for greater security against fraud, or for the better working of the system generally.

2. All such additional rules, however, must be promptly communicated to the Post Office Department of the other country.

ART. XIX. Each administration is authorized in extraordinary circumstances that would justify the measure, to suspend temporarily

* Forms C, E and F are in the Spanish language and are printed in connection with the Spanish text of this Convention.

the money order service in whole or in part, upon condition of giving notice of such suspension immediately to the other country, and if deemed necessary, by means of the telegraph.

ART. XX. This present Convention shall take effect on the first day of December of 1901, and shall continue in force until twelve months after either of the contracting parties shall have notified the other its intention to terminate it.

The ratification of the present Convention shall be exchanged at La Paz as soon as possible.

In witness whereof the respective Plenipotentiaries have signed the above articles both in the English and the Spanish languages and have hereunto affixed their seals.

Done in duplicate at the city of La Paz, Bolivia, this 20th day of June, 1901.

POST OFFICE DEPARTMENT,

OFFICE OF FIRST ASSISTANT POSTMASTER GENERAL,

MONEY ORDER DIVISION,

Washington, D. C., 19..

SIR: This Department has the honor to transmit herewith a Bill of Exchange No. for drawn 19.., by of New York, N. Y., to the order of the Postmaster General, and by his indorsement made payable to your order by at

Be pleased to cause the receipt of the said Bill of Exchange to be duly acknowledged, its payment to be reported and the proceeds to be placed to the credit of this Department on account of the exchange of Money Orders between our respective countries during the quarter end 19..

I have the honor to be, Sir, Your obedient Servant.

First Assistant Postmaster General.

PARCELS-POST CONVENTION WITH THE UNITED STATES.

The Superintendent of Foreign Mails of the United States at Washington issued the following on January 16, 1902 (see United States Postal Guide for February, 1902, page 7):

“A Parcels-Post Convention having been concluded between the United States and Bolivia, to take effect on the 1st of the next month (February, 1902), parcels post packages mailed in Bolivia and addressed for delivery in the United States, and mailed in the United States addressed for delivery in Bolivia, will be admitted on and after that date to the mails exchanged between the two countries.

“The parcels in question must not weigh more than 11 pounds, nor measure more than 3 feet 6 inches in length and 6 feet in length and girth combined.

“Postage on parcels for Bolivia must be prepaid in full at the rate of 20 cents per pound or fraction of a pound, and on each parcel received from Bolivia a delivery charge of 5 cents must be collected of the addressee of the parcel.

“Parcels for Bolivia will be included in mails made up at the offices of New York and San Francisco for the office of La Paz, and those of the United States will be included in mails made up at the office of La Paz for the offices of New York and San Francisco.”

WEALTH OF THE TIN DEPOSITS OF THE REPUBLIC.

It is a fact well known to metallurgists that tin is the most sparingly distributed metal in common use. While there is scarcely a country in which gold either has not been or may be profitably worked, only a half dozen districts in the world produce tin in paying quantities. Cornwall, whose tin has been famed since the times of the ancients, is reported to have practically exhausted its output, the total supply from this source in 1900 having been but 3,910 tons. The mines of Bohemia, Tuscany, and Spain are being rapidly depleted, and neither in North America nor Africa have paying quantities of this metal been found. The two tin-producing districts of Asia (the Hunan district of China, and the Straits Settlements) have formed the principal sources of supply within late years, and Australasia has been added recently to the list of tin producers.

In Mexico extensive deposits of tin are known to exist in the State of Durango, but are at present untouched, owing to the lack of transport facilities for the mined product. Brazil, Peru, and Bolivia have paying tin mines, production being confined at present, however, to the two last-named Republics. The Bolivian output is particularly worthy of note, the returns for 1900 placing the export of this commodity through the port of Antofagasta at 12,000 tons (including bars, ores, and waste), of which 4,350 tons were sent to London.

The "Iron and Coal Trades Review" (London) recently published an article relative to some of the mineral resources of Central and South America. As regards the tin deposits of Bolivia, the Review's summary is complete and interesting, while showing that they are almost inexhaustible. The tin mines are located and described as follows:

"The Huanuni district in Bolivia has for many years been an important tin-mining center. A conical mountain, Pozoconi, rising some 1,800 feet above the level of the adjoining ravine, is traversed by a multitude of lodes and veins which have been largely worked. While many of these, at depths of from 100 to 200 feet, run into tin pyrites, in one of the principal lodes crossing the summit of the mountains the pure ore has been followed down for 600 feet without alteration.

"Most of the lodes in Negro Pabellon, Morococala, and Huanuni present continuous veins of solid tin stone of variable width up to 2 feet, and under these circumstances, as might be expected, some difficulty is experienced owing to the extreme hardness both of the vein itself and the adjoining rock; but seams of clay containing interspersed nodules and grains are also met with and are worked to advantage, while from the tin-bearing pyrites the ore is extracted by calcination in ovens and subsequently grinding and washing.

"The Challa-Apacheta mines are situated about 10 miles south of Huanuni, the lodes traversing low hills rising some 250 feet above the neighboring ravine. One of these lodes is remarkable as possessing the unusual width of from 25 to 30 feet, the tin ore in the form of grains and sand being so thickly interspersed through a slightly argillaceous matrix as to give a mean for the whole mass of some 20 per cent. This lode has been exploited horizontally over an extent of 250 feet and to about the same distance vertically below the surface. When pyrites are encountered, the lode is extremely soft, the contents being worked out with pick and shovel at low cost. It requires, however, a certain amount of grinding to reduce the tin particles to a uniform size and to admit of satisfactory washing on the vanner. What appears to be a continuation of the same lode is met with in an adjoining hill, but under very different conditions. It is here a comparatively narrow, hard vein, from 12 to 18 inches wide, in parts very solid, but with more or less admixture of pyrites, requiring calcination before grinding. This calcination is effected in heaps in the open air, a very small amount of fuel at the base being sufficient to start combustion, which is then maintained by the sulphur present.

"The Avecayo mine, situated in a lofty mountain at the southern extremity of the Oruro tin district, has lodes from 1 foot to 3 feet wide, giving considerable masses of solid ore averaging some 40 per cent of the metal. The mining district of Berenguela is situated about 45 miles east of Oruro, on the heights immediately south of the Arque

Quebrada. It was extensively worked by the Spaniards, but chiefly for silver, in which many of the lodes appear to have been rich. Those containing tin are distinct and nearly virgin. The tin oxide occasionally occurs massive and pure, but for the greater part exists in the form of minute grains interspersed through a ferruginous and siliceous matrix from 3 to 6 and even 9 feet wide. This substance is soft and easily broken down with the pick at a trifling cost, but requires fine grinding for the satisfactory extraction of the tin. Several samples examined showed much uniformity of composition, giving 7 per cent of metallic tin. On grinding with water, some 50 per cent of the earthy matter is almost immediately carried off, when the residue, consisting of siliceous particles, requires further stamping to reduce it. On washing, the tin oxide remains as a fine sand.

"Tin from the Berenguela district is said to be of a superior quality to any other mined in Bolivia. A fine permanent water power, suitable for Pelton wheel turbine, exists at a distance of 900 to 1,000 yards from the mines.

"In addition to the deposits already mentioned, many others exist, though hitherto of less importance, while the ravines descending from some of the mines, such as Negro Pabellon, Morococala, and Huanuni, are more or less rich in stream tin, and have been worked to some extent, the washed product giving from 62 to 68 per cent."

INDUSTRIAL AND COMMERCIAL RESOURCES.

SEÑOR EDUARDO ZALLES, Consul-General of Bolivia at New York, in a recent interesting communication to the MONTHLY BULLETIN, states, in substance, that Bolivia is essentially an agricultural country, and a producer of large quantities of raw materials, the greater portion of which are exported to Europe, where they are made into manufactured articles, many of them being afterwards purchased by Bolivian merchants and reimported into the country in this changed form. The present exports of the nation comprise all the metals that are utilized in Europe in the arts and manufactures. Crude rubber, quinine, cocoa, coca, coffee, lumber for construction purposes, medicinal plants, and numerous other products, including all grades of wool, hides, and cotton in great quantities, can be exported on a large scale as soon as proper transportation facilities, such as good wagon roads, or, still better, of railroads, or steamers to navigate the fluvial highways to the Atlantic Ocean, are secured to the remote regions of the Republic that are now the principal centers of production.

The time is opportune for the Bolivian people to realize that the raw materials referred to should be manufactured at home, producing in this manner all kinds of domestic merchandise, enabling the country thereby to become, in a large measure, independent of the importation of costly foreign goods. Such a happy result would undoubtedly

reduce the cost of a large number of manufactured articles of daily consumption, and at the same time would leave the profits derived from manufacturing processes to be invested in the promotion and capitalization of home industries. In this connection the question naturally arises, Will Bolivia ever become a country of great commercial and industrial importance? Taking into consideration the fact that the Republic is so favorably situated from a commercial standpoint, and so richly endowed with natural products, it is at once seen that this desirable state of affairs is by no means impossible of attainment. The great productiveness of Bolivia, considered in general terms, is best shown by a partial enumeration of the large variety of products contained in its geographical divisions. Take, for instance, the natural wealth of the Republic contained in the different Departments, the first in importance being the mineral, and, secondly, the agricultural products. The principal mineral-producing regions of Bolivia may be enumerated as follows:

Department of Potosí.—This Department is exceedingly rich in silver, tin, and bismuth. Silver is found in great abundance in the provinces, or districts, of Lipez, Chocaya de Chichas, Cerro de Porco, Siporo, Ubina, Huanchaca, Macluyo, Tomave, Calavi, Andacaba, Coruna, Pulayo, Guayna Potosí, Puilecata, Malmira, San Juan, Caraguacallo in Porco, Guariguari, Machacamarea, Toraci, Maragua, Ocuri, San Pedro, and Cerro de Aullagas; tin in Unica; gold in Chilco de Chichas; red and white copper in Lipez; nitrate in San Cristobal de Lipez, and topazes, emeralds, opals, jasper, and marble in Lipez.

Department of Tarija.—This Department contains an abundance of native copper in the province of Tarija; silver is found in the province of Tazcara, and gold in Cerro de la Polla. In addition to the precious metals, the Department of Tarija is rich in asphalt, marble, etc.

Department of Sucre.—Silver is found in Huailas; silver and tin in the provinces of Tomina and Padilla; coal in Tejahuasi; lead, copper, and gold in Cinti; gold, silver, and native copper in Tarabuco de Tomina, as well as coal and mineral asphaltum; native copper in the province of Azero, as well as an abundance of coal of a superior quality.

Department of Cochabamba.—The gold mines at Choquecamata de Ayopaya have been worked for a long time, and were famous mines during the time of the Spanish dominion. Silver and marble are found at Palca; gold and silver at Sayari; silver at Mizque, Colcha de Arque, and Quioma.

Department of Santa Cruz.—In the Department of Santa Cruz there is a district 60 miles in length, situated in the province of Santo Corazon, containing rich gold mines that are worked by the natives only. An abundance of gold is also found in the provinces of Caparus, San

Simon, and Guarayos. These rich mining districts, which contain large deposits of high-grade gold ore, were discovered and worked by the Jesuit Fathers a century ago. Immense deposits of native iron ore exist in the province of Santa Ana, and precious stones are also found in this province.

Department of La Paz.—There are in operation in this Department the rich mines of Chuquiaguillo, which produce considerable quantities of silver ore. Gold and silver are found at Pongo, about 25 miles from the city of La Paz. Excellent wagon roads connect this mining district with the city of La Paz. Gold is found in the sands of all the small streams in the province of Yungas, and exists also in the provinces of Coroico, Chirca, Unduavi, and Yanacachi. Gold nuggets are encountered in the rivers of Zongo, Challana, Rio Cajones, and there are celebrated gold mines at Tipuani and Yani that are known in mining circles the world over. Silver and gold are also found in considerable quantities in the provinces of Muñecas and Charanzi. The provinces of Berenguela and Pacajes contain more than 200 mines of silver, copper, and bismuth. There are rich copper mines in exploitation in the province of Corocoro, and gold, silver, tin, and bismuth are mined in the province of Inquisivi. Marble, antimony, coal, tin, copper, and bismuth are found in the province of Sicasisca; silver in the provinces of Mohoza, Yaco, Cavari, Choquetanca, Ichoca, and the famous mines of Araca, which are still in operation, produce gold in considerable quantities.

Department of Oruro.—The province of Oruro contains at the present time 30 mineral districts where silver and tin are mined. Gold is found at Irooco, Chuquimia, La Joya, Machacamamarca, Poopo, Sepulturas, Sorasora, and Toraca; tin in Negro Pabellon, Condequi, Guanuni, Machacamamarca, Bizacoma, and Carangas; silver in nearly all the mining districts of the province; tin, copper, iron, lead, silver, bismuth, antimony, and sulphur in Antequera and Ichocollo; feldspar, which is used in the manufacture of porcelain, is found in San Juanillo de Oruro; silver, borax, tin, and bismuth in Carangas; bismuth in lumps in Poopo and Coriviri, and large deposits of almost pure antimony in Poopo. Topaz and amethysts are found in the province of Candelaria.

The agricultural productions of the country are as follows:

The province of Lipez has great herds of alpacas, vicuñas, sheep, and llamas. Alfalfa and barley grow in Chichas; wines are obtained from Turichipa, Mataca, and Churumatas. Sugar cane, coffee, wool, potatoes, cereals, flour, and fruits are produced in the province of Charcas, Potosi, and large herds of goats are also found there. The department of Tarija grows vegetables in the valley of the Paraguay River; cacao, wines, maize, and barley are also produced there, and magnificent pasture lands abound.

The Department of Sucre produces grains and cereals of all kinds. Wines and sugar cane are found in the province of Imapare; wines in the province of Cinti; maize in Turichipa; sugar cane and barley of superior quality in Palmar; rice and cereals in Tomina; barley in Azero, and cattle and horses abound upon the rich pasture lands of the province of Azero.

Cochabamba contains the extensive and rich plains of Sacaba in the province of Chapare, where all classes of agricultural products can be grown. This province also contains a number of useful medicinal plants, and alfalfa grows luxuriantly. In the province of Ayopaya horses, wool, and barley are produced, and great tracts of pasture lands are to be found. In Tapacari all the European fruits and cereals grow, and herds of llamas, cattle, and horses abound. The province of Cliz contains much pasture land; wool is an important product and grain grows in abundance. In Mizque pasture lands abound, all the cereals thrive, among which the excellent and nutritive Cochabamba corn is worthy of special mention. This province also contains extensive vineyards, and it has been truthfully said that Cochabamba is the granary of Bolivia.

In the Department of Santa Cruz rich coffee is produced in the province of Totora, and rice grows in Chiquitos. A superior quality of cacao is grown in Apolobampa, Yuracarez, and Guarayos; pepper and sugar cane in Valle Grande; barley in Cordillera. In the latter place pasture lands abound, and large forests of rubber trees are found.

In the Department of Oruro an excellent quality of cheese is manufactured at Paria, and fruits of all kind grow luxuriantly. This province also produces hay and wool. Barley grows in the province of Guallamarca. This province also produces salt meats, borax, butter, and salt; fine wool from the llama, alpaca, and vicuña are produced in the province of Poopo.

The Department of La Paz produces excellent wines and brandies, and a great variety of fruits grow there during the entire year. The other productions of this department are quinine, rubber, cacao, sugar cane, coffee, bananas, cereals, lumber, etc.

In addition to the products already mentioned, there are numerous other sources of wealth existing in the Republic, such, for instance, as the exploitation of the forests containing cabinet woods, the hunting of the otter, which animal is found in great numbers in Porco-Chijchi; fishing in the lakes and rivers, the exploitation of the numerous dye-woods which abound in the provinces of Tomina and Azero. There are a variety of woods that are suitable for export, especially in the provinces of Chapare, Ayopaya, Tapacari, Arque, and Tarata in the Department of Cochabamba.

Tobacco and vanilla flourish in Santa Cruz; forests of rubber are to be found in the provinces of San Rafael, Exaltacion, Chiquitos, Con-

cepcion, and Valle Grande; cochineal is produced in Guapay; valuable woods, cinchona bark, and crude rubber in Cordillera; several varieties of cedar and eight different kinds of mahogany in Chiquitos. Rare birds and animals are to be found in the tropical forests in the northeastern portion of the Republic and along the river Beni, and immense forests of rubber trees are encountered there. Cinchona bark is also produced in large quantities, cocoanuts and dates abound, and deposits of petroleum are to be found.

CONCESSIONS FOR PORT WORKS AND RAILWAY LINES.

The "Review of the River Plate" reports that the Bolivian Government has signed a contract with the Compañía Africana for the construction and working of a port in Bahia Negra with a canal in the Alto Paraguay. Also the construction of a railway from the west branch of Bahia Negra to Santa Cruz, with a branch to Sucre and Potosi; gauge, 1 meter; motive power, electricity or steam. The plans of 400 kilometers of the line are to be presented within eighteen months, while the whole is to be finished in ten years. As compensation, the company is to receive 6 per cent of the customs receipts of Bahia Negra for a period of twenty-five years and 400 square leagues of land.

STAGES OF THE JOURNEY FROM THE ATLANTIC TO PUERTO QUIJARRO.

From Buenos Ayres the navigation companies have a service established, according to "Le Courrier de la Plata," to Puerto Quijarro, in Bolivia. The distance in a direct line from Buenos Ayres, Argentine Republic, to the port named is 1,770 kilometers (1,100 miles), but following the course of the Paraná and Paraguay rivers the distance is a little over 3,070 kilometers (1,908 miles). The stages of the journey via the great water highways are as follows, the distances being from Buenos Ayres: Rosario, 400 kilometers (249 miles); Corrientes, 1,170 kilometers (727 miles); Asunción, 1,570 kilometers (976 miles); Bahia Negra, the first Bolivian port, 2,500 kilometers (1,553 miles); Corumbá, 2,800 kilometers (1,741 miles), and Puerto Quijarro, 3,070 kilometers (1,908 miles).

BRAZIL.

AUTHORIZED EXPENDITURES IN 1902.

The MONTHLY BULLETIN for February contained in detail the estimates of the anticipated revenues of Brazil for the year 1902, as compared with like estimates for the previous year. The authorized

expenditures in 1902, as compared with those of 1901, are divided among the following governmental departments:

Ministry.	1902.		1901.	
	Gold.	Currency.	Gold.	Currency.
Justice and Interior.....		16, 451, 611\$000		16, 094, 202\$000
Foreign Affairs.....	926, 500\$000	737, 920\$000	969, 500\$000	527, 520\$000
Marine.....		24, 379, 297\$000		23, 200, 337\$000
War.....		46, 295, 602\$000		45, 580, 058\$000
Industry, Railways, and Public Works.....	10, 770, 614\$000	66, 878, 840\$000	12, 859, 015\$000	61, 818, 446\$000
Finance.....	21, 895, 057\$000	83, 178, 618\$000	23, 681, 470\$000	97, 293, 661\$000
Total.....	33, 592, 171\$000	237, 921, 888\$000	37, 609, 985\$000	244, 514, 224\$000

Under the supervision of the different Ministries named, the following operations have been authorized by the National Congress:

Ministry of Marine.—To construct on trial a submarine vessel of national design or invention the plans of which, when submitted to competent authorities, shall be recognized as likely to have good results.

Ministry of War.—The continuation of the surveys for the construction of a railway between Parana and Matto Grosso, which will be constructed under the orders of military engineers by the national troops.

Ministry of Public Works.—To construct telegraph lines from Bom Jardim to Taquaretinga, in the State of Pernambuco, from Cuyaba to Corumba, and from Porto Cachoeira de Santa Leopoldina to Villa Alfonso Claudio, in the State of Espirito Santo; from Itabira to Santa Anna de Ferros e Guanhaes, and from Boquim to Simão Dias (passing through the village Campos and the town of Lagarto), State of Sergipe; from Lavras, State of Ceara, to Souza, State of Parahyba, passing through Cajazeiras and San Joao de Souza; from Peripery to Itamaraty, State of Piahy; a branch line to unite Santa Anna and Acarahu to Sobral, in the State of Ceara; branch lines to Maracana, Marapanim, Odivelas, Vigia, and San Miguel do Guama, State of Pará; a line from Oeiras to Paranagua, and a branch line from Oeiras to Valenca, Picos, and Jaicos; a line from Cachoeiro do Itapemirim to Rio Novo and Alfredo Chaves, State of Espirito Santo; a line to Campos Novos, passing through Corytibanos, State of Santa Catharina, and a line from San Benedicto, State of Ceara, to the most convenient point on the main line.

To supply seeds and plants and pay for the transportation of animals destined for the development of new cultures, and for the improvement of native stock. For these purposes 100 *contos* are appropriated.

To spend not more than 300,000\$000 for propagandas of Brazilian agricultural and mineral products abroad.

To reorganize the maritime service in charge of the Lloyd Brasileiro, obtaining a reduction in freight rates for the transportation of

national products. The company that shall undertake this service will be required to furnish, if necessary, with a ten days' notice, an extra boat for the transportation of goods.

To renew the contract, without increase of expenditure, with the Companhia Pernambucana de Navegação. The vessels of the company shall ply between Recife and Aracaja, with a bi-monthly voyage to Amarração or Cajueiros.

To renew the navigation service established by Law No. 351 of December 11, 1895, without increase in expenditure. The terminal points are Grajahn and Floriano.

To come to an agreement with the Companhia Amazonas to establish a maritime service from Arajuary to Oyapoe.

To construct the extension of the railway line from Silva Xavier to Curvello and the conclusion of the substitution of the wide gauge for the narrow-gauge track to São Paulo. The funds for these purposes, 1,500 *contos* for the former and 1,000 *contos* for the latter, to be taken from the net revenues of the Central of Brazil Railway, which is Federal property.

To extend the period for the completion of the Mogyana Railway works on the section from Araguary to Catalao. The period for the completion of the first section of the railroad from Catalao to Palmas by the Mogyana Railway Company is to count from the date of the inauguration of the Catalao station, the concessionaire to make arrangements with said company for the completion of the section from Araguary to Catalao.

To extend, without onus, the concession for the construction of the railway from Praça da Republica to the bar of Guaratyba.

To open up a credit of 600 *contos* for the inspection, renewal, and purchase of material for the drainage and sewerage of the Federal capital.

To open up a credit of 40 *contos* to meet the expenses of the exhibits of Brazilian products at the Pan-American Exposition at Buffalo.

To enter into an agreement with the railways which enjoy guarantees of interest for the modification of their lines without additional burden to the Government, the new lines to pass through more productive regions.

The port of Santarem, State of Pará, will be included in the itinerary of the Lloyd-Brazileiro, whose ships will touch at this port alternately with that of Obidos.

The date for the commencement of the Bahia port works will be extended for another eight months.

Ministry of Finance.—The Government is authorized to settle the debts of banks arising from aid to agriculture.

To lend to the State of Espirito Santo the sum of 300 *contos*.

To revise the regulations regarding consular invoices, introducing the improvements indicated by experience.

To grant a premium of 50\$000 per ton on all vessels above 100 tons each, built on Brazilian territory.

The fund for the amortization of the internal currency debt will be obtained from the following sources: (a) Annuities (*apólices*) purchased with the money received from the sale of Government property and the products of leases under the terms of article 3, law 471, of December 26, 1900; (b) annuities acquired with the balance or surplus over receipts and refunds of deposits; (c) annuities already purchased and to be purchased by the Amortization Department (*Caixa de Amortização*), with the product of unclaimed interest in accordance with article 48 of the law dated October 28, and regulation No. 9370, article 94 of the law dated February 14, 1885; (d) annuities purchased with the credits specially voted by Congress for that purpose.

All the annuities purchased in accordance with article 2 will be entered under the heading "Amortization fund of the internal currency debt," and the interests on same will be applied to the purchases of new annuities to increase said fund.

PROPOSED DRAINAGE WORKS IN THE STATE OF RIO DE JANEIRO.

The Belgian Legation at Rio de Janeiro has forwarded to the "Bulletin Commercial," of Brussels, a notice from the Department of Public Works and Industries of the State of Rio de Janeiro relative to the work of draining and improving the sanitary conditions of the lands of the lower part of this State from its frontier with the State of Espirito Santo to its boundary line on the State of São Paulo. Proposals relative to this enterprise were to have been received at the said Department up to March 20, 1902, but this time will doubtless be extended.

The principal works to be undertaken are the rectification and deepening of the rivers and their branches, the opening of small canals and ditches, and the appropriation of the rivers and canals for navigation and irrigation purposes.

The contractors must: (1) Submit the plans and projects of these works to the approval of the State government; (2) make a partial plan of all the waterways crossing this region; (3) make the partial plan of the maritime zone; (4) proceed with plans for the leveling of the entire territory; (5) verify and indicate the points of the maximum level reached by the waters of the rivers and sea; (6) make the necessary soundings to show the formation of the bottoms of the waterways.

The following advantages will be granted the contractors: The collection, during the duration of the contract, of fixed taxes per unity of area on the drained or improved lands and on a zone of 3 kilometers adjacent to said lands; the collection of a tax on the vessels trans-

porting merchandise; the privilege of supplying all the hydraulic force of the waterfalls for furnishing electrical power; preference in explorations for unemployed natural wealth; immigration favors; the right to collect a tax for the distribution of the water of the irrigation canals, and the right of expropriation for public good.

The State of Rio de Janeiro can not furnish any financial aid to this enterprise.

SHIPMENTS OF RUBBER IN 1901.

The United States Consul at Pará has furnished the Department of State at Washington with a statement of the shipments of rubber from the Amazon valley in 1901, compiled from custom-house records. This shows that there was an increase in the shipments of rubber from Pará in 1901, as compared with 1900, of 3,255 tons, of which increase 2,755 tons were taken by the United States and 500 tons by Europe.

The total shipments from Pará (the lower Amazon district) in 1901 amounted to 30,132 tons, of which 15,377 tons were sent to the United States, while 14,755 tons were shipped to Europe. In 1900, the shipments from this port were 26,875 tons, the destination of 12,621 tons being to the United States and that of 14,254 to Europe. During 1901, the total exports of rubber from Manãos (in the upper Amazon country), were 15,469 tons, of which 8,132 tons were sent to the United States and 7,337 tons to Europe. During the previous year, the total shipments of rubber from Manãos were 8,012 tons.

From Iquitos (Peru), also in the upper Amazon country, the shipments of rubber in 1901 were 1,391 tons, as compared with 920 tons in 1900. The total exports of rubber, according to these figures, were 46,992 tons in 1901 as compared with 31,052 tons in 1900.

CONTRACT FOR THE EXTRACTION OF MONAZITE.

On December 31, 1901, Messrs. CHARLES SCHNITZSPAHN & Co. signed a contract with the Brazilian Government by which they obtain a lease for the extraction and sale of monazitic sands or other sands containing precious metals which the firm may find in the marine deposits of the coasts of Brazil.

The concession is for a term of ten years from the date of the contract, at the end of which period all machinery, utensils, etc., belonging to the company used for the extraction of monazite shall revert to the Government.

By the terms of the contract the lessees must begin operations within six months from the date of the contract. They bind themselves to pay to the Brazilian Government 40 per cent of the gross price of the sands extracted, to be paid at the time of the exportation of the same.

The quantity of sands extracted annually by the company must not be less than 1,000 tons, valued at £20,000 or £20 per ton.

MINING DEVELOPMENT.

The city of Pitanguy, State of Rio Grande do Sul, according to a recent paper, is destined to become an important mining center. At the time of its foundation gold deposits were worked, which have since been abandoned. Investigations are now being made in the suburbs of the city and land has been bought by Mr. JOACHIM DA SILVA, who hopes by his discoveries to attract the attention of capitalists and mining companies.

REORGANIZATION OF THE LLOYD'S COAST NAVIGATION COMPANY.

President CAMPOS SALLES recently signed a decree authorizing Señor VAZ DE CARVALHO to reorganize the Lloyd's Brazilian Coast Navigation Company, which, on its liquidation, passed to the Banco da Republica as principal creditor. The new contract will expire at the end of 1912, and the enterprise has a subvention of 1,663 *contos*, covering eight lines. These are: (1) The Northern from Rio de Janeiro to Manãos, with five monthly voyages; (2) the Southern, with two monthly voyages to Buenos Ayres and Rosario; (3) the Rio Grande do Sul, with two voyages monthly; (4) the Bahia; (5) the Sergipe and Alagoas; (6) the fluvial line of Santa Catharina, including a call at Guarapuana; (7) the Matto Grosso, and (8) the north and south lines, designed exclusively for the transportation of merchandise, with one voyage monthly.

VALUE OF PAPER MONEY IN CIRCULATION.

The value of the Brazilian paper money in circulation on December 31, 1901, was 680,451,058 *milreis*, as compared with 699,631,719 *milreis* on December 31, 1900, 733,727,153 on the corresponding date in 1899, and 785,941,758 at the close of 1898.

CHILE.**RECEPTION OF MINISTER WALKER MARTÍNEZ.**

On Tuesday, March 4, 1902, Señor Don JOAQUIN WALKER MARTÍNEZ presented his credentials to President ROOSEVELT as Envoy Extraordinary and Minister Plenipotentiary of the Republic of Chile near the Government of the United States at Washington. The ceremony occurred in the Blue Room of the White House and was marked by expressions of cordiality.

On being presented Señor WALKER MARTINEZ said:

"Mr. PRESIDENT: With the greatest satisfaction I have the honor to place in Your Excellency's hands the credentials with which the President of Chile accredits me as an Envoy Extraordinary and Minister Plenipotentiary to the Government of the United States of America.

“Having been intrusted with this mission when my country had the misfortune to lose the distinguished representative of its foreign policy, Don CARLOS MORLA VICUÑA, my arrival at this capital has been delayed, due to the work I was commissioned to undertake at the Second International American Conference, which was proposed by your worthy predecessor, the genial statesman and illustrious martyr, Mr. WILLIAM MCKINLEY.

“But if this circumstance prevented me from coming sooner to express to you that the rule and guide to my actions will be uniformly to endeavor to tighten more and more and with greater vigor the links of friendship by which our countries are happily united, on the other hand it gave me the opportunity to anticipate with facts the intentions by which I am inspired of tending to bring Chile and the United States into closer bonds of friendship within an equitable, just, brotherly, American policy, but calm and reasonable, without utopic delusions, and bearing always in mind the ineludible requirements of the social status of our continent.

“Beyond the political sphere, my Government has directed me to use my utmost endeavors toward increasing the commercial relations of both nations, which are not now what they can be when causes disappear and which are easily removed by a better knowledge here of our products, arts, resources, stability, and progress, and by a larger current there toward this great and powerful center of modern civilization.

“I therefore ask Your Excellency that, together with your personal good will, of which I will be in need on account of the scantiness of my individual gifts, you deign to grant me your high cooperation on which will depend the success of that nation whose purpose I have just outlined. At the same time I beg Your Excellency to accept the expression of the wish I make in the name of the President of Chile, and in my own name, that God may continue to watch over the prodigious destinies of this great Republic and over the personal welfare of a magistrate who, as Your Excellency has revealed, from the very beginning of assuming power, that he knows the path through which to conduct his people.”

President ROOSEVELT replied as follows:

“Mr. MINISTER: It gives me pleasure to receive from your hands the letters by which His Excellency the President of Chile accredits you as Envoy Extraordinary and Minister Plenipotentiary near this Government.

“It having been the aim of the United States to foster and strengthen the bonds of friendship with the American Republics, I am gratified to receive your assurance that it will be your endeavor to maintain the friendly ties and increase the commercial intercourse between your country and the United States, and I assure you that your efforts will meet with cordial cooperation. Influenced by this common purpose

your relations with this Government, like those of your lamented predecessor, can not fail to inure to the mutual benefit and progress of the two countries. I trust, Mr. Minister, that your residence among us will be a long and happy one.

“On behalf of the American people, and speaking for my own part, I request you to tender to His Excellency the President of Chile all good wishes for his personal welfare and for the prosperity of the Chilean Republic.”

STATISTICAL SYNOPSIS.

According to a recent official publication entitled “Sinopsis Estadística de Chile” (Statistical Synopsis of Chile), the area of the Republic is 724,712 square kilometers. Chile, compared with the other South American countries, ranks as the seventh in size, the fifth in density of population, and the fourth in the number of its inhabitants. The population of the Republic in 1895 was 2,712,145 persons; 1,240,353 residing in towns and cities, and 1,471,792 in the rural districts.

PRINCIPAL CITIES.

On December 31, 1900, an estimate was made of the population of the principal cities of Chile, the result of which is shown in the following table:

Cities.	Popu- lation.	Cities.	Popu- lation.
Santiago	291,725	Antofagasta	19,482
Valparaíso	135,674	Curico	14,577
Concepcion	49,766	San Felipe	12,359
Talca	40,987	Talcahuano	15,643
Iquique	42,440	Valdivia	9,819
Chillan	34,994	Copiapó	9,586
La Serena	17,137		

In 1900 Chile had 4,642 kilometers of railways in operation, 2,456 kilometers of which belonged to private companies and 2,186 kilometers to the Government. The following tables show the lengths of the different railways of the Republic operated by the Government and also those controlled by private companies:

GOVERNMENT RAILWAYS.

NORTHERN SYSTEM.

	Kilometers.
Chañaral to Pueblo Hundido	66
Ramal to Las Animas	20
Huasco to Vallenar	49
Coquimbo to Serena and Compañía	16.2
Coquimbo to Guayacan	3
Empalme to Puntilla	93
Higuerita to Panulcillo	10
Ovalle to Puntilla	3.8
Ovalle to Paloma	24
Total	285

CENTRAL SYSTEM.

Principal lines:	Kilometers.
Santiago to Valparaiso.....	187
Santiago to Pitrufulquen.....	720
Branch lines:	
Calera á Cabildo	72
La Vega á Los Andes	45
Santiago to Melipilla	60
Pelequen to Peumo.....	27.5
Centinela to Alcones	83.5
Parral to Cauquenes	50
San Rosendo to Talcahuano.....	85
Santa Fé to Los Angeles	20.5
Coigüe to Mulchen	41.5
Renaico to Traiguen.....	93
Total.....	1,485

The railways under the provisional operation of the State include the following lines:

	Kilometers.
Serena to Rivadavia.....	81.1
Talca to Constitucion	83
Vilos to Illapel and Salamanca	104
Valdivia to Osorno	148
Total	416.1

The following Government railways were in process of construction in 1900:

	Kilometers.
Pueblo Hundido to Inca de Oro	54.5
Animas to Los Pozos	20
Santiago Belt Railway	29
Alcones to Pichilemu	35
Talca to San Clemente	20
Temuco to Carahue.....	56
Pitrufulquen to Antilhue	118
Total	332.5

PRIVATE RAILWAY LINES.

The railways belonging to private companies are as follows:

	Gauge meters.	Kilome- ters.
Arica to Tacna	1.45	63
Iquique to Pisagua	1.45	200
Iquique to Lagunas.....	1.45	142
Branches to La Granja, San Antonio, and other points.....	1.45	187
Junin and branches76	105
Agua Santa and branches76	122
La Granja to Challacollo.....	.76	36
Suspension railway to the mines.....	---	3
Patillos to Lagunas (not in operation)76	90

	Gauge meters.	Kilome- ters.
Tocopilla to Toco.....	1	87
Branch to Santa Fe.....	1	25
Antofagasta to Oruro (922 kilometers), Chilian section.....	.76	442
Taltal to Cachinal and branches.....	1.07	212
Special railway to Santa Louisa for transporting limestone.....	---	50
Caldera to Copiapó.....	1.44	81
Copiapó to Pabellon.....	1.44	37
Pabellon to San Antonio.....	1.44	33
Pabellon to Chañarillo.....	1.44	42
Copiapó to Púquois.....	1.44	60
Carrizal Bajo to Yerbas Buenas.....	1.27	100
Branches—		
Canto del Agua to Carrizal Alto.....	1.27	8.57
Chorillos to Manganeso (M. Coquimbana).....	1.27	24
The Chorillos and Manganeso line to Mina Astilla.....	1.27	3.3
Kilometer 47 to Jarilla (Mercedita Mine).....	1.27	45.3
Tongoi to Tamaya and branches.....	---	81
Los Andes to Salto del Soldado.....	---	27
Santiago to Puente Alto.....	1	20.34
Concepcion to Penco.....	---	16
Concepcion to Curanilahue.....	---	91
Branch from Carampangue to Arauco.....	---	8
Yanes to Huena Piden.....	---	15
Total.....	---	2,456.51

Total number of kilometers of railways in the Republic, 4,642.61.

HIGHWAYS AND NAVIGABLE STREAMS.

In 1900 Chile had 23,234 kilometers of public highways and 645 wagon bridges. The Provinces of the Republic having navigable streams are shown in the following table:

Provinces.	Navigable waterways.	Provinces.	Navigable waterways.
	<i>Kilometers.</i>		<i>Kilometers.</i>
Curicó.....	422	Cautín.....	123
Talca.....	16	Valdivia.....	339
Maule.....	120	Llanquihue.....	172
Concepcion.....	210	Chiloé.....	20
Arauco.....	86		
Bio-Bio.....	54	Total.....	1,562

The Government spent in the construction and repair of public highways, during the year, \$165,971.87,^a and in the construction and repair of bridges \$284,311.56.

POSTAL STATISTICS.

The number of post-offices in the Republic was 751 in 1900, and 1,948 persons were engaged in the postal service of the country. In

^aThe Chilean dollar is worth about 36.6 cents United States currency.

addition to the Chilean railways used in the transportation of the mails, 223 private companies, having 67 mail coaches and 1,614 horses, were also employed in the same service. The mail routes of the Republic during the year referred to covered 3,796 kilometers of railways, 8,340 kilometers of highways, and 18,476 kilometers of maritime waterways. The number of kilometers traveled during the year in connection with the postal service of the Republic was 7,645,121. Chile has, on an average, one post-office to 4,062 inhabitants, or one for each 965 square kilometers of its territory. The following table shows the receipts and expenditures of the Post-Office Department during the years 1899 and 1900:

Year.	Receipts.	Expenditures.
1900	\$1,136,887.32	\$1,178,322.47
1899	1,023,377.13	1,065,612.58
Increase	113,510.19	112,709.89

The number of pieces of mail matter handled during the year amounted to 33,287,492, an increase of 1,346,632 pieces as compared with the total handled in 1899. Post-office orders were issued in 1900 to the number of 270,156, the total values of which aggregated \$9,043,800.90, as compared with 234,233 money orders issued in 1899, valued at \$7,814,195.84.

TELEGRAPH LINES.

The Republic of Chile had, in 1900, 19,135 kilometers of Government telegraph lines, which, added to the 4,363 kilometers owned by private companies, make the total length of the telegraph system 23,948 kilometers. The messages sent over these lines in 1900 numbered 1,166,707, as compared with 1,083,599 telegrams dispatched in 1899. During the year 1900 the Government constructed \$39,723.41 worth of telegraph lines, as follows:

Lines.	Cost.
San Rafael to Ranquil.....	\$500.00
Temuco to Valdivia.....	12,914.20
El Carmen to San Felix, and from El Carmen to Transito.....	12,851.81
Pintados to Pica.....	2,154.50
San Fernando to Resguardo de Tinguiririca.....	3,087.90
Illapel to Punitaqui (via Pozos).....	7,735.00
Pinto to San Ignacio.....	480.00
Total	39,723.41

In addition to this the Government did reconstruction work on its telegraph lines to the extent of \$109,149.32, and repair work amounting to \$3,735.

The telephone system of the Republic covers an extent of 9,850 kilometers, and the approximate value of the different plants in 1900 was \$910,000.

ELECTRIC TRAMWAYS.

On December 31, 1900, there were in operation in the Republic 42.97 kilometers of electric tramways, and 145.675 kilometers of horse tramways, making the total length of the tramway system of Chile 186.24 kilometers. The number of passengers carried on the electric tramways during the year 1900 was 2,990,132, and on the horse tramways 39,077,110, or a total passenger traffic during the year of 42,067,242 persons. The following is a list of the principal cities of the Republic having tramways and the number of kilometers in operation in each:

	Kilometers.		Kilometers.
San Felipe	11.7	Rengo	4.5
San Carlos	2.5	Coquimbo	2
Copiapó	5	Talca	3.5
Antofagasta	9	Valparaiso	12.875
Iquique	16	Quillota	3
Pisagua6	Santiago	75

REVENUES AND EXPENDITURES.

The revenues of the Government in 1900 were \$78,381,197.12 gold, and \$25,583,833.72 national money, as compared with \$68,199,857.88 gold, and \$31,885,030.36 national money, collected in 1899. The following comparative tables show in detail the receipts of the Government of Chile during the years 1899-1900, expressed in dollars of a valuation of 18d., and in national money, respectively:

GOLD.

Sources.	1899.	1900.

FOREIGN DEBT.

On December 31, 1900, the foreign debt of the Republic of Chile amounted to 86,153,400 *pesos* of the value of 18d. (£17,230,680), and the internal debt to \$75,826,488.17, paper currency.

PUBLIC SCHOOLS.

In the budget for 1900 the Government of Chile provided \$7,985,257 for the maintenance of public schools. The total number of schools in the Republic during the year referred to was 1,547, divided as follows:

Under control of the Federal Government.....	330
Municipal schools.....	27
Private schools.....	1,190
Total.....	1,547

The total number of matriculates in 1900 was 114,410 males and 58,987 females. The following table shows the enrollment and average attendance in the schools of Chile for a period of ten years:

Years.	Enroll- ment.	Average attend- ance.	Years.	Enroll- ment.	Average attend- ance.
1891.....	95,454	64,737	1896.....	111,361	81,168

PROPOSED ELEVATED RAILROAD ON THE CHILEAN-ARGENTINE FRONTIER.

The Belgian Mission at Santiago has informed the "Bulletin Commercial," of Brussels, that the Chilean Government has approved the plan of M. ABELARDO PIZARRO, for the construction and exploitation of an elevated railroad for passenger and freight service between Juncal, Chile, situated at an elevation of 2,234 meters, and Paramillo de las Cuevas, Argentine Republic, at an elevation of 2,968 meters. This part of the passage of the Cordilleras is not only always difficult but it is even impracticable during several months in winter, on account of the prevailing snowstorms.

"The elevated road is planned in connection with the Transandine Railroad, the building and exploitation of which had been stopped at Salto Del Soldado, situated about 25 kilometers from Juncal. It will soon run as far as Las Cuevas, on Chilean territory, the entrance of the tunnel to be bored under the summit of the Cordilleras, 3,900 meters in height, called La Cumbre.

"From Salto Del Soldado to Juncal the journey must be accomplished, at the present time, in carriages or on muleback, according to the season of the year, while on the Argentine soil the elevated

road will be placed immediately in contact with the Transandine road, under development in that country.

“The total length of the road will be 22,154 meters, 11,682 meters being on Chilean territory. It will be formed by two steel cables of 40 millimeters in diameter, which will serve as rails to support the trains, and of two steel traction cables, 16 millimeters in diameter, for the motive power.

“The cables will be supported by solid iron columns, 8 meters high, placed at an average distance of 110 meters. In no case will the columns be more than 25 meters high, with a maximum distance of 230 meters between the columns.

“The total cost of the line is estimated at £59,687 and the construction could be completed in such a manner as to utilize the elevated road in the work on the Transandine Railroad, which is again being seriously undertaken.

“In fact, following a contract concluded with the Chilean Government, a company has been formed in London under the name of La Compañía Limitada del Ferrocarril Transandino, with a view of completing and exploiting that part of the Transandine Road which is on Chilean territory.

“The nominal capital of this company, legally formed, is £500,000, of which £167,000 have been subscribed by the Morgan Company and £70,000 by the Grace Company, these two houses agreeing to subscribe the remainder of the capital if it is necessary. The contract of this company has been submitted to Congress for approval.”

CONSTRUCTION OF A MILITARY PORT AT TALCAHUANO.

According to the Belgian Mission at Santiago, the President of Chile has presented a bill to Congress with a view of obtaining a credit of 6,390,390 *pesos* to complete the military port of Talcahuano.

The Government took advantage of the presence in Chile of Mr. JACOB KRAUSS, a Holland engineer, who directed the building of the dry dock of Talcahuano, to have him make a study and plans of the above-mentioned port. The appropriation asked is intended for the execution of Mr. KRAUSS's project.

It is estimated that the work will take about five years. It will include a floating dock to be built between the continent, the Marinos breakwater, and the present widened dam, reenforced and inclosed on the south side by a wall of artificial logs.

The area of this floating dock will be 12½ hectares. It will be fully protected, and will have a depth of 9.50 meters, which is sufficient to allow all vessels of the present squadron to enter. The complementary work provided for includes installations for disarmament, apparatus for loading and unloading coal, workshops and storehouses for sailors, etc.

EXPORTS OF FINE COPPER IN 1901.

The exports of copper from Chile during the year 1901 are reported by Messrs JACKSON BROTHERS, of Valparaiso, to have been as follows, the totals being stated in quintals:

Forms of exports.	Total.	Contents, fine cop- per.
Copper ores.....		526,950
Copper regulus.....	136,489	62,245
Copper bars.....	486,868	90,630
Total.....		679,825

This total of 679,825 quintals of fine copper is equivalent to 30,834 long tons.

The total fine copper contained in ores, regulus, and bars exported in 1900 was 565,062 quintals (25,630 tons), showing an increase for 1901 of 114,763 quintals (5,205 tons), or 20.3 per cent.

PURCHASE OF A STEAMSHIP.

The Chilean Government recently purchased the steamship *Manitoba*, of the North American Steamship Company's fleet. If not required by the Government as a transport, the steamer will probably be run on the west coast in the service of the Compañía Sud Americana de Vapores. This company has recently extended its line to San Francisco, thus necessitating more steamers than before, and it has been difficult for them to give the service rendered obligatory by the agreement with the Chilean Government.

ABOLITION OF PORT DUTIES ON PROVISIONS FOR SHIPS.

According to the "Moniteur Officiel du Commerce" of January 23, 1902, the Chilean Government has abolished the import duty on provisions and eatables destined for use on ships. This applies to trading vessels, whether seagoing or engaged in the coasting trade, as well as to Chilean and foreign men-of-war.

INCREASED PURCHASES FROM THE UNITED STATES.

Mr. R. E. MANSFIELD, Consul of the United States at Valparaiso, states that Chilean commerce with the United States showed a material increase during the quarter which ended December 31, 1901. Large shipments of lumber were received at Valparaiso, important contracts were entered into for the delivery of coal, orders for paper were largely augmented, while the purchases of other merchandise from the United States were more numerous. The Consul states that the present outlook for trade between the two Republics is more favorable than at any time in recent years.

On February 10 a consignment of goods of United States manufacture was forwarded to Chile, including, among other items, 12 passenger cars and 8 locomotives. Preliminary arrangements have been made to equip the street-railway system of Valparaíso with electricity. At present the work is done by horsepower. It is possible that the necessary work may be done by United States contractors, though this point has not yet been fully determined.

EXPORT DUTIES ON NITRATE.

A dispatch from Valparaíso dated February 3, 1902, states that the export duties on nitrate, which had previously been paid at the rate of 35 per cent in gold and 65 per cent in bills (paper), were, from February 15 following, to be paid at the rate of 10 per cent gold and 90 per cent in currency.

MISCELLANEOUS NOTES.

The shipping statistics of the port of Iquique show that during 1901 the vessels arriving numbered 870, having a total capacity of 1,260,236 tons. During the same year 877 vessels, having capacities aggregating 1,256,953 tons, departed from this port. Of the arrivals 324 were Chilean vessels (tonnage 286,839), and of the departing vessels 328 were Chilean (287,241 tons).

According to the "Chilian Times" of January 22, 1902, the total receipts from customs in 1901 were \$8,630,934.20 less than in 1900. The grand aggregate for 1901 was \$69,560,333.48, while for 1900 the total was \$78,191,267.68. The dollar is equal to 36.65 cents in United States currency.

The Chilean Government has presented to the city of Valparaíso the pavilion recently used at the Pan-American Exposition at Buffalo. It will now be used as a commercial and industrial museum, and samples of the industrial products of the country will be permanently displayed therein.

The American Vitriified Conduit Company, of Akron, Ohio, has secured a contract in Chile which calls for 250,000 feet of vitriified conduit pipe. This is to be used both for telephone and electric-light purposes.

COSTA RICA.

ELECTION OF A NEW PRESIDENT.

On February 17, 1902, Señor Don ASCENCIÓN ESQUIVEL was elected President of the Republic. The new President will be inaugurated for a term of four years on May 8, 1902.

FOREIGN COMMERCE IN 1901.

Señor Don MANUEL ARAGON, Honorary Corresponding Member of the International Union of American Republics, has furnished the MONTHLY BULLETIN some interesting statistics concerning the foreign commerce of the Republic of Costa Rica in 1901.

The imports during that period amounted to \$4,410,422.45, while the exports rose to \$5,583,197.91, or an excess of exports over imports of \$1,172,775.46. The following table shows in detail the imports and exports of the Republic in 1901:

Articles.	Quantity.	Value.
IMPORTS.		
Merchandise:		
Amount of consular invoices		\$3,727,060.76
Value of imports by parcels post.....		106,839.37
Brought in with passengers' baggage.....		21,129.68
Imported through frontier custom-houses		1,790.61
Live stock.....		165,583.25
Gold coin and bullion		388,018.78
Total.....		4,410,422.45
EXPORTS.		
Coffee.....kilos	16,574,025	2,823,291.32
Bananas.....bunches	3,870,156	1,532,581.78
Cedar.....cubic feet	732,866	291,859.80
Mahogany.....do	33,642	10,092.60
Cocobolo.....kilos	354,200	3,187.80
Mora.....do	1,377,160	12,394.44
Hides.....do	305,220	91,566.00
Deerskins.....do	24,686	14,811.60
Alligator skins.....do	8,671	3,468.40
Crude rubber.....do	58,687	76,293.10
Cacao.....do	22,630	9,052.00
Grindstones.....do	74,941	3,484.76
Live stock.....		14,000.00
Gold coin and bullion.....		682,409.23
Silver coin and bullion.....		39,149.04
Reexportation of merchandise.....		17,558.69
Merchandise exported with baggage.....		258.70
Merchandise exported by post.....		10,837.97
Sundry articles.....		18,900.68
Total.....		5,583,197.91

Of the \$388,018.78 gold coin and bullion imported in 1901, the sum of \$313,000 was brought in by the United Fruit Company, \$74,581.35 by the Government to be coined into *colones*, and \$437.43 by individuals for use in the arts and industries. The exports of gold in 1901 are shown in the following table:

	Colones.
Coin.....	1,182,153.73
Bullion and gold dust.....	10,910.00
Gold bullion.....	274,483.00
Total.....	1,467,546.73

The above total, with exchange at 46½ cents, is equal to \$682,409.23.

The exports of silver consisted of silver coin and bullion valued at \$39,149.04. The exports of live stock amounted to \$179,583.25, and

consisted of 11,845 head of yearling cattle and 21 head of horses and mules.

The imports of merchandise in 1901, exclusive of live stock and gold bullion and coin, amounted to \$3,856,820.42. The following table shows the percentage and value of the imports by countries:

Countries.	Amount.	Per cent.
France.....	\$208,425.35	5.43
Germany.....	520,670.76	13.50
Great Britain.....	841,943.90	21.83
Italy.....	118,404.38	3.07
Spain.....	122,104.16	3.14
United States.....	1,803,834.91	46.77
Other countries.....	241,436.96	6.26
Total.....	3,856,820.42	100.00

The maritime commerce of the Republic in 1901 is shown in the following tables:

PUERTO DEL LIMÓN.

Class.	Flag.	Entered.	
		Number of vessels.	Tonnage.
Steamships.....	English.....	126	185,789
	United States.....	62	20,732
	Norwegian.....	43	25,223
	Swedish.....	23	14,344
	French.....	21	32,583
	German.....	63	88,569
	Italian.....	2	22,671

PUERTO DE PUNTARENAS.

Steamships.....	English.....	51	67,068
	United States.....	55	97,751
	Chilean.....	33	48,459
	German.....	8	17,943
Warships.....	Chilean.....	1	3,500
	Austrian.....	1	2,340
Sailing vessels.....	English.....	2	2,055
	Norwegian.....	9	8,741
	German.....	6	4,854
	Italian.....	1	1,399
	Danish.....	1	1,050
	Colombian.....	2	52
	Costa Rican.....	1	14
Total.....		171	255,126

The total entries during the year consisted of 586 vessels, of a capacity of 678,985 tons.

All of the vessels mentioned in the foregoing tables cleared during 1901, with the exception of 2 steamships and 8 sailing vessels, representing a total carrying capacity of 3,534 tons, said vessels remaining in port for the purpose of discharging and taking on cargoes. The total number of passengers that these vessels brought to the Republic during the year was 5,707. The out-going passengers during the same period numbered 3,623, the arrivals exceeding the departures by 2,084.

The actual tonnage of merchandise imported during the year, according to consular invoices, was 37,992 metric tons. Calculating a metric ton at 700 kilograms, both as regards weight and volume, it is seen that the approximate tonnage during the year was 54,000 tons. The following table shows the principal exports of the Republic in 1901 calculated in metric tons:

Coffee	18,563
Bananas (30 bunches to the ton)	129,005
Cedar	18,322
Mahogany	841
Cocobolo and mora	1,731
Hides	339
Crude rubber	59
Cacao	23
Grindstones	75
Sundry products (estimated)	1,000
Total	169,958

The crop of coffee in 1900-1901 was, with the exception of 1897-98, the greatest that the Republic has produced since 1883. The following table shows the exports of coffee during the four years referred to:

Year.	Number of sacks.	Weight.
		<i>Kilos.</i>
1897-98	356,009	19,614,795
1898-99	281,434	14,843,757
1899-1900	321,244	16,214,891
1900-1901	320,934	16,707,119

The quantity of coffee in parchment exported from the crops produced during the four years mentioned above was as follows:

Year.	Number of sacks.	Weight.	Percentage of crop.
		<i>Kilos.</i>	
1897-98	114,252	4,759,543	24.26
1898-99	136,124	5,967,396	40.20
1899-1900	196,622	8,499,589	52.40
1900-1901	208,552	11,471,162	68.70

The weights given in the foregoing table are the net weights of the coffee in parchment obtained by deducting 18 per cent tare from the gross weight, and are the weights upon which the exportation duties were calculated. The following table indicates the quantity of inferior grade coffee exported during the years mentioned:

Year.	Number of sacks.	Weight.	Percentage of crop.
		<i>Kilos.</i>	
1897-98.....	19,133	1,156,862	5.90
1898-99.....	16,754	1,017,843	6.85
1899-1900.....	17,307	1,041,756	6.42
1900-1901.....	18,667	1,183,132	7.08

The following table shows in detail the exports of coffee in 1899-1900 and 1900-1901:

Destination.	1899-1900.		1900-1901.	
	Number of sacks.	Weight.	Number of sacks.	Weight.
		<i>Kilos.</i>		<i>Kilos.</i>
London.....	202,367	9,562,334	223,888	11,088,164
New York.....	49,350	2,793,028	33,732	2,059,971
Hamburg.....	24,754	1,296,164	19,354	1,022,594
San Francisco.....	21,090	1,245,177	24,223	1,448,519
Bremen.....	10,264	519,981	8,739	438,054
Bordeaux.....	8,948	533,560	7,964	477,677
Havre.....	217	11,522	1,129	59,876
Paris.....	107	6,497	757	44,759
Panama.....	61	3,581	215	13,300
Barcelona.....	173	10,837	307	19,536
Trieste.....	366	21,857	203	10,439
Other ports.....	3,547	210,353	426	24,230
Total.....	321,244	16,214,891	320,934	16,707,119

The average price obtained in London by the sale of 119,710 sacks of coffee in 1900-1901 was 53s. 9d. per 112 pounds. This makes the average net price obtained in Costa Rica for each quintal (46 kilograms) \$8.67 gold, as compared with \$12.26 gold, obtained in 1899-1900. The average price of coffee in 1900-1901 was lower than that secured at any other time since the fall in this article began. The following table shows the average prices in London since 1897:

1897-98.....	s. d.
1898-99.....	58 8
1899-1900.....	60 0
1900-1901.....	70 8
	53 9

The unsatisfactory result of the sales of Costa Rican coffee in London during 1900-1901, notwithstanding the increased quantity marketed, is due to some extent to the smallness of the grain, causing thereby a lower classification than that usually obtained. To remedy this defect in future the manuring of the coffee plantations is recommended so that the coffee berry will, by this means, be fully developed.

The following table shows the rates of exchange on London in 1901 for ninety-day drafts:

	Average each month.		
	1-10.	10-20.	20-30.
January	108	109	110
February	111 $\frac{1}{2}$	112	112
March	114	114 $\frac{1}{2}$	114 $\frac{1}{2}$
April ^a	116 $\frac{1}{2}$	116 $\frac{1}{2}$	117
May ^a	118	118	118
June ^a	118	118	118
July	112	110	113 $\frac{1}{2}$
August ^a	112	112	114
September	114	114	115
October	113	114	114
November	112 $\frac{1}{2}$	114	114

^aGold was exported.

Under date of February 18, 1902, the Government of Costa Rica fixed the rate in *colones* at which the moneys of the United States, England, France, and Germany would be received in Costa Rica. These rates are as follows:

One American dollar =	2. 15 <i>colones</i> .
One pound sterling =	10. 45 <i>colones</i> .
One franc =	0. 4125 <i>colones</i> .
One mark =	0. 51 <i>colones</i> .

IMPROVEMENT OF THE EL PORVENIR GOLD MINES.

The Rio Grande Gold Mining Company, the new owners of the mine known as "El Porvenir," have contracted with competent engineers for the development of the property at once. The improvements are to consist of a 1,000-foot main tunnel at a low level, with various upraises, crosscuts, and drifts. Power drills will be installed ready for operation on May 1, 1902.

CUBA.

ELECTION OF PRESIDENT PALMA.

On February 24, 1902, at Havana, Dr. THOMAS ESTRADA PALMA and Señor DON ESTIVIZ were formally chosen by the electoral college as President and Vice-President of the Cuban Republic. Provincial Senators were also elected.

CUSTOMS REVENUES IN 1901.

The Division of Insular Affairs of the War Department of the United States has issued a statement showing the customs revenues of Cuba for the calendar year 1901 to have been \$15,626,388.80, as compared with \$16,099,922.52 and \$14,894,374.43 for 1900 and 1899, respectively.

On April 1, 1901, the duties on exports from Cuba were abolished, but for the first three months of the year they aggregated \$267,440.42.

During the entire twelve months of 1900 the collections from exports amounted to \$1,066,005.53, and in 1899 to \$764,106.37. From this it appears that the customs revenues, exclusive of export duties, increased in 1901 over the previous year by \$325,031.39, or by 2 per cent, and over the second preceding year by \$1,228,680.32, or by 9 per cent.

COMMERCE DURING THE FIRST NINE MONTHS OF 1901.

A comparative statement concerning the commerce of the island of Cuba for the nine months ending September 30, during the years 1901, 1900, and 1899, has been issued by the Insular Division of the War Department of the United States from which the following statistics are obtained:

The total value of merchandise imported during the nine months ending with September 30, 1901, was \$48,616,814 as against \$49,701,998 for the same period of 1900, and \$46,833,122 for the same period of 1899. The total value of merchandise exported was \$52,861,672 as against \$37,911,367 for the same period of 1900, and \$37,435,298 for the same period of 1899. The imports show a decrease for the period of 1901 of 2.2 per cent as compared with 1900, and an increase of 3.8 per cent as compared with 1899. The exports show an increase of 39.4 per cent as compared with 1900, and 41.2 per cent as compared with 1899.

Gold and silver were imported during the nine months periods compared to the value of \$1,165,275 in 1901; \$3,406,704 in 1900, and \$7,803,625 in 1899. The gold and silver exported during the nine months of 1901 had a total value of \$1,884,902, as compared with \$2,176,664 and \$3,610,434, the exports in the first nine months of 1900 and 1899, respectively.

The value of imports of merchandise from the several countries during the nine months ended September 30, 1901, was as follows: United States, \$20,489,451; other North American countries, \$2,292,795; Great Britain, \$6,910,853; Germany, \$2,416,633; France, \$2,096,561; Spain, \$7,033,915; other European countries, \$1,080,527; Asia, \$237,947; Africa, \$9; Central America, \$94,073; South America, \$5,009,366; Porto Rico, \$854,211; other countries, \$100,473.

The value of exports of merchandise to the several countries here named during the nine months ended September 30, 1901, was as follows: United States, \$41,773,251; other North American countries, \$367,178; Great Britain, \$4,262,339; Germany, \$3,127,992; France, \$1,174,620; Spain, \$283,033; other European countries, \$765,986; Asia, \$8,350; Africa, \$168,936; Central America, \$14,594; South America, \$639,293; Porto Rico, \$6,294; other countries, \$269,806.

PATENT GRANTED.

MAX GOLDBERG, of Santa Clara, Cuba, has been granted a patent (No. 694738) in the United States for an "ant trap for furniture."

GUATEMALA.

THE RAILROADS OF THE REPUBLIC.

At the present time there are 342 miles of railroad in operation in the Republic of Guatemala.

In a report to the Pan-American Railway Committee, Señor Don FRANCISCO ORLA gave a full description of the various roads of the Republic, from which the following information is obtained:

THE CENTRAL RAILROAD.

The Central Railroad, the first railroad line constructed (completed in 1882) placed the port of San José in communication with Guatemala City, the capital of the Republic, which is situated at an altitude of 4,887 feet above sea level. This line is $74\frac{1}{2}$ miles long and is notable among other things for the grades along the route. These steep grades at times permit the traveler to see four parallel stretches of track, one above the other, so great is the decline between the terminal points. This is the most important railroad of the Republic, because of its immense passenger and freight traffic, the greater part of the foreign commerce, imports and exports, passing over it.

THE CHAMPERICO RAILROAD.

The Champerico Railroad was the second line to be constructed in Guatemala. It begins at Champerico, a Pacific port, and originally terminated at Retalhulen, but was prolonged to San Felipe in 1893. It is 41 miles long.

THE OCOS RAILROAD.

The Ocos Railroad begins at the wharf in Ocos, on the Pacific, and terminates in the town of Ayutla, Department of San Marcos, near the Mexican frontier. It is 15 miles in length.

THE IXTAPA RAILROAD.

The Ixtapa Railroad starts at the old port of Ixtapa on the Pacific Ocean and terminates at Overo, on the Central Railroad. The distance is 12 miles. As soon as the harbor works, now in progress, are completed, it is believed that Ixtapa will become Guatemala's most important port on the Pacific side.

PATULUL-MAZATENANGO RAILROAD.

The Patulul-Mazatenango Railroad is almost parallel to the Pacific coast. Starting at Santa Maria station, on the Central Railroad, the line passes through the city of Patulul and the village of Mazatenango and will terminate in the city of San Felipe. A small central section remains to be finished (which will be soon) to complete the line.

NORTHERN RAILROAD.

The Atlantic railroad system was begun by the construction of the Northern Railroad, a line which, leaving Puerto Barrios, will terminate in Guatemala City, uniting there with the Central Railroad. In March, 1902, there will be completed and in operation 159 miles of road from Puerto Barrios (at the head of the Gulf of Amatique) to Sanarte. This is within 35 or 40 miles of the capital, that much of the road being unfinished.

VERA-PAZ RAILROAD.

Of the Vera-Paz Railroad, the contract for which was approved in January, 1894, 24 miles, between Panzos and Panajach, are in operation. The line is designed to connect the river port of Panzos with the city of Tiecuro.

PROJECTED RAILROADS.

The construction of a number of other lines is projected, the routes for some of them having been surveyed. They are as follows:

From Quetzaltenango to Retalhulen, 42 miles; from Quetzaltenango to the city of San Marcos, 32 miles; from Escuintla to Barberena, 29 miles; from Guatemala to Antigua, 27 miles; from Panajach to Coban, 50 miles; from Zacapa to the frontier of Salvador, in the direction of Santa Ana, 86 miles; from Santa Maria, on the Central Railroad, to Hachadura, on the frontier of Salvador, 60 miles.

IMPORT DUTIES.

According to a report of the "International Customs Journal," the President of the Republic of Guatemala, by a decree, dated December 18, 1901, published in the official journal of the 24th of the same month, has decided that merchandise imported into this country from the 1st of January, 1902, will be exempt from the additional surtax of 15 per cent established by a decree of December 20, 1893.

MINERALS FOUND IN THE REPUBLIC.

Within the limits of the Department of Huehuentenango, Guatemala, there are a number of unworked gold, silver, iron, lead, and salt deposits. Lead is being mined at Toljon, and salt at San Mateo. Several seams are to be found in the Department of Izabal, which are said to contain a rich bituminous coal, of 50 per cent volatile matter. These seams start from San Felipe de Golfo, near the Izabal Lagoon (situated in the eastern part of the Republic and connected with the Gulf of Honduras by the Dulce River), and then pass beneath the gulf to the foot of the extinct volcano, called San Gil, near Santo Tomas.

REVIEW OF THE COMMERCE OF 1900.

The "Monthly Review" published by Señor RICARDO FRAUNZ, of the City of Guatemala, contained in one of its recent issues some interesting statistics concerning the commerce of that Republic in 1900. According to the publication in question the imports of the Republic of Guatemala in 1900 amounted to \$3,127,102.06 gold, which sum produced a total revenue to the Government in the way of customs duties of \$1,296,139.84. The exports from Guatemala for the same period amounted to \$7,393,203.84 gold, and consisted of coffee, sugar, hides, and cabinet woods. During the year referred to the exports of coffee rose to 72,982,637 pounds, valued at \$6,485,936.34 gold. The same authority states that the price of cacao fluctuated in 1900 from \$160 to \$170 (national currency) per 100 pounds, according to the quality of the article. Tobacco during this period varied in price from \$60 to \$75 per 100 pounds, and corn sold on the coast at \$2 per bushel.

HAITI.**EXTRACT FROM THE BUDGET LAW.**

The budget law for the year 1902 was enacted on October 16 and promulgated October 29, 1901, and contains the following provisions:

"ARTICLE 1. Taxes for the financial year 1901-2 shall be collected in accordance with existing laws.

"Whenever circumstances so require, foreign goods proceeding from particular country or countries may, however, be subject to the maximum tariff, rates of which shall be thrice the amounts charged under the one at present in force.

"On that account the other duties classed under the head of importation, to wit, tonnage dues, shall in regard to such goods as aforesaid be increased in like proportion.

"Any provisions to be made in the matter shall be the subject of a decree issued by the President of Haiti, to be repealed as soon as the reasons for its enactment have ceased."

"ART. 3. All customs duties generally whatsoever, levied under the head of exportation, with the exception of port and pilotage dues, shall be paid in American gold."

SURTAX ON IMPORTS.

The "Moniteur Officiel du Commerce" of January 30, 1902, reports that the law promulgated the 20th of September, 1901, enforcing the payment in American gold of the surtax of 25 per cent on imports has not been maintained in practice and, at the beginning of January, 1902, the Haitian customs-house only demanded the payment in gold of half the surtax of 25 per cent, the balance remaining payable in paper.

HONDURAS.

COMMERCE DURING THE FISCAL YEAR 1900-1901.

“La Gaceta,” the official newspaper of Honduras, in its issue for the 27th of January, 1902, publishes some interesting official statistics regarding the commerce of that Republic during the fiscal year 1900-1901. The total importations of Honduras during the period mentioned amounted to \$4,168,599.51, while the exportations rose to \$6,183,023.37. About 70 per cent of the exports were shipped to the United States, the remainder going to Germany, Central America, and other countries. The following table shows the number of bundles, weight, and value of the imports during the fiscal year 1900-1901, through the different ports of the Republic:

Ports.	Packages.	Weight.	Value.
		<i>Kilos.</i>	
Amapala	68,516	4,397,608	\$1,857,002.05
La Ceiba	42,455	1,343,601	454,563.69
Puerto Cortés.....	85,581	4,716,213	1,521,168.81
Roatán	8,223	252,519	71,721.49
Trujillo	20,853	756,870	264,143.47
Total	225,628	11,466,811	4,168,599.51

Analyzing the \$4,168,599.51 worth of imports shown in the foregoing table, it is seen that merchandise to the amount of \$3,344,574.90 was subject to the payment of customs duties, while goods to the value of \$824,024.61 were imported free of duty. Of the articles that were admitted without the payment of duties, merchandise valued at \$632,920.76 was for account of concessions now in force, \$88,195.35 worth of goods were for the use of the Government, and articles to the value of \$102,908.50 were brought in under the provisions of reciprocity treaties. The imports by countries were as follows:

Countries.	Packages.	Weight.	Value.
		<i>Kilos.</i>	
United States.....	174,682	8,573,906	\$2,792,822.40
Germany	11,399	594,282	486,273.68
England.....	9,391	456,882	471,690.83
British Honduras.....	11,271	285,782	152,800.02
Central America.....	10,383	517,135	107,412.15
Other Latin-American countries	231	712,977	1,673.12
France	1,632	99,653	101,855.94
Spain	6,014	190,326	33,513.17
Other European countries.....	611	34,231	18,301.26
Africa and Asia.....	14	1,637	2,256.94
Total	225,628	11,466,811	4,168,599.51

The following table shows the principal exports for the period mentioned in the order of their importance:

Ores	\$2, 279, 115. 50	Rubber	\$82, 958. 40
Fruits	1, 945, 388. 43	Sarsaparilla	88, 503. 54
Stock	557, 316. 00	Sundry products (hats,	
Coffee	275, 193. 95	wheat, manufactured	
Woods	274, 255. 00	articles, salt, etc.)	177, 153. 90
Tobacco	213, 423. 75		
Hides and skins	182, 349. 70	Total	6, 183, 023. 37
Indigo	107, 365. 20		

NEW YORK AND HONDURAS ROSARIO MINING COMPANY.

The report of the directors of the New York and Honduras Rosario Mining Company for the year ending November 30, 1901, says that the dividends paid have amounted to \$300,000, being 20 per cent on the capital stock. To and including the past year the total dividends of this company have amounted to \$1,695,000. The high-grade milling ore in sight at the mine is estimated at 33,500 tons, with excellent prospects for future increase. In the underground workings 8,500 feet were driven as against 7,204 feet in 1900.

The property of this company is represented by \$1,500,000 stock. The receipts during the year were from the following sources: Bullion, \$780,760; interest, etc., \$6,110; total, \$786,870. The expenses were: General supplies, \$159,555; expenses in Honduras, \$354,939; freight and insurance, \$18,468; general expenses, \$18,142; total, \$551,142; profit balance, \$235,766.

MEXICO.

THE SUGAR INDUSTRY.

The third annual edition of "The Mexican Sugar Report" (1901-2), published by "El Hacendado Mexicano," City of Mexico, was issued in January, 1902. For this Report an effort was made to obtain the exact quantity of sugar produced by each Mexican planter. The publication also contains an official list of sugar-cane growers and sugar manufacturers in Mexico, Central America, Cuba, and Porto Rico, together with their post-office addresses and other pertinent information.

As regards the Republic of Mexico, the statistics given show that the increase in the production of sugar in 1900-1901, as compared with the year preceding, was considerable, while a further gain for the present year (1901-2) is predicted, as six new factories have already been projected. The total amount of sugar produced in Mexico by those factories and *haciendas* reporting to El Hacendado Mexicano in 1900-1901 was 77,361,712 kilograms, to which are added 17,633,288

kilograms, the approximate total of the sugar produced in the various States which are not reported, making a grand total of 95,000,000 kilograms, or 95,000 metric tons. The total quantity of molasses is estimated at 50,000 tons.

The following table gives the statistics of sugar production by commonwealths, as reported during the crop season of 1901-2:

State.	Number of prop- erties.	Number of grow- ers and manufac- turers.	Quantity.
			<i>Kilos.</i>
Campeche	35	29	201, 200
Chiapas	216	214	659, 764
Colima	4	4	1, 239, 700
Guerrero	48	44	578, 990
Jalisco	233	230	5, 037, 397
Mexico	15	14	200, 000
Michoacan	31	27	970, 000
Morelos	29	29	28, 781, 463
Nuevo Leon	21	21	818, 000
Oaxaca	134	132	2, 029, 659
Puebia	19	19	10, 535, 338
Queretaro	1	1	30, 000
San Luis Potosi	36	31	786, 800
Sinaloa	6	6	6, 260, 000
Tabasco	47	47	867, 485
Tamaulipas	135	135	651, 916
Territory of Tepic	2	1	2, 750, 000
Veraacruz	161	153	11, 010, 000
Yucatan	18	17	4, 951, 000
Total	1, 191	1, 154	77, 361, 712

MANUFACTORIES IN THE CITY OF MEXICO.

The following list of the manufactories in the City of Mexico was compiled from the list of the Department of Contributions, the local directories, and other sources, by ANDREW D. BARLOW, Consul-General of the United States.

Description.	Num- ber.	Description.	Num- ber.
Distilleries and manufactories of liquors having a base of alcohol	14	Manufactories of porcelain ware, china ware, glassware, and fine pottery	2
Manufactories of wines and liquors	13	Manufactories of artificial stone, brick, tile, lime, etc	34
Breweries	3	Manufactory of clay tubing	1
Vinegar manufactories	2	Rope, wire, and cord factories	2
Bottlers of mineral and carbonated waters	3	Manufactories of paint, varnish, and axle grease	3
Cigarette factories	5	Manufactories of acids, chemical products, white lead, and other pigments	15
Cigar factories	51	Manufactories of machinery bands	4
Hat factories	22	Manufactories of trunks, valises, canvas coats, beds, and springs	3
Manufactories of dry goods, cotton, wool, and linen textiles and prints	18	Pasteboard factories	4
Manufactories of beds and furniture of iron and other metals	12	Wood and paper box factories	12
Manufactories of wood furniture	9	Manufactories of cartridges, ammunition, and munitions of war	3
Mattress and pillow factories	1	Manufactory of soda and saltpeter	1
Manufactory of curtains and awnings	6	Phosphorus and match factories	12
Manufactories of harness and supplies for horses and carriages	15	Shirt factories	11
Iron foundries	3	Manufactories of saddlebows, shoe lasts, and other wooden forms	6
Type foundries	11	Starch factories	4
Manufactories of agricultural and other implements	7	Glue factories	10
Manufactories of sewing machines and articles for domestic use	7	Ice factories	10
Manufactories of plate glass and glass-ware	7	Oil mills	6
		Coffee mills	12

Description.	Num-ber.	Description.	Num-ber.
Corn mills.....	26	Manufactories of fine paraffin candles...	4
Flour mills.....	4	Manufactories of common candles.....	57
Paper mills.....	4	Manufactories of wax, wax candles, and	
Shoe factories.....	7	wax products.....	21
Lead-pipe factory.....	1	Perfume factories.....	4
Cement factories.....	2	Manufactories of artificial flowers.....	4
Flag factory.....	1	Veil factories.....	4
Manufactories of pyrotechnics.....	2	Manufactories of trimmings.....	8
Candy factories.....	7	Playing-card manufactories.....	2
Cracker factories.....	3	Manufactories of blank books, account	
Soap factories.....	15	books, letter books, paper sacks, etc....	11
Manufactories of underclothing and fur-		Manufactories of scientific and ortho-	
nishings.....	17	pedic instruments.....	3

Manufactories of cereal foods, macaroni,		Manufactories of other musical instru-	
vermicelli, etc.....	11	ments.....	13
Petroleum refinery.....	1		
Chocolate factories.....	9	Total.....	618

CATTLE RAISING.

The raising and fattening of cattle, according to information furnished by the Belgian Legation at Mexico, is at present, in the regions sufficiently irrigated, the most productive of the Mexican enterprises, though the cultivation of sugar cane gives the best results in the warm lands. The landowner who buys cattle to fatten for the market gains, in general, 75 per cent on the capital invested. The expenses are comparatively insignificant in a well-organized *hacienda*. The highest wages paid to a *vaquero*, or cowboy, do not exceed 1 *peso* silver per day; the food and lodging are sometimes included in the contract, but when the food is not included 2 *reals* are counted per day. A good *vaquero* can guard 100 head of cattle.

In the north of the great Mexican plateau, where the largest enterprises of this kind are to be found, certain proprietors each own more than 100,000 head of cattle.

When the animals are ready for market they are generally shipped by special trains to the United States, and especially to Chicago. It is consequently necessary for a *ranchero*, or cattle raiser, owning so many herds to possess a large surplus capital, and to have agents in the principal cities of the United States.

This industry, so simple and primitive, is the one which most of the speculators undertake, after having attempted the complicated cultures without any appreciable success. The price of grazing lands is very low, and at the end of the first year a high rate of interest on the capital invested is realized. The condition of the soil should be carefully studied by the prospective buyer.

This industry, however, presents several disadvantages, such as epidemics, which sometimes destroy a large number of the cattle; and droughts, which are the plague of the great Mexican plateau. The inspection of the irrigation system should not be made during the season of the tropical rains; it is in winter, in the month of March,

and especially April, that an idea of the value of the pasturage lands of Mexico can be gained.

So far the Spaniards have succeeded best in this branch of industry, the knowledge of the Spanish language being indispensable in directing these exploitations.

ECONOMIC SITUATION OF THE STATES OF JALISCO AND COLIMA.

The "Bulletin Commercial," of Brussels, publishes in its issue of February 1, 1902, the following details relative to the economic situation of the States of Jalisco and Colima and their probable future:

"The construction of the Mexican Central Railway (already completed to Tuxpan), which is to connect Tampico to Manzanillo, on the Pacific, will soon considerably shorten the distance separating the States of Jalisco and Colima from the rest of Mexico, the United States, and Canada.

"This distance will be reduced to 700 kilometers when the direct line from Aguascalientes to Guadalajara is completed, while the shortest transcontinental line exceeds 2,900 kilometers.

"From Guadalajara to Manzanillo the country traversed by the new railroad is very much favored by nature. The State of Jalisco, with its 86,752 square kilometers of plains, valleys, and mountains, leads the Mexican States as a grain producer. All along the line are to be found beautiful *haciendas* and numerous ranches of easy access, producing in abundance grain, sugar, cattle, and alcohol (*tequila*). These lands yield an income of from 7 to 10 per cent.

"Among the principal products of the country can be mentioned henequen, different varieties of maguery, cotton, rubber, copal, chicle, oranges, lemons, bananas, pears, peaches, coffee, cacao, vanilla, and tobacco.

"There are also forests of pine, cedar, mahogany, and ironwood, while on the Tehuantepec line almost all the wood of this kind has already disappeared and one must go to the Guatemalan frontier, where varieties of wood which have not yet been introduced to commerce are to be found, to establish new exploitations.

"There are at the present time in the State of Jalisco 5 cotton factories, which, in 1899, produced 248,180 pieces of cotton and other tissues. The latest statistics show that there are 349 mining concessions granted by the Government, covering 4,775 acres, and including 32 mines producing gold alone, 68 producing gold and silver, 178 producing silver alone, 9 producing silver and copper, 2 producing silver and tin, 2 producing mercury, 20 producing gold and copper, 5 producing gold, silver, and copper, 1 producing copper and tin, 15 producing copper alone, and 16 producing iron.

"The State of Jalisco also owns tobacco factories which yearly

furnish about 13,924,991 packages of cigarettes, 2,398,723 cigars, and a number of packages of cut tobacco, representing a total of 153,908 kilograms of native tobacco. The alcohol distilleries number 96; they manufacture yearly 3,194,209 liters of spirits, extracted from maguey and also from sugar cane. There are 2 breweries, producing 1,185,400 liters of beer. The yearly consumption of meat in this State amounts to 10,502,000 kilograms; 132,292 head of cattle of all kinds, representing a value of 3,015,381 *pesos*, are yearly slaughtered.

“The declared value of the rural properties is 31,765,295 *pesos*, and of the town properties 20,886,074 *pesos*, or a total value of 52,653,469 *pesos* of landed properties from which taxes are collected. Lands exempt from the operation of the tax laws are not included in this estimate. These include railway, church, and State and municipal properties. The exact value of the property of this State is, therefore, nearly double the figures given.

“In 1899 the State revenues were 1,291,924 *pesos*; since then they have somewhat increased, although the receipts and expenditures are almost equivalent.

“The city of Guadalajara is endowed with a special financial establishment, the Bank of Jalisco, founded by the authorization of the Federal Government, with a capital of 1,500,000 *pesos*. This institution is well directed; its business is prosperous. The shares are quoted at above par, and very few are for sale. The National Bank of Mexico and The London and Mexican Bank have branch houses at Guadalajara.

“Cattle raising is developing every year in this country. Many *haciendas* and ranches are engaged exclusively in this branch of industry. Many choice breeds of cattle are imported from the United States to improve the native stock, and the State of Jalisco can now furnish excellent material for the slaughterhouse and superior milch cows for the dairy farms.

“The City of Mexico and many other important cities of the country are in great part supplied with beef and milk by the State of Jalisco. The country offers excellent investments to promoters desiring to establish agricultural establishments of this kind, owing to the railroad facilities.

“A few kilometers from Tuxpan, to which point the new railway line is built, the Mexican Central Railway enters the small and fertile State of Colima. It only contains, in fact, 5,887 square kilometers and 65,026 inhabitants. Agriculture is the principal resource of this country. The climate is warmer than that of the State of Jalisco, but the fertility of the soil is the same. The State contains 3 cotton factories which in 1899 manufactured 22,051 pieces of calicoes and other tissues of from 25 to 30 yards each; 9 tobacco factories, which in the same year produced 5,174,300 packages of cigarettes and 563,050 cigars;

6 distilleries which in the same year manufactured 87,522 liters of spirits extracted from maguey and sugar cane.

"The State of Colima, as well as that of Jalisco, offers lands suitable for cattle raising, and many farmers are devoting themselves to this industry.

"In anticipation of the extension of the Mexican Central line to the Pacific coast, the port of Manzanillo has been enlarged and improved under the direction of Engineer EDGAR SMOOT, who has a contract with the Federal Government. This enterprise is not yet completely finished, but the work is being rapidly pushed. The port of Manzanillo will offer to vessels a basin of about 70 hectares, which can shelter a hundred vessels and will be easily accessible.

AGRICULTURAL EXPLOITATIONS.

The following figures taken from the latest official statistics relating to the agricultural establishments of Mexico were forwarded by the Belgian Legation, at Mexico City, to the Brussels "Bulletin Commercial" of January 25, 1902:

"The States of the Republic contain 8,101 *haciendas*, of which 3,400 are devoted to the raising of cereals and 1,560 to cattle raising. They are scattered over the entire country. Stock raising constitutes the principal source of profit of the northern haciendas, while those of the great central plateau are engaged in the cultivation of cereals.

"The cotton plantations includes 108 *haciendas*, 70 of which are in the State of Coahuila, 23 in that of Veracruz, and 15 in Guerrero.

"The *haciendas* cultivating cacao number 124 in Tabasco and 115 in the State of Chiapas. There are 98 coffee plantations in the State of Veracruz, 42 in the State of Oaxaca, and 181 in the State of Chiapas.

"In Yucatan there are 348 plantations of henequen, while in the State of Campêche there are 38.

"The tobacco plantations are divided among the following States: Veracruz, 45; Tabasco, 12; Oaxaca, 28, and Sonora, 13.

"The greatest pulque-producing State is Hidalgo, where there are 102 maguey plantations; there are 32 in the State of Puebla, 17 in the State of Mexico, and 7 in the Federal District.

"In the State of Jalisco there are 45 agave plantations (producing mezcal). The principal plantations are found in the district of Tequila which gives its name to the best brand of this liquor, which resembles both Scotch whisky and Holland gin.

"The sugar-cane plantations are found scattered over all the region of the warm lands: 224 in the State of Chiapas, 226 in Nuevo Leon, 106 in Veracruz, 94 in Yucatan, 82 in Michoacan, 75 in Oaxaca, 72 in Guerrero, 67 in Puebla, 53 in Jalisco, and 67 in Morelos. The sugar-cane plantations cover, in fact, almost the entire extent of this latter State."

NEWLY INVENTED DECORTICATING MACHINE.

Some months since the "Boletín de la Sociedad Agrícola Mexicano" (Bulletin of the Agricultural Society of Mexico), published in the City of Mexico, issued an account of the successful operations of various public trials of a new machine for decorticating native fibrous plants, such as the maguey, henequen, and other species of the agave family. A more recent number of the Boletín states that this machine, which is the invention of Señor MANUEL PIETRO, has passed the experimental stage and is being manufactured regularly in the Mexican capital and finding ready sale in various sections of the Republic. The report states that this machine is performing more satisfactorily than any other of its class the work for which it is destined, greater economy being one of the features of its operation. Furthermore, it renders available for marketable purposes certain fibers which, on account of difficult decortication, have hitherto been used locally and to a limited extent. As a consequence of the work of this machine, a great expansion in the fiber industries of the Republic is predicted.

SHOE FACTORY AT TORREON.

A shoe factory costing \$300,000 for buildings and equipments has been completed at Torreon, and arrangements are being made to open up all the departments, including a well-equipped tannery. A dozen skilled shoemakers from one of the large factories in Massachusetts have been engaged and are now employed in teaching native workmen how to operate the machines for making foot wear of United States types.

MINING NOTES FROM MONTEREY.

Iron ore from the Solonduna district, Mexico, where the supplies for the Monterey steel plant are to be secured, is to be shipped to the Maryland Steel Works, at Sparrows Point, Maryland. Arrangements, according to Mexican advices, are now being made and shipments will commence soon. The construction of the Monterey plant is now reported to have reached a point where it can be stated with certainty that the works will be able to turn out steel rails by September, 1902. The company has decided to bid for the orders of the three principal railroads of Mexico by manufacturing rails corresponding in weight to their various standards. The Mexican Central standard is said to be 81 pounds; that of the Mexican International, 75, and of the Mexican National, 70.

Recent advices state that the Mexican Mining and Smelting Company, recently organized, with a capital of \$10,000,000 (gold), is making active preparations for the construction of a smelter plant in the city of Monterey. The company, it is said, also proposes to develop mines throughout the State of Nuevo Leon and other parts of Mexico.

JAPANESE IMMIGRATION IN THE STATE OF COAHUILA.

Japanese immigration is rapidly increasing in the State of Coahuila. In one week 80 Japanese families arrived at Barroterán to work in the coal mines near that city.

It is reported from San Francisco that 300 Japanese families have sailed for Mexican ports on the Pacific to engage in agricultural pursuits.

ITALIAN CAPITAL IN NUEVO LEON.

According to investigations made through the Italian Legation at Mexico City and with the cooperation of the Italian Chamber of Commerce of this capital it appears that a sum of more than \$20,000,000 (silver), furnished by Italian capitalists and manufacturers, is invested in Mexico in the single State of Nuevo Leon.

This capital is especially invested in industrial enterprises, import, export, and commission houses, banks, spinning mills, agricultural colonies, etc.

DEMANDS FOR MARBLE AND ONYX.

The demands for Mexican marble and onyx are becoming numerous in the United States as well as in Europe. The rich quarries recently discovered near Oaxaca and Tehuacan are far from being able to fill the orders which are received daily. The exploitation of the marble and onyx quarries of Mexico is doubtless destined to become a new source of wealth for the fortunate owners.

THE RUBBER INDUSTRY.

The Mexican Herald of February 9, 1902, contains the following item:

“Orders for *caoutchouc* (rubber) aggregating over \$70,000 silver have been lately received and will be supplied by the rubber plantations of the States of Veracruz and Oaxaca. The first crop of rubber will be harvested in the spring, on the isthmus of Tehuantepec, from the plantations stocked five years ago. A great many new rubber plantations will be stocked in the States of Oaxaca and Veracruz, and the first rubber factory in the Republic is to be built soon at Coatzacoalcos, the necessary capital having been subscribed by the proprietors of the rubber plantations of the isthmus.”

MISCELLANEOUS NOTES.

In January the Department of Fomento received from Sumatra a consignment of grapevine cuttings and tobacco seed and from Japan some tea plants, which will be distributed to agriculturists who have lands suitable for their cultivation. Chinese tea plants had previously been planted in the district of Comitan, and the results have induced

other planters to entertain the idea of tea culture on a large scale. Lands which produce coffee have been found also to be suitable for the production of tea.

The "Mexican Herald" states that the commission on vegetable parasites, before the agricultural department of Mexico, has received from the Institute of Bacteriology in Grahamstown, Cape Colony, Africa, a number of tubes containing fungi for the destruction of locusts, which so frequently devastate the fields of the Republic. The commission will distribute these tubes to applicants, together with instructions as to the use of their contents.

Several of the important mine owners of the State of Chihuahua recently met to discuss the advisability of establishing a railroad to cross the southern part of the district of Santa Eulalia, in the State of Chihuahua. This project was adopted and the building of the road will be undertaken at once. This road will pass through the mining regions of Santa Eulalia, Santo Domingo, Galeana, Bustillos, and San Juan.

The number of freight cars which crossed the Rio Grande into Mexican territory from the United States at the various railway depots during the twelve months ending June 30, 1901, was 38,629, carrying 535,640 tons of merchandise. The number which crossed from the opposite direction during the same period was 20,368, conveying 223,720 tons of freight.

A plant for the manufacture of gas engines is to be established by a firm from the United States at Monterey. The capital to be invested is given at \$250,000 Mexican (about \$113,000). The United States Consul at Monterey reports that the use of gas engines is becoming very popular in Mexico.

The "Mexican Herald" reports that an extensive deposit of marble of various colors has been discovered near Tezutlan, in the State of Puebla. This place is the present terminus of the San Marcos and Tecolutla Railway.

FREDERICK W. DUFWA, of the City of Mexico, has been granted a patent (No. 694,356) in the United States for a "blade for propellers for airships."

NICARAGUA.

BELGIAN REPORT ON THE RESOURCES OF THE REPUBLIC.

The "Recueil Consulaire Belge" contains an interesting and detailed report on the Republic of Nicaragua, prepared by the Belgian Chargé d'Affaires in Central America, from which the following facts relating to the commerce, resources, and industry of the Republic are obtained:

"The imports of Nicaragua, briefly indicated, are principally all

kinds of tissues, and especially cotton goods, firearms, dried, salted, and canned provisions, glassware, window glass, candles, matches, iron and steel in various forms, nails, machetes, crockery and china ware, all kinds of paper, mercery, hardware, all kinds of furniture, paints, musical instruments, agricultural implements and tools for workshops and domestic use, tanned hides, lamps, wines and liquors, art objects, etc.

“The exports consist of coffee, rubber, bananas, coined silver, coined gold and gold in bars, gold ore and gold amalgam, hides, sugar, buckskin, fine woods and mahogany, and, among the less important articles, cacao, tortoise shells, maize, salt, sole leather, cheeses from the Department of Chontales, etc.

“Coffee is shipped principally to Germany, France, England, and the United States. Rubber finds its most important market in the United States, but England, France, and Germany also receive quantities of importance. Bananas are bought exclusively by the United States. Gold is shipped principally to the United States and England. The fine woods are sent principally to the United States, England, and, on a smaller scale, to Germany.

“The vegetable wealth of Nicaragua, like that of the other Central American Republics is abundantly distributed in the lands bathed by the two oceans, in the valleys, on the slopes, and a great number of plateaus along the lakes and rivers. The country produces, in addition to the products named as exports, pita, henequen, building and cabinet woods, medicinal plants, various rosins, etc., maize, rice, beans, yucca, and other alimentary plants, as well as tropical fruits, including oranges, lemons, pineapples, and others.

“At the present time the domainial lands suitable to agriculture are sold at the rate of 3 *pesos* the *manzana*.

“According to Mr. F. BELY in his work entitled ‘Across Nicaragua,’ this Republic is the promised land *par excellence* for all natural products of the tropical zone. The results obtained from the most rudimentary culture are nothing short of marvelous. While in Algeria it takes eighteen months for cotton to arrive at maturity, in Nicaragua it is planted in October and picked in February on all the western lands. In this country, as in all parts of Central America, sugar cane produces at least two annual crops and sometimes three, while the life of the plant is from fifteen to twenty years. Four crops of maize can be gathered in a year in the virgin lands, such as those of the eastern slope. Rice planted in the same zone produces abundantly, while indigo can be cut three times before replanting is necessary.

“The coffee tree is found everywhere in Nicaragua, but grows best in lands situated at a certain elevation. Thus, in lands from 200 to 2,000 feet above sea level the annual production of coffee per tree is only from one-half to 1 pound, while on the plantations between 2,000 and 3,000 feet elevation the production varies from 1 to 4 pounds,

according to the elevation and the quality of the land. Beyond 3,000 feet the yield again decreases. In 1898 the number of coffee trees in the Republic was 36,965,237. The cultivation of coffee is more largely carried on in the Department of Managua, but from the point of view of the quality of the berry the first place belongs to the Department of Matagalpa.

"The first cost of establishing a coffee plantation of an area of 1 *manzana*, in uncultivated or domanial land, up to the time when the production begins to pay expenses—that is, after three years—is about as follows:

	Pesos.
Purchase of 1 <i>manzana</i> of domanial land	3 to 4
Clearing.....	6 to 15
Preparation of the land and plantation	7 to 10
Cost of 1,000 young coffee trees	2 to 10
Transportation and planting	4 to 6
Weeding during three years, or ten in all.....	50 to 120
Total.....	72 to 165

"The coffee tree is really capable of producing at three years, but the production does not exceed one-fourth of a pound. It is only from the fourth or fifth year that the crop begins to count, and it then increases gradually up to the tenth year, at which time, however, the production remains the same during at least 15 or 20 years and sometimes even longer if the plantation is well kept up and cared for. For the purpose of developing coffee culture, the Government has granted different facilities to the planters of this product.

"Rubber, which for a long time was taken from trees growing wild, is now systematically cultivated. These plantations thrive in lands situated at a height of less than 1,000 feet. Rubber is taken principally from the Departments of Zelaya, Rivas, and Chontales, and the Territory (*comarca*) of San Juan del Norte. The cultivation of rubber, like that of coffee, is granted certain concessions by the Government. The approximate cost of a rubber plantation of 1 *manzana* (7,000 square meters), with 156 trees planted at a distance of 24 feet from each other, is the following:

	Pesos.
One <i>manzana</i> of domanial land	3. 00
Clearing, preparation, and seeding of land.....	20. 00
One annual weeding during ten years, at rate of 9 <i>pesos</i>	90. 00
Unforeseen expenses	9. 00
Interest at 6 per cent during ten years on 122 <i>pesos</i>	73. 20
Total.....	195. 20

"Bananas are cultivated on a large scale in the Department of Zelaya, the Territory of Cabo de Gracias á Dios, and the district of Siquia, and give rise to an important export trade. In the western regions

the banana is found principally in the Departments of Managua and Leon, but it is employed there exclusively for local consumption.

“Bananas are easily cultivated and demand but little special attention. They include several varieties, such as the bananas properly called, plantains, *guineo comuno* and the *guineo manzano*, which produce vinegar of good quality, and *dominico*, which furnishes a nutritive flour.

“The cultivation of henequen and pita, of recent introduction, have been successful in the Departments of Leon and Chinandega and is protected by the Government.

“Tobacco is principally cultivated on the coasts and in the interior valleys, notably in the Departments of Managua, Masaya, Rivas, Chinandega, and Nueva Segovia. The tobacco of this last Department is considered the best in the country and of the same quality as the Havana product.

“Sugar cane is successfully cultivated in a great number of Departments, and especially in Masaya, Granada, Carazo, Rivas, León, Chinandega, Matagalpa, and Nueva Segovia. Refined sugar and inferior sugars, known under the name of *chancaca* and *mascabado*, are manufactured.

“Cacao, which is of an excellent quality, is cultivated in the Department of Granada. The MENIER house, of Paris, owns a large cacao plantation not far from Nandaime, on the side of the extinct volcano Mombach, in the Department of Granada. The cultivation of cacao is also protected by the Government.

“The indigo plant is found abundantly in the warm plains, situated at an elevation of from 200 to 250 feet. In quality the product, especially that of the Department of Rivas, can compete with that of India. The plant is also found in the Departments of Granada and Chinandega.

“Vanilla, vegetable wax, sarsaparilla, ipecacuanha, quinquina, rhubarb, copabia balsam, etc., are gathered in the forests, but do not figure among the export articles. Vanilla is found principally in the district of Prinzapolka, and medicinal and oleaginous plants are found especially in the Departments of León, Carazo, Nueva Segovia, and Zelaya.

“Maize yields two good crops per year, the first in August, the second in December. It is planted in May and September. The principal producing Departments are Managua, Granada, Carazo, Rivas, León, Chinandega, Matagalpa, and Nueva Segovia.

“Beans are consumed in large quantities and are cultivated on a large scale, principally in the Departments of Granada, León, and Matagalpa.

“Cattle raising is practiced on a certain scale in all parts of the Republic, but this industry is very backward and many improvements

are necessary to be introduced. At the present time, with few exceptions, enterprises of this kind are among the least remunerative. Scarcely anything has been done to improve the stock, and the methods of gathering fodder need to be modified. However, outside of the lands suitable to stock raising, there are two elements in favor of this industry—the increase in the consumption of meat and an increased exportation.

“The actual price of domanial lands suitable to stock raising is 2 pesos per *manzana*.

“The forest wealth of Nicaragua is very great and furnishes one of its principal export articles, cabinet woods. Among the principal woods are mahogany, cedar, ebony, *guayacan* or *galo sento*, *ronron*, *granadillo*, quebracho, light rosewood, etc. Other woods, such as *mora*, *palo amarillo*, and Brazilwood, used in dyeing, are shipped in their natural state, or the extracts produced in the country are shipped abroad. The wood is exploited in most of these Departments of the Republic, especially is Managua, Rivas, León, Chontales, Matagalpa, Jinotega Estali, Nueva Segovia, and Zelaya; in the territory of Cabo de Gracias á Dios, and the district of Prinzapolka.

“An American company has the concession for the exploitation during fifteen years of mahogany, cedar, and rosewood of the immense territory near the Atlantic Ocean.

“As regards the mineral wealth of the five Central American Republics, Nicaragua follows after Honduras, which occupies first place.

“The mineral wealth of this Republic is distributed about as follows: Gold, in the Departments of Nueva Segovia, Chontales, León, Matagalpa, Jinotega, and the district of Prinzapolka; silver, in these same, with the exception of Prinzapolka; copper, in Nueva Segovia, León, and Matagalpa; lead and iron, in Nueva Segovia and Matagalpa; nickel and zinc, in Matagalpa; tin, in Nueva Segovia; calcaire, in León and Matagalpa; mercury, sulphate of lime, salt, sulphur, and combustible minerals, in Leon.

“At the present only gold mines are worked, and these are found principally in the Departments of Nueva Segovia and Chontales, on the eastern slopes of the Cordillera and in the district of Prinzapolka.

“The only two manufacturing industries of any importance in Nicaragua are, first, the manufacture of sugar and next the extraction of *mora* for dyeing. Among the less important industries are cheese factories of the Department of Chontales, furniture factories, common soap factories, and factories for making of rush and straw hats, candles, starch, shoes, cord, sole leather, ice, mineral waters, common pottery, baskets, harnesses, etc. Tailoring establishments, jewelry stores, and locksmiths complete this table.”

PURCHASE OF RAILWAY SUPPLIES.

The Consul of the United States at Managua has informed the Department of State at Washington that on December 15, 1901, the Nicaraguan Government signed a contract with Mr. P. W. CHAMBERLAIN, a railway engineer, for the purchase of 300 tons of steel rails and other fittings for the Atlantic Railroad, which the latter is constructing. It is stipulated in the contract that the above-mentioned material shall be purchased in the United States.

The Consul adds that Mr. CHAMBERLAIN is at present pushing to completion the work on that part of the road connecting the Indio River with the San Juan River at San Francisco, from which point there is steamboat navigation.

PARAGUAY.**NEW SACCHARINE PLANT.**

The flora of Paraguay is rich in plants of importance both as food and drugs. Dr. M. BERTONI, in the "Revue Mensuel du Paraguay," describes a plant which is to be found in profusion in the northern part of the Republic, and which is noted for its saccharine properties. This plant is known botanically as *Eupatorium Rebaudiarum*, in honor of the Paraguayan chemist, Señor OVID O. REBAUDI, and is variously spoken of by the Indian population as *caáheé*, *azucá-caái*, and *cira-caái*, which may be translated "sweet herb," "sugar herb," and "honey herb."

The plant is a humble-looking herb, which grows to a height of but a few decimeters, with small leaves and minute blossoms. It flourishes in the high plains which environ the Amambari Mountains from the extreme north of the Republic to the sources of the Monday River. Its saccharine properties are described as most remarkable, a few leaves being sufficient to sweeten a large cup of tea or coffee, and on putting insignificant portions of the leaves into the mouth the impression of sweetness is retained for many minutes. The plant contains no deleterious substances whatever.

The Director of the Agronomical Institute at Asunción considers that the sweetness is not due to the sugar contents, as the sweetening power by far exceeds that of sugar. Moreover, it is stated that the sweet matter contained in the plant can not, like sugar, be brought to a state of fermentation by adding yeast. He assumes, rather, that a new chemical substance has been discovered. As an experiment a German colonist is endeavoring to cultivate specimens of the plant at Nueva Germania.

SALVADOR.

CENSUS RETURNS FOR 1901.

The Department of Statistics has just issued an interesting bulletin compiled from the census returns taken by the Government on March 1, 1901. This data shows that the population of the Republic on the date mentioned was 1,006,848 souls. The largest cities are San Salvador, with a population of 59,544 inhabitants, and Santa Ana, with a population of 48,120. The area of the Republic is 34,126 square kilometers, with an average population of 29.5 persons per square kilometer. The following tables show the population by Departments, density, sexes, races, etc.:

Departments.	Population.	Area, square kilometers.	Density per square kilometer.	Sexes.

* All values in silver. The dollar of Salvador is worth \$0.413 gold.

THE COFFEE INDUSTRY.

The Government of Salvador recently furnished to the Legation of Brazil in the United States an interesting report concerning the coffee industry in Salvador. This report shows that at the present time there are in the Republic 50,000 hectares of land planted in coffee trees, and that there still remain in an uncultivated state about 20,000 hectares of virgin land suitable for the growing of coffee. Two thousand hectares of coffee land formerly under cultivation have been abandoned due to the wearing out of the soil, but no plantations have been abandoned on account of the low prices of the different grades of coffee in the markets of the world.

The average bearing life of a coffee tree in Salvador is given as thirty years, and the average production as 350 grams. The average yearly exportation is estimated at 50,000,000 pounds, and the average cost of production per kilogram, delivered at the maritime ports of the country from whence the exportation is made, 9 cents United States gold. The following table shows the shipments of coffee from the Republic of Salvador to foreign countries in 1900:

	Pounds.		Pounds.
Australia.....	1, 343, 251	Germany	7, 420, 280
Belgium	210, 834	Italy	4, 462, 905
Chile	1, 830	Spain	38, 344
Colombia	2, 290	United States	7, 477, 476
England	5, 329, 398		
France	23, 815, 148	Total	50, 101, 756

THE PRESENT COFFEE CROP.

The United States Consul-General at San Salvador reports that the coffee crop of the Republic will not exceed 40,000,000 pounds. This is a great decrease as compared with the crop of 1901, which amounted to 55,600,000 pounds. The falling off in the yield is due wholly to unseasonable weather. The rains, which fell earlier than is usual, caused the plants to blossom prematurely, the bloom being afterwards destroyed by the north winds. Later and more seasonable rains caused the plants to bloom anew, but only partially, the consequent result being a short crop.

REVENUES COLLECTED DURING FIRST NINE MONTHS OF 1901.

An interesting statistical table published in the official newspaper of the Republic, under date of December 25, 1901, shows that the collection of revenue from all sources by the Government of Salvador from January to September of said year amounted to \$4,835,064.06. Comparing this sum with the amount collected during the first nine months of 1900, it is seen that the revenues collected in 1901 exceeded those collected during the same period of 1900 by \$282,375.72. The total revenue is made up of the following items: Imports, \$2,542,967.51; exports, \$526,396.56; tax on liquors, \$1,354,262.91; sundry taxes, \$411,437.08.

IMPORTATIONS THROUGH THE PORT OF LA UNION.

During the month of October, 1901, merchandise to the value of \$122,244.30 were imported into Salvador through the port of La Union, the customs duties on which amounted to \$141,641.81. The following table shows in detail the shipments by countries:

Countries.	Pack- ages.	Value in gold.	Duties paid.
Belgium.....	62	\$458.70	\$1,426.10
Chile.....	50	70.00	265.20
Colombia.....	39	657.00	688.39

Cuba.....	4	931.00	810.54
Ecuador.....	111	3,669.87	6,197.76
Germany.....	6,356	110,448.20	123,679.34
Spain.....	264	5,545.53	8,361.66
Total.....	6,936	122,244.30	141,641.81

UNITED STATES.

TRADE WITH LATIN AMERICA.

STATEMENT OF IMPORTS AND EXPORTS.

The following is the latest statement, from figures compiled by the Bureau of Statistics, United States Treasury Department, showing the value of the trade between the United States and Latin-American countries. The report is for the month of January, 1902, with a comparative statement for the corresponding month of the previous year; also for the seven months ending January, 1902, as compared with the corresponding period of the fiscal year 1901. It should be explained that the figures from the various custom-houses, showing imports and exports for any one month, are not received at the Treasury Department until about the 20th of the following month, and some time is necessarily consumed in compilation and printing, so that the returns for the month of January, for example, are not published in full until some time in March.

FOREIGN COMMERCE, JANUARY, 1902.

During the month of January, 1902, the United States imported merchandise to the value of \$79,138,192, against like imports in January, 1901, worth \$69,307,080. The imports free of duty were valued at \$36,461,913 in January, 1902, and \$27,382,894 in January, 1901. The dutiable imports were worth \$42,676,279 in January, 1902, as compared with \$41,924,186 in January, 1901. The greater part of the increase for January, 1902, over the same month in 1901 was due to the greater importation of crude and partially manufactured articles which enter into processes of manufacture in the United States (\$7,654,544), and to the gain in the importation of articles of luxury (\$1,306,440), which, together account for \$8,960,984 of the total increase of \$9,831,112.

For the seven months of the fiscal year 1902 the imports were valued at \$526,116,998, as compared with \$459,038,141 for the same period of the previous fiscal year. Of the increase of \$67,078,857, the importations of manufactured articles ready for consumption show a gain of \$9,095,514.

The summary of the imports for January, 1902, as compared with that for January, 1901, is as follows:

Classification.	1902.	1901.
Articles of food and animals	\$16, 273, 453	\$16, 718, 448
Articles in a crude condition entering into processes of domestic manufacture.....	30, 445, 623	23, 166, 281
Articles wholly or partially manufactured for use in manufacturing and mechanic arts.....	6, 886, 890	6, 411, 688
Articles manufactured ready for consumption	12, 910, 991	11, 709, 259
Articles for voluntary use, luxuries, etc	12, 621, 235	11, 301, 404
Total.....	79, 138, 192	69, 307, 080

The exports from the United States in January, 1902, including foreign merchandise reexported, were valued at \$129,136,444, as compared with \$136,325,601, the value of the exports in January, 1901. The loss was wholly attributable to the decrease in the value of agricultural products sent abroad, as the manufactured articles increased by about \$2,000,000. During the seven months of the fiscal year which ended with January, 1902, the exports were valued at \$872,659,682, as compared with \$902,237,970, the value of the exports for the same period in the previous fiscal year.

The official summary of the exports for January, 1902, as compared with the previous January, is as follows:

Classification.	1902.	1901.
Products of—		
Agriculture	\$84,477,950	\$92,565,242
Manufactures	34,412,992	32,654,035
Mining	2,912,011	3,011,212
Forest	3,328,987	3,983,475
Fisheries	477,719	656,301
Miscellaneous	756,651	505,310
Total domestic	126,366,310	133,375,575
Foreign reexported	2,770,134	2,950,026
Grand total	129,136,444	136,325,601

LEADING EXPORT NATION IN 1901.

The United States maintained its position as the leading exporting nation of the world in the calendar year 1901. The figures compiled by the Bureau of Statistics of the Treasury Department show the exports of each of the principal countries of the world at the latest available date, and clearly indicate that the exports of the United States during the year were larger than those of any other nation. While the total for the full calendar year is shown only in the case of a few of the more important nations, the monthly average for the portion of the year for which figures are available is shown in practically every country. This statement shows that the average monthly exportations in the year 1901 were:

United States, \$119,840,333; United Kingdom, \$113,753,987; Germany, \$90,242,000; France, \$66,929,329; Netherlands, \$56,790,923; Austria-Hungary, \$32,012,746, and Belgium, \$28,678,729. For the full calendar year the figures of the United States and the United Kingdom are available. They show: United States, \$1,438,083,000; United Kingdom, \$1,365,047,843. The exports of the United States thus exceed by nearly \$75,000,000 those of the United Kingdom. Upon the face the exports of the United States seem to show a reduction of about \$12,000,000 as compared with the year 1900, but this is due to the fact that the shipments to the Hawaiian Islands and Porto Rico are no longer classed as foreign exports, while if the figures of the shipments to those islands were included, an increase would be shown. The figures for the United Kingdom are: For 1901, \$1,365,047,843, and for 1900, \$1,417,085,849, a decrease of about \$52,000,000. Germany, for the nine months ending with September (the latest available figures), shows an increase of \$4,000,000 in exports. In the eleven months ending with November, France shows an increase of \$18,000,000, Belgium a decrease of \$7,000,000, and Austria-Hungary a decrease of \$9,000,000.

On the import side the United States stands fourth in the list of nations, the imports for the calendar year averaging \$73,368,421 per

month, against \$211,789,669 for the United Kingdom, \$111,646,000 for Germany, \$75,483,423 for France, \$65,922,642 for the Netherlands, \$34,942,018 for Belgium, and \$28,600,569 for Austria-Hungary. It is proper to add that the Netherlands figures are for the year 1900, no statements of the commerce for 1901 being yet available.

The following table shows the average monthly importations and exportations of the principal countries of the world during such portion of the calendar year 1901 as is available, the Netherlands figures, as above indicated, being for 1900:

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.
United States.....	\$73,368,421	\$119,840,333	Italy	\$29,700,743	\$22,657,465
United Kingdom.....	211,789,669	113,753,987	Canada	16,097,469	18,959,203
Germany	111,646,000	90,242,000	Brazil	5,258,454	15,051,841
France	75,483,423	66,929,329	Argentine Republic..	9,449,168	14,061,897
Netherlands.....	65,922,642	56,790,923	Switzerland.....	17,071,874	13,127,468
Austria-Hungary.....	28,600,569	32,012,746	Spain	13,464,488	10,698,054
Russia (European)...	22,838,052	30,227,582	Japan	10,803,457	10,176,972
India (British).....	21,803,746	30,891,350	China	13,446,163	9,553,055
Belgium.....	34,942,018	28,678,729			

DOMESTIC TRADE MOVEMENTS IN 1901.

The summary of domestic trade movements of staple commodities, as made by the Bureau of Statistics of the Treasury Department, shows that the calendar year 1901 was one of the most remarkable in the history of the economic development of the United States. The accumulation of surplus products at interior centers, their distribution toward the seaboard, and their withdrawal from domestic trade into the export movement are being subjected more completely to measurement year by year. The summary of internal commerce shows that there have been extraordinary gains in most staples and losses in a few, but on the whole the year is signalized by conspicuous gains over 1900.

The four leading spring wheat markets for the first five months received 122,394,597 bushels, in contrast with 87,743,974 in the corresponding period of the preceding year. At four winter wheat markets the receipts were 38,147,982 bushels, compared with 51,136,559 bushels during the six months of the crop year 1900. The winter wheat section has furnished less than half the quantity shipped in the first six months of 1900, but the combined arrivals at the four spring wheat and the four winter wheat markets, however, show a gain of 21,662,533 bushels, or 15.6 per cent, in 1901.

Taking Minneapolis as the chief center of the production of flour, it is shown that the average output per week during 1901 was 315,103 barrels, compared with 286,811 barrels in 1900 and 274,460 barrels in 1899. The average weekly shipments for these years were, respectively, as follows: 292,211 barrels, 284,738 barrels, and 265,900 barrels. The average weekly shipments destined for export during the

years under consideration were 75,320 barrels in 1901, 91,463 barrels in 1900, and 77,599 barrels in 1899, the decrease for 1901 being charged by the milling interests to the relatively unfavorable rate on flour as compared with wheat.

Taking the five leading cereals as a basis of comparison, the volume of trade at Chicago is representative of the entire group of centers of accumulation of grain. During 1901 this market is reported as receiving 245,207,653 bushels, while in 1900 the receipts were 307,726,135 bushels, a decrease of 20.3 per cent. Shipments from that market show a decrease of 17.8 per cent.

The live-stock trade of the interior was extraordinary in many respects. The feeding sections of the Southwest, owing jointly to the decrease in the corn yield and the high prices for stock, precipitated unusually large quantities of live stock, especially hogs, upon the packing markets in the last quarter of the calendar year. As a factor in traffic operations the live-stock movement has continued to expand. At Chicago 14,536 carloads were received in excess of 1900. In shipments there was a gain of 4,270 cars. The five Western markets, Chicago, Kansas City, Omaha, St. Louis, and St. Joseph, received 7,243,467 cattle, 18,764,041 hogs, and 7,399,062 sheep, making a total of 33,406,543 head, or a gain of 3,063,737 head over 1900.

On the Great Lakes the Bureau's reports cover the entire year's navigation for the first time. The operations reported include 204 ports of receipt and 331 points of shipment. The total quantity of commodities received during the twelve months amounted to 45,689,507 tons, and the total amount shipped to 46,065,288 tons, the combined total amounting to 91,754,795 tons. The tonnage passing through the Sault Ste. Marie Canal was 28,403,069 net tons, compared with 25,643,073 tons for the season of 1900, being a gain of 2,759,996 tons, or 11 per cent.

At the North Atlantic seaports the receipts of staple commodities from the interior fell somewhat short of the mark reached in 1900. At Boston, New York, Philadelphia, and Baltimore there was an aggregate decrease of 20,687,567 bushels, or 12 per cent, compared with 1900. This figure in some cases includes flour and meal reduced to bushels. The receipts of coal at Boston during the year were 4,878,275 tons, mostly by vessels.

In the Southern territory the cotton brought into sight by the end of the year was 6,604,943 bales.

The year's shipments of pig iron, iron pipe, and steel from the Southern producing districts reached a grand total of 1,685,674 tons.

On the Pacific coast, the redwood lumber shipments from upper California during 1901 amounted to 244,386,075 feet, against 209,001,022 feet for 1900. Another lumber movement on this coast of prime

importance is that of Washington, out of which States were sent 24,491 cars in 1901 and 19,402 cars in 1900 loaded with lumber. The shingle shipments were 28,251 cars in 1901 and 23,536 in 1900. From Portland and Tacoma the year's lumber shipments and shingles considerably exceeded those of the preceding year. Shipments of flour from the upper Pacific coast, from July 3 to December 28, reached a total of 685,991 barrels.

LOCOMOTIVE CONSTRUCTION IN 1901.

The "Railroad Gazette" states that the number of locomotives built by contracting works in the United States between January 1 and December 31, 1901, numbered 3,384. This is 231, or 7.3 per cent, more than in 1900, and is the largest output for any one year since the building of locomotives began. This total represents the work of eight locomotive-building companies, operating fifteen plants. The following table gives the output of the contracting locomotive works for the past ten years:

1901	3,384	1895	1,101
1900	3,153	1894	695
1899	2,473	1893	2,011
1898	1,875	1892	2,012
1897	1,251	1891	2,165
1896	1,175	1890	2,240

The locomotives built at the railroad shops are not included in the above list, though the figures for 1901 include 170 geared, 45 electric, and 44 compressed-air locomotives, and some 300 locomotives for light service, such as mine or plantation work or for contractors' use. Of the number built in 1901, 337, or not quite 10 per cent, were for export.

THE GROWING OF SUMATRA TOBACCO.

Government enterprise, through the medium of the Agricultural Department, has been devoting its attention to the growing of Sumatra tobacco in the Connecticut Valley, with results which promise to be in the highest degree satisfactory. The cost of production in a marketable state is estimated at about 90 cents a pound for the home-grown variety, and whereas the Sumatra leaf sells in Amsterdam at prices ranging from 50 cents to \$3 per pound, it is thought that the Connecticut species will bring about \$2 per pound, thus giving a profit of over 100 per cent to the producer.

In the effort to establish this culture in the Republic, the Government, through the Department of Agriculture, furnished the seed for planting, gave full directions for the care of the crop, and sent a corps of experts to supervise the growth, curing, and packing of the tobacco. The actual expense of growing and harvesting the crop was borne by

the growers, and 45 acres were planted, it being understood that sufficient instruction should be given during the course of the experimental culture to admit of the carrying on of the industry. The tobacco was grown under cheese-cloth tents, the entire amount to be disposed of amounting to about 40,000 pounds. The growers have agreed to have the sale of the entire crop take place under the auspices of the Government, as it is desired to establish a standard or market price, in order to show what has been accomplished by departmental expenditures.

It is said that tobacco brokers who have had samples to work up in their factories agree that the experiment has been a great success, and that the expansion of the industry will mean hundreds of thousands of dollars in the commercial development of the country.

CENSUS COMPILATIONS OF INDUSTRIAL STATISTICS.

Recent census bulletins contain statistics showing the changes in the manufacturing industries in the interval between 1890 and 1900. In the annexed tables the statistics for 1900 are compared with those of the preceding census year, 1890:

	Manufacturing establishments. ^a			Flouring and grist mills.		
	1900.	1890.	Increase.	1900.	1890.	Increase.
			<i>Per cent.</i>			<i>Per cent.</i>

^a These figures do not include establishments with a product less than \$500; nor governmental establishments, penal, eleemosynary, and educational institutions.

^b Decrease.

In connection with the table relative to the slaughtering and meat-packing industry, the statistics showing the varieties and total quantities and value of the exports of meats and meat products in the calen-

dar year 1901 are interesting as showing the enormous proportions to which it has grown. These official figures are as follows:

Products.	Quantity.	Value.
	<i>Pounds.</i>	
Beef, fresh	354,421,731	\$32,294,877
Beef, salted or pickled	51,761,505	3,035,025
Beef, other cured	767,007	64,467
Beef, canned	52,239,582	5,233,782
Tallow	51,846,765	2,698,692
Bacon	447,620,337	39,402,500
Hams	230,456,004	24,739,003
Pork, fresh	40,348,780	3,224,726
Pork, salted or pickled	127,863,335	10,254,695
Pork, canned	9,341,262	744,455
Lard	607,266,176	51,626,346
Lard compounds, etc	30,513,728	2,039,698
Sausage and sausage meats	7,140,383	699,841
Sausage casings		2,022,496
Mutton	298,700	22,815
Canned meats other than beef and pork		1,821,610
Oleo, oil	163,828,675	12,951,745
Oleomargarine	5,094,541	499,489
Other meat products		3,850,836
Total value		197,227,098

Besides the above, there were exported in 1901 poultry and game, in the slaughtering and packing of which some of the great meat-packing establishments of the country are now engaged, to the value of \$866,322; butter, 24,249,565 pounds, worth \$4,184,966; cheese, 31,396,115 pounds, valued at \$3,006,344, and milk to the value of \$1,646,579, making the grand aggregate value of meat and dairy products \$206,931,309.

WOOL MANUFACTURES.

The Census Office has made public a preliminary report regarding wool manufactures in the United States, which gives the following statistics for 1900 and the percentage of increase since the previous census year:

Country.	1900.	Per cent of increase.
Establishments	1,414	*16.5
Average wage-earners	159,108	3.1
Capital	\$210,179,749	26.1
Total wages	57,933,817	6.6
Miscellaneous expenses	17,329,932	10.9
Cost of materials	181,150,669	8.3
Value of products	296,990,484	9.8

* Decrease.

THE OLEOMARGARINE INDUSTRY.

In a special bulletin the Census Bureau shows that the number of establishments for the manufacture of oleomargarine in the United States increased from 12 to 24 between 1890 and 1900, with a total capital invested of \$3,023,646, an increase of 376 per cent. Other items given are as follows: Wage-earners 1,085, increase 311 per cent; total wages \$534,541, increase 246 per cent; miscellaneous expenses

\$2,489,784, increase 545 per cent; cost of materials used \$7,639,501, increase 251 per cent; value of the products \$12,988,525, increase 318 per cent.

Oleomargarine manufactured as a by-product by slaughtering and meat-packing establishments is not included in these statistics.

VALUE OF COTTON-SEED PRODUCTS.

The report of the Census Bureau shows that in 1900 there were 357 establishments in the United States engaged in the extraction of cotton-seed oil, using 2,479,386 tons of cotton seed, the cost of which was \$28,632,616, or an average of \$11.55 per ton. The total quantity crushed was 53 per cent of the total amount produced. The weight of the whole of the cotton seed produced in the United States in the census year was 4,668,346 tons, which was valued at \$54,345,677. The available and the actual value of the crude manufactured products are \$80,371,375 and \$42,411,835.

IMPORTS OF MAHOGANY IN 1901.

During the calendar year 1901 the United States imported 39,682,000 feet of mahogany, valued at \$2,123,195. Of this quantity Latin America furnished 32,894,000 feet, worth \$1,539,256 in 1901, as compared with 25,062,000 feet, valued at \$1,274,524, in the calendar year 1900. The sources from which the United States received mahogany during the years under comparison were as follows:

Countries.	1901.		1900.	
	Quantity.	Value.	Quantity.	Value.
	<i>Feet.</i>		<i>Feet.</i>	
Central America	14,442,000	\$729,178	7,752,000	\$388,883
Mexico	12,579,000	537,156	11,520,000	503,291
Cuba	4,333,000	217,378	4,705,000	328,925
Other West Indies	682,000	27,640	512,000	32,813
South America	858,000	27,904	573,000	19,612
Other countries	6,788,000	583,939	6,389,000	530,667
Total	39,682,000	2,123,195	31,451,000	1,804,191

PATENT OFFICE REPORT.

In the year 1901, according to the annual report submitted to Congress by the Commissioner of Patents, the number of patents issued was 27,373, the largest number reported for any one year in the history of the Department. The issue of certificates of registration of trademarks, prints, and labels was also unprecedented, numbering 2,965.

The cash receipts of the office during 1901 were \$1,449,398.16, exceeding those of any previous year by nearly \$100,000. The

expenditures of the year were \$1,297,387.64, leaving a surplus of \$152,012.52.

In the number of patents issued to citizens of foreign countries Germany stands first, with 1,045; England second, with 986, and Canada third, with 376.

COMMERCIAL PROGRESS DURING A CENTURY.

Interesting statistics concerning the industrial, commercial, and financial development of the United States during the nineteenth century have been recently published by the Treasury Bureau of Statistics. Among the facts presented are the growth of production, the growth of commerce, the growth of wealth, the growth of money in circulation, the growth of deposits in savings banks, and the increased number of depositors in savings and other banks, the decrease in interest on the public debt, and various other items demonstrating the advance of the country.

On the production side it is shown that cotton has increased from 155,556 bales in 1800 to 9,436,416 bales in 1900; the wool produce, from 35,802,114 pounds in 1840 to 302,502,328 pounds in 1901; wheat, from 151,999,906 bushels in 1866 to 522,229,505 bushels in 1900; corn, from 867,946,295 bushels in 1866 to 2,105,516 bushels in 1900; copper, from 650 tons in 1850 to 270,588 tons in 1900; pig iron, from 165,000 tons in 1830 to 15,800,000 tons in 1901; petroleum, from 21,000,000 gallons in 1860 to 2,661,233,568 gallons in 1900; coal, from 3,358,899 tons in 1850 to 267,850,000 tons in 1901; and gold from \$50,000,000 in 1850 to \$79,171,000 in 1900.

According to this compilation of statistics, exports of merchandise have grown from \$70,971,780 in 1800 to \$1,487,764,991 in 1901, and imports from \$91,252,768 in 1800 to \$823,172,165 in 1901. The country's wealth has increased from \$7,135,780,000 in 1850 to \$94,300,000,000 (estimated) in 1900, the per capita increase being from \$307.69 to \$1,235.86.

The total money circulation in 1860 was \$435,407,252, as compared with \$2,175,387,277 in 1901. In 1830 the deposits in savings banks were \$6,973,304, while in 1901 they reached the amount of \$2,597,094,580.

Railway extension is evidenced by the statement that in 1850 the total mileage was 9,021, which in 1901 had grown to 199,378, while proportionate increases in freight transportation coupled with decreased charges for carrying are noted. It is also estimated that the territorial expansion of the Republic has been fourfold with the period under consideration, while the population has increased sixteenfold.

RECOGNITION OF LATIN-AMERICAN CONSULAR OFFICERS.

The following Latin-American consular officers have been recognized by the Department of State of the United States:

JUAN C. ZIMMERMAN, Consul-General of the Argentine Republic at New York.

GEORGE DE URIOSTE, Consul of the Argentine Republic at San Francisco.

NAPOLEON BONAPARTE KELLY, Vice-Consul of Brazil at Philadelphia.

ANDRES GRAY, Commercial Agent of Brazil at Pascagoula, Mississippi.

SANTOS ELIAS SANTOS, Consul of Ecuador at San Francisco, California.

CHARLES VERE, Consular Agent of Haiti at San Juan, Porto Rico.

LUIS M. NORAGUEZ, Vice-Consul of Honduras at Mobile, Alabama.

JOAQUIN DIAZ PRIETO, Consul of Mexico at Cincinnati, Ohio.

AGUSTIN PINA, Consul of Mexico at Phoenix, Arizona.

LEONARDO D. LE BARON, Vice-Consul of Mexico at Mobile, Alabama.

DANIEL T. HUNT, Consul of Paraguay at Chicago.

CHR. G. BAHL, Consul of Paraguay at Savannah, Georgia.

ELLIOTT G. RICKARBY, Vice-Consul of Paraguay at Mobile, Alabama.

C. M. PRYNNE, Vice-Consul of Paraguay at St. Louis, Missouri.

RICHARD C. OLIPHANT, Vice-Consul of Paraguay at Trenton, New Jersey.

JUAN WALKER, Vice-Consul of Paraguay at Detroit, Michigan.

GUILLERMO CALVERT WIASBOROUGH, Vice-Consul of Paraguay at Kansas City, Missouri.

EDUARDO H. HARGRAVE, Vice-Consul of Paraguay at Cincinnati, Ohio.

JAMES A. COE, Vice-Consul of Paraguay at Newark, New Jersey.

TEODORO A. LEISEN, Vice-Consul of Paraguay at Wilmington, Delaware.

GUILLERMO LOVE, Vice-Consul of Paraguay at Baltimore, Maryland.

L. D. KINGSLAND, Consul of Salvador at St. Louis, Missouri.

GEORGE ANDREW LEWIS, Honorary Consul of Salvador at Boston, Massachusetts.

ESTEBAN GOTOS, Consul of the Dominican Republic at Ponce, Porto Rico.

MARCIAL SALAS, Vice-Consul of Venezuela at New York City.

SIMON BARCELO, Consul-General of Venezuela at San Juan, Porto Rico.

PEDRO ABADIN MARTINEZ, Vice-Consul of Venezuela at San Juan, Porto Rico.

URUGUAY.

REPORT OF THE BANK OF THE REPUBLIC FOR 1901.

The balance sheet of the Bank of the Republic on December 31, 1901, shows the following figures:

CREDITS.	
Unissued shares of second series.....	\$5, 000, 000. 00
Unissued bonus shares.....	1, 881, 307. 46
Various debtors.....	10, 493, 252. 23
Values deposited.....	4, 151, 972. 75
Guaranty of judicial deposits (face value, \$800,000).....	500, 000. 00
Cash on hand.....	5, 500, 213. 94
Total.....	27, 526, 746. 38
DEBITS.	
Capital, nominal.....	12, 000, 000. 00
Various creditors.....	5, 105, 546. 04
Judicial deposits.....	393, 444. 95
Depositors of values.....	4, 151, 972. 75
Service of the extraordinary loan.....	47, 883. 60
Notes in circulation.....	5, 586, 706. 50
Reserve fund.....	118, 692. 54
Provision fund.....	90, 000. 00
Silver checks (<i>conformes</i>) in circulation.....	32, 500. 00
Total.....	27, 526, 746. 38

The net profits of the bank in the year 1901 amounted to \$349,789, as compared with \$254,705 in 1900, \$206,093 in 1899, and \$178,300 in 1898.

VALUE OF THE EXPORTS TO THE UNITED STATES IN 1901.

The exports from Montevideo to the United States were valued as follows during each quarter of 1901, according to the national statistics:

First, \$1,032,735.30; second, \$597,524.47; third, \$810,053.71; fourth, \$985,872.20; total, \$3,426,185.68.

PRINCIPAL EXPORTS FROM MONTEVIDEO IN 1901.

The principal exports from Montevideo during the year 1901, according to the "Review of the River Plate," were as follows:

Dry oxhides, 995,808; salt oxhides, 540,568; hair, 1,509 bales; wool, 74,334 bales; sheepskins, 15,587 bales; beef, 537,886 bales and 2,943 tons; tallow, 44,916 hogsheads; flour, 24,083 bags; bran, 8,303 bags; maize, 279,420 bags; wheat, 4,513 bags; linseed, 16,356 bags and 31 tons; bones, 14,778 tons, and bone ash, 14,106 bags. Cattle horns formed an additional item to the exports, 1,049,219 horns having been sent abroad in 1901.

MINERALS OF THE REPUBLIC.

The hills and high lands of Uruguay are believed to be very rich in minerals. Among the metals gold, silver, copper, iron, tin, and cinabar have been found, while mineralogists have discovered topazes and diamonds in the Province of the Minas, while sufficient quantities of amethysts and agates have been found to admit of their exportation to Europe. It is stated that the domestic silver ores yield 87 per cent of metal; copper ores, 56 per cent, and magnetic ores, 72 per cent. The average yield of gold per ton of auriferous quartz from three districts in 1886 was 70 ounces. No coal mines are worked in the Republic, but a number of deposits of this mineral have been discovered.

The "Mining Journal" (London) of February 8, 1902, states that the gold mines of Cuñapiru, San Gregorio, and Santa Ernestina, Uruguay, yielded 71,94¢ grams of gold from 6,183,380 tons of quartz in 1901.

THE PORT OF SAUCE.

The "Montevideo Times" of January 9, 1902, published the following information relative to the port of Sauce:

"All the wide-gauge railway lines of the Republic through the Central Uruguay Railway and the Western Railway system converge at Sauce, and it is also the head of the narrow-gauge lines running to Ombues de Lavalle. There are depots with every accommodation for storing grain and other produce. Steamers or sailing vessels entering the port of Sauce can moor alongside the moles, where there is a depth of water of 20 feet within a basin sheltered from the winds and where they may load or unload with perfect safety.

"The port concessionaires charge no fees or tolls for their services to the vessels. Pilotage is given gratis to or from Buenos Ayres, Montevideo, or La Plata to all steam or sailing vessels loading or unloading 1,500 tons net cargo at Sauce. It is guaranteed that vessels drawing up to 18 feet can leave Sauce port in cargo by the northern channel, which has been buoyed by the concessionaires.

"Every information, plans, etc., will be forwarded to interested commercial parties, shipping agents, and others. The concessionaires maintain transport service for passengers and cargo between Sauce and Buenos Ayres, and a service of launches between Sauce, Buenos Ayres, and La Plata. Further information may be obtained at the office, Calle Rivadavia, 1365, Buenos Ayres, Argentine Republic."

RAILWAY CONNECTION BETWEEN MONTEVIDEO AND MERCEDES.

During the latter part of December, 1901, the completed western extension of the Central Uruguay Railway of Montevideo was opened for traffic, the capital of the Republic being thereby placed in direct

communication with the city of Mercedes. The Central system is by far the most important railway enterprise that has been carried on in Uruguay for the last twelve or fifteen years. It is controlled by English capitalists who have furnished the money for construction purposes. The system opens to the benefits of railway traffic the entire western zone of the Republic, which is a rich agricultural section with soil and climatic conditions productive of large crops of the finest wheat grown in South America, besides other grains, as well as a great variety of farm supplies.

The Uruguay Railway at San José extends to the southward through the Central Colonia and Sauce on the Plate estuary, at both of which places excellent port accommodations are being provided for the embarkation of produce and live stock. Connection is made with Mercedes on the Uruguay River.

VENEZUELA.

DIPLOMATIC AGREEMENT WITH FRANCE.

M. DELCASSÉ, Minister of Foreign Affairs of France, and Señor MAN BOURGET, the Venezuelan Plenipotentiary at Paris, have signed an agreement determining the conditions under which diplomatic relations between Venezuela and France are to be resumed. They have also appended their signatures to a commercial convention providing that France and Venezuela should each grant to the products of the other country the most favored nation treatment.

REQUIREMENTS OF APPLICANTS FOR PATENTS.

Whereas in view of the frequency with which applications for patents of invention or improvements referred to in article 1 of the patent laws are filed with the Federal Executive without clearly specifying the art, machine, manufacture, or composition of the material that has been improved, and inasmuch as this causes loss of time and trouble to this office as well as to the interested parties, the Federal Executive decrees that every applicant for a patent of invention or improvement shall state in the application, description, drawings, or samples sent to this Department what is the art, machine, manufacture, or composition of material which has been improved.

Let it be made known and published.

By the Federal Executive.

FELIPE AROCHA G.

CARACAS, *January 31, 1902.*

SUPPLEMENT TO THE HANDBOOK OF MEXICO.

THE STATES OF CHIHUAHUA, JALISCO, SAN LUIS POTOSÍ, AND
THE TERRITORY OF TEPIC.

At the time the "Handbook of Mexico," prepared at the Bureau of the American Republics, went to press (July, 1900), descriptions of the States of Chihuahua, Jalisco, and San Luis Potosí, as well as the Territory of Tepic, were necessarily omitted, due to the lack of sufficient reliable data concerning these important political divisions of the Mexican commonwealth. As a supplement to the Handbook, and for the purpose of answering numerous inquiries regarding these portions of the Republic, the MONTHLY BULLETIN publishes short sketches of the States and of the Territory named.

Chihuahua.—The State of Chihuahua, whose capital is the city of the same name, has a population of 262,271 persons, 8,000 of whom are Indians belonging principally to the Tarahumara race. It is not only the largest of the 27 States of which the Republic of Mexico is composed, but is also one of the richest in natural resources. Its area is 227,468 square kilometers, or about three times that of the State of New York. This vast area is but sparsely populated, containing only 1.15 inhabitants to the square kilometer, while the State of Pennsylvania, about one-third its size, has 140.1 inhabitants to the square mile. Its northern boundary is formed by the Rio Grande River, which separates the State from the United States. It is bounded on the east by Coahuila, on the south by Durango, and on the west by Sinaloa and Sonora.

The State is situated on an undulating tableland, the elevation of which varies from 3,500 to 7,000 feet above the level of the sea. Mountain peaks abound in the Sierra Madre range which traverses the State. Some of the principal peaks, situated in that part of the range known as Sierra de Tarahumares with their elevations above sea level, are Jesús y Maria, 2,511 feet; Mesa de Tabascotes, 2,359 feet; and Bufa de Cerro Prieto, 2,811 feet.

Among the plains of greater area lying between the mountain peaks and ranges are the Chilicote, the Gigantes, and Bolsón de Mapimí. The climate of the entire State is salubrious and healthful. The summers are long, and for a few months considerable heat is felt in the lower elevations during the middle of the day, but the nights are always cool and pleasant. During the short winters, especially in the elevated portions of the table-lands, frosts frequently occur, and sometimes snow falls. Considerable rain falls during the summer, but in winter the precipitation is very light.

The State is divided into ten districts, the names, principal towns, and population of which are as follows:

District.	Principal town.	Population of district.
Andres del Rio	Batopilas	14,454
Arteaga	Chinipas	8,075
Bravos	Ciudad Juarez	25,122
Camargo	Santa Rosalia	27,126
Guerrero	Ciudad Guerrero	22,252
Hidalgo	Hidalgo del Parral	36,997
Iturbide	Chihuahua (capital of the State)	72,869
Jimenez	Jimenez de los Santos	23,377
Mina	Guadalupe y Calvo	16,978
Rayon	Ocampo	15,521
Total		262,771

Chihuahua produces corn, wheat, rye, oats, potatoes, beans, vegetables, and most of the fruits of the temperate zone. Cotton is grown along the borders of some of the lower rivers with great success. The principal source of industry, however, is the raising of cattle, sheep, horses, and mules. *Haciendas* of several hundred square miles, producing as many as 20,000 head of cattle, horses, etc., are common. It is estimated that on some of the large ranches there are branded from 30,000 to 40,000 calves yearly.

Besides mesquite and similar trees, which grow everywhere, cedar is found in the Sierra Madre, while in some parts of the State vast forests of oak and pine cover the mountain slopes.

There are 9 Mormon colonies in Chihuahua, all of which are prosperous and in a flourishing condition. These colonies are rapidly becoming an important factor in the agricultural development of the country.

The mineral riches of Chihuahua are probably not surpassed by any other State of the Republic. Millions of dollars' worth of gold, silver, copper, and lead ores are mined annually, and the output is constantly increasing. Large quantities of these ores are treated in the smelting and reduction works of the State and elsewhere in the Republic. The extension of the Rio Grande, Sierra Madre and Pacific Railway and the completion of the Chihuahua and Pacific Railway, now in course of construction, together with the utilizing of newly discovered reduction processes in the treating of ores, will be of great force in the development of the State.

Among the numerous known mining districts, all noted for their abundant production of ores, the most noteworthy are Santa Eulalia, Parral, Minas Nuevas, Palmarejo, Uruapan, Guazapares, Cusihiurichic, Batopilas, Cerro Colorado, Corralitos, etc.

Lying directly south of the United States, the State of Chihuahua is exceedingly well situated for the carrying on of international trade. Cattle, sheep, and hogs are exported annually in considerable numbers

to the United States. Though this industry is as yet in its infancy, under proper conditions and encouragement it could be increased and developed to immense proportions.

The following are some of the most important towns of the State:

Towns.	Number of inhabitants.	Towns.	Number of inhabitants.
Chihuahua (capital).....	25,000	Guerrero	4,250
Hidalgo del Parral.....	7,000	Rosales	3,500
Ciudad Juarez	4,500	Allende	3,200

The city of Chihuahua is a busy, bustling municipality. It is the metropolis and business center of the entire northwestern section of the Republic, and does a larger business than other Mexican towns of five times its size. Not only does it supply the outfits for the majority of the mining camps and prospecting expeditions of the State, but it contains a number of banks and commercial houses engaged in all branches of business. It also has large manufacturing establishments. The Compañía Industrial Mexicana is one of the largest iron foundries and machine factories in the Republic. The Chihuahua Brewery, one of the best constructed breweries of the country, has a capital of nearly 500,000 *pesos*. The woolen factories Concordia, La Paz, and Rio Florido, produce fine cassimeres, blankets, carpets, cotton goods, etc. Besides these and the Compañía Minera, there are a number of other establishments which are favorably known throughout the Republic.

Notwithstanding large portions of this State are already under cultivation, there are still hundreds of thousands of acres of good land that could be utilized by irrigation and rendered exceedingly productive. Its mountains, rich in ores and mineral wealth, offer an inviting field to the capitalist, prospector and miner. In a word, capital and labor will find in the rich and progressive State of Chihuahua unbounded opportunities for profitable investment and employment. Coal exists in various localities, but most of the mines, lacking good transportation facilities, have been but little developed.

The main line of the Mexican Central Railway extends for a distance of 850 kilometers through the State. A branch line of this road also traverses the important mining district of Parral. The Mexican Northern Railway runs from Escalon to Sierra Mojada, State of Coahuila, connecting that region, rich in low-grade lead ores, with the Mexican Central system. The Rio Grande, Sierra Madre and Pacific Railway and the Chihuahua and Pacific Railway are now being constructed, and will unite the capital of the State with rich mining and agricultural sections hitherto difficult of access. Good wagon roads abound and connect the different districts with Chihuahua, the capital.

In 1897 there were 127 public and 45 private schools in the State,

the total attendance being 6,939 pupils, of whom 4,775 were boys and 2,164 girls.

Jalisco.—The State of Jalisco is one of the richest agricultural and mining sections of the Republic. It has an area of 83,503 square kilometers, and has 1,107,227 inhabitants, or about 13 persons to the square kilometer.

Jalisco is of irregular shape. It is bounded on the north, east, and south by the States of Durango, Zacatecas, Aguas Calientes, San Luis Potosi, Guanajuato, Queretaro, Michoacan, Colima, and the Territory of Tepic, and on the west by the Pacific Ocean. The eastern portion of the State is traversed by the Sierra Madre range, in which occur a number of imposing mountain peaks. The most noted of these are the Tapalpa, Tigre, Nevado, and Colima. The latter is an active volcano, the elevation of which is 4,378 meters above the level of the sea. The northern and northeastern portions of the State are very mountainous and form a veritable network of spurs and isolated peaks from the Sierra Madre range. Between these are found picturesque and fertile valleys of varying elevations and extent. The State in its entirety possesses a vast territory, watered by numerous lakes and rivers.

The largest and most important stream is the Santiago, or Lerma, River. This river rises in Lake Chapala in the extreme southeastern portion of the State, and flows in a northwesterly direction through Jalisco and the Territory of Tepic, emptying into the Pacific Ocean at a point north of the port of San Blas. It is about 750 kilometers long, and drains a territory containing, it is estimated, 25,000 square kilometers. In its course toward the sea this stream forms beautiful cascades near the village of Juanacatlan in the vicinity of the city of Guadalajara. These are of such a grand and imposing character that they have been appropriately called the Niagara of Mexico. Their height is about 20 meters. The river at this point is 160 meters wide. The force generated by these celebrated falls is enormous, and a large electric plant has been erected there. This plant supplies electric power to the city of Guadalajara, the capital of the State, 7 kilometers distant. This water power is also utilized by a large number of factories in Guadalajara and vicinity in the operation of their plants, and is fast making that city one of the great manufacturing centers of the Republic.

Other important rivers of the State are the Acaponeta and San Pedro, both of which flow into Lake Mexcaltitlan. The Armenia and Ameca rivers are also streams of considerable size and importance.

One of the most beautiful lakes of the State, and the largest in the Republic, is Lake Chapala, the surface area of which is 234 square kilometers. The waters of this lake contain a great abundance of edible fish. German carp abound, the Mexican Government having stocked the lake some years ago with this variety of fish. Lake

Chapala is also quite a summer resort. Comfortable hotels have been built upon its shores, and hundreds of people from Guadalajara and surrounding country spend the summers there.

Jalisco contains a great variety of minerals. Within its boundaries are to be found at the present time numerous silver, gold, copper, iron, lead, and cinnabar mines. The silver mines of San Pedro Analco and of Atemajac are the most important. The concessionaires have recently been negotiating the sale of this latter mine for \$800,000 gold. A United States company is developing the gold mines near Tequila, which yield from one to four ounces per ton. The Calabra and Santo Domingo mines near Ezatlan have produced large quantities of silver ore containing a certain percentage of gold. These mines are still under development. The total mineral production of the State in 1897 was \$2,252,999 Mexican silver. A large quantity of ore is shipped annually to the smelters at Aguas Calientes, San Luis Potosi, Monterey, and Ciudad Juarez, to be reduced there. There are a number of small smelters in the State, and considerable quantities of ore are treated in these, and by the *patio* process. Rich copper deposits have been discovered in various parts of the State, and within the last few years many claims have been denounced and new mines opened. The field is practically a virgin one, and offers rich rewards to the miner and capitalist.

Jalisco possesses a great variety of climates. A large portion of the State is traversed by the Sierra Madre range, which gradually slopes to the Pacific, giving rise to nearly every climatic condition known to the temperate and torrid zones. The high table-lands of the eastern portion are cold. In this region cereals, as well as many other products of the temperate zone, can be produced. The valleys between the mountains are well watered and exceedingly fertile. In these favored places flourish, according to the elevation, sugar cane, cotton, vanilla, tobacco, oranges, coffee, etc. Sugar cane grows very rapidly in this State, and once planted it does not have to be renewed for eight or ten years, which is a great advantage over Morelos and other States, where cane only grows by means of artificial irrigation and must be replanted every two years. The cultivation of cotton could be greatly increased, the native product at present not being sufficient to supply the needs of the cotton industry, which has developed to such an extent in Mexico that nearly 70 per cent of the raw material consumed has to be brought from the United States. Cotton planters would, therefore, be sure to find in the Republic an excellent home market for their product. The lowlands on the coast are hot, and on them thrive a great variety of tropical and subtropical products, while the climate, invigorated by the sea breeze, is not as enervating as that of the eastern coast of Mexico. Cedar, pine, oak, and other valuable trees are found in the mountains, and cabinet woods also abound. If the projected rail-

road from Aguas Calientes to Chamela, a small port on the Pacific, is built the forest lands will greatly enhance in value. At present, owing to the lack of easy means of transportation, the exploitation is difficult and timbered lands in some parts of the State can now be bought for \$2 Mexican silver per hectare.

The State is divided into twelve cantons, the names and populations of which are as follows:

Guadalajara.....	18, 584	Colotlán	63, 543
Lagos.....	99, 088	Zapotlán.....	134, 209
La Barca.....	160, 372	Mascota	53, 967
Sayula.....	74, 354	Teocaltiche	88, 899
Cocula.....	68, 554	Ahualulco	60, 146
Autlán	68, 176		
Chapala	50, 079	Total	1, 107, 227

The principal agricultural productions of these cantons in 1897 is shown in the following table, the values being in Mexican silver:

	Corn.	Wheat.	Peas.	Sugar and molasses.	Alcohol.	Wine.	Tobacco.	Coffee.
Chapala.....	\$141, 754	\$197, 794	\$38, 394	\$4, 100			\$1, 000	
Ahualulco	330, 000		7, 500	45, 560	\$1, 202, 000		5, 600	\$55, 000
Autlán	476, 779	36, 515		47, 000	8, 700		15, 739	2, 100

In the district of Tequila, west of Guadalajara, one of the principal products cultivated is the maguey, a plant belonging to the agave family and from the sap of which a liquor resembling gin is obtained by distillation. This beverage, called "tequila," has an enormous consumption in the northwestern part of Mexico. Lands planted in this variety of maguey bring large prices in Mexico. One farm containing less than 1,700 hectares was sold for 600,000 *pesos* (\$300,000). The government of Jalisco is endeavoring to introduce the culture of the Yucatan henequen, the plant of which resembles in appearance the maguey. Agricultural enterprises on a large scale could be successfully carried on in the part of the State comprised in the so-called hot country, where virgin lands cleared of underbrush can be obtained at very low prices.

During the last few years large shipments of oranges from the La Barca district have been made to the United States. These oranges are of a rich color, delicately flavored, and are sweet and luscious. They come into the market a few weeks before the early California oranges, and are yearly becoming more highly prized in the markets of the United States.

Cattle raising is also carried on in Jalisco to advantage and profit. This industry is as yet in its infancy, but is rapidly increasing in value and importance. The number of large ranches or farms in this State is also considerable, many of which constantly employ 500 or 600 laborers and 200 to 300 horses and mules daily in the operation of the same.

The sugar industry is of great importance, the annual production now reaching 15,000 tons of refined sugar and 11,000 tons of raw sugar, worth, respectively, 2,500,000 and 1,200,000 *pesos*. The district of Cocula alone, situated in the temperate zone, produces 10,000 tons of sugar, or three times more than the entire State of Veracruz. A *hacienda* situated in this district not far from Santa Ana has realized a profit of 800,000 *pesos* in one year. Morelos is the only State whose production exceeds that of Jalisco. The following table will give an idea of the importance of this State as compared with other sugar-producing States of the Republic:

States.	Yellow sugar.	Raw sugar.
	<i>Kilos.</i>	<i>Kilos.</i>
Morelos	26,328,308	475,132
Jalisco	15,584,184	11,118,695
Yucatan	3,796,407	583,742
Veracruz	3,490,749	4,352,466
Nuevo Leon	91,520	10,806,685
Other States	22,137,702	35,351,380
Total	71,428,870	62,688,100

The main line of the Mexican Central Railway passes through the northeastern portion of the State. A branch line of this road runs from Lagos to La Barca, Guadalajara, and Ameca. This branch will ultimately be extended to the Pacific coast, opening up a region rich in valuable forests and agricultural and mineral wealth.

Guadalajara, the capital of the State, with 83,934 inhabitants, is one of the finest cities in the country, and is known as the "Pearl of the West." It contains a large number of government buildings, schools, and educational institutions, a large and handsome cathedral, and the largest theater in the Republic. Many magnificent public parks adorn and beautify the town.

The cotton industry is one of the principal industries of the city. "La Compañia Industrial Manufacturera" (capital 4,000,000 *pesos*), has established a spinning mill and 700 looms at Juanacatlan, 26½ kilometers from Guadalajara. The machinery is run by the celebrated waterfalls of Juanacatlan. Manta or unbleached cotton is the principal product. A few kilometers from Guadalajara, but in another direction, the Compañia Industrial of Guadalajara, with a capital of 2,000,000 *pesos*, owns the cotton factories of Atemajac and Experiencia.

There are 164 looms at Atemajac and 180 at Experiencia, all imported

from England. There are also two other cotton factories in the State of Jalisco, those of Escoba and Rio Blanco, but they are of much less importance.

There are no woolen mills, with the exception of a few hand looms.

The leather industry is greatly developed. There are in Guadalajara saddleries, shoe factories, and two tanneries; also two breweries, a paper mill, and canning factories.

The city is in a very prosperous condition, and many opportunities exist for the establishment of new industries.

In addition to Guadalajara, the State of Jalisco contains a number of other important cities, as shown by the following table:

Name.	Popula- tion.	Name.	Popula- tion.
Guadalajara	83,934	Tamazula	8,783
Zapotlanejo	20,270	Autlán	8,710
Ciudad Guzmán	17,374	Teocaltiche	7,568
Lagos	14,716	Ameca	7,212
Sayula	8,819	Cocula	7,090

The "Guia General" is authority for the statement that the number of public schools in the State exceeded, not including church and private schools, 500 in 1897. These schools had 31,725 pupils enrolled, 15,934 boys and 15,818 girls. The number of scholars attending church and private schools during the same period was 14,106. The total number of persons of school age attending all the schools in the State during the year referred to is thus shown to have been 45,858. The State of Jalisco spends more than \$300,000 Mexican silver annually in the maintenance of its schools. Guadalajara has a number of schools devoted to higher education, including the College of Medicine and Pharmacy, the Law School, the Lyceum, and the Normal School.

San Luis Potosí.—This important State, the capital of which is the city of the same name, is of irregular shape and covers an area of 65,586 square kilometers. It lies between 22° and 25° north latitude and is bounded on the north by the State of Coahuila; on the east by the States of Nuevo Leon, Tamaulipas, and Veracruz; on the south-east by the State of Jalisco; on the south by the States of Hidalgo, Queretaro, and Guanajuato, and on the west by the State of Zacatecas. The Tropic of Cancer passes through the northern part of this State at a point about 23 kilometers to the south of the famous mining district of Catorce. The population, according to the latest census returns, was 568,449 souls, or about 9 inhabitants to the square kilometer.

The State is traversed from north to south by the Sierra Madre range and is very mountainous, especially in the eastern portion. The central and western parts consist of the elevated table-land, which extends from north to south through that portion of the Mexican

Republic. The greater part of this table-land is exceedingly dry, but where water can be obtained for irrigation purposes the soil proves to be fertile and productive. The southeastern portion is well watered and contains numerous running streams, some of them of considerable volume and importance. The principal rivers are the Tantojon and Tamuin, which flow into the Panuco River.

The climate is mild. It varies somewhat according to the elevation, cool weather occurring in the higher altitudes during the winter months, and warm weather prevailing at all seasons of the year in the lower ones. The agricultural products are exceedingly varied, and, where irrigated, the rich soil produces abundant crops. The following table shows the principal agricultural products in 1897:

Alcohol:		Pepper:	
Distilled from grape juice,		Dried.. . . . kilograms..	258, 680
hectoliters	40, 000	Green.....hectoliters..	4, 450
Distilled from sap of cen-		Potatoes:

Peas	do..... 57, 383	Mezquite	do..... 15, 830, 996
		Oak	do..... 3, 149, 667

San Luis Potosi contained, in 1897, 196 large plantations, 3 of which were devoted exclusively to the cultivation of coffee, 39 to sugar cane, 139 to cereals, and 15 to the products of the century plant.

The mineral wealth of the State is very great. The great mining district of Catorce is famous the world over for its enormous deposits of silver ores. Immense quantities of high and low grade ores are taken from the rich mines of this district annually. Some of these mines have been worked more than 50 years without exhausting the supply of ore, and are still great producers. The argentiferous ores of this district contain a considerable percentage of lead, which adds to their value and desirability for smelting purposes. The immense output is shipped to the smelters at San Luis Potosi, Aguascalientes, and Monterey for treatment. A large number of other minerals are mined in different parts of the State. The principal mining districts are: Catorce, Matehuala, Cedral, San Luis, Guadalcázar, and Salinas.

Silver, lead, and copper ores are found in these districts in great abundance. Cinnabar is mined at Santa Maria del Rio, Guadalcazar, and Salinas; copper at Matehuala, and gold at Guadalcazar. The value of the annual silver production of the mines of the State is estimated at \$3,000,000 Mexican silver. There are numerous salt deposits in this State, the largest and most important being situated at Peñon Blanco, on the Mexican Central Railway. The works at this place produce thousands of tons of fine salt annually.

Stock raising in San Luis Potosi is in a flourishing and prosperous condition, and some authorities claim that it is the most important industry of the State, exceeding in value the agricultural industry. In addition to the large native herds which the State possesses, thousands of cattle are brought in annually from the neighboring States of Nuevo Leon, Coahuila, and Tamaulipas to graze and fatten upon the grassy plains of the table-lands and mountain slopes. When considered to be in a marketable condition, the beef cattle are separated from the herds, driven to the railway stations, and shipped to the City of Mexico, and other large distributing centers of the Republic. There are some thirty large ranches in the State devoted exclusively to the raising of cattle.

A branch of the Mexican Central Railway traverses the State from east to west. This branch line connects with the main line of the Mexican Central Railway at a point near the city of Aguascalientes, in the State of the same name. Its total length is 678 kilometers, about two-thirds of which is in the State of San Luis Potosi. This branch railway passes through San Luis Potosi, the capital of the State, and terminates at the port of Tampico, in the State of Tamaulipas. The main line of the Mexican National Railway crosses the State from north to south, placing both the State and city of San Luis Potosi in direct communication, via Laredo, Texas, with the United States. The Mexican National passes through the important cities of Monterey, State of Nuevo Leon; Saltillo, State of Coahuila, and the city of San Luis Potosi, terminating in the City of Mexico, the capital of the Republic. The principal stations of the Mexican National in the State of San Luis Potosi are the city of San Luis Potosi, Venado, and Catorce.

The Mexican Central Railway, in addition to passing through the capital of the State, runs through the important mining and commercial centers of Salinas, Guadalcazar, Cerritos, Cárdenas, and Valle. There are two other railway lines, both short. One extends from Matehuala to La Paz, a distance of 21 kilometers, while the other is known as the Vanegas, Cedral and Matehuala Railroad, and connects Vanegas, a station of the Mexican National Railway, with Matehuala, the length of line being 47 kilometers. These two short railways penetrate one of the richest mining districts of the Republic, and trans-

port annually thousands of tons of ore consigned to the different smelters of the State. Generally speaking the State highways are good, but the roads which cross the mountains are mere trails, and in many places are almost impassable.

The State of San Luis Potosi is divided into thirteen districts, the name and population of each being as follows:

Name.	Popula- tion.	Name.	Popula- tion.
Catorce	70,685	Santa Maria del Rio.....	41,095
Cerritos.....	27,131	Tamanzunchale.....	31,653
Ciudad del Maiz	34,758	Tancanhuitz	34,983
Guadalcazar	31,050	Valles	18,312
Hidalgo.....	42,143	Venado.....	36,345
Rio Verde.....	45,767		
Salinas.....	11,539	Total	568,449
San Luis Potosi	142,988		

San Luis Potosi, the capital of the State, has a population of 69,050 inhabitants, and is located 1,810 meters above sea level. It is one of the principal smelting and commercial centers of the Republic. Hundreds of tons of ore are smelted daily in the large reduction works situated in the suburbs of this city. Thousands of workmen are employed in the handling of ores, and hundreds of thousands of dollars are paid out to them annually in the form of wages. The city contains many large and handsome public buildings, churches, and schools, and has one of the finest theaters in the Republic. It is a healthful community, the climate is salubrious, but little rain falls, and the atmosphere is clear and dry. The water supply is at present somewhat deficient, but steps are being taken for the construction of large reservoirs in the neighboring hills to remedy this defect. Considerable manufacturing is done at San Luis Potosi, the principal products being soap and candles, pottery wares, hats, paints, cigars and cigarettes, beer, etc.

San Luis Potosi contains one of the largest furniture factories in the Republic. This factory is very complete and its products are to be found in many of the Mexican cities. Almost all the wood used comes from the United States. This seems unusual in a country so rich in cabinet woods, but it is owing to the fact that mahogany and the other fine woods of Tabasco and Chiapas can not be worked until they are seasoned, which takes considerable time. As the shops of San Luis Potosi do not keep a sufficiently large stock on hand, they prefer to buy the seasoned wood in the United States. Walnut lumber is principally employed for the fine furniture. The other industries of the city are cotton goods factories, tanneries, breweries, etc.

The principal exports are to the United States, and consist of goat-skins, bones for the manufacture of phosphorus, fruits from the Rio Verde region shipped to St. Louis, and cattle which are exported to Cuba.

The other large towns of the State are shown in the following table:

Name.	Popu- lation.	Name.	Popu- lation.
Catorce	9,457	San Luis Potosi.....	69,050
Cedral	6,333	Soledad Diez Gutierrez.....	5,730
Matchuala	13,101	Venado.....	5,750
Rio Verde.....	6,628		

In 1897 San Luis Potosi had 173 State and 162 municipal schools devoted to primary education. The Government also maintains several institutions of higher education, the principal school being the Scientific and Literary Institute, located at the capital of the State, which has an able corps of professors and is otherwise well equipped.

Territory of Tepic.—The Territory of Tepic is bounded on the west by the Pacific Ocean, on the north by the States of Sinaloa and Durango, and on the east and south by the State of Jalisco. It has an area of 29,211 square kilometers, and is situated between 20°40' and 23°20' north latitude. It formerly belonged to Jalisco, but was made a free Territory during the administration of President LERDO DE TEJADA in recognition of the services rendered the Republic of Mexico by the Indian Chief LOZADA.

The Sierra Madre range traverses the Territory from southeast to northeast. The eastern portion of Tepic is exceedingly mountainous. Precipitous cliffs and deep *barrancas* (cañons) occur with great frequency. At the bottom of some of these are rapid mountain streams, many of which empty into Santiago River. The western part of the Territory is level, and is crossed by numerous small rivers and creeks. These streams overflow during the rainy season and flood the plains through which they pass, enriching the soil and rendering it wonderfully fertile and productive. In the southern part of the Territory, in the district of Ahuacatlán, the country is almost entirely of volcanic origin. In this part of Tepic is found the celebrated volcano Ceboruc, 1,525 meters above the level of the sea. In 1870 this volcano was in a state of great activity, and threw out immense quantities of lava and ashes. Not far from Ceboruc is the celebrated Sangangüey Peak, which rises to a height of 2,000 meters above the level of the sea.

The principal river that runs through the Territory is the Lerma, or Santiago, which originates in the tributaries that flow into Lake Chapala, in the State of Jalisco. This important river empties into the Pacific Ocean just to the north of the port of San Blas. Many smaller streams are found in the Territory, a number of which could easily be used for irrigating the fertile valleys through which they pass. The extension of the maritime coast line is about 300 kilometers, and San Blas is the principal port.

The climate of the lowlands is hot, while that of the higher regions

is temperate and agreeable, some of the high mountain table-lands and slopes being cold. The agricultural productions of the Territory are numerous and abundant. They are similar in variety and number to the productions of the famous agricultural States of Veracruz, Puebla, and Oaxaca. The valley of Jala is famous for its great productiveness, the fertility of the soil being such that the planting of one bushel of corn is said to yield six hundred fold. Besides cereals, cotton, tobacco, sugar cane, coffee, beans, and rice grow luxuriantly. Agriculture is the chief industry of Tepic, and corn and beans are raised in considerable quantities all over the Territory. Wheat and other cereals grow in the districts of Ahuacatlán and Tepic; rice in Compostela, Tepic, Ahuacatlán, and San Blas; cotton in Acaponeta and Santiago Ixcuintle, and coffee, tobacco, and sugar cane in all the districts of the Territory. According to the "Guia General," Tepic has 48 large plantations, 7 of which are devoted exclusively to the cultivation of cotton, 4 to coffee, 22 to sugar cane, and 15 to wheat, barley, and other grains.

Samples of coffee grown in the Territory of Tepic sent to New York have been pronounced to be of very fine grade, and similar samples sent to Hamburg were valued at a price exceeding not only the Brazilian coffee, but also that of Córdoba and other coffees from the eastern coast of Mexico. The best coffee lands are to be found in the district of Compostelles in a zone parallel to the ocean and at an elevation of 800 meters.

Tobacco is exported to Central America, which consumes about 1,000,000 kilograms annually of this product grown on the west coast of Mexico. This industry is susceptible of great development.

Rubber trees grow wild, but up to the present time no attempt has been made to establish plantations. The same can be said of Yucatan henequen. The soil is also suitable to the cultivation of the olive tree.

The territory is rich in mineral wealth. The principal mining regions are as follows:

District.	Mining camps.	Class of ores.
Acaponeta	Motaje	Silver.
	Mojocuanilla	Do.
	Teponahuata	Do.
	Minitos	Do.
	La Candelaria	Silver and gold.
	San Francisco	Do.
	Montaña de Oro	Do.
Ahuacatlán	Castellana and San Ramon	Silver.
	Pinolillo	Do.
	San Jose	Do.
	Refugio	Silver and gold.
	Buenavista	Do.
	La Yesca	Do.
	La Rondadera	Do.
Compostela	Huicicila	Silver.
	Espiritu Santo	Do.
Santiago Ixcuintla	Zapilote	Do.
	San Francisco de Tenamache	Do.
Tepic	Aguapán	Do.
	Acuilapila	Do.

The *patio* and lixiviation processes are used in treating the ores from many of these mines. A number of the mining regions are difficult of access, and many mines are idle due to the lack of favorable transportation facilities. Much of this natural wealth must necessarily lie dormant and undeveloped until railroad communication is established.

Stock raising is carried on throughout the entire Territory. A number of the large plantations have great herds of cattle, sheep, and goats, but the industry is as yet in its infancy. Tepic contains every natural condition that could be desired for the profitable raising of live stock, and this industry is constantly developing and growing in importance.

There are no railroads in the Territory. San Blas is the principal port, and does a large maritime business with the entire Pacific coast of North and South America. A great number of steamships and sailing vessels touch at this port annually. In addition to a large international trade, the coastwise trade is of great importance, and is constantly increasing, San Blas being a great distributing and commercial center. A fairly good wagon road connects San Blas with Tepic, Ahuacatlán, and Ixtlan, and then proceeds to Guadalajara in the State of Jalisco. The other highways of Tepic are not good, many of them being little more than mere mountain trails. When constructed, the proposed railway from Tepic to San Blas will be a powerful factor in the development of the entire Territory.

The political divisions of the Territory are as follows:

District.	Popu- lation.	District.	Popu- lation.
Acaponeta	25,400	Santiago Ixcuintle.....	24,386
Ahuacatlán	36,765	Tepic	45,493
Compostela	11,643		
San Blas	5,029	Total	148,776

The Federal Government maintains 90 primary schools in the Territory, 36 of which are for boys, 25 for girls, and 29 mixed. In 1898 1,354 boys and 1,223 girls attended these schools, and the sum of \$59,182, Mexican silver, was paid out by the Government for teachers' salaries and other necessary expenses incurred for educational purposes. Statistics show that during the same period there were 19 private schools in operation in the Territory, with an enrollment of over 650 pupils of both sexes.

The city of Tepic is the capital of the Territory. It is situated on the banks of the Tepic River at an elevation of 968 meters above the level of the sea and contains more than 15,000 inhabitants. It has some fine buildings, such as the Calderon theater, the penitentiary, the Government palace, a handsome cathedral, and a number of fine churches and other public edifices. The city possesses several small

but attractive parks, the most noted of which are Hernan Cortes and Hidalgo. Beautiful tropical and subtropical flowers and plants adorn the public parks and grow luxuriantly in the private gardens of the city. The climate, though somewhat warm in summer, is salubrious and healthful, and, with better transportation facilities, the city would undoubtedly rapidly increase in population and commercial importance. Considerable manufacturing is carried on in the Territory, and especially in the city of Tepic, where there are in operation large cotton, soap, and other factories, provided with substantial buildings and equipped with modern machinery and appliances. The city also contains a large distillery which produces considerable quantities of alcohol and mescal.

THE WORLD'S SUGAR PRODUCTION, 1901-2.

The "Bulletin Commercial" of Brussels states that, according to information secured from various reliable sources, the total production of beet sugar in the world will reach 6,363,000 tons in 1901-2, as against 6,048,000 tons in 1900-1901.

ESTIMATE OF THE BULLETIN COMMERCIAL.

The production of the various countries is estimated as follows, the figures for the preceding year being given for purposes of comparison:

Countries.	1901-2.	1900-1901.	Countries.	1901-2.	1900-1901.
Germany	2,125,000	1,979,000	Denmark	60,000	53,000
France	1,150,000	1,170,000	Spain	100,000	84,000
Austria	1,125,000	1,074,000	Italy	77,000	66,000
Russia	1,050,000	920,000	Roumania	18,000	24,000
Belgium	350,000	340,000	Other countries	3,000	48,000
Holland	190,000	178,000			
Sweden	115,000	112,000	Total	6,363,000	6,048,000

The figures of cane-sugar production during the periods under comparison are given as follows:

Countries.	1901-2.	1900-1901.	Countries.	1901-2.	1900-1901.
Cuba	755,000	512,061	Porto Rico	80,000	55,089
Java	720,000	704,456	Barbadoes	60,000	61,074
United States	400,000	350,000	Trinidad	50,000	47,942
Hawaii	340,000	320,000	Philippines	50,000	55,559
Brazil	190,000	180,000	Reunion	40,000	42,631
Mauritius	170,000	174,938	Guadeloupe	40,000	37,946
Peru	135,000	120,000	Martinique	35,000	33,543
Demerara	100,000	95,188	Jamaica	30,000	30,000
Lesser Antilles	95,000	85,000			
Egypt	90,000	85,000	Total	3,380,000	2,990,427

From this estimate it is evident that, taken as a whole, the world's sugar production in 1901-2 will be considerably in excess of that of the preceding year.

INTERNATIONAL UNION'S ESTIMATE OF THE BEET-SUGAR PRODUCT.

The United States Consul at Bremen, under date of December 16, 1901, forwarded to the Department of State at Washington a report on the sugar production of Europe. This states that the result of the investigations made on the subject of the beet-sugar crop in Europe by the International Union for Sugar Statistics shows the following figures for the years in question:

Countries.	1901-2.	1900-1901.	Countries.	1901-2.	1900-1901.
Germany	2,220,850	1,974,785	Sweden	121,392	115,547
Austria	1,306,900	1,083,300	Denmark	57,500	50,760
France	1,080,300	1,100,171	Other countries	221,000
Russia	1,079,550	893,520			
Belgium	325,000	320,000	Total	6,612,592	5,716,183
Holland	200,100	178,100			

There will apparently be an overproduction of sugar in Europe, according to the above report, amounting to 1,000,000 tons, and the stock to be carried over to next season may reach 1,500,000 tons.

ESTIMATES PRESENTED TO THE BRUSSELS CONFERENCE.

A recent press dispatch states that European sugar manufactures are much alarmed about the present sugar crisis. The reports submitted to the Brussels Conference by the beet-sugar producers show that during the sugar season of 1901 Germany manufactured about 2,000,000 tons of sugar, the home consumption of which amounted to 850,000 tons; Austria manufactured 1,200,000 tons, with a home consumption of 400,000 tons; France manufactured 1,000,000 tons and consumed only 450,000 tons, while Russia's production of 1,000,000 tons was largely consumed at home, the beneficial cartel (agreement between manufacturers) in that country meeting the exigencies of any situation that arises. Belgium produced 330,000 tons of sugar, and consumed 70,000 tons, and Holland, with a home consumption of 75,000 tons, produced 190,000 tons. Other European countries—that is to say, Spain, Italy, and Roumania—have now become sugar producers, thus producing disadvantageous results for the countries that formerly supplied them with this commodity.

The calculations accepted as accurate by the Sugar Conference estimate the total of the beet-root sugar production for 1901 at 6,470,000 tons, while the consumption in these countries is only 3,600,000 tons. The excess thus existing is 2,870,000 tons, of which England received nearly 1,700,000 tons, a portion of the remainder going to the United States and the rest being stored in warehouses, where, controlled by cartels, it is an important factor in the European market.

ESTIMATE OF CANE-SUGAR PRODUCTION.

The greater part of the sugar used in the United States is manufactured from the cane, and from this standpoint it is difficult to realize that two-thirds of the sugar produced in the world is made from beets. The following table shows the sources of supply of the cane sugar of the world, the crop, in tons, of the year 1901-2 being compared with that of 1900-1901, according to accepted American authorities:

Countries.	1901-1902.	1900-1901.
	<i>Tons.</i>	<i>Tons.</i>
United States (Louisiana)	300,000	275,000
Porto Rico	100,000	80,000
Hawaiian Islands *	300,000	321,461
Cuba (crop)	875,000	636,000
Trinidad (exports)	50,000	50,000
Barbados (exports)	60,000	60,000
Jamaica	30,000	30,000
Antigua and St. Kitts	25,000	25,000
Martinique (exports)	32,000	32,000
Guadaloupe	35,000	35,000
St. Croix	13,000	13,000
Haiti and San Domingo	45,000	45,000
Lesser Antilles	8,000	8,000
Mexico (crop)	95,000	93,000
Guatemala (crop)	9,000	9,000
Salvador	5,000	5,000
Nicaragua (crop)	3,500	3,500
Costa Rica (crop)	1,500	1,500
British Guiana (exports)	95,000	95,000
Dutch Guiana (crop)	6,000	6,000
Venezuela	3,000	3,000
Peru (exports)	105,000	105,000
Argentine Republic (crop)	115,000	114,252
Brazil (crop)	215,000	190,000
Total in America	2,526,000	2,235,713
British India (exports)	15,000	15,000
Siam (crop)	7,000	7,000
Java (crop)	725,000	710,120
Philippines (exports)	70,000	52,000
Total in Asia	817,000	784,120
Queensland	117,000	92,554
New South Wales	19,000	19,000
Fiji Islands (exports)	33,000	33,000
Total Australia and Polynesia	169,000	144,554
Egypt (crop)	95,000	94,880
Mauritius	180,000	175,267
Reunion	35,000	35,000
Total for Africa	310,000	305,147
Spain	33,000	33,000
Total cane-sugar production	3,855,000	3,502,534

* A dispatch from Hawaii, via San Francisco, dated January 16, 1902, stated that it was estimated that the Hawaiian sugar crop for the year ending November 1, 1901, would be 281,000 tons, a considerably lower estimate than the figures given in the preceding tables. Of the 281,000 tons, 100,000 will be sent to San Francisco for distribution to various points in the United States, 68,200 will be sent via the Straits of Magellan and 18,000 via Cape Horn to the eastern part of the United States.

THE GREATEST CONSUMER OF CANE SUGAR.

Of the cane sugar of the world, the United States uses the greater part. In 1900 the entire production of the North, South, and Central Americas was 2,204,252 tons of cane sugar; the consumption in the United States amounted to 2,219,847 tons. In the calendar year 1901

the United States is estimated to have consumed 2,372,316 long tons of sugar of all kinds, as compared with 2,219,847 long tons in 1900, an increase of 152,469 tons, or about 6.87 per cent. This consumption was distributed as follows: Domestic cane sugar, 292,150 tons; domestic beet sugar, 124,859 tons; maple sugar, 5,000 tons; molasses sugar, 17,977 tons; a total of 439,986 tons domestic production; and 1,672,529 tons of foreign cane sugar, 217,286 tons of foreign raw beet sugar, and 42,515 tons of foreign refined sugar, a total of 1,932,330 tons of sugar from foreign countries and insular possessions. Of the imports of cane sugar from external sources, 309,070 tons were Hawaiian, 66,279 tons Porto Rican, and 5,100 tons Philippine.

The amount of refined sugar which went into consumption in 1901 was 2,287,828 tons, and the undistributed stock of refined sugar at the close of the year is estimated at 30,000 tons, as against 30,000 tons in 1900.

According to Mr. C. F. SAYLOR, the special agent in charge of the beet-sugar investigation of the Department of Agriculture, the total production of beet sugar in the United States in 1901-1902 will be 185,000 tons in the aggregate, as against 77,000 tons produced in 1900-1901.

ESTIMATES OF THE UNITED STATES BUREAU OF STATISTICS

The Bureau of Statistics of the Treasury Department of the United States incorporated an elaborate compilation on sugar in its latest volume of trade reports which presents some interesting figures with reference to sugar production and consumption.

From the tables presented the first important fact observed is the gain of the beet-sugar product upon that of cane sugar. In 1887-88 the production was: Beet sugar, 2,451,000 tons; cane sugar, 2,465,000 tons. By 1899-1900 the developments had been such as to give the following results: Beet, 5,510,000 tons; cane, 2,904,000 tons. Beet sugar, which supplied only 5 per cent of the world's sugar consumption in 1840, supplied 67.71 per cent in 1900. Cane sugar, instead of being the menacing has been the menaced article. It is said that but a single factory in all the United Kingdom of Great Britain now refines cane sugar, though the fortunes of English colonies are bound up in cane culture.

The largest production of beet sugar is on the Continent of Europe, and Germany, Austria-Hungary, and France take the lead in the business. Their output for the season 1900-1901 was: Germany, 4,132,996,689 pounds; Austria-Hungary, 2,388,304,909 pounds; France, 2,293,432,474 pounds.

But while these countries are such great producers they do not rank high in the list of consumers. At the head of this list is Great Britain, which produces no sugar at all. The consumption of this nation is at

the rate of 91.6 pounds per capita per annum, and other countries follow in this order: United States, 65.2 pounds; Switzerland, 60.3 pounds; Denmark, 54.8 pounds; Sweden and Norway, 38.2 pounds; France, 37 pounds; Germany 33.9 pounds; Netherlands, 32.5 pounds; Belgium, 23.3 pounds; Austria-Hungary, 17.6 pounds.

TRADE OPPORTUNITIES IN LATIN AMERICA.

MR. LAMOR LYNDON, of New York, is reported to have prepared a report for an electric railway in Santo Domingo.

It is stated that arrangements are being made for the construction of a drainage system in the city of Merida, Yucatan, Mexico. About 28 miles of pipe will be required. The estimated cost of the system is \$5,000,000. Particulars may be obtained of H. H. BARNES, of 20 Broad street, New York.

The Honduras Construction Company, with a capital of \$50,000, has been incorporated for the purpose of securing concessions in Honduras for railways, telegraph, and telephone lines. NATHANIEL H. KENNEDY, of East Orange, New Jersey, is one of the interested parties.

Florianapolis, Brazil, through the municipal council, is asking bids for the construction of waterworks, drainage canals, electric lights, and other improvements. For particulars, address the president of the council.

The municipal authorities of Durango, Mexico, will give aid and encouragement, so it is reported, to any foreign company undertaking the construction of waterworks for that city. Durango has a population of 40,000 people, and it is estimated that about 12,000,000 liters of water will be required for the needs of the inhabitants. The estimated cost is about \$300,000 silver.

The British Consul at Bahia, reporting on the trade of the State of Sergipe, Brazil, states that there is an opening for the sale of foreign merchandise of a general character in that State. The only traveling salesmen visiting Sergipe are Brazilians, who represent native or German firms.

According to reliable information there is a market in Guatemala for agricultural machinery. The attention of manufacturers is called to the fact that there is also at present a demand for lists of current prices of products sold in tropical countries, catalogues of agricultural machinery and implements, catalogues of houses selling seeds and fertilizers, and also the names of agricultural reviews and other publications relating to agricultural industries of all kinds.

The "Blue Book" of Mexico, published by the MASSEY-GILBERT Company, first Independencia 8, City of Mexico, is a small directory

of English-speaking people in the city, together with a partial business and general directory in English, which may be of some use to prospective exporters to that city. A general directory of the city, in Spanish, was recently published by RUHLAND & ALSCHIER, Coliseo Viejo 16, of the same city, which is the most elaborate and accurate directory issued, though it is far from complete. The same firm publishes a general business directory of the Republic, which may be of value to prospective exporters in the United States.

In the course of his annual report the Consul-General of the United States in the City of Mexico says: "The use of Spanish in catalogues and correspondence can not be too strongly recommended to United States firms desiring to build up a trade in Mexico. Correspondence, circular letters, catalogues, and general advertising matter in English are worse than wasted on Spanish merchants. It is true that more Mexicans are learning the English language every year, but as yet they are comparatively few, especially outside of the national capital, and it is a safe rule to employ Spanish in all correspondence to Mexico. The same applies to commercial agents. It is, as a rule, useless for a business house to send a representative to Mexico who is ignorant of the Spanish language. It is also useless to expect that business of any kind can be transacted as quickly in Mexico as in the United States. American commercial houses desiring to build up a trade in Mexico should 'make haste slowly.'"

In a report to the Department of State, United States Consul-General EUGENE SEEGER, at Rio de Janeiro, says: "From a prominent representative of Belgian capitalists I have received the following information, which may be of interest to American investors, especially in the gas and electrical industries: The gas company in Rio, which consists exclusively of Belgian capitalists and their representatives, and enjoys valuable rights and privileges, is very much in need of funds to make improvements and extensions necessary on account of the largely increased demand and the more modern requirements. In order to develop the earning power the capacity of the plant ought to be greatly enlarged and an electric plant ought to be added. The estimate of expenses for the necessary improvements amounts to about \$3,000,000, which sum the company seems to be unable to raise here or in Belgium. The capital invested in the plant up to date is about \$10,000,000, and the company's contract with the city expires in forty-five years. The managers would be willing to transfer all their rights and privileges and the controlling interest of the property to an American syndicate which would undertake the necessary improvements, provided they could be accorded a fair share in the net earnings of a new company to be organized on that basis. I was handed the inclosed copy of the *Messenger de Bruxelles*, containing the official report of the last meeting of the stockholders. Capitalists interested

in this enterprise can have the inclosure translated for their benefit. I will, of course, be glad to procure any additional information desired." The report to which Consul SEEGER refers is filed in the Bureau of Foreign Commerce, Washington, District of Columbia, where it may be consulted by interested parties.

The municipal authorities of Orizaba, Veracruz, are reported to have decided on a water service for that Mexican city. The projected service necessitates the construction of a rubble-work masonry canal for the purpose of providing a minimum consumption of 130 liters per second, and the construction of storage tanks having a capacity of 1,000 cubic meters each, the same to be made in excavation. Proposals for the carrying out of the work are invited from foreign contractors. Further particulars can be obtained by entering into communication with SENOR M. LANSCANO, secretary, Orizaba, Veracruz, Mexico.

It is reported that tenders for the extension of the docks at the port of Buenos Ayres, Argentine Republic, are to be asked by the Secretary of State for Foreign Affairs.

The United States Consul at Pará, Brazil, states that the rubber exporting firm of FRANK DA COSTA & Co. desires to purchase six safes for the preservation of money, books, and other valuables.

TRADE WITH SPANISH AMERICA.

The Consul-General of Mexico at New York City announces that the imports from Mexico through the port of New York during the month of January, 1902, were as follows:

Articles.	Quantity.	Articles.	Quantity.
Alligator skins.....bales..	75	Hair.....bales..	18
Bones.....crates..	633	Honey.....barrels..	586
Broom root.....bales..	1,994	Ixtle.....bales..	1,821

During the same month, 13 ships carrying 163,655 packages cleared from the port of New York bound for Mexican ports, and 10 ships bringing 133,491 packages from Mexico entered that port.

According to statistics furnished by the Mexican Consul at Nogales, Arizona, merchandise to the value of \$138,723.70 entered the Mexican Republic through that port during the month of December, 1901. These products were classified in the following manner:

Animal substances	\$23, 219. 50	Paper and paper products...	\$2, 214. 00
Vegetable products	33, 894. 50	Machinery and apparatus...	20, 242. 00
Mineral products	22, 331. 80	Vehicles	4, 213. 00
Textile products	14, 123. 90	Arms and explosives	6, 222. 00
Chemical products	7, 032. 50	Sundry articles	4, 120. 50
Spirituous beverages	1, 110. 00	Total	138, 723. 70

The foregoing products originated in the following countries:

United States	\$130, 900. 70
Germany	3, 656. 00
England	1, 609. 00
France	2, 358. 00
Switzerland	200. 00
Total	138, 723. 70

The duties collected on these goods by the Mexican Government amounted to \$56,381.26, silver.

The exports from Mexico to the United States, through the port of Nogales, during the month of December, 1901, were valued at \$1,259,791, Mexican silver, and were made up of the following items:

Articles.	Quantity.	Value (Mexican silver).
Cattle		\$79, 638
Copper bullion	pounds.. 4, 798, 012	766, 850
Fruits		19
Gold bullion and gold dust	ounces.. 7, 624	152, 448
Hides	pounds.. 100, 905	7, 891
Lead bullion		13, 506
Mescal		62
Oranges		3, 642
Ores		156, 012
Salt		23
Silver bullion		79, 700
Total		1, 259, 791

The Consul-General of Venezuela at New York advises that the total shipments from that port to the Republic of Venezuela during the month of January, 1902, consisted of 35,593 packages, weighing 2,020,591 kilograms, valued at \$201,264.21, as compared with 41,345 packages, weighing 3,063,565 kilograms, valued at \$230,718.32 in January, 1901. The following table shows the movement of this merchandise in detail:

Ports.	1901.				1902.		
	Articles.	Number of pack- ages.	Weight.	Value.	Number of pack- ages.	Weight.	Value.

The Mexican Consul at San Francisco, California, advises that during the month of January, 1902, the total shipments from San Francisco of American products to Mexican ports were valued at \$157,642. Goods of foreign origin reexported from the same port during the month referred to amounted to \$12,621. The imports during the same period consisted of mineral products to the value of \$202,161, and sundry other products amounting to \$40,166.

Six thousand eight hundred and ninety-five Mexican dollars were shipped to Hongkong during the month.

The following table shows the imports in detail:

Products.	Value (Mexican silver).
Gold coin.....	\$3,164
Gold bullion.....	35,255
Lead ores.....	74,633
Mexican dollars.....	230
Silver bullion.....	88,879
Sundry products.....	40,166
Total.....	242,327

The Vice-Consul of Mexico at Pascagoula, Mississippi, reports that the shipments from Pascagoula to the Mexican ports of Vera Cruz, Progreso, Tlacotalpam, and Campeche during the month of January, 1902, consisted of lumber valued at \$7,335 and general merchandise amounting to \$2,140, or a total of \$9,275.

During the month of January, 1902, according to the reports of the Vice-Consul of Mexico at Mobile, three ships from the Mexican ports of Progreso and Frontera entered the port of Mobile, Alabama, bringing 1,799 tons of henequen and 88 tons of mahogany. During the same period three ships loaded with lumber and general merchandise cleared from Mobile destined to the port of Progreso, Mexico.

The following table, compiled by the Mexican Consul at Galveston, Texas, shows the exports of merchandise from that port to the Mexican ports of Tampico and Tuxpam during the month of January, 1902:

Articles.	Quantity.	Weight.	Value.
		<i>Pounds.</i>	
Construction timbers.....pieces..	1,638	463,800	\$1,659.23

Total.....			91,953.52

* Kilograms.

The Consul-General of the Republic of Uruguay at Baltimore, Maryland, states that the exports from the United States to Uruguay in 1901 rose to \$2,631,443.46, \$1,000,000 of which consisted of shipments of gold and \$1,631,443.46 of merchandise. In 1900 the ship-

ments of merchandise amounted to \$1,904,300.62, or \$272,897.16 more than the shipments of merchandise in 1901. The decrease is principally due to the falling off in 1901 of exports from New York City. The imports into the United States from Uruguay in 1901 aggregated \$2,854,418.78, as compared with \$2,383,212.40 in 1900, or an increase of \$470,936.38 in 1901. Of this increase \$464,639.01 consisted of hides. These figures include 66,239 bales of jerked beef, valued at \$512,046.01, shipped from Uruguay to Cuba, via the United States, in bond. Deducting the value of jerked beef from the total imports leaves \$2,342,372.77 worth of Uruguayan products actually consumed in the United States during the year 1901.

The Mexican Consul at New Orleans, Louisiana, advises that in January, 1902, there were shipped from Mexican ports to the port of New Orleans 10,972 packages of coffee, henequen, and cabinet woods. The exports from New Orleans to Mexican ports during the same period aggregated 48,963 packages of railway machinery, groceries, and sundry merchandise, valued at \$131,570.

BOOK NOTES.

Books and pamphlets sent to the Bureau of the American Republics, and containing subject-matter bearing upon the countries of the International Union of American Republics, will be treated under this caption in the *Monthly Bulletin*.

"The Report of the Pan-American Railway Committee to the Second International Conference of American States, held in the City of Mexico, Winter of 1901-2," was recently issued from the press of Gibson Brothers, Washington, D. C. (1902), in pamphlet form. The members of this committee were Señor Don J. B. CALVO, of Costa Rica; Hon. H. G. DAVIS, of the United States; Señores Don ALBERTO ELMORE, of Peru; Don BALTAZAR ESTUPINIAN, of Salvador; Don J. LEONARD, of Honduras; Don AUGUSTO MATTE, of Chile; Don FRANCISCO ORLA, of Guatemala; Don JOSÉ LOPEZ PORTILLO Y ROJAS, of Mexico, and Don RAFAEL REYES, of Colombia.

According to a table incorporated in the report the distance from New York to Buenos Ayres is 10,228.06 miles (16,460.32 kilometers), over which 4,771.93 miles (7,679.61 kilometers) of railroad are yet to be built in order to make connections with existing lines. In making the estimate the Committee considers the unfinished part of the route at 5,000 miles and believes that the work of construction will cost on an average \$40,000 per mile, so that the sum of at least \$200,000,000 would be required for the completion of this great project.

The Committee unanimously recommended the construction of an

intercontinental line with branches where necessary to connect with the principal cities, passing through the different Republics and connecting the systems of the United States and Mexico with those of the Argentine Republic. The Committee also indorsed the recommendations adopted by the first International Conference, held in the city of Washington in 1889-90, and formed additional articles of recommendation which (1) requested the delegates to urge upon their respective Governments the granting of liberal concessions to the enterprise; (2) invited the United States to initiate with the Ministers of the other American Republics at Washington the adoption of measures that would result in sending within one year to said Republics competent and reliable persons who are to report of the resources of the different countries, the conditions of existing railroad lines, commercial conditions, the prospects for business for an intercontinental line, and to ascertain what concessions or assistance each country is willing to grant such an enterprise; (3) providing for the appointment by the president of the Conference of a permanent committee of five members residing in the United States, which is to report at the next Conference and furnish in the meantime all information possible in regard to the enterprise, and conferring upon said committee, in conjunction with the Secretary of State of the United States and with the Ministers of the interested countries resident in Washington, power to convoke, within a period of one year, an assembly composed of representatives of all the Republics for the purpose of arranging for the construction of the proposed railway.

The report of the committee was unanimously adopted, and the president of the Conference appointed the following gentlemen as a permanent Committee on Pan-American Railway to further the project after the adjournment of the conference: Messrs. HENRY G. DAVIS, of West Virginia, and ANDREW CARNEGIE, of New York, U. S. A.; Señores Don MANUEL DE ASPIROZ, Ambassador of Mexico to the United States; Don MANUEL ALVAREZ CALDERÓN, Minister of Peru to the United States, and Don ANTONIO LAZO ARRIAGA, Minister of Guatemala to the United States.

The appendix to this report contains communications from the delegations to the Conference in response to the request of the committee, which give information with regard to the railway lines in operation, those under construction, and those in contemplation in the several countries represented. The pamphlet also contains a map showing the transportation routes between the United States and other American countries.

In a large octavo volume of 576 pages, embellished with 178 illustrations, W. GOLDEN MORTIMER, M. D., has presented to the public a history of coca from which the anæsthetic alkaloid cocaine is prepared. The volume, which was issued from the publishing house of

J. H. Vail & Co. (New York, 1901), bears the title, "Peru; History of Coca, the Divine Plant of the Incas." Although of a scientific nature, this work has not been written exclusively for scientists. The history of the coca plant is preceded by an account of the Incas, their rites and ceremonies, their conquest by the Spanish and of the Indians of to-day. A chapter is devoted to the physical aspect of Peru, and another to the coca region of the country. The author presents ample testimony that coca is not only a substance innocent as is tea or coffee, but that it is vastly superior to those substances and more worthy of general use, because of its depurative action on the blood, as well as through its property of provoking a chemico-physiological change in the tissues, whereby the nerves and muscles of the human frame are rendered more capable of doing their work. The book contains an extended index, embraced in which is a glossary of Incan or Quichua terms.

The library of the Bureau of the American Republics is in receipt of a handsomely illustrated volume of 472 pages, written by Mrs. ALEC TWEEDIE, an English woman and a traveler of some note. This book, issued from the press of the MacMillan Company (New York, 1901), bears the title "Mexico As I Saw It," and is mainly devoted to the record of scenes familiar to Mexican life and their impression upon the writer. A chapter is devoted to President DÍAZ and his administration, one to the history of the country, and another to the Emperor MAXIMILIAN and the Empress CARLOTTA. Of the numerous reminders of ancient civilization which exist in such abundance within the confines of the Republic, the Aztec mines of Xochicalco and the ancient ruins of Mitla, particularly enthused the writer. Two appendices are included in the work, Appendix A being devoted to mining and trade statistics up to 1899, and Appendix B containing some very pertinent information for travelers in the Republic. The illustrations with which the volume is embellished are reproductions from photographs taken by the author, while a finely executed map adds to the attractiveness of the book.

"A Summer Journey to Brazil" is the title of an octavo volume of 150 pages, written by ALICE R. HUMPHREY, and published by Brownell, Silver & Co. (London, 1900). Beside the city of Rio de Janeiro, the writer visited Petropolis (the diplomatic center), Pernambuco, Santos, and São Paulo, all these cities being described to a limited extent. In a chapter devoted to "facts about Brazil," it is stated that the Republic "embraces about one-fifteenth of the habitable globe, one-fifth of both Americas, and three-sevenths of South America," that "it is larger than the United States and her territories, with the exception of Alaska, and fourteen times as large as France," that "it has a coast line of nearly 5,000 miles, and possesses fifty-two seaports, among which are the largest and best of the world," that "its mate-

rial resources are almost incalculable, embracing the products of both the temperate and torrid zones, while the climate is varied, and, on the whole, very favorable." The volume is embellished with a number of illustrations.

The Department of Agriculture of the United States has issued a bulletin prepared by EDWIN S. HOLMES, Jr., which gives "Statistics on the Fruit Industry of California." This industry was practically begun during the establishment of the missions of the Franciscan monks, and as early as 1792 they had about 5,000 growing fruit trees. The fruit era, however, did not begin in the State until the gold excitement in 1849 brought thousands of people into its confines. The climate and soil are peculiarly adapted to the industry and the varieties produced include apples, apricots, cherries, figs, grapes of all kinds, peaches, pears, plums, prunes, olives, quinces, and all citrus fruits. The number of bearing trees in 1900 was 16,192,876, while the number not yet producers was 13,209,411, a total of 29,402,287. These cover 409,557 acres, to which must be added the vineyards (157,000 acres) and the orchards devoted to almonds (22,852 acres) and walnuts (19,843 acres), making a grand total of 609,252 acres.

"The Jewelers' Circular," New York, contained as a supplement to its issue for February 5, 1902, an interesting "Tabular arrangement of the distinguishing characteristics and localities of precious stones" prepared by Mr. LEOPOLD CLAREMONT. Besides information regarding the composition, mode of occurrence, etc., this publication shows that what are known as precious stones are to be found in the following countries of the American continent: Diamonds, Brazil; sapphires and fancy sapphires, Montana, United States; topaz, garnets, chrysoberyl, alexandrite, catseye, and spodumene, Brazil; emeralds and beryl, South America; phenakite, Peru; euclase, Brazil and Peru; hiddenite, North Carolina, United States; cairngorm, in all the Republics; sphene or titanite, United States; turquoise, all of North America; precious opals, Mexico.

"The Aztecs, their History, Manners, and Customs," from the French of LUCIEN BIART, authorized translation by J. L. GARNER (A. C. McClure & Co., Chicago, 1900). While Mexico of the present is well known, the Mexico of the past—the Mexico of the Aztecs—is almost ignored by the writers of to-day. In this volume the author, availing himself of the observations of the persons who saw Mexico in its Aztec splendor, CORRES and other conquerors and explorers, attempts to reclothe with life a people whose descendants, subdued by the progeny of their ancient oppressors, have forgotten not only their history, but even their racial name. Chapters in this book are devoted, respectively, to the worship, education, military institutions, agricultural pursuits, trade, language, poetry, and art of the Aztecs.

"To the Pacific and Mexico," by A. K. McCURE, LL. D. (J. B. Lippincott Company, Philadelphia, 1901). This volume of 162 pages is made up of letters which originally appeared in the "Philadelphia Times," and were written amidst the exactions of a journey across the United States to San Francisco, and thence by El Paso to the city of Mexico, returning by way of Eagle Pass and New Orleans. The interesting scenery of the western mountain ranges of the United States and the vastly more entertaining historical lessons in Mexico, inspired the author to present to the public a record of his impressions. In addition to a portrait of the author, the volume contains six illustrations, four of which depict scenes in Mexico.

The library of the Bureau of American Republics has received an interesting publication issued by the Government of Honduras, entitled "Mensaje del Presidente de la República, Contestación del Congreso, y Memorias de los Secretarios de Estado, referentes á los actos del Poder Ejecutivo durante el año económico de 1899 á 1900" (Message of the President of the Republic, the Answer of the Congress, and Reports of the Heads of Departments respecting the Acts of the Executive Power during the fiscal year 1899-1900). The volume is a neatly printed work of 793 pages and contains numerous statistical tables and valuable data concerning the Republic of Honduras for the period mentioned.

The University Press, of Princeton, New Jersey, has issued (1901) a monograph of 43 pages and 10 plates descriptive of the "Marine Cretaceous Invertebrates" obtained by the Princeton University expedition to Patagonia in 1899. The fossils secured at that time have proved to be unusually interesting from the fact that they represent a species of the Cretaceous fauna not hitherto described from South America. In the Princeton Patagonian collection there are about 40 species of the *Mollusca*, of which 31 are sufficiently well represented to be named and described. These indicate the lower Cretaceous age of the beds from which they were derived.

The United States Department of Agriculture has issued a pamphlet of 30 pages, embellished with 10 plates descriptive of the "Dairy Products at the Paris Exposition of 1900." This publication is a reprint of part of the seventeenth annual report of the Bureau of Animal Industry (1900) of the Department. Only two American countries contributed entries to the exhibits of this industry at Paris—the United States with 152 displays, and Mexico with 9. Two other countries exceeded the United States in the number of exhibits, namely, France with 800 and Switzerland with 160.

The publishing house of Herbert S. Stone & Co. (Chicago, 1901), has issued a volume of 208 pages, written by OLIVE PERCIVAL,

and entitled "Mexico City; an Idler's Note-Book." In this book, which contains a number of original illustrations, the writer has endeavored to convey the impressions made upon a foreigner, and particularly a citizen of the United States, by the Mexican capital in its everyday aspects. Most of the matter contained in this book first appeared in the form of letters from the Mexican capital to the "Los Angeles Times."

Through the courtesy of the Buenos Ayres and Pacific Railway Company the Bureau of the American Republics has received a map of the railways of the Argentine Republic in 1901. This shows not only the location of the lines in active operation, but also the routes of the projected lines. The scale is $2\frac{3}{8}$ inches per 100 kilometers or $3\frac{1}{4}$ inches per 100 English miles. A map of Buenos Ayres (scale, 1 in 300,000) appears as an insert to the map of the railway system proper.

"Estadística Comercial de la República de Chile" (Commercial Statistics of the Republic of Chile) is the title of a useful compilation recently published at Valparaiso. The volume is composed of 754 pages and treats exclusively of statistics concerning the foreign and domestic commerce of Chile for the year 1900. The work contains numerous statistical tables, prepared with great detail and care, and is a complete index of Chilean trade during the period mentioned.

ADDITIONS TO THE LIBRARY DURING FEBRUARY.

BOLETÍN MENSUAL

DE LA

OFICINA DE LAS REPÚBLICAS AMERICANAS,

Unión Internacional de Repúblicas Americanas.

VOL. XII.

MARZO, 1902.

No. 3.

DECISIONES DEL DEPARTAMENTO DEL TESORO
DE LOS ESTADOS UNIDOS DE AMÉRICA EN
MATERIAS RELATIVAS AL ARANCEL DE ADUA-
NAS Y LEYES DE NAVEGACIÓN É INMIGRACIÓN,
ETC. (AÑO DE 1902).

No. 23465.

IMPORTACIONES DE LAS ISLAS HAWAII.

Por esta decisión, fecha 14 de enero de 1902, se dispone que la Junta de Aforadores Generales no está investida de jurisdicción para determinar si una mercancía es ó no importada. Con arreglo á la resolución conjunta del 7 de julio de 1898, las mercancías importadas de Hawaii estaban sujetas á derechos hasta que el Congreso cambiase las relaciones arancelarias.

No. 23466.

TRANSPORTE COMÚN.

Por esta decisión, fecha 16 de enero de 1902, se dispone el reafianzamiento de la Chicago, Rock Island and Pacific Railway Company, para hacer el servicio de transporte de mercancías aforadas y sin aforar.

No. 23467.

TRANSPORTE COMÚN.

Por esta decisión, fecha 16 de enero de 1902, se aprueba la fianza de la Southern Pacific Company, para hacer el servicio de transporte de mercancías no aforadas.

No. 23468.

ANIMALES DE CRÍA.

Registro de caballos boloñeses en el libro genealógico francés, denominado "Caballos de tiro."

DEPARTAMENTO DEL TESORO, *enero 16 de 1902.*

SEÑOR: Refiriéndome á las Reglas dictadas por este Departamento el 22 de junio de 1899 (T. D., 21298), para la importación de animales de cría con arreglo á las prescripciones del párrafo 473 de la ley de 24 de julio de 1897, debo manifestarle que el Secretario de Agricultura ha hecho saber á este Departamento, que el libro genealógico de "Caballos de tiro," mencionado en la página 3 de aquellas Reglas, consta de varias secciones una de las cuales está consagrada al registro de caballos boloñeses: que las otras secciones se refieren á los caballos nivernesés, ardeneses, bretones, de Maine-Anjou y normandos: que en cada sección se registran respectivamente los mencionados caballos de tiro; y que, por consiguiente, con arreglo á las disposiciones citadas pueden dejarse entrar los caballos boloñeses que muestren su certificado de genealogía tomado de la sección respectiva del Registro de "Caballos de tiro" franceses. Deberá usted proceder de acuerdo con las precitadas disposiciones.

Soy de usted respetuosamente,

O. L. SPAULDING,
Subsecretario.

Al ADMINISTRADOR DE LA ADUANA,
Nueva York, N. Y.

No. 23469—A. G. 5061.

RECORTES DE METAL.

Por esta decisión se dispone que los fragmentos de metal viejo, tales como las cápsulas ya usadas ó descargadas, y los recortes del metal con que se hicieron originalmente, recogidos de los arsenales, compuestos de cobre y níquel con vestigios de plomo, pero sin contener, zinc, en que el cobre sea el material más valioso que se encuentre en ellos, no devengan derechos como "argentina, albata ó plata alemana sin

manufacturar," con arreglo á las prescripciones del párrafo 174 de la ley del 24 de julio de 1897, ni están comprendidos en las del artículo 6º, párrafo 588, sino en las del párrafo 533 de la misma ley, y tienen derecho á entrar libremente.

No. 23470—A. G. 5062.

MEDICIÓN DE TAPETES CON ORILLO.

Por esta decisión se dispone que el orillo de los tapetes orientales se ha de incluir en la medida para el aforo de los artículos que adeudan derechos con arreglo á las prescripciones del párrafo 379 de la ley arancelaria de 1897, al tipo de 10 centavos "por pie cuadrado," y un recargo de 40 por ciento ad valorem.

No. 23471—A. G. 5063.

RECORTES DE TUMBAGA—ATRIBUCIONES DE LOS AFORADORES LOCALES—PROTESTA CONTRA LA ENTRADA LIBRE.

Por esta decisión se dispone lo siguiente:

1. Con arreglo al párrafo 550 de la ley arancelaria de 1897, los recortes de tumbaga que sólo sirvan para propósitos de fabricación están exentos de derechos, y con arreglo al párrafo 193 tampoco adeudan derechos como manufacturas de metal.

2. Los aforadores locales no son, en ningún sentido, funcionarios clasificadores, y sus recomendaciones á los Administradores de Aduanas, en cuanto á la índole de las mercancías, son puramente en forma de advertencia.

3. *Quere:* Si una persona que importa mercancías que pueden entrar libres de derechos, puede protestar legalmente y alegar que adeudan derechos.

No. 23472—A. G. 5064.

REIMPORTACIÓN DE SACOS PARA GRANOS.

Por esta decisión se dispone lo siguiente:

Aparejos de buques.—La razón que se expone para considerar exento de derechos el aparejo de un buque, es que el aparejo forma parte del buque, y que las embarcaciones que llegan á un puerto en el curso de la navegación, no se consideran mercancías en el sentido de la ley arancelaria.

Sacos para granos.—Los sacos que se exporten llenos de granos para

servir de alimento al ganado durante la navegación, y que se devuelvan vacíos reunidos en pacas ó fardos pero que no pertenecían absolutamente al buque reimportador, ó que no se usaron en su viaje ni estuvieron en sentido alguno identificados con sus utensilios, no forman parte de su aparejo.

No. 23473—A. G. 5065.

PIPAS Y HORNILLOS DE PIPAS.

Las pipas de fumar y los hornillos de pipas cuyo material principal es el barro, adeudan derechos como “pipas y hornillos de pipas de barro,” al tipo de 50 centavos por gruesa y un 25 por ciento *ad valorem*, con arreglo al párrafo 459 de la ley de 1897, y no como “pipas y hornillos de pipas, sea cual fuere el material de que se compongan,” al tipo de 60 por ciento *ad valorem*, con arreglo al mismo párrafo. Las palabras “hechas de barro” en este párrafo significan “hechas entera ó principalmente de barro.”

No. 23473a—A. G. 5065a.

EL COÑAC FRANCÉS DE LA HABANA.

LAS PRERROGATIVAS DE LA RECIPROCIDAD—EL TRÁNSITO DESDE FRANCIA TIENE QUE SER CONTINUO.—Para tener derecho á los beneficios del convenio comercial recíproco con aquel país (T. D., 19405) es preciso que las mercancías embarcadas en Francia no pierdan en un puerto intermedio su carácter francés y entren á ser parte del comercio de otro país.

EL TRASBORDO.—El mero trasbordo no constituye una conversión de ese género.

EXPORTACIONES CUBANAS.—El coñac comprado en la Habana, llevado allí de Francia traído de allí á los Estados Unidos y manifestado en una factura de la Habana, tiene que considerarse como una exportación de Cuba, á menos que todos los hechos justifiquen una deducción distinta. Una factura consular francesa, hecha después de llegar las mercancías á este país, y una declaración jurada *ex parte* y unas declaraciones de aduana hechas por personas interesadas, no se consideran pruebas suficientes de un tránsito continuo desde Francia con trasbordo en la Habana.

Quere: Si el cargamento, una vez comprado en Cuba, se debe considerar como una importación de aquella isla, aunque la travesía desde Francia no se hubiera interrumpido.

Esta protesta es relativa á 199 cajas de coñac importadas en Tampa, Fla., por la Florida Brewing Company. Las circunstancias del caso son las siguientes: Al hacer la declaración de entrada, los importadores presentaron una factura no certificada, hecha por Dussaq y Ca., de la Habana, Cuba, expresando que el coñac en ella mencionado se había recibido de Saint-Nazaire, Francia, por el vapor *La Navarre*, y que había sido trasbordado al vapor *Olivette* para traerlo á Tampa.

Después se presentó una factura certificada por el Cónsul de los Estados Unidos en Burdeos, Francia, con el siguiente encabezamiento: "Factura de 199 cajas de coñac compradas por los Sres. Dussaq y Ca., de la Habana, de tránsito para Cayo Hueso, de * * * de Burdeos, para ser embarcadas en el vapor *Dragut*, vía de Saint-Nazaire, y trasbordadas al vapor *La Navarre*." La declaración de los exportadores acerca de esta factura, expresa que se había intentado hacer el desembarco de las mercancías en Cayo Hueso; pero que la factura se hizo y se certificó, á ruego de los protestantes, después de haber llegado las mercancías á este país, lo cual disminuye sensiblemente su fuerza probatoria. También tenemos á la vista una declaración jurada del Director de la Florida Brewing Company, exponiendo lo siguiente:

Que la expresada Florida Brewing Company compró á Dussaq y Ca., de la Habana, Isla de Cuba, 199 cajas de coñac, las cuales habían de ser embarcadas de Saint-Nazaire, Francia, á Tampa, Florida, vía de la Habana; que las expresadas 199 cajas de coñac fueron embarcadas efectivamente en Saint-Nazaire, Francia, por el vapor *La Navarre* para la Habana, Cuba, de donde se trasladaron al vapor *Olivette* y se trajeron á Tampa.

La declaración de entrada de los importadores expresa que las mercancías se importaron de "Francia, vía de la Habana."

Basados en estas pruebas, se nos pide que decidamos que las mercancías se produjeron en Francia y se importaron de aquella nación, y que, por consecuencia, tienen derecho á entrar pagando un derecho de \$1.75 por galón, con arreglo al convenio de reciprocidad comercial con Francia (T. D., 19405), en vez de \$2.25 por galón, que es el tipo con arreglo al párrafo 289 de la ley arancelaria de 1897, según las aforó el Administrador de Aduana. Los importadores alegan que los comerciantes de la Habana funcionaron simplemente como corredores.

Si cuando las mercancías salieron de Francia se intentaba desembarcarlas en un puerto de los Estados Unidos, su trasbordo en la Habana no pudo cambiar su carácter de importación de Francia en este país. (In re Hermann Brothers, G. A. 4751.) Según manifestó el Juez Curtis, en el caso de Grant contra Peaslee (2 Curt., 250; 9 Fed. Cas., 1143), el trasbordo "sólo afecta la ruta y á los medios de su tránsito, pero no el lugar de su partida ni el punto de su destino." Por otra parte, si el cargamento se desvió en la Habana á tal extremo que la exportación se efectuó realmente de aquella plaza, de allí, el origen francés de las mercancías no puede eximir las del pago de un derecho total. (In re La Montagne, G. A. 4538; In re Booth, G. A. 4719.)

Las pruebas resultan deficientes en varios puntos. Ninguna de carácter directo se ha presentado para demostrar que las mercancías se produjeron en Francia. Las relaciones que se alega existían entre Dussaq y Ca., de la Habana, y los importadores, no se han demostrado de una manera satisfactoria. Por los hechos consignados aparece que

el negocio fué una venta de mercancías compradas en Francia hecha por comerciantes de la Habana á los importadores de aquí. Si esto afectaría ó no el carácter de la importación, dado caso que su tránsito de Francia hubiera sido continuo, con excepción del trasbordo, no podemos afirmarlo. Una conclusión de ese género en vista de las pruebas sería injustificada.

Todo lo que las pruebas indican acerca de una travesía continua, resulta *ex parte* y de un carácter parcial, y apenas tiene peso suficiente para apoyar la deducción de que las mercancías no entraron á ser parte del comercio de Cuba. La factura francesa no menciona á ningún consignatario en los Estados Unidos, y en el expediente no se encuentra nada que demuestre satisfactoriamente que el coñac de que se trata, no pudo haberlo vendido en Cuba Dussaq y Ca., y haberse cumplimentado la orden de la Florida Brewing Company de una existencia semejante que hubiera á mano ó que había de llegar. (In re Booth, supra.) Debe tenerse presente que este caso se volvió á iniciar después de la rebeldía ó falta de comparecencia, por parte de los protestantes, á quienes se les concedieron más de dos meses para presentar más pruebas, lo cual no han hecho.

Por tanto, se desestima la protesta y se confirma la decisión del Administrador de Aduana.

No. 23473b—A. G. 5065b.

DROGAS EN BRUTO (QUILLAYA Ó CERNIDURAS DE LA CORTEZA DE SAPONARIA.)

Por esta decisión se dispone que las cerniduras resultantes del procedimiento de cortar con máquina la corteza de la saponaria que son menos valiosas que la misma corteza en bruto, están exentas de derechos con arreglo al párrafo 448 de la ley arancelaria de 1897 como drogas en bruto “cuyo valor no se ha aumentado por medio del refinamiento ó la molienda, ó por cualquier otro procedimiento, y que no están tarifados especialmente.”

No. 23474.

LIBRE ENTRADA DE ARTÍCULOS PARA INSTITUCIONES.

Por esta decisión, fecha 16 de enero de 1902, se dispone la aplicación de los reglamentos del Departamento del Tesoro promulgados el 13 de junio de 1900.

No. 23475.

ANIMALES SALVAJES Y PÁJAROS SILVESTRES.

Por esta decisión, fecha 22 de enero de 1902, se dispone que los informes trimestrales de las importaciones de fieras y aves extranjeras, no domésticas, se extiendan en la forma marcada en las hojas ó plantillas establecidas por la circular del 10 de octubre de 1900.

No. 23476.

PESCA DEL SALMÓN EN ALASKA.

Por esta decisión, fecha 24 de enero de 1902, se ordena la observancia de la ley y reglamento dictados en 18 de febrero de 1901 para la protección de la pesca del salmón en Alaska.

No. 23477.

DEVOLUCIÓN DE DERECHOS—FORMA DE LOS CONOCIMIENTOS.

Los conocimientos que se usen para solicitar la devolución de derechos deberán firmarse de la manera acostumbrada y la nota que dice “para propósitos aduaneros” ha de estar escrita con tinta ó lápiz indeleble.

DEPARTAMENTO DEL TESORO, *enero 24 de 1902.*

SEÑOR: Este Departamento ha recibido, por conducto del Comisionado de la Renta Interior, la carta de V. del 7 del corriente, relativa á la cuestión de si el representante de las compañías de transporte debe ó no firmar los conocimientos, cuando éstos tengan la siguiente marca: “Sólo para propósitos aduaneros; no es negociable; no se ha expedido otro ejemplar para la aduana.”

En contestación debo manifestar á usted que los conocimientos de que se trata deben firmarse de la manera usual y llevar estampada la nota que expresa que el conocimiento se ha expedido para fines aduaneros, debiendo firmarla ó ponerle sus iniciales con tinta ó con un lápiz indeleble, el representante que firme el conocimiento.

Soy de usted respetuosamente,

O. L. SPAULDING,
Subsecretario.

Sr. L. E. TOWNSLEY, *Chicago, Ill.*

No. 23478.

MERCANCÍAS CONDUCIDAS EN TRÁNSITO.

Con arreglo al artículo 3005 de los Estatutos Revisados, tal como está enmendado las mercancías que van en tránsito pueden declararse para transporte y exportación en el primer puerto á que lleguen, expresando que esta se efectuará por cualquier puerto ó subpuerto de los Estados Unidos.

DEPARTAMENTO DEL TESORO, *enero 24 de 1902.*

SEÑOR: Este Departamento ha recibido la carta de V. del 19 de noviembre último, en que expresa la razón que tuvo para no permitir la entrada, con arreglo al artículo 3005 de los Estatutos Revisados, tal como se ha enmendado, de ciertas mercancías que debían pasar de tránsito por los Estados Unidos y exportarse por Sumas, Wáshington.

Usted expone que: “Como quiera que, con arreglo al artículo 730, del reglamento de 1899, Sumas no es un puerto autorizado para la exportación de estas mercancías, juzgó oportuno no permitir el uso de dicho puerto como un puerto fronterizo para efectuar dicho transporte y exportación. En esta oficina se entiende que la decisión del Tesoro No. 21829, es la última decisión que designa los puertos que han de servir para el fin arriba mencionado.”

En contestación, debo informar á usted que cuando se demuestre por medio de la factura, el conocimiento, el manifiesto, ú otro comprobante fidedigno, que las mercancías están destinadas á pasar de tránsito, por los Estados Unidos y exportarse de éstos, pueden ser declaradas para su transporte y exportación en cualquier puerto ó subpuerto de los Estados Unidos, con tal que sea con sujeción á la ley del 21 de mayo de 1900, que enmienda el artículo 3005 de los Estatutos Revisados. (Véanse las Decisiones del Tesoro No. 22250 del 25 de mayo de 1900 y No. 22605 del 14 de noviembre de 1900.)

Soy de usted respetuosamente,

O. L. SPAULDING,
Subsecretario.

AL ADMINISTRADOR DE LA ADUANA,
Boston, Mass.

No. 23479.

**FIANZAS DE TRANSPORTE Y EXPORTACIÓN CON ARREGLO AL
ARTÍCULO 3005 DE LOS ESTATUTOS REVISADOS.**

DEPARTAMENTO DEL TESORO, *enero 25 de 1902.*

Á los administradores y otros oficiales de aduanas:

Se ha encontrado que el plazo de cuatro y de seis meses, de que se trata en el artículo 735 del Reglamento de Aduanas de 1899 y en la decisión del Tesoro No. 22605 de 14 de noviembre de 1900, concedido

para otorgar las fianzas á que se refiere el artículo 3005 de los Estatutos Revisados, tal como se ha enmendado por la ley del 21 de mayo de 1900 (decisión del Tesoro No. 22250) es en muchos casos demasiado corto. Por consiguiente, este Departamento ha determinado que se enmiende aquel artículo, de modo que se entienda prorrogado dicho plazo hasta un año á contar desde la fecha de la declaración de entrada, sea cual fuere el destino de las mercancías.

O. L. SPAULDING,
Subsecretario.

No. 23480.

EL CÓDIGO INTERNACIONAL DE SEÑALES.

[Circular No. 10.]

DEPARTAMENTO DEL TESORO, OFICINA DE NAVEGACIÓN,

Washington, D. C., enero 25 de 1902.

A los administradores de aduanas, capitanes de buques y demás personas á quienes interese:

Según se expresó en la Lista de Códigos que esta oficina publicó para el año de 1901, el nuevo Código internacional de señales empezó á ponerse en práctica el día 1° de enero de 1901. Hasta 1° de enero de 1902 rigieron igualmente la antigua y la nueva edición del Código, pero desde el 1° de enero de 1902 sólo se usará la nueva edición.

Ahora aparece que la Cámara de Comercio inglesa ha resuelto que, si bien es cierto que en todos los casos se ha de entender que el nuevo Código está en uso desde el 1° de enero de 1902, sin embargo, si en algún caso ocurriese que los oficiales de señales no pueden interpretar una señal por el nuevo Código, y encuentran que pueden traducirla por el antiguo, no deberán negarse á recibirla.

En los Estados Unidos puede tomarse una medida semejante, y las señales que en tales casos hagan los buques con arreglo al antiguo Código, pueden recibirse y anunciarse.

Se indica la conveniencia de que cada vez que un buque use el antiguo Código, se haga saber el hecho á la Oficina de Navegación del Departamento del Tesoro.

En cada aduana deberá fijarse una copia de esta circular para el conocimiento de los capitanes de buques y demás personas interesadas.

E. T. CHAMBERLAIN,

Comisionado.

CUEROS.

Método de aforar los cueros. No deberá imponerse el recargo que prescribe el artículo 32 de la ley de 1897, si el aumento de valor se debe únicamente al encogimiento después del embarque.

DEPARTAMENTO DEL TESORO, *enero 25 de 1902.*

SEÑOR: El Interventor del Departamento del Tesoro llama la atención de este Departamento hacia el hecho de que la declaración No. 7, de 1901, de entrada, en el almacén de su puerto, comprende ciertos cueros. Parece que éstos se encogieron durante la travesía; que el número total de libras desembarcadas y de que dió cuenta el pesador, fué menor que el número de libras constante en la factura; y que el aforador al determinar el valor corriente en el mercado, multiplica el número de libras desembarcadas por la unidad de valor expresada en la factura, de donde resulta que el valor total aforado sea menor que el valor de factura.

Incumbe á los aforadores aforar la mercancía en el estado en que ésta se importa, y no en el estado en que se factura y embarca. Por ejemplo, los cueros húmedos ó frescos que se facturen y embarquen pueden secarse ó encogerse, durante la travesía y, por consiguiente, al aforador se le presentan cueros de un carácter y valor indudablemente distinto del de los cueros que se facturaron y embarcaron, y es su deber encontrar el valor que tenían en el mercado extranjero, en la fecha en que se embarcaron. (Véanse los artículos 10 y 19 de la ley administrativa de aduana.)

En relación con esto se llama la atención de usted á los casos de Reiss contra Magone (39 Fed. Rep., 105), de Robertson contra Bradbury (132 U. S., 491), y de la American Sugar Refining Company contra los Estados Unidos (181 U. S., 610); y también á la decisión del Tesoro número 9305, del 23 de marzo de 1889, relativa al jabón de Castilla, en la cual se mantiene que cuando la diferencia entre el peso expresado en la factura y el que aparece en el informe del pesador pueda ser debida á la evaporación ó á otras causas semejantes, y el aforador y el administrador de aduana se convenzan de que el valor por libra en el mercado extranjero de las mercancías desembarcadas se ha aumentado proporcionalmente, de modo que no resulte ninguna disminución del valor total declarado de la factura, dicho valor por libra en el mercado extranjero lo representaría el resultado que se obtendría dividiendo el valor total de la factura en el mercado extranjero por el número de libras desembarcadas. En tal caso, el valor total que adeuda derechos no puede ser menor que el valor de factura.

Cuando el aumento hecho por el aforador se deba únicamente, en todo ó en parte, al encogimiento de los cueros después de su embarque, en cuyo caso ni el exportador ni el importador pueden impedir el cam-

bio del estado de las mercancías, será indebido considerarlo como un aumento *per se*, que influya en la determinación de su valor del mercado, y no se impondrá un recargo con arreglo al artículo 32 de la ley del 24 de julio de 1897. Por tanto, deberá usted proceder de acuerdo con lo que acaba de exponerse.

Soy de usted respetuosamente,

O. L. SPAULDING,
Subsecretario.

Al ADMINISTRADOR DE LA ADUANA, *Erie, Pa.*

No. 23482.

LAS CAJAS DE LIMONES.

Por esta decisión, fecha 25 de enero de 1902, se dispone que para determinar el peso neto de los limones importados en cajas, es necesario encontrar el peso bruto de cada clase importada, pesando separadamente, al efecto, un número suficiente de cajas de diferentes clases del tamaño regular ó corriente, debiendo marcarse el peso bruto en cada caja que se pese. Es necesario obtener los pesos brutos totales de las diferentes clases, fijando el promedio de los pesos determinados al número de cajas de cada clase, y la tara deberá encontrarse pesando un número suficiente de cajas vacías de cada tamaño.

No. 23483.

RECORTES DE TOBACO.

Los recortes de tabaco que se hubieren exportado de una fábrica afianzada adeudarán derechos al reimportarse como tabaco elaborado.

DEPARTAMENTO DEL TESORO, *enero 25 de 1902.*

SEÑOR: Este Departamento recibió oportunamente su carta del 15 del corriente, relativa á la decisión de la junta de Aforadores Generales de los Estados Unidos, fechada el 30 del pasado que comprende cierta importación de "Recortes de Tabaco."

En su carta dice usted lo que sigue:

"Cuando estas mercancías se declararon originalmente, parecían tener derecho á la entrada libre como productos domésticos que regresan al país en el mismo estado en que estaban cuando se exportaron, y por consiguiente, fueron examinadas en el muelle, liquidándose la declaración de entrada el 23 de noviembre de 1900." Y agrega usted que:

“Posteriormente esta oficina recibió informes de Petersburg, Virginia, que muestran que las mercancías fueron exportadas de un almacén de sexta clase, y en vista de ello, y de la interpretación que esta oficina ha dado á los preceptos del artículo 27 de la ley de 24 de julio de 1897, se impuso á las mercancías un derecho á razón de 55 centavos por libra. En el estado artículo 27, se dice: ‘excepto los artículos manufacturados en almacenes afianzados y exportados en conformidad con la ley, los cuales adeudarán el mismo tipo de derecho que si fuesen importados originalmente.’

“La junta encontró probado, ‘el hecho de que el tabaco de que se trata no estaba elaborado’ y que ‘como no pagó ninguna contribución de renta interna antes de la exportación, queda comprendido en dicho artículo 27, como mercancía producida en los Estados Unidos, que después de haberse exportado sin haber pagado contribución interior, se ha vuelto á importar’ y de aquí dedujo que ‘sólo adeuda un derecho igual á la contribución impuesta por las leyes de rentas internas á artículos semejantes, según se alega en la protesta.’”

V. alude á la cláusula final del párrafo 483 de la citada ley de 24 de julio de 1897, que impone un derecho igual á la contribución interna impuesta al tabaco manufacturado reimportado y al reglamento revisado relativo á la contribución sobre el tabaco, el rapé, y los cigarros ó puros (serie 7, número 8, revisada, de la oficina de rentas internas), que muestra que en ciertos casos los recortes de tabaco se consideran como tabaco elaborado que adeuda la contribución de renta interna á razón de 12 centavos por libra, y deduce que el dictamen de la Junta de Aforadores de que el tabaco de que se trata “no está elaborado,” y que, como se dice después en el mismo párrafo, adeuda un derecho equivalente á la contribución impuesta por las leyes de rentas internas—las cuales sostienen que los recortes de tabaco son tabaco elaborado—se encuentran en evidente contradicción.

Este Departamento está de acuerdo con esta opinión, y por la presente ordena á usted que apele de la decisión de que se trata con arreglo al artículo 15 de la ley del 10 de junio de 1890.

Se llama la atención de usted hacia el hecho de que la exportación de una fábrica afianzada constituye prueba *prima facie* de que las mercancías estaban manufacturadas, puesto que, con arreglo al artículo 15 de la ley del 24 de julio de 1897, únicamente artículos manufacturados pueden ser sacados de las fábricas para la exportación.

Soy de usted respetuosamente,

O. L. SPAULDING,
Subsecretario.

Al ADMINISTRADOR DE LA ADUANA,
Nueva York, N. Y.

No. 23484.

FACTURAS.

Siempre que se compre realmente una mercancía, la factura y declaración que se hagan á estar deber firma das por el comprador ó su agente debidamente autorizado.

DEPARTAMENTO DEL TESORO, *enero 28 de 1902.*

SEÑOR: Tengo el honor de acusarle recibo de su carta del 13 del próximo pasado, en la cual me incluye una copia de un cablegrama del Cónsul general de Marsella, relativo á la dificultad de aplicar la regla de que los comisionistas en el extranjero que compran mercancías para embarcarlas y que las remitan á importadores de este país, han de firmar la declaración que se ha de hacer en la factura como agentes del comprador. Se alega que la aplicación de esta regla ofrece muchos inconvenientes, tanto á los remitentes como á los agentes consulares, porque en ciertos casos, aunque los comisionistas en el extranjero no discutan la propiedad de que dicha regla se aplique á sus operaciones mercantiles, los importadores americanos no han querido enviar poderes. Los cónsules americanos en otros puntos se conforman con que los comisionistas firmen las facturas como vendedores, y los comisionistas en el extranjero que tienen á veces una larga lista de parroquianos nuevos en los Estados Unidos, no pueden decir cuando les llegue un cablegrama autorizándolos para hacer una compra sin que sea posible conseguir en tiempo un poder en forma.

La circular de V. de 18 de diciembre de 1900, que comprende la carta de este Departamento del 3 de diciembre de 1900 (decisión del Tesoro, No. 22646), se basó en el hecho de que la partida de comisión que aparece en las facturas respaldadas por un comisionista como “vendedor,” debe entrar á formar parte del valor sobre que deben cargarse los derechos, y el Departamento, con el fin de proteger á los comisionistas de buena fe, indicó la conveniencia de exigir les que firmen las declaraciones como agentes del comprador. Si se examinan los preceptos de los artículos 2 y 3, de la ley del 10 de junio de 1890, se encontrará que apoyan por completo la actitud que el Departamento ha tomado. En el primero se prescribe: “Que todas las facturas de mercancías importadas han de estar * * * firmadas por la persona que posea ó embarque las dichas mercancías, si es que éstas han sido realmente compradas, ó por el fabricante ó dueño de las mismas, si se han obtenido de otra manera que no sea una compra, ó por el agente debidamente autorizado de dicho comprador, fabricante ó dueño.”

Se comprenderá que la persona que posee y embarca las mercancías es el comprador, y la ley prescribe que la factura la ha de firmar él ó su agente debidamente autorizado. El artículo 3 prescribe lo siguiente:

“Que al respaldo de todas estas facturas * * * ha de aparecer * * * una declaración firmada por el comprador, fabricante, dueño ó agente.”

Es evidente que las palabras “fabricante” y “dueño” se refieren expresa y únicamente á las mercancías que no se han obtenido por medio de una compra, y que siempre que las mercancías sean compradas, tanto la factura como la declaración que en ella aparece, deben estar firmadas por el comprador ó su agente. No hay ningún precepto que exija que el “vendedor” haga una declaración como tal. Si bien es cierto que el artículo 3 no exige expresamente que el agente esté debidamente autorizado, el artículo 2 sí lo exige, y como quiera que los actos de firmar la factura y la declaración, la mayor parte de las veces los desempeñaría una misma persona, no sería injusto exigir que al agente del comprador, que firma la declaración, se le autorice debidamente; pero en relación con esto, opino que la debida autorización, por parte de una persona residente en este país á un comisionista en el extranjero, para que le compre mercancías y firme la factura, sería una autorización suficiente para que dicho agente firme la declaración.

Soy de usted respetuosamente,

O. L. SPAULDING,
Subsecretario.

Al SECRETARIO DE ESTADO.

No. 23485—A. G. 5066.

LOS CIGARROS Ó PUROS DE MUESTRAS, DISTRIBUIDOS EN LA EXPOSICIÓN PAN-AMERICANA.

Por esta decisión se dispone que los cigarros ó puros que se distribuyeron en grandes cantidades, gratis, al tribunal de adjudicación de premios de la Exposición Pan-Americana, se aforen debidamente para imponerles derechos con arreglo á los preceptos de la ley arancelaria (párrafo 217).

Las mercancías que se están exhibiendo en la Exposición tienen que considerarse como si estuviesen en un almacén de depósito afianzado y al sacarse adeudan derechos.

No. 23486—A. G. 5067.

EL PAPEL DE IMPRENTA HECHO Á MANO.

Por esta decisión se dispone que, con arreglo al párrafo 401 de la ley del 24 de julio de 1897, el papel de imprenta hecho á mano adeuda derechos como tal, y no como papel de imprenta con arreglo al párrafo 396 de dicha ley. La ley debe aplicarse en todas sus partes, si es posible,

No. 23487—A. G. 5068.

TOALLAS TURCAS Y LIENZOS DE LAVAR.

Por esta decisión se dispone que las toallas turcas y los lienzo de lavar hechos de algodón ó de lino con un punto enterizo ó de felpa, no adeudan derechos como “tejidos de felpa,” con arreglo á lo que prescribe el párrafo 315 de la ley del 24 de julio de 1897, sino que deben pagarlos al tipo de 45 por ciento *ad valorem*, según el valor del material que constituye el componente principal de ellos, de acuerdo con lo que prescribe el párrafo 322 ó 347 de dicha ley.

Las palabras “tejidos de felpa,” tales como se emplean en dicho párrafo, se limitan, en cuanto á su significación, á los géneros ó tejidos de diferentes clases hechos de diferentes materiales, como los terciopelos, las panas, etc., conocidos y empleados con este nombre en la industria y el comercio.

No. 23488—A. G. 5068.

LOS LADRILLOS DE PIEDRA PÓMEZ.

Por esta decisión se dispone que los ladrillos para limpiar cuchillos hechos de piedra pómez molida y arena, que se mezclan y prensan hasta que adquieren diferentes tamaños, adeudan derechos al tipo de \$6 por tonelada, con arreglo al párrafo 92 de la ley del 24 de julio de 1897, á semejanza de la piedra pómez entera ó parcialmente manufacturada.

No. 23489—A. G. 5070.

EL CEMENTO PARA DENTISTAS.

Por esta decisión se dispone que dos compuestos distintos, uno un polvo y el otro una mezcla de formaldehyde, aceite de clavo y creosoto, que se venden y usan juntos bajo la denominación comercial de “formagen” y se conocen también en el comercio por “cemento para dentistas,” adeudan derechos al tipo de 20 por ciento *ad valorem*, con arreglo al párrafo 89 de la ley del 24 de julio de 1897, como “otro cemento.”

Que el compuesto de formaldehyde, aceite de clavo y creosoto, si se importa separadamente, para unirlo á un polvo y formar un cemento, y que también sirve de antiséptico, adeuda derechos como una preparación medicinal no alcohólica, con arreglo al párrafo 68 de la citada ley.

No. 23490—A. G. 5071.

ROLLOS DE VIAJE HECHOS EN PARTE DE LANA, CUYO MATERIAL COMPONENTE MÁS VALIOSO ES EL ALGODÓN Ó EL LINO.

Por esta decisión se dispone que la cláusula contenida en el párrafo 391, tarifa de sedas, ley arancelaria de 1897, que dice que “todas las manufacturas en que la lana sea un material componente, se clasificarán y aforarán para imponerles un derecho como manufacturas de lana,” se aplica solo á dicho párrafo, ó á lo más á la clase ó división en que se encuentra dicho párrafo. Por tanto, los titulados rollos de viaje, que se compongan, en parte, de lana, pero cuyo material más valioso sea el algodón ó el lino, con arreglo al párrafo 322 ó 347, adeudan derechos como manufacturas de algodón ó de lino que no están especialmente tarifadas.

Que no es necesario determinar cuál de los dos párrafos del arancel es aplicable á las mercancías importadas, siempre que no quepa duda de que debe aplicarse uno de ellos, si el tipo del derecho en cada caso es igual.

TRATADO DE PAZ CENTROAMERICANO.

Los Gobiernos de Nicaragua, El Salvador, Honduras y Costa Rica, deseando contribuir por todos los medios que están á su alcance, al mantenimiento de la paz y buena armonía que existen y deben existir entre ellos, han convenido en celebrar una Convención de Paz y Arbitraje obligatorio; y al efecto han nombrado por sus respectivos Plenipotenciarios:

El Gobierno de Nicaragua, al Excelentísimo Señor Doctor Don FERNANDO SÁNCHEZ, Ministro de Relaciones Exteriores.

El Gobierno de El Salvador, al Excelentísimo Señor Doctor Don SALVADOR RODRÍGUEZ, Subsecretario de Estado en el Despacho de Relaciones Exteriores.

El Gobierno de Honduras, al Excelentísimo Señor Doctor Don CÉSAR BONILLA, Ministro de Relaciones Exteriores.

El Gobierno de Costa Rica, al Excelentísimo Señor Licenciado Don LEONIDAS PACHECO, Ministro de Relaciones Exteriores.

Quienes después de haberse comunicado sus plenos poderes, y habiéndoles encontrado en buena y debida forma, han convenido en las siguientes estipulaciones:

ART. I. Se declara que la presente Convención tiene por objeto incorporar, en la forma de Tratado Público, las conclusiones á que han llegado los Excelentísimos Señores Presidentes, General Don J. SANTOS ZELAYA, General Don TOMÁS REGALADO, General Don TERENCIO SIERRA y Don RAFAEL IGLESIAS, en las varias conferencias que han celebrado en este puerto, con el único objeto de mantener y asegurar por todos los medios posibles, la paz de Centro-América.

ART. II. Los Gobiernos contratantes establecen el principio del arbitraje obligatorio para dirimir toda dificultad ó cuestión que pudiera presentarse entre las partes contratantes, comprometiéndose, en consecuencia, á someterlos á un Tribunal de árbitros centroamericanos.

ART. III. Cada una de las partes contratantes nombrará un árbitro propietario y un suplente para constituir el Tribunal.

El cargo de los árbitros durará un año, contado desde su aceptación, pudiendo éstos ser reelectos.

ART. IV. Los árbitros de los Estados entre los cuales existiere el conflicto, no formarán parte del Tribunal para el conocimiento del caso concreto, quedando éste integrado con el árbitro ó árbitros de los demás Estados.

ART. V. Si por razón de empate no hubiere laudo, el Tribunal sorteará un tercero entre los respectivos suplentes. El tercero deberá necesariamente adherirse á uno de los pareceres emitidos.

ART. VI. Tan pronto como se presente una dificultad ó cuestión entre dos ó más Estados, sus respectivos Gobiernos lo comunicarán á los demás signatarios de la presente Convención.

ART. VII. Se establece y reconoce por los Gobiernos contratantes la facultad de cada uno de ellos de ofrecer sin demora, aislada ó conjuntamente, sus buenos oficios á los Gobiernos de los Estados que se encuentren en desacuerdo, aun sin previa aceptación de éstos y aunque no se les hubiere notificado la dificultad ó cuestión pendiente.

ART. VIII. Agotados los oficios amistosos sin resultado satisfactorio, el Gobierno ó Gobiernos que los hubiesen ejercido, lo notificará á los demás, declarando, al propio tiempo, procedente el arbitramento. Esta declaración se comunicará á la mayor brevedad posible, al miembro del Tribunal á quien corresponda la Presidencia del mismo, á fin de que en un término que no exceda de quince días, reúna el Tribunal que debe conocer y resolver el conflicto.

La instalación del Tribunal se comunicará por telégrafo á los Gobiernos signatarios, requiriéndose á las partes contendientes para que presenten sus alegatos en los quince días siguientes.

ART. IX. El Tribunal dictará su laudo dentro de los cinco días siguientes á la expiración del término de que se ha hablado.

ART. X. Las dificultades que puedan surgir por cuestiones de límites pendientes ó por interpretación ó ejecución de tratados de límites, podrán ser sometidas por los Gobiernos interesados al conocimiento y resolución de un árbitro extranjero de nacionalidad americana.

ART. XI. Los Gobiernos de los Estados en disputa se comprometen solemnemente á no ejecutar acto alguno de hostilidad, aprestos bélicos ó movilización de fuerzas; á fin de no impedir al arreglo de la dificultad ó cuestión, por los medios establecidos en el presente convenio.

ART. XII. La Presidencia del Tribunal arbitral se ejercerá alternativamente por períodos anuales, por cada uno de los miembros, siguiéndose el orden alfabético de los Estados que representen; correspon-

diendo ejercerla el primer año, al árbitro costarricense, el segundo al del Salvador, y así sucesivamente.

Cuando por el caso previsto en el artículo IV el miembro que ejerce la Presidencia del Tribunal estuviere inhibido de conocer, la Presidencia accidental para el caso en cuestión será ejercida por el árbitro que fuese hábil, según el orden de presidencia establecido en el inciso anterior.

El Tribunal ejercerá sus funciones en la capital del Estado á que corresponda el árbitro que debe presidirlo.

ART. XIII. El Tribunal arbitral dictará todas aquellas disposiciones de orden interior que considere necesarias para llenar cumplidamente la altísima misión que por este tratado se le confiere.

ART. XIV. Á fin de prevenir los abusos que pudieran cometerse en un Estado por emigrados políticos de otro contra la paz y tranquilidad públicas de éste, los Gobiernos contratantes se comprometen á retirar de los lugares fronterizos, á aquellos emigrados respecto de los cuales se hiciere la solicitud del caso por el Gobierno interesado.

ART. XV. Con el objeto de armonizar en lo posible las ideas y tendencias de los Gobiernos de los Estados signatarios en todo cuanto se refiere á mantener y estrechar los vínculos de fraternidad centroamericana y buena inteligencia entre aquéllos, mientras que para tales fines no se establezcan legaciones permanentes entre los Estados contratantes, se recomienda el nombramiento de Cónsules generales, de cada uno de ellos, en los otros Estados, los cuales tendrán á la vez el carácter de agentes confidenciales de sus respectivos Gobiernos.

ART. XVI. La presente convención será sometida á la ratificación de los respectivos Congresos, á la mayor brevedad posible, y ratificada que sea por todos ellos, entrará en vigor treinta días después sin necesidad del canje.

ART. XVII. Para la instalación del Tribunal arbitral establecido por este Convenio, se señala el día quince de septiembre del año en curso, aniversario de la Independencia de Centro América.

ART. XVIII. En el deseo de que la presente Convención ligue á todos los Estados de la familia centroamericana, los Gobiernos signatarios invitarán conjuntamente ó por separado, al Gobierno de la República de Guatemala para que se adhiera á sus estipulaciones, si fuere posible.

En fe de lo cual firmamos cuatro ejemplares de igual tenor en el puerto de Corinto, República de Nicaragua, á los veinte días del mes de enero de mil novecientos dos.

FERNANDO SANCHEZ.
SALVADOR RODRIGUEZ.
CESAR BONILLA.
LEONIDAS PACHECO.

Estando el presente Tratado arreglado á las instrucciones comunicadas al efecto, el Presidente de la República acuerda darle su aprobación.

Palacio Nacional, Managua, 28 de enero de 1902.

ZELAYA.

El Ministro de Relaciones Exteriores.

SANCHEZ.

SEGUNDA CONFERENCIA PAN-AMERICANA.

FUENTES DE PRODUCCIÓN Y ESTADÍSTICA.

Entre las Comisiones permanentes que la Segunda Conferencia Internacional Americana, últimamente celebrada en la capital de México, estableció al organizarse, hubo una, compuesta de siete miembros y presidida originalmente por el Señor Don JOAQUÍN BERNARDO CALVO, Delegado de Costa Rica, que tuvo por objeto el estudio de las “fuentes de producción” y la “estadística” de los países representados en aquella asamblea.

Es muy interesante el dictamen, redactado por el Señor CALVO, de que se dió cuenta en nombre de la referida Comisión el 18 de diciembre de 1901 (acta No. 19), y dice como sigue:

DICTAMEN DE LA COMISIÓN DE FUENTES DE PRODUCCIÓN Y ESTADÍSTICA.

Pocas cosas pueden ser tan útiles para las relaciones internacionales, como el conocimiento mutuo de los pueblos en lo que se refiere á sus productos, industrias y riqueza.

La estadística que considera los países desde el punto de vista socio-lógico, se encarga de desempeñar ese trabajo, llevando cuenta minuciosa de todo cuanto atañe á las fuerzas vitales y á los medios de engrandecimiento de las naciones. Desconocida en la antigüedad, cuando el trabajo era poco estimado y poco fecundo, ha adquirido un gran desarrollo en las sociedades modernas, á medida que el esfuerzo humano, la ciencia aplicada á la mecánica, la mecánica aplicada á la industria, y el cambio llevado á su más alto desarrollo, han ido multiplicando y engrandeciendo la producción.

Ahora los pueblos pueden estudiarse á distancia. Libros laboriosísimos llenos de datos de todos géneros, se publican por todas partes acerca de cuanto puede interesar á la demanda universal; y el empresario, el capitalista y el comerciante conocen previamente y antes de dar principio á sus operaciones, en qué región del mundo se producen los frutos naturales que necesitan, cuáles faltan en tal ó cual comarca, y cuáles son los medios de que pueden valerse para adquirir lo que desean y para dar salida á lo que tratan de enajenar. No puede calcu-

larse el número de negocios que se hacen con fundamento de esas noticias, así como es incalculable también el número de operaciones que se frustran por la carencia de ellas.

Por más tediosa que parezca la labor consagrada á la recolección y clasificación de datos de ese género, no puede desconocerse su inmensa trascendencia, porque la publicación de esos datos es el anuncio más resonante que puede hacerse de los mercados del mundo. Pueblos que se conocen están muy cerca de estrecharse. Lo que no hacen la ciencia, la filantropía ó el sentimentalismo, lo hacen los estímulos del interés, inclinando á las agrupaciones humanas á servirse y ayudarse mutuamente, por el instinto de su insuficiencia en el aislamiento, y de su poderío en la unión.

Las Repúblicas Americanas que se encuentran representadas en esta Conferencia y que tienen tan vivo deseo de aproximarse y estrecharse, habrán dado un paso muy avanzado en este camino si logran no perderse de vista en lo sucesivo y mantenerse siempre bien informadas entre sí de las evoluciones de su vida económica. El conocimiento mutuo y periódico de los inventarios nacionales, traerá consigo el despertamiento de numerosas corrientes de negocios y amistad, de que será á la vez origen y objeto cada uno de nuestros respectivos países. Así se establecerá una positiva solidaridad de intereses entre los pueblos que habitan este hemisferio, porque el cambio de sus frutos y artefactos ligará á las soberanías americanas con vínculos fuertes y duraderos.

Para alcanzar este resultado, nuestro punto de vista debe ser, por consiguiente, no sólo obtener informes exactos y oportunos sobre esos asuntos, sino sistemarlos y clasificarlos de tal suerte, que las personas que los busquen puedan adquirirlos de un modo fácil y tan completo como sea posible.

Estos datos deberán versar sobre los puntos siguientes:

A. Minas explotadas, criaderos metalíferos y asfaltos, con expresión de su ubicación y de su proximidad á caminos y mercados.

B. Bosques, con su situación, extensión y calidad de maderas.

C. Flora, comprendiendo en ella de un modo especial las plantas textiles, medicinales y tintóreas ó que tengan cualquiera otra aplicación á la industria.

D. Productos agronómicos, como guanos, nitratos y todos los que sean útiles para el abono de la tierra.

E. Mejoras del suelo, entendiéndose bajo esta denominación todos los sistemas y procedimientos que tiendan á hacer aquél más productivo por medio de la industria, como presas, acueductos y sistemas de irrigación.

F. Fuerzas naturales, abarcando en este título los ríos, las corrientes ó las cascadas susceptibles de dar origen á fuerza motriz.

G. Medios de comunicación. En este grupo podrían figurar los lagos y ríos navegados y navegables, carreteras, caminos y ferrocarriles.

les existentes ó en vía de próxima construcción, con referencia á los centros de producción y á las poblaciones, mercados puertos y fronteras.

H. Terrenos con la expresión de la extensión y ubicación de los baldíos y del precio medio de ellos y de las tierras en general, relativamente á su situación en costas, planicies ó montañas y de su aproximación á los caminos ó mercados.

I. Industrias. Los datos de este género deberán referirse á las fábricas y artefactos de cada país, clasificados según su especie y las regiones en que aquellos se hallen establecidos ó en que se produzcan como industria popular.

Para que las noticias á que se refieren los puntos anteriores puedan dar los resultados que se buscan, deberán ser lo más completas posible y recogidas y publicadas de un modo sistemático en períodos de tiempo convenientes.

A este efecto cree la Comisión que debe autorizarse á la Oficina de las Repúblicas Americanas en Washington (donde informes de la misma naturaleza se han estado publicando ya, ora en libros especiales, ora en un Boletín mensual) para que extienda su acción y sus esfuerzos al logro del fin propuesto, con la cooperación de los representantes de los países respectivos.

Muy conducente será, de la misma manera, y como medio de información práctica, que se establezcan en las naciones americanas en que no las haya, exposiciones permanentes para exhibir los productos naturales é industriales de nuestros países; ó bien, que donde las haya, se fomenten de tal suerte que se envíen á ellas y se renueven con oportunidad muestras de todos aquellos artículos que puedan ser materia de comercio, acompañadas de explicaciones que pongan de manifesto los procedimientos de producción, y los precios de terrenos, semillas, materia prima y mano de obra.

Los informes á que aludimos serían de difícil inteligencia si se expresasen en diferentes sistemas de peso, medida ó moneda. El decimal para lo primero, y el tipo monetario en oro para lo último, podrán servirles de punto común de partida, y aclaraciones adicionales sobre el sistema especial de la misma clase, adoptado por cada nación, servirán de complemento á esas noticias.

Basada en las anteriores consideraciones la Comisión de Fuentes de Producción y Estadística propone que la Conferencia recomiende á las naciones en ella representadas:

I. Que los Gobiernos americanos remitan periódicamente, y á más tardar cada año, á la Oficina Internacional de las Repúblicas Americanas, los informes más completos que les sea dable, acerca de su población y recursos naturales, y datos estadísticos sobre sus artefactos y comercio, y sobre todo lo demás que juzguen útil para el incremento de sus relaciones económicas internacionales.

II. Que la Oficina mencionada dedique especial atención á obtener

dichos datos, y, tan pronto como los reciba, los clasifique, ordene y publique.

III. Que las mismas Repúblicas envíen y renueven periódicamente muestras de sus productos naturales é industriales á las exposiciones permanentes establecidas ya, ó que se establezcan, en el Continente americano, acompañadas de todos los informes que puedan estimular el desarrollo de su comercio, y sin perjuicio de las exposiciones particulares que todas ó algunas de las Repúblicas deseen establecer dentro de su propio territorio.

IV. Que los datos sobre pesas y medidas se expresen según el sistema decimal, con la anotación de su equivalencia según el sistema nacional en aquellas en que no se haya adoptado; y de igual manera, para expresar los valores, se tome como base la moneda de oro de los Estados Unidos de América, expresando su relación con las demás naciones al tipo de cambio medio en cada año correspondiente.

V. Que para obtener uniformidad en la valuación de las materias de comercio internacional, se fije, como precio de éstas, el que tengan á bordo en los puertos de desembarque, expresado, como queda dicho, en moneda de los Estados Unidos de América.

J. LEONARD.

CHARLES M. PEPPER.

J. B. CALVO.

BALTASAR ESTUPINIAN.

JOSÉ LÓPEZ PORTILLO Y ROJAS.

MÉXICO, 14 de diciembre de 1901.

REPÚBLICA ARGENTINA.

COMERCIO EXTRANJERO EN 1901.

Del “Diario de Buenos Aires”, correspondiente al 29 de enero de 1902, se han tomado los siguientes datos estadísticos relativos al comercio extranjero de la República Argentina durante el año de 1901.

IMPORTACIÓN.

	Oro.
Sujeta á derechos.....	\$95, 252, 275
Libre.....	18, 707, 474
Total	113, 959, 749

Comparado con el año 1900, ha habido una disminución en las importaciones sujetas á derechos de \$1,250,177 y un aumento en la libre de \$1,724,857. Resulta una mayor importación total de \$474,680.

EXPORTACIÓN.

	Oro.
Sujeta á derechos.....	\$74, 373, 521
Libre.....	93, 342, 581
Total	167, 716, 102

En las exportaciones sujetas á derechos ha habido un aumento de

\$18,204,144 y en las libras una disminución de \$5,088,454. En total la exportación aumentó en \$13,115,690.

En el movimiento de metálico las entradas suman \$2,388,120 oro y las salidas \$2,376,270 oro, equilibrándose así con corta diferencia la importación con la exportación.

El movimiento commercial por naciones ha sido el que sigue:

	Importación.	Exportación.		Importación.	Exportación.
Africa.....		\$ 2,891,259	Italia.....	\$14,736,103	\$ 4,318,950
Alemania.....	\$16,724,549	21,479,883	Las Países Bajos.....	573,409	1,753,931
Las Antillas.....	43,679	366,782	Paraguay.....	1,767,644	216,053
Bélgica.....	8,688,657	13,457,731	El Reino Unido.....	36,460,898	29,920,759
Bolivia.....	138,732	541,049	Uruguay.....	679,236	3,710,663
Brazil.....	4,386,047	9,702,488	Otras procedencias y destinos	244,083	38,723,093
Chile.....	111,076	568,173			
España.....	3,912,536	2,131,713			
Los Estados Unidos.....	15,533,639	9,296,454	Total.....	\$113,959,749	\$167,716,102
Francia.....	9,959,541	28,637,121			

En las importaciones, es notable el incremento tomado por los Estados Unidos, que ya han sobrepasado á Bélgica, Francia é Italia y disputan el segundo lugar á la Alemania.

Comparadas las importaciones de 1901 con las de 1900, se notan las siguientes diferencias por categorías de artículos:

DISMINUCIONES.

Animales vivos.....	\$161,623
Tabacos.....	109,874
Bebidas.....	187,278
Materias textiles y sus artefactos.....	4,650,039
Colores y tintes.....	22,724
Cueros y sus artefactos.....	102,952

AUMENTOS.

Sustancias alimenticias.....	\$501,161
Aceites.....	309,316
Productos químicos.....	354,208
Maderas y sus artefactos.....	358,724
Papeles y sus artefactos.....	117,125
Hierro.....	2,670,392
Otros metales.....	12,680
Piedras, productos cerámicos, etc.....	1,261,762
Artículos y manufacturas diversas.....	123,820

Damos á continuación las cifras de los principales artículos de exportación en 1901:

Animales en pie.....	3,084,755	Lino.....	16,515,263
Carne bovina congelada.....	4,490,447	Maíz.....	18,887,397
Carneros idem.....	5,041,023	Trigo.....	26,240,755
Lana.....	44,666,483	Azúcar.....	3,952,998
Tasajo.....	2,879,455	Harina de trigo.....	2,711,298
Cueros lanares.....	7,339,811	Afrecho.....	1,454,428
Id. vacunos salados.....	5,281,756	Rollizos de quebracho.....	1,989,195
Id. id. secos.....	8,848,438	Extracto de id.....	451,004
Sebo y grasa.....	3,902,909		

Los productos de la ganadería importan \$90,646,411 oro, con un aumento sobre el año anterior de \$19,392,125, de los cuales \$16,674,922

en lanas, lo que proviene en parte de la otra cosecha cuya salida se demoró.

Los otros aumentos principales de la exportación ganadera son los siguientes:

Carnes congeladas.....	\$2, 559, 540	Tasajo	\$899, 868
Cueros secos	688, 826	Sebo y grasa.....	1, 097, 238

En los animales en pié ha habido una disminución de 2,857,375 pesos.

Los productos agrícolas exportados representan un total de \$71,596,-099, ó sea 85,830,257 menos que en 1900.
